As a continuation of our previous work during Operation Desert Shield/Storm, we examined the effect a fleet exercise has on the work/rest patterns, fatigue, and cognitive performance of F/A-18 aviators. For 10 days during Fleet Exercise 1992, 25 pilots from VFA-81 and VFA-83 completed daily work/rest logs while performing their usual tasks. Subjective measure of fatigue, quality of rest, and sleep need were also collected. A subset of these F/A-18 pilots completed a brief battery of cognitive tasks as soon before flying as possible and again after the flight debrief. As a group, the pilots were adequately rested with little or no problem sleeping, and they operated on a typical work/rest schedule for deployed F/A-18 aviators. However, in some instances during which late night missions were flown, sleep onset was delayed, coupled with shorter sleep periods and additional sleep problems. Several work/rest and flight related parameters were related to subjective measures of aircrew combat readiness, including the following: (1) flight quartile, (2) number and order of flights per day, (3) flight duration, (4) flight hours during the 72 h before a mission, (5) total work during the 24 h before a mission, (6) total sleep during the 12 h before a mission, and (7) total hours continuously awake before a mission. All seven variables significantly contributed to a multiple regression model derived using subjective strike delay, accounting for 51 percent of the variance. Moreover, statistically significant changes were observed from pre- to postflight on a fatigue-sensitive reaction time task. DTIC

THE IDENTIFICATION OF ABILITY REQUIREMENTS AND SELECTION INSTRUMENTS FOR FIGHTER PILOT TRAINING Interim Report, Jan. - Aug. 1992
Thomas R. Carretta, Michael N. Rodgers, and Ivar Hansen Jun. 1993 48 p
(AD-A266340; AL/HR-TP-1993-0016) Avail: CASI HC A03/MF A01

Forty-three experienced fighter pilots from Canada, Norway, and the United States served as subject matter experts (SME's) in an effort to determine the relative importance of 27 personnel characteristics for fighter pilot performance. Inter-rater reliability estimates indicated an acceptable level of agreement for SME's within each country and between pairs of countries regarding the relative importance of the 27 characteristics. Because there was sufficient agreement among SME's from the three countries, the average ranking of the 27 characteristics was calculated. Based on these results, aviation psychologists from Canada, Denmark, the Netherlands, Norway, the United Kingdom, and the United States reviewed selection instruments currently in use in NATO member countries, to identify the most promising selection instruments for inclusion in a computer-based fighter pilot test battery. Their recommendations are summarized in the paper. DTIC

AN EVALUATION OF NOISE AND ITS EFFECTS ON SHUTTLE CREWMEMBERS DURING STS-50/USML-1
Anton Koros (Lockheed Engineering and Sciences Co., Houston, TX.), Charles Wheelwright (Lockheed Engineering and Sciences Co., Houston, TX.), and Susan Adam Sep. 1993 51 p
(NASA-TM-104775; S-729; NAS 1.15:104775) Avail: CASI HC A04/MF A01

High noise levels can lead to physiological, psychological, and performance effects in man, ranging from irritability, annoyance, and sleep interference to interference with verbal communication and fatigue, and to temporary or permanent threshold shift at more extreme levels. The current study evaluated the acoustic environment of the STS50/USML-1 mission. The major objectives were to gain subjective assessments of the STS-50 noise levels, document impacts of noise upon crewmember performance, collect inflight sound level measurements, compare noise levels across missions, evaluate the current Shuttle acoustic criterion, and to make recommendations regarding noise specifications for SSF and other long-duration manned space missions. Sound measurements indicated that background noise levels were 60, 64, and 61 A-weighted decibels, respectively, on the Orbiter middeck, flight deck, and Space lab. All levels were rated acceptable, with the Spacelab environment rated the most favorably. Sleep stations afforded attenuation from airborne noise sources, although all crewmembers reported being awakened by crew activity on the middeck. Models of distance for acceptable speech communications were generated, identifying situations of compromised verbal communications to be avoided. Author

DEPTHS FROM FOCUSING AND DEFOCUSING
Nicola Muscettola Mar. 1993 29 p
(Contract F33615-90-C-1465; ARPA Order 7597)
(AD-A266644; CMU-RI-TR-93-07) Avail: CASI HC A03/MF A01

This paper studies the problem of obtaining depth information from focusing and defocusing, which have long been noticed as important sources of depth information for human and machine vision. In depth from focusing, we try to eliminate the local maxima problem which is the main source of inaccuracy in focusing; in depth from defocusing, a new computational model is proposed to achieve higher accuracy. The major contributions of this paper are as follows: (1) in depth from focusing, instead of the popular Fibonacci search which is often trapped in local maxima, we propose the combination of Fibonacci search and curve fitting, which leads to an unprecedentedly accurate result; (2) a new model of the blurring effect is presented which takes the geometric blurring as well as the imaging blurring into consideration and the calibration of the blurring model; and (3) in spectrogram-based depth from defocusing, an iterative estimation method is proposed to decrease or eliminate the window effect. This paper reports focus ranging with less than 1/1000 error and the defocus ranging with about 1/200 error. With this precision, depth from focus ranging is becoming competitive with stereo vision for reconstructing 3D depth information. DTIC

VALIDITY OF FAA-APPROVED COLOR VISION TESTS FOR CLASS 2 AND CLASS 3 AEROMEDICAL SCREENING Final Report
Henry W. Mertens and Nelda J. Milburn Sep. 1993 13 p
(DOT/FAA/AM-93/17) Avail: CASI HC A03/MF A01

All clinical color vision tests currently used in the medical examination of pilots were studied regarding validity for prediction of performance on practical tests of ability to discriminate the aviation signal colors, red, green, and white given under both day and night conditions. Those same practical tests are given to pilots with color vision deficiency who apply for a waiver of the Class 2 or Class 3 color vision standards. Subjects with varying type and degree of color vision deficiency (n=122) and subjects with normal color vision (n=120) were classified with the anomaloscope and given both practical and clinical tests. The clinical color vision tests included the American Optical Company plates (1965 and 1940 Editions), AOCHRR plates (2nd Edition), Ishihara plates (14-, 16-, 24-, and 38-plate tests), Dvorine plates, Richmond plates, Farnsworth Lantern, School of Aviation Medicine Color Threshold Tester, Titmus Tester, Titmus II Tester, OPTEC 2000 Tester, and Keystone Orthoscope/Telebinocular test. The criterion tests required naming the colors of actual signals produced by the Aviation Signal Light, with the same test procedures and viewing distances used in actual practical tests. The Farnsworth Lantern and several plate tests were the best clinical tests for predicting ability to identify the colors of aviation signals. Individuals with color vision deficiency identified

signal colors better at night than during the day. Recommendations for improving the disposition criteria of some clinical tests, and for discontinuing several obsolete tests are discussed. Author (revised)

VALIDATION OF AN INEXPENSIVE ILLUMINANT FOR AEROMEDICAL COLOR VISION SCREENING Final Report
Nelda J. Milburn and Henry W. Mertens Sep. 1993 9 p
(DOT/FAA/AM-93/16) Avail: CASI HC A02/MF A01

An inexpensive illuminant for color vision screening suggested by the NRC-NAS Committee on Vision was evaluated as a substitute for the Macbeth Easel Lamp. The Macbeth Easel Lamp is the recommended illuminant for pseudoisochromatic plate tests used in aeromedical color vision screening, but is no longer in production. Subjects included both normal trichromats (p=145) and persons with varying degrees and types of color vision deficiencies (p=152) as diagnosed with the Nagel Type I anomaloscope. Subjects were given the Dvorine Pseudo-Isochromatic Plate Test illuminated by each of the two light sources. One Verilux True Color Light tube (F15T8VLX) was installed in an adjustable fluorescent desk lamp and positioned at a height of 24 in above the center of the Dvorine test book to give a 270 lux illumination to match the illumination produced by the Macbeth light source. The two presentations of the Dvorine were separated by several other color vision tests. Each subject was given a different random order of plates 2-15 for each light source. Pass/Fail performance with the Dvorine test was virtually the same with the two light sources when criterion for failure was three or more errors. The Verilux True Color Light obtained a Kappa value of .97, and very low false positive (.021) and false negative (.006) rates when compared to the Macbeth Easel Lamp. Performance and possible applications of the Verilux True Color Light in aeromedical color vision screening are discussed.

EVALUATION OF THE RETROGRADE INFLATION ANTI-G SUIT (RIAGS) Final Report, Oct. 1989 - 1992
Lloyd D. Tripp, Jr., Kathy McCloskey, Daniel Repperger, Stephen E. Popper, and Smith L. Johnston 18 Dec. 1992 16 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract F33615-89-C-0574)
(AD-A265884; AL-TR-1992-0176) Avail: CASI HC A03

The Retrograde Inflation Anti-G Suit (RIAGS) was originally designed and fabricated in the early 1940's by Mr. David Clark and Dr. Earl Wood as The Progressive Arterial Occlusion Anti-g Suit. Testing of this suit on the Mayo Clinic centrifuge revealed that the suit provided more g protection than the fighter pilot of the era needed (+2.9 gz relaxed). This technology was revisited in 1987 by the Armstrong Laboratory and culminated in the development of a new version of the technology using modern methods and materials. The new suit consisted of a retrograde inflating anti-g suit which inflated cephaladward, arterial occlusive cuffs for the arms, and capstan sleeves. These suit combinations were compared to the standard Air Force issue CSU-13B/P anti-g suit. Endurance testing of the current suit involved exposing subjects to a continuous +4.5 to +7 gz Simulated Aerial Combat Maneuver. Results showed the RIAGS with capstan sleeves provided the maximum amount of protection to the subject in terms of endurance (p less than 0.013), followed by RIAGS alone (p less than 0.058), Standard CSU-13B/P and RIAGS with occlusion cuffs (p=0.28). In addition to the protection issue, RIAGS with sleeves also proved to be the most comfortable of all the g suit combinations evaluated. DTIC

EOS WORKSTATION Final Report, 2 Jun. 1989 - 3 Jan. 1992
Franz Leberl, Milan Karspeck, Michel Millot, Kelly Maurice, and Matt Jackson 7 Apr. 1992 365 p
(Contract NAS7-1070; SBIR-07.07-0094)
(NASA-CR-191326; NAS 1.26:191326) Avail: CASI HC A16/MF A03

This final report summarizes the work done from mid-1989 until January 1992 to develop a prototype set of tools for the analysis of EOS-type images. Such images are characterized by great multiplicity and quantity. A single 'snapshot' of EOS-type imagery may contain several hundred component images so that on a particular pixel, one finds multiple gray values. A prototype EOS-sensor, AVIRIS, has 224 gray values at each pixel. The work focused on the ability to utilize very large images and continuously roam through those images, zoom and be able to hold more than one black and white or color image, for example for stereo viewing or for image comparisons. A second focus was the utilization of so-called 'image cubes', where multiple images need to be co-registered and then jointly analyzed, viewed, and manipulated. The target computer platform that was selected was a high-performance graphics superworkstation, Stardent 3000. This particular platform offered many particular graphics tools such as the Application Visualization System (AVS) or Dore, but it missed availability of commercial third-party software for relational data bases, image processing, etc. The project was able to cope with these limitations and a phase-3 activity is currently being negotiated to port the software and enhance it for use with a novel graphics superworkstation to be introduced into the market in the Spring of 1993. BODY/CUSHION CONTACT STRESS ANALYSIS DURING SITTING M.S. Thesis
Silviu Comisioneru Sep. 1991 154 p
(ITN-93-85204) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Suitably designed cushions could minimize body stresses experienced during sitting for long periods and the consequent discomfort and pain. A series of two-dimensional numerical models of the pelvis-cushion system and the stresses developed in the body as a result of sitting on various types of cushion were analysed by means of the ANSYS finite-element program. Experimental measurements were made by means of the Contact Pressure Display (CPD) and the Piezoresistive Sensor Array (PSA). It was shown that the use of composite cushions, comprising layers of various thicknesses, made of materials of various mechanical properties, could provide a quasi-uniform stress distribution, with consequently reduced stresses on the skeleton and soft tissues. It was demonstrated that the achievement of such a quasi-uniform stress distribution is a fundamental condition for comfort. Cushion design guidelines were developed based on the need to use softer materials in high-stress regions and stiffer materials in low-stress regions, with a lower layer sufficiently stiff to prevent contact between the ischial tuberosities and the rigid base. Other applications of composite cushion design are in protecting the human body against vibration and impact stresses and in protecting paraplegic and geriatric patients against pressure ulcer development, caused by prolonged sitting without change of posture. For such patients, the cushion design and optimization must be done on an individual basis. ISA

The water recycling system is a key subsystem of the integrated material recycling system which must be developed to obtain long-term, manned space activity. This paper presents the results of system study for designing water recycling system in which three kinds of membrane filters are introduced to purify waste water discharged from men, animals, and plants. In addition, the long duration processing tests utilizing artificial urine waste water were conducted to evaluate the appropriateness of adopting these membrane filters. Author (NASDA)

ANALYSIS OF DIFFERENCES BETWEEN SEATING POSITIONS IN SIMULATORS AND ORBITERS
Philip T. Mongan Sep. 1993 13 p
(NASA-TM-104776; S-730; NAS 1.15:104776) Avail: CASI HC A03/MF A01

Crew comments indicate that Space Shuttle simulator seats place crewmembers in a position different from that of the actual Orbiter seats. The crew feel that they launch in a different position, and with a different reach and visibility, from that in which they had trained. This study examined three factors in differences between training and flight positions. Key dimensions, which were considered important to spatial orientation, were compared in the Orbiters and simulators. These were dimensions such as seat back to glare shield and seat pan to overhead. The differences between flight and training crew equipment, and how these differences may contribute to the problem were discussed with engineers and technicians responsible for the equipment. Eye position measurements were taken on subjects to assess any differences that could be attributed to different ingress methods in the Orbiters and the simulators. This report presents the data, analysis, and recommendations. Author (revised)

DEVELOPMENT OF A NONAZEOTROPIC HEAT PUMP FOR CREW HYGIENE WATER HEATING Final Report, Jun. 1989 - Aug. 1991
David H. Walker and Glenn I. Deming Oct. 1991 98 p
(Contract NAS8-38407; SBIR-09.04-3200)
(NASA-CR-194189; NAS 1.26:194189; FM-9017-482) Avail: CASI HC A05/MF A02

A Phase 2 SBIR Program funded by the NASA Marshall Space Flight Center to develop a Nonazeotropic Heat Pump is described. The heat pump system which was designed, fabricated, and tested in the Foster-Miller laboratory, is capable of providing crew hygiene water heating for future manned missions. The heat pump utilizes a nonazeotropic refrigerant mixture which, in this application, provides a significant Coefficient of Performance improvement over a single-constituent working fluid. In order to take full advantage of the refrigerant mixture, compact tube-in-tube heat exchangers were designed. A high efficiency scroll compressor with a proprietary lubrication system was developed to meet the requirements of operation in zero-gravity. The prototype heat pump system consumes less than 200W of power compared to the alternative of electric cartridge heaters which would require 2 to 5 kW. Author (revised)

BIOMASS PRODUCTION CHAMBER AIR ANALYSIS OF WHEAT STUDY (BWT931)
J. H. Batten, B. V. Peterson, E. Berdis, and E. M. Wheeler Aug. 1993 62 p
(Contract NAS10-11624)
(NASA-CR-194092; NAS 1.26:194092) Avail: CASI HC A04/MF A01

NASA's Controlled Ecological Life Support System (CELSS) biomass production chamber at John F. Kennedy Space Center provides a test bed for bioregenerative studies using plants to provide food, oxygen, carbon dioxide removal, and potable water to humans during long term space travel. Growing plants in enclosed environments has brought about concerns regarding the level of volatile organic compounds (VOC's) emitted from plants and the construction materials that make up the plant growth chambers. In such closed systems, the potential exists for some VOC's to reach toxic levels and lead to poor plant growth, plant death, or health problems for human inhabitants. This study characterized the air in an enclosed environment in which wheat cv. Yocora Rojo was grown. Ninty-four whole air samples were analyzed by gas chromatography/mass spectrometry throughout the eighty-four day planting. VOC emissions from plants and materials were characterized and quantified. AN ASSESSMENT OF THE POTENTIAL FOR NECK INJURY DUE TO PADDING OF AIRCRAFT INTERIOR WALLS FOR HEAD IMPACT PROTECTION Final Report

R. Armenia-Cope, J. H. Marcus, R. V. Gowdy, and R. L. DeWeese Aug. 1993 13 p

(DOT/FAA/AM-93/14) Avail: CASI HC A03/MF A01

This report describes a short test program to assess the potential for neck injury induced by placing padding on the interior walls of an aircraft cabin to reduce the possibility of a head injury during a crash. Such padding is a possible mechanism of achieving the heightened impact protection requirements adopted by the Federal Aviation Administration in 1988. The report reviews the literature on impact induced neck injury, and reports neck injury criteria developed and reported by others. The type of test device to use with the neck injury criteria is also discussed. Using the reported neck injury criteria, and a Hybrid 3 test dummy with neck instrumentation, the testing program found that neck injury, with one exception, was not likely in either the tested pad or unpadded case. The one exception was neck extension injuries for which both the unpadded and padded tests exceeded the injury criteria. The tested pad, in comparison to the unpadded case, substantially decreased the neck extension moment, implying a reduction in neck injury risk. Author (revised)

EYE-GAZE AND INTENT: APPLICATION IN 3D INTERFACE CONTROL

J. C. Schryver and J. H. Goldberg (Pennsylvania State Univ., University Park.) 1993 7 p Presented at the 5th International Conference on Human-computer Interaction, Orlando, FL, 8-13 Aug. 1993

(Contract DE-AC05-84OR-21400)

(DE93-015210; CONF-9308124-1) Avail: CASI HC A02/MF A01

Computer interface control is typically accomplished with an input 'device' such as a keyboard, mouse, trackball, etc. An input device translates a users input actions, such as mouse clicks and key presses, into appropriate computer commands. To control the interface, the user must first convert intent into the syntax of the input device. A more natural means of computer control is possible when the computer can directly infer user intent, without need of intervening input devices. We describe an application of eye-gaze-contingent control of an interactive three-dimensional (3D) user interface. A salient feature of the user interface is natural input, with a heightened impression of controlling the computer directly by the mind. With this interface, input of rotation and translation are intuitive, whereas other abstract features, such as zoom, are more problematic to match with user intent. This paper describes successes with implementation to date and ongoing efforts to develop a more sophisticated intent inferencing methodology. DOE

SHEAN (SIMPLIFIED HUMAN ERROR ANALYSIS CODE) AND AUTOMATED THERP

J. R. Wilson 1993 9 p Presented at the GOCO Database Meeting, Augusta, GA, 2-3 Feb. 1993

(Contract DE-AC07-84ID-12435)

(DE93-014904; WINCO-11908; CONF-9302122-1) Avail: CASI HC A02/MF A01

One of the most widely used human error analysis tools is THERP (Technique for Human Error Rate Prediction). Unfortunately, this tool has disadvantages. The Nuclear Regulatory Commission, realizing these drawbacks, commissioned Dr. Swain, the author of THERP, to create a simpler, more consistent tool for deriving human error rates. That effort produced the Accident Sequence Evaluation Program Human Reliability Analysis Procedure (ASEP), which is more conservative than THERP, but a valuable screening tool. ASEP involves answering simple questions about the scenario in question, and then looking up the appropriate human error rate in the indicated table (THERP also uses look-up tables, but four times as many). The advantages of ASEP are that human factors expertise is not required, and the training to use the method is minimal. Although not originally envisioned by Dr. Swain, the ASEP approach actually begs to be computerized. That WINCO did, calling the code SHEAN, for Simplified Human Error ANalysis. The code was done in TURBO Basic for IBM or IBM-compatible MS-DOS, for fast execution. WINCO is now in the process

of comparing this code against THERP for various scenarios. A discussion of SHEAN is reported. DOE

This semiannual status report describes activities conducted by the Principal Investigator during the first half of this third year of the NASA High Resolution Microwave Survey (HRMS) Investigator Working Group (IWG). As a (HRMS) Team Member with primary interest in the Sky Survey activity, this investigator attended IWG meetings at NASA/Ames and U.C.-Santa Cruz in Apr. and Aug. 1992, and has traveled independently to NRAO/Kitt Peak, Arizona (April 1993) and Woodbury, Georgia (July 1993). During the July 1993 visit to the Georgia Tech Research Corporation/Woodbury Research Facility, an experiment was conducted to study the effects of interference from C-band (3.7 - 4.2 GHz) geostationary spacecraft on the Sky Survey operation in that band. At the first IWG meeting in April of this year, results of a SETI observation conducted at the 203 GHz positronium hyperfine resonance using the NRAO facility at Kitt Peak, AZ, were presented, as well as updates on the development of the spaceborne RFI data bases developed for the project. At the second meeting, results of the study of interference from C-band geostationary spacecraft were presented. Likewise, a presentation was made at the accompanying 1993 Bioastronomy Symposium describing the SETI observation at the positronium hyperfine resonance. Author (revised)

In April 1985, as required by Public Law 98-371, the NASA Advanced Technology Advisory Committee (ATAC) reported to Congress the results of its studies on advanced automation and robotics technology for use on Space Station Freedom. This material was documented in the initial report (NASA Technical Memorandum 87566). A further requirement of the law was that ATAC follow NASA's progress in this area and report to Congress semiannually. This report is the sixteenth in a series of progress updates and covers the period between 15 Sep. 1992 - 16 Mar. 1993. The report describes the progress made by Levels 1, 2, and 3 of the Space Station Freedom in developing and applying advanced automation and robotics technology. Emphasis was placed upon the Space Station Freedom Program responses to specific recommendations made in ATAC Progress Report 15; and includes a status review of Space Station Freedom Launch Processing facilities at Kennedy Space Center. Assessments are presented for these and other areas as they apply to the advancement of automation and robotics technology for Space Station Freedom. Author (revised)

APPROACHES TO HIGH ASPECT RATIO TRIANGULATIONS
M.-A. Posenau Aug. 1993 21 p Presented at the 5th Canadian Conference on Computational Geometry, Waterloo, Ontario, 5-9 Aug. 1993
(RTOP 505-90-53-02)
(NASA-TM-107684; NAS 1.15:107684) Avail: CASI HC A03/MF A01

In aerospace computational fluid dynamics calculations, high aspect ratio, or stretched, triangulations are necessary to adequately resolve the features of a viscous flow around bodies. In this paper, we explore alternatives to the Delaunay triangulation which can be used to generate high aspect ratio triangulations of point sets. The method is based on a variation of the lifting map concept which derives Delaunay triangulations from convex hull calculations. Author (revised)

The theory and practice of implementing Tanemura's algorithm for 3D Delaunay triangulation on Intel's Gamma prototype, a 128 processor MIMD computer, is described. Efficient implementation of Tanemura's algorithm on a conventional, vector processing supercomputer is problematic. It does not vectorize to any significant degree and requires indirect addressing. Efficient implementation on a parallel architecture is possible, however. Speeds in excess of 20 times a single processor Cray Y-MP are realized on 128 processors of the Intel Gamma prototype. A new set of benchmarks was developed for the performance evaluation of highly parallel supercomputers. These benchmarks consist of a set of kernels, the 'Parallel Kernels,' and a simulated application benchmark. Together they mimic the computation and data movement characteristics of large scale computational fluid dynamics (CFD) applications. The principal distinguishing feature of these benchmarks is their 'pencil and paper' specification - all details of these benchmarks are specified only algorithmically. In this way many of the difficulties associated with conventional benchmarking approaches on highly parallel systems are avoided. Author (revised)

Accelerator physicists today have access to computers that are far more powerful than those available just 10 years ago. In the early 1980's, desktop workstations performed less than one million floating point operations per second (Mflops), and the realized performance of vector supercomputers was at best a few hundred Mflops. Today vector processing is available on the desktop providing researchers with performance approaching 100 Mflops at a price that is measured in thousands of dollars. Furthermore, advances in Massively Parallel Processors (MPP) have made performance of over 10 gigaflops a reality, and at mid-decade, MPP's are expected to be capable of teraflops performance. Along with advances in MPP hardware, researchers have also made significant progress in developing algorithms and software for MPP's. These changes have had, and will continue to have, a significant impact on the work of computational accelerator physicists. Now, instead of running particle simulations with just a few thousand particles, we can perform desktop simulations with tens of thousands of simulation particles, and calculations with well over 1 million particles are being performed on MPP's. In the area of computational electromagnetics, simulations that used to be performed only on vector supercomputers now run in several hours on desktop workstations, and researchers are hoping to perform simulations with over one billion mesh points on future MPP's. In this paper we will discuss the latest advances and what can be expected in the near future in hardware, software, and applications codes for the advanced simulation of particle accelerators. DOE

DISKLESS SUPERCOMPUTERS: SCALABLE, RELIABLE I/O FOR THE TERA-OP TECHNOLOGY BASE Final Report
Randy H. Katz, John K. Ousterhout, and David A. Patterson 1993 11 p
(Grant NAG2-591)
(NASA-CR-194089; NAS 1.26:194089) Avail: CASI HC A03/MF A01

Computing is seeing an unprecedented improvement in performance; over the last five years there has been an order-of-magnitude improvement in the speeds of workstation CPU's. At least another order of magnitude seems likely in the next five years, to machines with 500 MIPS or more. The goal of the ARPA Teraop program is to realize even larger, more powerful machines, executing as many as a trillion operations per second. Unfortunately, we have seen no comparable breakthroughs in I/O performance; the speeds of I/O devices and the hardware and software architectures for managing them have not changed substantially in many years. We have completed a program of research to demonstrate hardware and software I/O architectures capable of supporting the kinds of internetworked 'visualization' workstations and supercomputers that will appear in the mid 1990s. The project had three overall goals: high performance, high reliability, and scalable, multipurpose system.

The PRAM (Parallel Random Access Machine) model is widely used to formulate parallel algorithms because of its shared memory and its synchronous behavior. The model, however, bears little resemblance to real parallel machines. This has led to various approaches to emulating PRAM's on processor networks. A survey of the principles behind these emulations is presented, and it is shown why hashing is an important part of them. The commonly used types of hash functions and their theoretical properties are discussed and related to their behavior in simulations. Both synthetic and application based traces are used as input data for these simulations. The simulation results suggest the use of linear functions with randomly chosen coefficients. These functions also have the advantage of short evaluation time and bijectivity. But no matter which type of hash function is chosen, it may be necessary to choose a new hash function on the fly. An algorithm to rehash linear functions in optimal time without using shade memory or mass storage systems during rehashing is presented. ESA

COLLECTION AND ANALYSIS OF DIALOGUE PROTOCOLS FOR THE QUESTION-ANSWERING FACILITY OF THE ENTITY-RELATIONSHIP MODELING ADVISOR
A. Parent Oct. 1990 61 p
(ERB-1032; NRC-31827; CTN-93-60825) Copyright Avail: CASI HC A04/MF A01

An experimental procedure was set up to simulate the conditions under which an intelligent computer facility could help a user create a conceptual data model. This was accomplished by having a human advisor give assistance within constraints similar to those of the computerized

facility. The semantics of the conceptual model were made available to the human expert so that heuristic rules associated with the area of application could be collected. The task consisted of designing a conceptual data model for an unsatisfactory condition report management system for use in equipment maintenance. The user had to develop a valid conceptual model of this system, in the entity relationship formalism, using the Silverrun-ERM automated modeling tool. To analyze the protocols, an adapted version of dialogue game theory was applied. Five question types were identified. The results show that the most important need of the user involves a validation question seeking the evaluation of a hypothetical or current state of the user's conceptual design. This activity will offer a basis for the functional specification of a computer facility capable of constructing an educational response to questions dealing with conceptual data design. CISTI

MASS MARKET COMPUTERS FOR SOFTWARE DEVELOPMENT

W. M. Gentleman and M. Wein Nov. 1991 15 p Presented at the 1991 ACM Symposium of Personal and Small Computers, Toronto, Ontario, 12-14 Jun. 1991

(ERB-1035; NRC-33162; CTN-93-60826) Copyright Avail: CASI HC A03/MF A01

The mass market or appliance computer has become a plausible alternative to workstations for software development. While it is easy to use for software development, a different style of development emerges. By being truly personal, the mass market computer provides a focus for all the professional activities of a developer such as program development, documentation, and preparation of presentations. The primary form of software used on such computers is commercially available software; this has profound implications on how the software is used and the make-or-buy tradeoff takes on an entirely new meaning. The advantages of mass market computers are described. An environment consisting of a network of mass market computers is presented as an example of how these computers have influenced the development of a novel source management scheme. Author (CISTI)

SPACE AND EARTH SCIENCES, COMPUTER SYSTEMS, AND SCIENTIFIC DATA ANALYSIS SUPPORT, VOLUME 1 Final Progress Report, 1 Jun. - 30 Sep. 1993

Ronald H. Estes, ed. 6 Oct. 1993 688 p

(Contract NAS5-30440)

(NASA-CR-194535; NAS 1.26:194535) Avail: CASI HC A99/MF A06

This Final Progress Report covers the specific technical activities of Hughes STX Corporation for the last contract triannual period of 1 June through 30 Sep. 1993, in support of assigned task activities at Goddard Space Flight Center (GSFC). It also provides a brief summary of work throughout the contract period of performance on each active task. Technical activity is presented in Volume 1, while financial and level-of-effort data is presented in Volume 2. Technical support was provided to all Division and Laboratories of Goddard's Space Sciences and Earth Sciences Directorates. Types of support include: scientific programming, systems programming, computer management, mission planning, scientific investigation, data analysis, data processing, data base creation and maintenance, instrumentation development, and management services. Mission and instruments supported include: ROSAT, Astro-D, BBXRT, XTE, AXAF, GRO, COBE, WIND, UIT, SMM, STIS, HEIDI, DE, URAP, CRRES, Voyagers, ISEE, San Marco, LAGEOS, TOPEX/Poseidon, Pioneer-Venus, Galileo, Cassini, Nimbus-7/TOMS, Meteor-3/TOMS, FIFE, BOREAS, TRMM, AVHRR, and Landsat. Accomplishments include: development of computing programs for mission science and data analysis, supercomputer applications support, computer network support, computational upgrades for data archival and analysis centers, end-to-end management for mission data flow, scientific modeling and results in the fields of space and Earth physics, planning and design of GSFC VO DAAC and VO IMS, fabrication, assembly, and testing of mission instrumentation, and design of mission operations center. A PERFORMANCE PREDICTION MODEL FOR A FAULT-TOLERANT COMPUTER DURING RECOVERY AND RESTORATION Ph.D. Thesis Report, 1 Jan. - 31 Dec. 1992

John W. Stoughton and Rodrigo A. Obando Sep. 1993 186 p

(Contract NCC1-136)

(NASA-CR-194490; NAS 1.26:194490) Avail: CASI HC A09/MF A02

The modeling and design of a fault-tolerant multiprocessor system is addressed. In particular, the behavior of the system during recovery and restoration after a fault has occurred is investigated. Given that a multicomputer system is designed using the Algorithm to Architecture to Mapping Model (ATAMM), and that a fault (death of a computing resource) occurs during its normal steady-state operation, a model is presented as a viable research tool for predicting the performance bounds of the system during its recovery and restoration phases. Furthermore, the bounds of the performance behavior of the system during this transient mode can be assessed. These bounds include: time to recover from the fault (t(sub rec)), time to restore the system (t(sub rec)) and whether there is a permanent delay in the system's Time Between Input and Output (TBIO) after the system has reached a steady state. An implementation of an ATAMM based computer was developed with the Generic VHSIC Spaceborne Computer (GVSC) as the target system. A simulation of the GVSC was also written based on the code used in ATAMM Multicomputer Operating System (AMOS). The simulation is in turn used to validate the new model in the usefulness and accuracy in tracking the propagation of the delay through the system and predicting the behavior in the transient state of recovery and restoration. The model is validated as an accurate method to predict the transient behavior of an ATAMM based multicomputer during recovery and restoration. Author (revised)

ADAPTIVELY RESIZING POPULATIONS: ALGORITHM, ANALYSIS, AND FIRST RESULTS

Robert E. Smith and Ellen Smuda 13 Sep. 1993 57 p

(Grant NAG9-625)

(NASA-CR-194277; NAS 1.26:194277) Avail: CASI HC A04/MF A01

Deciding on an appropriate population size for a given Genetic Algorithm (GA) application can often be critical to the algorithm's success. Too small, and the GA can fall victim to sampling error, affecting the efficacy of its search. Too large, and the GA wastes computational resources. Although advice exists for sizing GA populations, much of this advice involves theoretical aspects that are not accessible to the novice user. An algorithm for adaptively resizing GA populations is suggested. This algorithm is based on recent theoretical developments that relate population size to schema fitness variance. The suggested algorithm is developed theoretically, and simulated with expected value equations. The algorithm is then tested on a problem where population sizing can mislead the GA. The work presented suggests that the population sizing algorithm may be a viable way to eliminate the population sizing decision from the application of GA's. Author (revised)

PACT USER'S GUIDE

S. A. Brown and D. Braddy Jan. 1993 26 p

(Contract W-7405-eng-48)

(DE93-013093; UCRL-MA-112087) Avail: CASI HC A03/MF A01

In a computing landscape which has many different hardware architectures and supporting software systems ranging from compilers to operating systems, there is an obvious and strong need for a philosophy of software development that lends itself to the design and construction of portable code systems. The current efforts to standardize software bear witness to this need. PACT is an effort to implement a software development environment which is itself portable and promotes the design and construction of portable applications. PACT does not include such important tools as editors and compilers. Well built tools of that kind are readily available across virtually all computer platforms. The areas that PACT addresses are at a higher level involving issues such as data portability, portable inter-process communication, and graphics. In its current conception, PACT is a set of 10 tools. Nine of these are implemented as libraries, and two of them provide both libraries and executable applications. PACT is entirely coded in C but was designed with a view toward support of other languages, notably FORTRAN. DOE

FORTRAN GRAPHICS ROUTINES FOR THE MACINTOSH

B. W. Shore Jun. 1992 15 p

(Contract W-7405-eng-48)

(DE93-013092; UCRL-MA-111145) Avail: CASI HC A03/MF A01

The Language Systems MPW FORTRAN is a popular FORTRAN compiler for the Macintosh. Unfortunately, it does not have any built-in calls to graphics routines (such as are available with Graflib on the NLTSS), so there is no simple way to make x-y plots from calls within FORTRAN. Instead, a file of data must be created and a commercial plotting routine (such as IGOR or KALEIDAGRAPH) or a spreadsheet with graphics (such as WINGZ) must be applied to post-process the data. The Macintosh does have available many built-in calls (to the Macintosh Toolbox) that allow drawing shapes and lines with quickdraw, but these are not designed for plotting functions and are difficult to learn to use. This work outlines some FORTRAN routines that can be called from LS FORTRAN to make the necessary calls to the Macintosh Toolbox to create simple two-dimensional plots or contour plots. The source code DEMOGRAF.F shows how these routines may be used. DEMOGRAF.F simply demonstrates some FORTRAN subroutines that can be called with language systems MPW FORTRAN on the Macintosh to plot arrays of numbers. The subroutines essentially mimic the functionality that has been available at LTSS and NLTSS and UNICOS at LLNL. The graphics primitives are kept in four separate files, each containing several subroutines. The subroutines are compiled and stored in a library file, LIBgraf.o. Makefile is used to link this library to the source code. A discussion is included on requirements for interactive plotting of functions. DOE

SMOOTH TRANSITIONS BETWEEN BUMP RENDERING ALGORITHMS

B. G. Becker and N. L. Max Jan. 1993 37 p Presented at the Siggraph 1993 Conference, Anaheim, CA, 2-6 Aug. 1993

(Contract W-7405-eng-48)

(DE93-012504; UCRL-JC-112601; CONF-930881-2) Avail: CASI HC A03/MF A01

A method is described for switching smoothly between rendering algorithms as required by the amount of visible surface detail. The result will be more realism with less computation for displaying objects whose surface detail can be described by one or more bump maps. The three rendering algorithms considered are bidirectional reflection distribution function (BRDF), bump-mapping, and displacement-mapping. The bump-mapping has been modified to make it consistent with the other two. For a given viewpoint, one of these algorithms will show a better trade-off between quality, computation time, and aliasing than the other two. Thus, it needs to be determined for any given viewpoint which regions of the object(s) will be rendered with each algorithm. The decision as to which algorithm is appropriate is a function of distance, viewing angle, and the frequency of bumps in the bump map. DOE

COMMON LISP FRAMEWORK Final Report, 1 Sep. 1987 - 31 May 1992

David S. Wile 8 Feb. 1993 21 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality

(Contract MDA903-87-C-0641; DARPA Order 6096)

(AD-A265878) Avail: Issuing Activity (Defense Technical Information Center (DTIC))

The principal goal of the COMMON LISP Framework project was to support Strategic Computing (SC) contractors with a comprehensive, state-of-the-art programming framework for the development and evolution of COMMON LISP programs. The CLF has affected the technical community by shaping both the structure of modern programming environments and the development paradigm they support. This structure rests upon an active objectbase which maintains integrity, integrated tools and provides persistence. CLF's integrity management is unique in providing declarative integrity condition statements--which can be reasoned about and analyzed--while still permitting efficient algorithmic maintenance of these conditions. Its declarative persistence mechanism, based on conceptual aggregations of objects, is also unique. Tools are integrated with the objectbase rather than each other. They gather their inputs from, and place their results back in, the objectbase and are invoked (demonically) by relative activity in the objectbase. DTIC

A GENERAL CONTACT DETECTION ALGORITHM FOR FINITE ELEMENT ANALYSIS

M. W. Heinstein, S. W. Attaway, J. W. Swegle, and F. J. Mello 1992 9 p Presented at the First International Conference in Contact Mechanics, Southampton, England, 13-15 Jul. 1993

(Contract DE-AC04-76DP-00789)

(DE93-012846; SAND-92-2059C; CONF-930782-1) Avail: CASI HC A02/MF A01

A contact detection algorithm has been developed to address difficulties associated with the numerical simulation of contact in nonlinear finite element structural analysis codes. Mechanics problems which have self-contacting surfaces, tearing and eroding surfaces, and multibody impact are solved using the new algorithm. The proposed algorithm is portable between dynamic and quasi-static codes and can efficiently model contact between a variety of finite element types including shells, bricks, beams and particles. The algorithm is composed of the following: (1) a location strategy that uses a global search to decide which slave nodes are in proximity to a

master surface; and (2) an accurate detailed contact check that uses the projected motions of both master surface and slave node. The capability of the new algorithm is illustrated with several example problems. DOE

ADVANCED DISPLAY OBJECT SELECTION METHODS FOR ENHANCING USER-COMPUTER PRODUCTIVITY
G. A. Osga Mar. 1993 6 p
(AD-A265806) Avail: CASI HC A02/MF A01

The User-Interface Technology Branch at NCCOSC RDT&E Division has been conducting a series of studies to address the suitability of commercial off-the-shelf (COTS) graphical user-interface (GUI) methods for efficiency and performance in critical naval combat systems. This paper presents an advanced selection algorithm and method developed to increase user performance when masking selections on tactical displays. The method has also been applied with considerable success to a variety of cursor and pointing tasks. Typical GUI's allow user selection by the following methods: (1) moving a cursor with a pointing device such as a mouse, trackball, joystick, touchscreen; and (2) placing the cursor on the object. Examples of GUI objects are the buttons, icons, folders, scroll bars, etc. used in many personal computer and workstation applications. This paper presents an improved method of selection and the theoretical basis for the significant performance gains achieved with various input devices tested. The method is applicable to all GUI styles and display sizes, and is particularly useful for selections on small screens such as notebook computers. Considering the amount of work-hours spent pointing and clicking across all styles of available graphic user-interfaces, the cost/benefit in applying this method to graphic user-interfaces is substantial, with the potential for increasing productivity across thousands of users and applications. TREE RECONSTRUCTION FROM PARTIAL ORDERS
S. K. Kannan and T. J. Warnow (Sandia National Labs., Albuquerque, NM.) 1993 11 p Presented at the Workshop on Algorithms and Data Structures; International Congress on Automata and Language Processing, Montreal, Canada; Lund, Sweden, 11-13 Aug. 1993; Jul. 1993
(Contract DE-AC04-76DP-00789)
(DE93-009841; SAND-93-0689C; CONF-930884-1; CONF-930770-1) Avail: CASI HC A03/MF A01

The problem of constructing trees given a matrix of interleaf distances is motivated by applications in computational evolutionary biology and linguistics. The general problem is to find an edge-weighted tree which most closely approximates the distance matrix. Although the construction problem is easy when the tree exactly fits the distance matrix, optimization problems under all popular criteria are either known or conjectured to be NP-complete. In this paper we consider the related problem where we are given a partial order on the pairwise distances, and wish to construct (if possible) an edge-weighted tree realizing the partial order. In particular we are interested in partial orders which arise from experiments on triples of species, which determine either a linear ordering of the three pairwise distances (called Total Order Model or TOM experiments) or only the pair(s) of minimum distance apart (called Partial Order Model or POM experiments). The POM and TOM experimental model is inspired by the model proposed by Kannan, Lawler, and Warnow for constructing trees from experiments which determine the rooted topology for any triple of species. We examine issues of construction of trees and consistency of TOM and POM experiments, where the trees may either be weighted or unweighted. Using these experiments to construct unweighted trees without nodes of degree two is motivated by a similar problem studied by Winkler, called the Discrete Metric Realization problem, which he showed to be strongly NP-hard. We have the following results: Determining consistency of a set of TOM or POM experiments is NP-complete whether the tree is weighted or constrained to be unweighted and without degree two nodes. We can construct unweighted trees without degree two nodes from TOM experiments in optimal O(n(sup 3)) time and from POM experiments in O(n(sup 4)) time. DOE

DATA FUSION FOR ADAPTIVE CONTROL IN MANUFACTURING: IMPACT ON ENGINEERING INFORMATION MODELS
O. H. Bray 1992 11 p Presented at the 1993 ASME International Computers in Engineering Conference and Exposition, San Diego, CA, 8-12 Aug. 1993
(Contract DE-AC04-76DP-00789)
(DE93-011555; SAND-92-2405C; CONF-930862-2) Avail: CASI HC A03/MF A01

This paper addresses the impact of data fusion on engineering and manufacturing information systems. Data fusion is the integration and analysis of data from multiple sensors to develop a more accurate understanding of a situation and determine how to respond to it. Sensor fusion, a related term, has a somewhat different, more implementation oriented focus. The difference between these two concepts is addressed specifically in Section 1. Although data fusion can be applied in many situations, this paper focuses on its application to manufacturing and how it changes some of the more traditional, less adaptive information models that support the design and manufacturing functions. KNOWLEDGE BASE TECHNOLOGY FOR CT-DIMS: REPORT 1
E. E. Kelley May 1993 40 p
(Contract DE-AC04-76DP-00613)
(DE93-013118; KCP-613-4984) Avail: CASI HC A03/MF A01

This report discusses progress on the Cutting Tool-Database and Information Management System (CT-DIMS) project being conducted by the University of Illinois Urbana-Champaign (UIUC) under contract to the Department of Energy. This project was initiated in October 1991 by UIUC. The Knowledge-Based Engineering Systems Research Laboratory (KBESRL) at UIUC is developing knowledge base technology and prototype software for the presentation and manipulation of the cutting tool databases at Allied-Signal Inc., Kansas City Division (KCD). The graphical tool selection capability being developed for CT-DIMS in the Intelligent Design Environment for Engineering Automation (IDEEA) will provide a concurrent environment for simultaneous access to tool databases, tool standard libraries, and cutting tool knowledge. FEATURE EXTRACTION AND CLASSIFICATION ALGORITHMS FOR HIGH DIMENSIONAL DATA
Chulhee Lee and David Landgrebe Jan. 1993 226 p
(Grant NAGw-925)
(NASA-CR-194298; NAS 1.26:194298; TR-EE-93-1) Avail: CASI HC A11/MF A03

Feature extraction and classification algorithms for high dimensional data are investigated. Developments with regard to sensors for Earth observation are moving in the direction of providing much higher dimensional multispectral imagery than is now possible. In analyzing such high dimensional data, processing time becomes an important factor. With large increases in dimensionality and the number of classes, processing time will increase significantly. To address this problem, a multistage classification scheme is proposed which reduces the processing time substantially by eliminating unlikely classes from further consideration at each stage. Several truncation criteria are developed and the relationship between thresholds and the error caused by the truncation is investigated. Next an approach to feature extraction for classification is proposed based directly on the decision boundaries. It is shown that all the features needed for classification can be extracted from decision boundaries. A characteristic of the proposed method arises by noting that only a portion of the decision boundary is effective in discriminating between classes, and the concept of the effective decision boundary is introduced. The proposed feature extraction algorithm has several desirable properties: it predicts the minimum number of features necessary to achieve the same classification accuracy as in the original space for a given pattern recognition problem; and it finds the necessary feature vectors. The proposed algorithm does not deteriorate under the circumstances of equal means or equal covariances as some previous algorithms do. In addition, the decision boundary feature extraction algorithm can be used both for parametric and non-parametric classifiers. Finally, some problems encountered in analyzing high dimensional data are studied and possible solutions are proposed. First, the increased importance of the second order statistics in analyzing high dimensional data is recognized. By investigating the characteristics of high dimensional data, the reason why the second order statistics must be taken into account in high

dimensional data is suggested. Recognizing the importance of the second order statistics, there is a need to represent the second order statistics. A method to visualize statistics using a color code is proposed. By representing statistics using color coding, one can easily extract and compare the first and the second statistics. OPTIMIZATION AND EIGENVALUE COMPUTATION WITH APPLICATION TO METEOROLOGY AND OCEANOGRAPHY
J. Nocedal May 1993 3 p
(Contract DE-FG02-87ER-25047)
(DE93-015310; DOE/ER-25047/5) Avail: CASI HC A01/MF A01

Our computational experience has shown that dynamic scaling techniques can have a dramatic effect in the efficiency of optimization algorithms, especially when the number of variables is very large. Conjugate gradient and limited memory methods do not have adequate information on the Hessian matrix, and dynamic scaling of the variables can supply some of this missing information. We developed a full-rank scaling technique for variable metric methods that is globally and superlinearly convergent on general problems. We have also proposed a new technique for accelerating the optimization process in the solution of data assimilation problems. This is an area where optimization plays a crucial role, since the four dimensional assimilation approach consists of using a nonlinear optimization code to adjust the initial conditions of the model so that measurements distributed in space and time can be adequately predicted. Each iteration of the optimization method requires a full simulation of the model a process that typically takes 1 hour on the CRAY 90. We have found that by computing a few extreme eigenvalues of the Hessian matrix, and by incorporating this information in a limited memory code, the number of simulations can be reduced by at least 50%. This is highly significant and represents a substantial contribution to the area of variational assimilation of data. We have also developed an extension of the limited memory BFGS method that is capable of handling simple bounds on the variables, providing more freedom to the modeler. This work was made possible by the development of compact matrix representations of limited memory matrices, which keep the computational cost of the iteration to a minimum. Indeed, we have shown that the operations with limited memory BFGS matrices are optimal in terms of arithmetic operations, since they can be rewritten as the reverse automatic differentiation of an auxiliary function. LECTURE NOTES ON SOFTWARE PROCESS IMPROVEMENT Final Report
Laurie H. Werth Feb. 1993 60 p
(Contract F19628-90-C-0003)
(AD-A265200; CMU/SEI-93-EM-8) Avail: CASI HC A04/MF A01

Software process improvement is not usually covered in standard software engineering textbooks. However, because it is a topic of great interest to the software industry, both faculty and students should be familiar with it. The goal of this package is to provide the basis for an introductory 30 to 60 minute lecture on the software process and its improvement. The material in the main body of the document is intended primarily for instructors. In conjunction with the student-oriented document described below, it provides technical information from which an instructor can prepare a lecture. Two appendices provide additional information for instructors. Appendix A is a brief description of the use of the software process material in a university software engineering class at the University of Texas at Austin. This classroom example might be used as an illustration for students to relate the process concepts to their own software development work. Appendix B presents the Software Engineering Institute's (SEI) process maturity questionnaire from which instructors and students can gain some insight into how a software process is assessed. DTIC

A PATH-ORIENTED MATRIX-BASED KNOWLEDGE REPRESENTATION SYSTEM
Stefan Feyock and Stamos T. Karamouzis Washington NASA Sep. 1993 26 p
(Contract NCC1-159; RTOP 505-64-13-22)
(NASA-CR-4539; NAS 1.26:4539) Avail: CASI HC A03/MF A01

Experience has shown that designing a good representation is often the key to turning hard problems into simple ones. Most AI (Artificial Intelligence) search/representation techniques are oriented toward an infinite domain of objects and arbitrary relations among them. In reality much of what needs to be represented in AI can be expressed using a finite domain and unary or binary predicates. Well-known vector- and matrix-based representations can efficiently represent finite domains and unary/binary predicates, and allow effective extraction of path information by generalized transitive closure/path matrix computations. In order to avoid space limitations a set of abstract sparse matrix data types was developed along with a set of operations on them. This representation forms the basis of an intelligent information system for representing and manipulating relational data. Author

IMAGE CODING USING ENTROPY-CONSTRAINED RESIDUAL VECTOR QUANTIZATION
Faouzi Kossentini, Mark J. T. Smith, and Christopher F. Barnes 15 Apr. 1993 31 p
(Grants NAG5-2187; NSF MIP-91-16113)
(NASA-CR-193728; NAS 1.26:193728) Avail: CASI HC A03/MF A01

The residual vector quantization (RVQ) structure is exploited to produce a variable length codeword RVQ. Necessary conditions for the optimality of this RVQ are presented, and a new entropy-constrained RVQ (ECRVQ) design algorithm is shown to be very effective in designing RVQ codebooks over a wide range of bit rates and vector sizes. The new EC-RVQ has several important advantages. It can outperform entropy-constrained VQ (ECVQ) in terms of peak signal-to-noise ratio (PSNR), memory, and computation requirements. It can also be used to design high rate codebooks and codebooks with relatively large vector sizes. Experimental results indicate that when the new EC-RVQ is applied to image coding, very high quality is achieved at relatively low bit rates. Author (revised)

ULTRA 2 USER'S MANUAL FOR ULTRA 2 REVISION 3.0
S. A. Brown, C. F. McMillan, D. Braddy, and P. Keller Jan. 1993 74 p Revised
(Contract W-7405-eng-48)
(DE93-015970; UCRL-MA-108967-Rev-1) Avail: CASI HC A04/MF A01

ULTRA 2 is a program for the presentation, manipulation, and analysis of 1D data sets (i.e., x, y pairs). Presentation refers to the capability to display and make hard copies of data plots. Manipulation refers to the capability to excerpt, shift, and scale data sets. Analysis refers to the capability to combine data sets in various ways to create new data sets. An example of this is the Fast Fourier Transform (FFT) capability in ULTRA 2. The principal object with which ULTRA 2 works is the curve. A curve is an object which consists of an array of x values, an array of y values, a number of points (the length of the x and y arrays), and an ASCII label. ULTRA 2 operates on curves. ULTRA II is a portable tool. It runs on machines from supercomputers to PC's. It runs under UNIX, DOS, and MAC OS. Its portability derives from the PACT libraries which provide the portable graphics and the SCHEME interpreter engine which are the main foundation of ULTRA 2. ULTRA 2 can read and write ASCII data files or PDB files with ULTRA curves in them. PDBLib is another PACT tool which

provides portable, self-describing, binary data files. PDBLib has specific functionality to write ULTRA curves. This provides an easy and convenient way for applications to produce ULTRA files. The advantage of PDB files over ASCII files is that PDB files are about 1/3 the size of a corresponding ASCII file and can be written or read about 10 times faster. Interested readers will find references to PACT documentation later in this manual.

A KNOWLEDGE-BASED EXPERT SYSTEM TO COORDINATE CAD/CAE WITH INTEGRATION AND TEST Final Technical Report
Charles D. Stormon 10 Jul. 1991 91 p
(Contract NAS7-1068; SBIR-06.06-0929)
(NASA-CR-191394; NAS 1.26:191394) Avail: CASI HC A05/MF A01

The objective of this project was to construct a prototype expert system to coordinate computer aided design and computer engineering (CAD/CAE) with integration and test. The prototype was intended to integrate existing CAD/CAE tools, provide the facility for integration with future CAD/CAE tools, and use a knowledge base to assist in simulation, testing, fault diagnosis, and design verification. In constructing this prototype, the approach was to build on experience gained from our Phase 1 effort, while maintaining a flow of new ideas from a close-knit collaboration with researchers at Syracuse University. The results from Phase 1 proved useful in terms of understanding some of the more difficult research issues, but major effort was required to create a prototype which provided the above functions. Much was learned in the process of creating this prototype, both in terms of what was feasible and what was useful. Ultimately, such a prototype was successfully constructed, and it is supplied along with this report. We believe that this prototype will allow NASA and CRi to address the issues of commercialization from a well-informed perspective.

ADAPTIVE TRANSFER FUNCTION NETWORKS
J. R. Goulding 1993 6 p Presented at the World Congress on Neural Networks, Portland, OR, 11-15 Jul. 1993
(Contract W-7405-eng-36)
(DE93-014344; LA-UR-93-1983; CONF-930741-3) Avail: CASI HC A02/MF A01

Real-time pattern classification and time-series forecasting applications continue to drive artificial neural network (ANN) technology. As ANNs increase in complexity, the throughput of digital computer simulations decreases. A novel ANN, the Adaptive Transfer Function Network (ATF-Net), directly addresses the issue of throughput. ATF-Nets are global mapping equations generated by the superposition of ensemblies of neurodes having arbitrary continuous functions receiving encoded input data. ATF-Nets may be implemented on parallel digital computers. An example is presented which illustrates a four-fold increase in computational throughput. DOE

CALCULATING INTERSECTIONS OF SURFACES IN SCREEN SPACE Final Report
David C. Banks Washington Jul. 1993 15 p Submitted for publication
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-191498; NAS 1.26:191498; ICASE-93-41) Avail: CASI HC A03/MF A01

When surfaces intersect, one may desire to highlight the intersection curve in order to make the shape of the penetrating surfaces more visible. Highlighting the intersection is especially helpful when the surfaces become transparent, because transparency makes the intersections less evident. A technique for locating intersections in screen space using only the information locally available to a pixel is discussed. The technique is designed to exploit parallelism at the pixel level and was implemented on the Pixel-Planes 5 graphics supercomputer. Author (revised)

GENERIC SOFTWARE ARCHITECTURE BASED REDESIGN
Sanjay Bhansali 1992 6 p
Avail: CASI HC A02/MF A01

The design of software architecture is concerned with decomposing a software system into sub-systems or modules, defining the interface and the dependencies between the modules, allocating high-level tasks to agents, determining representation schemes for data, and other similar activities which enable the later implementation of the software to proceed in a modular and largely routine manner. Currently existing software methodologies and tools are generally adequate in constructing an initial design for a system that is well structured. However, they do not adequately capture the process or rationale underlying the design and hence later modifications to the system are difficult and error-prone. Since a major portion of a software's lifecycle is devoted to maintenance, significant payoffs could result if changes to a software artifact can be incorporated rapidly and reliably. SOFTWARE SYNTHESIS USING GENERIC ARCHITECTURES
Sanjay Bhansali Aug. 1993 43 p
(Contract NCC2-749)
(NASA-CR-194201; NAS 1.26:194201; KSL-93-60) Avail: CASI HC A03/MF A01

A framework for synthesizing software systems based on abstracting software system designs and the design process is described. The result of such an abstraction process is a generic architecture and the process knowledge for customizing the architecture. The customization process knowledge is used to assist a designer in customizing the architecture as opposed to completely automating the design of systems. Our approach using an implemented example of a generic tracking architecture which was customized in two different domains is illustrated. How the designs produced using KASE compare to the original designs of the two systems, and current work and plans for extending KASE to other application areas are described. Author (revised)

ARCHITECTURE-DRIVEN REUSE OF CODE IN KASE
Sanjay Bhansali Apr. 1993 9 p
(Contract NCC2-7491)
(NASA-CR-194200; NAS 1.26:194200; KSL-93-35) Avail: CASI HC A02/MF A01

In order to support the synthesis of large, complex software systems, we need to focus on issues pertaining to the architectural design of a system in addition to algorithm and data structure design. An approach that is based on abstracting the architectural design of a set of problems in the form of a generic architecture, and providing tools that can be used to instantiate the generic architecture for specific problem instances is presented. Such an approach also facilitates reuse of code between different systems belonging to the same problem class. An application of our approach on a realistic problem is described; the results of the exercise are presented; and how our approach compares to other work in this area is discussed.

THE KASE APPROACH TO DOMAIN-SPECIFIC SOFTWARE SYSTEMS
Sanjay Bhansali and H. Penny Nii 1992 5 p Previously announced as N93-17502
Avail: CASI HC A01/MF A01

Designing software systems, like all design activities, is a knowledge-intensive task. Several studies have found that the predominant cause of failures among system designers is lack of knowledge - knowledge about the application domain, knowledge about design schemes, and knowledge about design processes. The goal of domain specific software design systems is to explicitly represent knowledge relevant to a class of applications and use it to partially or completely automate various aspects of the design activity for designing systems within that domain. The hope is that this would reduce the intellectual burden on the human designers and lead to more efficient software development. A domain-specific system built on top of KASE, a knowledge-assisted software engineering environment being developed at the Stanford Knowledge Systems Laboratory is presented. The main ideas underlying the construction of domain specific systems within KASE are introduced; the application of the idea in the synthesis of a system for tracking aircrafts from radar signals is illustrated; and some of the issues in constructing domain-specific systems are discussed. EGS (UNDERSCORE) WINDOWS 2: AN ENHANCED GRAPHICAL INTERFACE TO EGS
S. Chatterjee and R. J. Donahue Jan. 1993 14 p Presented at the International Conference on Monte Carlo Simulation in Nuclear and High Energy Physics, Tallahassee, FL, 22-26 Feb. 1993
(Contract DE-AC03-76SF-00098)
(DE93-010447; LBL-33429; CONF-9302113-1) Avail: CASI HC A03/MF A01

This report gives a general overview of the EGS-Windows2 program. The program is intended to be used to display individual particle histories of electrons, photons, and positrons generated by the EGS4 Code System. Much of this work is based on the earlier version of EGS-Windows2 from the Institute for National Measurement Standards at the National Research Council of Canada (NRCC). No attempt is made to modify their EGS subroutine WATCH, which is used to output the particle vectors to be read by EGS-Windows, or duplicate any of the documentation describing the subroutine. EGS-Windows2 reads data in the same format as produced by WATCH. Users of EGS-Windows2 are encouraged to obtain the original EGS-Windows report from the NRCC in addition to this report as complete documentation of EGS-Windows2. As in the original report, two levels of information are covered in this report: the user level, and the programmer level. The user level should be read by all users. It describes execution, operation, and capabilities. The programmer level should be read by those users who may want to modify the program or who would like a more detailed understanding. It describes briefly the routines and there function, as well as the major changes in the new release of the 3D graphics programming library Sun PHIGS 2.0. DOE

CREATING A STRATEGIC PLAN FOR CONFIGURATION MANAGEMENT USING COMPUTER AIDED SOFTWARE ENGINEERING (CASE) TOOLS
P. R. Smith and R. Sarfaty 1993 26 p Presented at the 1993 DOE/Contractors and Facilities Data Acquisition and Control User's Group Meeting, Livermore, CA, 13-16 Apr. 1993
(Contract DE-AC07-76ID-01570)
(DE93-013663; EGG-M-93143; CONF-9304134-1) Avail: CASI HC A03/MF A01

This paper provides guidance in the definition, documentation, measurement, enhancement of processes, and validation of a strategic plan for configuration management (CM). The approach and methodology used in establishing a strategic plan is the same for any enterprise, including the Department of Energy (DOE), commercial nuclear plants, the Department of Defense (DOD), or large industrial complexes. The principles and techniques presented are used world wide by some of the largest corporations. The authors used industry knowledge and the areas of their current employment to illustrate and provide examples. Developing a strategic configuration and information management plan for DOE Idaho Field Office (DOE-ID) facilities is discussed in this paper. A good knowledge of CM principles is the key to successful strategic planning. This paper will describe and define CM elements and discuss how CM integrates the facility's physical configuration, design basis, and documentation. The strategic plan does not need the support of a computer aided software engineering (CASE) tool. However, the use of the CASE tool provides a methodology for consistency in approach, graphics, and database capability combined to form an encyclopedia and a method of presentation that is easily understood and aids the process of reengineering. CASE tools have much more capability than those stated above. Some examples are supporting a joint application development group (JAD) to prepare a software functional specification document and, if necessary, provide the capability to automatically generate software application code. This paper briefly discusses characteristics and capabilities of two CASE tools that use different methodologies to generate similar deliverables. DOE

A MEASUREMENT AND EVALUATION PROCESS MODEL APPLIED TO SOFTWARE ENGINEERING ENVIRONMENTS [UM MODELO PARA O PROCESSO DE MEDICAO E AVALIACAO APLICADO EM AMBIENTES DE ENGENHARIA DE SOFTWARE]
Nilson SantAnna Apr. 1991 37 p In PORTUGESE
(INPE-5345-PUD/048) Avail: CASI HC A03/MF A01

In order to determine the software development processes, it is necessary to have available information about the processes models and the present technology. A possible way to do this is developing studies directed to project environments. These studies can be conducted based on measurement and evaluation mechanisms to capture useful information in order to improve the processes and products quality, increase the productivity and reduce the costs, among other goals. Concepts regarding software engineering area, as well as a model to measurement and evaluation mechanisms in such way that useful information about the processes models and the present technologies (methodologies and tools) can be collected in an organized form. FABRICATION OF AlGaAs/GaAs-LIGHT-EMITTING DEVICES BY SELECTIVE MOCVD USING DIALKYLMETALCHLORIDE **c33**
Koichi Yamaguchi, Shigeki Kishida, and Kotaro Okamoto *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 1-8 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

AlGaAs/GaAs-light-emitting devices were fabricated by selective metalorganic chemical vapor deposition (MOCVD) using dialkylmetalchloride. Polycrystal deposition was effectively suppressed on SiO2-mask surfaces even under atmospheric-pressure conditions. Ridged layers grown on side surfaces provided lateral current confinement and reduced edge leakage. As the results, stable light emission from the selective epitaxial layers was observed by current injection. It was found that it is a useful growth technique for application to integrated optical devices. Author (revised)

We have been taking charge of the basic laboratory experiment in Department of Electronics Engineering of UEC and have been performing the maintenance and development of laboratory equipment. We have been taking up the various problems and have been improving the system of laboratory experiments. We are thinking basically as follows. As we provided the environment where students can conduct an experiment freely, they may study methods and skills of engineering according to the plan which he makes by himself. To realize this laboratory system, we have produced the careful selection of subjects, and the increase and improvement of laboratory equipment. We have completed the laboratory system where each student can obtain equipment for the experiment of electronic circuits. Now, we are opening the laboratory of the problem solving method. The faculty provides problems about the subjects, among which a student can choose some and solves them by conducting his experiment without a time limit. This paper describes how the laboratory of electronic circuit has been constructed, changed, and maintained. Author (revised)

ON THE CONSTRUCTION AND DECODING OF HYPERELLIPTIC CODES
Masazumi Kurihara *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 21-28 (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

Methods of construction and decoding of algebraic geometric codes from hyperelliptic curves are presented. The decoding is able to correct up to ((d*-1)/2) errors and the complexity is O(n(sup 2)), where d* is the designed distance of the code and n is the code length. We decompose t errors into some double errors, where t is less than or equal to ((d*-1)/2). We can treat their errors as ordinary double errors and in parallel.

COMPUTATIONAL RUSSIAN MORPHOLOGICAL GENERATION ON PROLOG: NOUN, PRONOUN, AND ADJECTIVE
Tetsuya Okamoto, Kayoko Yamamoto, and Yasuo Urai *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 29-38 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

An experimental Russian morphological generator on Prolog was outlined. The generator produces all Russian inflected forms, including allomorphs, with their accents. Word dictionary and morphological rewriting rules were defined based on Zaliznyak's theory as well as on school grammars. This word-form generating system was tested on 10,000 words (lexemes) from Karamzin's works. The noun, adjective and pronoun component of the system was described.

DESIGNING AND GENERATING A GUI MODULE USING GUI
Keita Oosima and Mituo Kobayasi *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 39-47 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

Programming of GUI (Graphical User Interface) of an application program is not so easy, that a typical GUI is constructed from ready-made GUI modules. However, a ready-made GUI module often does not fit an application. The authors propose a method of making a GUI module by means of GUI. Based on the method a software tool for designing and generating a GUI module is implemented on the X Window System. Experiments show that the system is useful to get an expected GUI module with ease.

STUDY OF COMPUTER SYSTEM AS A MUSICAL INSTRUMENT
Daisuke Sugitani and Yoshimitu Takasawa *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 59-68 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

A Computer Music System has become very popular to the people in Japan. But they mostly use it only as something like a recording machine. In music, live performance is the most exciting and important. Why don't people make use of the system in live music ? The main reason is that the system can't respond to our instruction in real time. A new computer music player which follows a human sense through a mouse (input device) is presented. As a result of experiments, our system could play music with human musicians and we found new meanings of the MIDI (Musical Instruments Digital Interface) data.

ANALYSIS OF FUNDAMENTAL FREQUENCY PATTERN IN SPEECH **c32**
Takeshi Okudera and Yoshimitsu Takasawa *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 69-78 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

The fundamental frequency pattern is varied in speech. For example, when we speak angrily, the fundamental frequency is high, and the intonation comes to be deep. Is there a rule about the pattern and speech? The way to analyze the fundamental frequency pattern at an accent part with 2 intervals is suggested. Each interval is the ratio of 2 values of fundamental frequency per Japanese pattern with only 2 parameters. Then, in the experiment, we found out a rule when the pattern was varied in speech.

RECONSIDERATION OF THE AUTONOMOUS VIEW OF LANGUAGE **c32**
Eijiro Tsuboi *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 79-96 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A03/MF A02

This paper aims to provide a critical examination of the autonomous view of language espoused in current generative grammar that attributes modular status to the faculty of language which is itself taken to comprise autonomous modular components. Several pieces of supposed evidence for the autonomous thesis are discussed, along with some other related topics, and shown to be critically flawed. It is suggested in conclusion that the status of language as a product of the processes of natural selection and syntacticization should be given more recognition in order to obtain a more realistic and integrating framework for natural language.

HEIDEGGER'S THINKING **c53**
Ichiro Akanuma *In its* Bulletin of the University of Electro-Communications, Volume 6, No. 1, Serial No. 11 Jun. 1993 p 97-10 In JAPANESE (For primary document see N94-13432 02-61)
Avail: CASI HC A02/MF A02

In Heidegger's 'Was heist Denken? (= What is called thinking?)', we meet with a shocking statement 'Die Wissenschaft denkt nicht (= Science does not think.)'. Considering what he truly means by these words, I would like to pursue his way of thinking and his ultimate aim in philosophy. In his lecture 'Gelassenheit (releasement)' given at his home town, Heidegger emphasizes the importance of 'Besinnung (meditative thinking)' in contrast with the overwhelming thinking of today, that is, 'das rechnende Denken (calculative thinking)'. This 'meditative thinking' is what Heidegger has in mind when he says 'science does not think.' I want to reflect upon the way of our life in the age of science and technology through listening to his speech carefully.

SOFTWARE DESIGN BY REUSING ARCHITECTURES
Sanjay Bhansali and H. Penny Nii Jul. 1992 11 p Revised
(Contract NCC2-7491)
(NASA-CR-194151; NAS 1.26:194151; KSL-92-38) Avail: CASI HC A03/MF A01

Abstraction fosters reuse by providing a class of artifacts that can be instantiated or customized to produce a set of artifacts meeting different specific requirements. It is proposed that significant leverage can be obtained by abstracting software system designs and the design process. The result of such an abstraction is a generic architecture and a set of knowledge-based, customization tools that can be used to instantiate the generic architecture. An approach for designing software systems based on the above idea are described. The approach is illustrated through an implemented example, and the advantages and limitations of the approach are discussed.

ANALYSIS AND EFFECTS OF THE NUMBER OF NESTS OF DO LOOPS DURING VECTOR SUPERCOMPUTING [BEKUTORU KEISANKI NIOKERU TAJUU DO RUPU NO KOUSO KU SHORI KOUKA TO SONO KAISEKII]

Masahiro Yoshida Apr. 1992 29 p In JAPANESE
(NAL-TR-1146; JTN-93-80499) Avail: CASI HC A03/MF A01

This paper investigates the efficiency of a programming technique which reduces the number of nests of DO loops to obtain longer vector lengths and higher vectorization ratios in vector supercomputers. The technique is applied to a three dimensional Navier-Stokes code, LANS-3D, and run on a Fujitsu VP-400. Scalar and vector processing times of the original and modified DO loops are compared and analyzed. In addition, a criterion is proposed to determine the technique's effective applicability from using quantitative characteristics of the DO loops. Author (NASDA)

RAPID INTELLIGENT INSPECTION PROCESS DEFINITION FOR DIMENSIONAL MEASUREMENT IN ADVANCED MANUFACTURING

C. W. Brown Mar. 1993 8 p Presented at the Advanced Technology Program Proposal Meeting, Arlington, TX, 19 Mar. 1993
(Contract DE-AC04-76DP-00613)
(DE93-011271; KCP-613-5172; CONF-9303165-1) Avail: CASI HC A02/MF A01

The Rapid Intelligent Inspection Process Definition (RIIPD) project is an industry-led effort to advance computer integrated manufacturing (CIM) systems for the creation and modification of inspection process definitions. The RIIPD project will define, design, develop, and demonstrate an automated tool (i.e., software) to generate inspection process plans and coordinate measuring machine (CMM) inspection programs, as well as produce support information for the dimensional measurement of piece parts. The goal of this project is to make the inspection and part verification function, specifically CMM measurements, a more effective production support tool by reducing inspection process definition flowtime, creating consistent and standard inspections, increasing confidence of measurement results, and capturing inspection expertise. This objective is accomplished through importing STEP geometry definitions, applying solid modeling, incorporating explicit tolerance representations, establishing dimensional inspection, techniques, embedding artificial intelligence techniques, and adhering to the Dimensional Measuring Interface Standard (DMIS) national standard. ON THE OCCUR-CHECK FREE PROLOG PROGRAMS

Krzysztof R. Apt (Amsterdam Univ., Netherlands.) and Alessandro Pellegrini (Padua Univ., Italy.) Oct. 1992 39 p
(CWI-CS-R9238; ETN-93-94164) Copyright Avail: CASI HC A03/MF A01

In most PROLOG implementations for the efficiency reasons, the so called check is omitted from the unification algorithm. Natural syntactic conditions which allow the occur-check to be safely omitted are presented. The established results apply to most well known PROLOG programs, including those that use difference-lists, and seem to explain why this omission does not lead in practice to any complications. When applying these results to general programs, their usefulness for proving absence of floundering is shown. A program transformation is proposed which transforms every program into a program for which only the calls to the built-in unification predicate need to be resolved by a unification algorithm with the occur-check. ROBOT PROGRAMMING, NATURAL COMPUTATION AND CONCEPTUAL GRAPHS M.S. Thesis

Alex Kapitanovsky May 1990 173 p
(ITN-93-85193) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

A method is developed for robot program synthesis. Currently, the programming of a robot task is one of the major hurdles of robot application. The automation of robot program synthesis will ease industrial application of robots. In order to develop a support system for robot programming, it is proposed to consider the natural information processing by humans during synthesis and interpretation of robotic programs and then to construct an approximate conceptual model of the dynamically changing real world which is involved. Such a model must be suitable (i.e., representable and executable) for efficient computer processing. This approach enables the proposed system to provide a means for automated (knowledge guided) conversion of a user's request, expressed in a natural language, to the appropriate conceptual model of the required task. This model incorporates the information necessary for understanding, planning, and sensory-guided performance of the required robotic task. In Part A, the overall framework of the system is defined, together with the first phase of an assembly program synthesis: request specification, planning of the valid assembly sequences and determination of the required sources. Part B concerns the final phase of a robot program synthesis and its interpretation in changing conditions. A case study is presented, to illustrate this approach on the large family of multi-axisymmetric components. Author (ISA)

PROGRAMMING THE MULTIMODAL INTERFACE

E. P. Glinert and M. M. Blattner 10 Sep. 1992 8 p Presented at the INTERCHI 1993 Interact and Computation Human Interaction, Amsterdam, Netherlands, 24-29 Apr. 1993
(Contract W-7405-eng-48)
(DE93-013084; UCRL-JC-112195; CONF-9304147-1) Avail: CASI HC A02/MF A01

Fundamental problems will confront those who wish to take full advantage of the power of tomorrow's multimodal environments. We argue that our recently introduced concept of meta-widget, when embedded within a high level, networked user interface server, can support the effective implementation of complex multimedia applications. We develop algorithms which enable a multimodal system to select the 'best' combination of representations for the various 'information packets' in a display at any moment. If no acceptable - combination of available representations can be found, strategies are provided for creating a new and useful, if not beautiful, representation to resolve the impasse. A running example is provided to motivate and clarify the discussion. DOE

FORMALLY BIORTHOGONAL POLYNOMIALS AND A LOOK-AHEAD LEVINSON ALGORITHM FOR GENERAL TOEPLITZ SYSTEMS

Roland W. Freund (Bell Telephone Labs., Inc., Murray Hill, NJ.) and Hongyuan Zha (Pennsylvania State Univ., University Park.) Sep. 1992 41 p Revised Submitted for publication
(Contracts NCC2-387; DAAL03-90-G-0105)
(NASA-CR-194297; NAS 1.26:194297; RIACS-TR-91-27) Avail: CASI HC A03/MF A01

Systems of linear equations with Toeplitz coefficient matrices arise in many important applications. The classical Levinson algorithm computes solutions of Toeplitz systems with only O(n(sub 2)) arithmetic operations, as compared to O(n(sub 3)) operations that are needed for solving general linear systems. However, the Levinson algorithm in its original form requires that all leading principal submatrices are nonsingular. An extension of the Levinson algorithm to general Toeplitz systems is presented. The algorithm

uses look-ahead to skip over exactly singular, as well as ill-conditioned leading submatrices, and, at the same time, it still fully exploits the Toeplitz structure. In our derivation of this algorithm, we make use of the intimate connection of Toeplitz matrices with formally biorthogonal polynomials.

SPECIMEN FILES IN VAMAS STANDARD DATA TRANSFER FORMAT (EXAMPLE 1.TXT TO EXAMPLE 4.TXT)
M. P. Seah and W. A. Dench Mar. 1993 20 p
(NPL-DMM(A)-90; ETN-93-94462) Copyright Avail: National Physical Laboratory, Teddington, Middlesex TW11 0W, United Kingdom HC

So that data may be transferred from institute to institute or from computer to computer, the VAMAS standard data transfer format was established. The VAMAS Format may be used for both exporting and importing data. To assist those writing the imported data software, four examples of files in the Format, which may then be read and manipulated by such software, are provided. If the files are correctly read, many of the basic functions of the reading program will have been tested. Four files are provided on IBM PC readable diskettes in the VAMAS Format, representative of different aspects of the use of the Format. The textual labels and the values of parameters in these examples have no particular significance and do not indicate the approval or support of any particular manufacturer or that any particular instrument can produce the data or conditions recorded in the files. All four examples are purely synthetic. The annotation of these files is given in the annex. ESA

THE 8TH WORKSHOP ON THE MATHEMATICAL FOUNDATIONS OF PROGRAMMING SEMANTICS Progress Report, 1 Apr. 1992 - 31 Mar. 1993
Michael W. Mislove 31 Mar. 1993 4 p Workshop held in Oxford, England, 6-10 Apr. 1992
(Contract N00014-92-J-1480)
(AD-A266436) Avail: CASI HC A01/MF A01

This grant provided support for the Eighth Workshop on the Mathematical Foundations of Programming Semantics, held at the University of Oxford from 6-10 April 1992. The Workshop attracted 101 participants from 13 countries including the United States. Twenty-nine of the participants were graduate students. There were six invited hour talks, and 38 contributed 30-minute talks. These talks ranged from talks on abstract mathematical topics such as topology and category theory, to work on the mathematical foundations underlying semantics issues, to applications of such theories to the semantics of various high-level programming languages. There were two Special Sessions at the Workshop. The first was organized by J.M. Woodcock (Oxford) on Formal Methods and featured a talk by Cliff Jones (Manchester). The second special session was on Linear Logic. It was organized by Samson Abramsky (Imperial College) and featured an address by J.-Y. Girard (Paris), as well as talks by Jean-Marc Andreoli (Muenchen) and Philip Scott (Edinburgh and Ottawa). DTIC

MATHEMATICAL ALGORITHMS FOR MULTIDIMENSIONAL INVERSE SCATTERING PROBLEMS IN INHOMOGENEOUS MEDIUM
Michael V. Klibanov 1992 133 p
(Contract N00014-92-J-1008)
(AD-A266440) Avail: CASI HC A07/MF A02

Multidimensional inverse scattering problems (ISP) in inhomogeneous media have important and extensive applications in many areas of interest to the Navy. Among them are ocean acoustics, electromagnetic properties of sea ice, oceanic biology, and non-invasive testing of some materials, including semiconductors. From mathematical point of view the numerical methods must be based on robust and efficient mathematical algorithms. The development of such algorithms with rapid convergence rates is a challenging task in the theory of multidimensional ISP. In fact, ISP's represent an alternative to the conventional X-ray tomography. The major difficulty of the ISP's is that waves propagate in different (unknown) directions rather than just along straight lines, as it is in the case with X-ray tomography. Thus another term for ISP's is diffusion tomography. We have been working on theoretical studies and computational testing of numerical methods for Inverse Scattering Problems (ISP). Our main efforts have been concentrated on 3-Dimensional ISP. A more minor effort was devoted to 1-D phaseless ISP, that is ISP without phase information. DTIC

A DATA DISTRIBUTED PARALLEL ALGORITHM FOR RAY-TRACED VOLUME RENDERING Final Report
Kwan-Liu Ma, James S. Painter (Utah Univ., Salt Lake City.), Charles D. Hansen (Los Alamos National Lab., NM.), and Michael F. Krogh (Los Alamos National Lab., NM.) Washington Aug. 1993 32 p Submitted for publication Sponsored in part by NSF
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-191520; NAS 1.26:191520; ICASE-93-59) Avail: CASI HC A03/MF A01

This paper presents a divide-and-conquer ray-traced volume rendering algorithm and a parallel image compositing method, along with their implementation and performance on the Connection Machine CM-5, and networked workstations. This algorithm distributes both the data and the computations to individual processing units to achieve fast, high-quality rendering of high-resolution data. The volume data, once distributed, is left intact. The processing nodes perform local ray tracing of their subvolume concurrently. No communication between processing units is needed during this locally ray-tracing process. A subimage is generated by each processing unit and the final image is obtained by compositing subimages in the proper order, which can be determined a priori. Test results on both the CM-5 and a group of networked workstations demonstrate the practicality of our rendering algorithm and compositing method. Derived from text

FAIL-SAFE PVM: A PORTABLE PACKAGE FOR DISTRIBUTED PROGRAMMING WITH TRANSPARENT RECOVERY
Juan Leon, Allan L. Fisher, and Peter Steenkiste Feb. 1993 25 p
(Contract MDA972-90-C-0035; ARPA Order 7330)
(AD-A266594; CMU-CS-93-124) Avail: CASI HC A03/MF A01

Through fail-safe PVM we seek to explore fault tolerance for distributed computation from a practical perspective. The fail-safety features are considered to be add-ons to an existing model from distributed computing, VIZ PVM in the prototype. We desire the following from the add-ons, with respect to the base model: (1) Application independence. Fail-safety is provided for arbitrary model programs; (2) Application transparency. Failures are invisible to applications that do not bypass the model; (3) Compatibility. The interfaces presented by the model and the modified model are compatible; (4) External to operating system. The implementation requires only the standard OS interface. This makes it portable, which in turn facilitates heterogeneity and the constitution of systems containing many machines from different administrative domains; (5) Minimal overhead. Minimize overhead during regular execution; and (6) Practicality. The whole system is considered. In particular, the existence of distributed stable storage is not assumed. DTIC

EVENT-DRIVEN SIMULATION IN SELMON: AN OVERVIEW OF EDSE
Nicolas F. Rouquette, Steve A. Chien, and Leonard Charest, Jr. Aug. 1992 19 p
(Contract NAS7-918)
(NASA-CR-194505; JPL-Publ-92-23; NAS 1.26:194505) Avail: CASI HC A03/MF A01

EDSE (event-driven simulation engine), a model-based event-driven simulator implemented for SELMON, a tool for sensor selection and anomaly detection in real-time monitoring is described. The simulator is used in

conjunction with a causal model to predict future behavior of the model from observed data. The behavior of the causal model is interpreted as equivalent to the behavior of the physical system being modeled. An overview of the functionality of the simulator and the model-based event-driven simulation paradigm on which it is based is provided. Included are high-level descriptions of the following key properties: event consumption and event creation, iterative simulation, synchronization and filtering of monitoring data from the physical system. Finally, how EDSE stands with respect to the relevant open issues of discrete-event and model-based simulation is discussed. Author (revised)

EXPLOITING STRUCTURE: INTRODUCTION AND MOTIVATION

Semiannual Status Report, 1 Mar. - 31 Aug. 1993

Zhong Ling Xu 3 Sep. 1993 10 p

(Grant NAG5-2210)

(NASA-CR-194199; NAS 1.26:194199) Avail: CASI HC A02/MF A01

Research activities performed during the period of 29 June 1993 through 31 Aug. 1993 are summarized. The Robust Stability of Systems where transfer function or characteristic polynomial are multilinear affine functions of parameters of interest in two directions, Algorithmic and Theoretical, was developed. In the algorithmic direction, a new approach that reduces the computational burden of checking the robust stability of the system with multilinear uncertainty is found. This technique is called 'Stability by linear process.' In fact, the 'Stability by linear process' described gives an algorithm. In analysis, we obtained a robustness criterion for the family of polynomials with coefficients of multilinear affine function in the coefficient space and obtained the result for the robust stability of diamond families of polynomials with complex coefficients also. We obtained the limited results for SPR design and we provide a framework for solving ACS. Finally, copies of the outline of our results are provided in the appendix. Also, there is an administration issue in the appendix. Author (revised)

VMEC30 PROGRAMMING LIBRARY: REFERENCE MANUAL

Hugh A. Parliament Apr. 1992 52 p

(DSIS-93-00350; CTN-93-60756) Avail: CASI HC A04

The library routines available to programmers developing software for the VMEC30 board in the Adaptive Signal Processing Testbed are described. The various routines are grouped into the following categories: general digital signal processing (DSP) functions, including Fourier transform calculations, power spectrum estimation, and filter calculations; routines available for performing DSP functions on the VMEC30 board or any other TMS320C30 based processing board; VMEC30 executive functions such as memory allocation, initialization, device driver interfaces, interrupt handling, interprocessor communications, and format conversion; and VMEC30 host/interface functions including downloading code, starting programs, resetting the VMEC30, and performing data table and command processing functions. USRA/RIACS Final Report, 1 Jul. - 31 Dec. 1992

Joseph Oliger 1992 27 p

(Contract NCC2-387)

(NASA-CR-194334; NAS 1.26:194334) Avail: CASI HC A03/MF A01

The Research Institute for Advanced Computer Science (RIACS) was established by the Universities Space Research Association (USRA) at the NASA Ames Research Center (ARC) on 6 June 1983. RIACS is privately operated by USRA, a consortium of universities with research programs in the aerospace sciences, under a cooperative agreement with NASA. The primary mission of RIACS is to provide research and expertise in computer science and scientific computing to support the scientific missions of NASA ARC. The research carried out at RIACS must change its emphasis from year to year in response to NASA ARC's changing needs and technological opportunities. A flexible scientific staff is provided through a university faculty visitor program, a post doctoral program, and a student visitor program. Not only does this provide appropriate expertise but it also introduces scientists outside of NASA to NASA problems. A small group of core RIACS staff provides continuity and interacts with an ARC technical monitor and scientific advisory group to determine the RIACS mission. RIACS activities are reviewed and monitored by a USRA advisory council and ARC technical monitor. Research at RIACS is currently being done in the following areas: Parallel Computing; Advanced Methods for Scientific Computing; Learning Systems; High Performance Networks and Technology; Graphics, Visualization, and Virtual Environments. VMEC30 SOFTWARE DEVELOPMENT: TUTORIAL MANUAL

Hugh A. Parliament Sep. 1992 138 p

(DSIS-93-00351; CTN-93-60757) Avail: CASI HC A07

The VMEC30 board is a VME bus based processing board based on the TMS320C30 Digital Signal Processor. A self-contained and self-paced course is presented for learning how to develop software for the VMEC30 board. The tutorial starts with an overview of the VMEC30 hardware, including a memory map of the board and some important registers. The areas of memory that are usable for programs are outlined. The host utilities available for communicating with the VMEC30 monitor are reviewed,

with some information on the monitor commands as well as an example of downloading and running code. The Texas Instruments development tools are then described, detailing the compile/link procedure for software and the use of the simulator. An overview of the VMEC30 library routines available for use is presented, followed by a section on simple programming examples. Helpful hints and programming tips for developing software on the board are included. Author (CISTI)

DEMONSTRATION AND ACCEPTANCE TEST PLAN FOR REAL-TIME EXCISION SOFTWARE ON THE ADAPTIVE SIGNAL PROCESSING TESTBED
Hugh A. Parliament 20 Mar. 1992 9 p
(Contract DREO-W7714-0-9504)
(DSIS-93-00275; CTN-93-60813) Avail: CASI HC A02

The functions to be demonstrated for the acceptance test for the real-time excision software component on the Adaptive Signal Processing Testbed are described. A script outlines the steps to be performed in the demonstration and describes the expected results. A check list is included which indicates which sections were performed successfully and accepted. The operations to be demonstrated are the continuous acquisition mode with power spectrum estimation, the real-time excision software, and the off-line despreading and bit error rate determination software for post-run analysis of the excision system. Formal Description Techniques (FDT) were developed to assist in the design of complex computing systems. These techniques lead to rigorous validation approaches. The design and validation of distributed computing systems, in particular, that of communicating systems, are presented. Validation concerns the process of checking whether a system implementation conforms to the system's specification. In the framework of a design without within FDT, a homogeneous validation approach, which unified two approaches up to now distinguished, is proposed: verification and conformance testing. The use of a single conformance definition merges the advantages of both approaches: verification's discriminating power resulting from the internal knowledge of the system and conformance testing's generality which can be applied to any implementation. Validation is enhanced by a design assessment based on testability analysis. This consists of investigating testability for each component of a system whose global behavior specification results from the interconnection of several components. The proposed approach considers in the same way either standard testability criteria, or testability analysis of systems that are partially or totally controllable and observable. ESA

THREE, FOUR, FIVE, SIX OR THE COMPLEXITY OF SCHEDULING WITH COMMUNICATION DELAYS
J. A. Hoogeveen (Princeton Univ., NJ.), J. Lenstra (Technische Univ., Eindhoven, Netherlands.), and B. Veltman Oct. 1992 11 p
(CWI-BS-R9229; ETN-93-94160) Copyright Avail: CASI HC A03/MF A01

A set of unit-time jobs has to be processed on identical parallel machines subject to precedence constraints and unit-time communication delays; does there exist a schedule of length at most L? The problem has two variants, depending on whether the number of machines is restrictively small or not. For the first variant, the question can be answered in polynomial time for $L = 3$ and is NP complete for $L = 4$. The second variant is solvable in polynomial for $L = 5$ and NP complete for $L = 6$. As a consequence, neither of these problems has a polynomial approximation scheme, unless $P = NP$. ESA

MATHEMATICAL OPTIMIZATION: A TOOL FOR AIRCRAFT DESIGN
J. Krammer and O. Sensburg 24 Jul. 1992 14 p Presented at DGLR-Jahrestagung 1992, Bremen, Germany, 29 Sep. - 2 Oct. 1992
(MBB-LME-251-S-PUB-0492; ETN-93-94198) Copyright Avail: CASI HC A03/MF A01

Formal mathematical optimization methods developed for the structural design of aircraft are introduced. Together with reliable analysis programs like finite element methods they provide powerful tools for the structural design. They are efficient in at least two ways: producing designs that meet all specified requirements at minimum weight in one step; relieving the engineer from a time consuming search for modifications that give better results, they allow more creative design modifications. The practical architecture of multidisciplinary design optimization software is discussed. In the case of structural design this is based on three concepts: a structural model, an optimzation algorithm and an optimization model. A powerful optimization code called MBB-LAGRANGE which uses mathematical programming methods to fulfill different constraints simultaneously was developed. Some examples depicting the successful application of the MBB-LAGRANGE code are presented. Results of other optimization codes are also shown. ESA

CMAPP USER'S MANUAL, PART 2
J. C. Wallace and M. W. Chernuka Sep. 1990 42 p
(Contract DREA-W7707-0-0918/01-OSC)
(DSIS-93-00858-Pt-2; DREA-CR-90-442-Pt-2; CTN-93-60838) Avail: CASI HC A03

CMAPP (Composite Material Properties Prediction) is a menu-driven composite material analysis computer program capable of generating effective material properties for particulate, continuous fiber, and platelet composites. Constituent material properties can also be generated from composite properties. A collection of eight micromechanical material models has been incorporated into the CMAPP model library. A hierarchical arrangement of menus is used to guide the user through the process of defining various material parameters, entering all necessary material data, and storing or displaying the results. CMAPP will not only perform a single analysis, but will also perform analyses for a range of volume fractions. The latter option gives the user the ability to investigate the effect that a volume fraction change has on any desired material property. Continued development of CMAPP is expected. It will eventually be a comprehensive composite material property program that will deal with macro-mechanical as well as micro-mechanical properties and will calculate a wide range of material properties. VFGEN: A PARALLEL VOLUME FRACTION GENERATOR FOR HYDROCODES
A. L. Ames, A. C. Robinson, and T. L. Edwards 1993 10 p Presented at the Object-Oriented Numerics Conference, Sunriver, OR, 25-27 Apr. 1993
(Contract DE-AC04-76DP-00789)
(DE93-011673; SAND-93-0044C; CONF-9304114-3) Avail: CASI HC A02/MF A01

Mesh generation for hypervelocity impact calculations involves computing the portion of the volume of each cell in a grid filled by a solid object. We have developed a volume fraction generator that supports three-dimensional regular Cartesian grids. It executes on both serial and massively parallel computers, and uses a commercial solid modeler (ACIS) to accurately compute the volume fractions. The volume fraction generator, VFGEN, was developed using an object-oriented paradigm facilitated by the ACIS C++ solid modeler toolkit. Although the underlying problem is embarrassingly parallel, a number of geometric optimizations have been developed to improve speed on serial architectures. The relationship of these optimizations to performance of the algorithm on parallel machines is described. DOE

DETERMINATION OF POSITION AND ORIENTATION OF RIGID BODIES FROM IMAGE SEGMENTS [BESTEMMELSE AV STIVE LEGEMERS POSISJON OG ORIENTERING UT FRA SEGMENTERTE BILDER]
Mads Egil Henriksveen 11 May 1992 115 p In NORWEGIAN
(FFI-92-4005; ETN-93-94451) Avail: CASI HC A06/MF A02

Scene analysis is connected to image processing and pattern recognition, and can be defined as the determination of a scene description from image data. Examples are determination of types of objects and their position and orientation in the scene. A method for determining the position and orientation (pose) of rigid bodies based on image segments is described. The method takes two inputs: a segment representing the silhouette of the imaged object, whose pose is to be determined; and a geometric model of the object. An estimate of object pose is found by minimizing a deviation measure for the segment and a silhouette of the object described by the geometric model. Results from testing the method on synthetic and real image segments are presented. ESA

A DESIGN METHODOLOGY FOR PORTABLE SOFTWARE ON PARALLEL COMPUTERS Final Research Report
David M. Nicol, Keith W. Miller, and Dan A. Chrisman 9 Aug. 1993 59 p
(Grant NAG1-995)
(NASA-CR-194181; NAS 1.26:194181) Avail: CASI HC A04/MF A01

This final report for research that was supported by grant number NAG-1-995 documents our progress in addressing two difficulties in parallel programming. The first difficulty is developing software that will execute quickly on a parallel computer. The second difficulty is transporting software between dissimilar parallel computers. In general, we expect that more hardware-specific information will be included in software designs for parallel computers than in designs for sequential computers. This inclusion is an instance of portability being sacrificed for high performance. New parallel computers are being introduced frequently. Trying to keep one's software on the current high performance hardware, a software developer almost continually faces yet another expensive software transportation. The problem of the proposed research is to create a design methodology that helps designers to more precisely control both portability and hardware-specific programming details. The proposed research emphasizes programming for scientific applications. We completed our study of the parallelizability of a subsystem of the NASA Earth Radiation Budget Experiment (ERBE) data processing system. This work is summarized in section two. A more detailed description is provided in Appendix A ('Programming Practices to Support Eventual Parallelism'). Mr. Chrisman, a graduate student, wrote and successfully defended a Ph.D. dissertation proposal which describes our research associated with the issues of software portability and high performance. The list of research tasks are specified in the proposal. The proposal 'A Design Methodology for Portable Software on Parallel Computers' is summarized in section three and is provided in its entirety in Appendix B. We are currently studying a proposed subsystem of the NASA Clouds and the Earth's Radiant Energy System (CERES) data processing system. This software is the proof-of-concept for the Ph.D. dissertation. We have implemented and measured the performance of a portion of this subsystem on the Intel iPSC/2 parallel computer. These results are provided in section four. Our future work is summarized in section five, our acknowledgements are stated in section six, and references for published papers associated with NAG-1-995 are provided in section seven. (DE93-012639; LA-UR-93-1338; CONF-9304131-1) Avail: CASI HC A02/MF A01

The advent of high-performance computer systems has brought to maturity programming concepts like vectorization, multiprocessing, and multitasking. Although there are many schools of thought as to the most significant factor in obtaining order-of-magnitude increases in performance, such speedup can only be achieved by integrating the computer system, and application code. Vectorization leads to faster manipulation of arrays by overlapping instruction CPU cycles. Discrete ordinates codes, which

require the solving of large matrices, have proved to be major benefactors of vectorization. Monte Carlo transport, on the other hand, typically contains numerous logic statements and requires extensive redevelopment to benefit from vectorization. Multiprocessing and multitasking provide additional CPU cycles via multiple processors. Such systems are generally designed with either common memory access or distributed memory access. In both cases, theoretical speedup, as a function of the number of processors (P) and the fraction of task time that multiprocesses (f), can be formulated using Amdahl's Law S(f, P) = 1/(1 (minus) f + f /P). However, for most applications this theoretical limit cannot be achieved, due to additional terms not included in Amdahl's Law. Monte Carlo transport is a natural candidate for multiprocessing, since the particle tracks are generally independent, and the precision of the result increases as the square root of the number of particles tracked. DISCRETE EVENT SIMULATION USING OBJECT-ORIENTED PROGRAMMING: APPLICATION TO MANUFACTURING
H. Atabakhsh and A. W. Chan May 1992 39 p
(ERB-1037; NRC-33188; CTN-93-60821) Copyright Avail: CASI HC A03/MF A01

Discrete event simulation following the traditional approach of event scheduling has been implemented using the object oriented paradigm. Concepts and terminology in object oriented programming are reviewed and implications of using this paradigm for discrete event simulation are discussed. To illustrate the concepts, an example in the field of discrete parts manufacturing has been implemented in Smalltalk-80. The approach used is, however, generic and can be implemented in other object oriented programming environments and applied to other domains in discrete event simulation. A brief comparison is also made between this approach and the implementation of discrete event simulation based on the multiprocessing approach proposed by Goldberg and Robson (1989). Author (CISTI)

PC VIRUSES: HOW DO THEY DO THAT?
K. Pichnarczyk Jul. 1992 10 p Presented at the Workshop on Computer Security Incident Handling, Denver, CO, Aug. 1992
(Contract W-7405-eng-48)
(DE93-012581; UCRL-JC-111212; CONF-9208108-2) Avail: CASI HC A02/MF A01

The topic of PC Viruses has been an issue for a number of years now. They've been reported in major newspapers, tabloids, television, and radio. People from all fields get viruses: government, private sector businesses, home computers, schools, and computer software suppliers. A definition is proposed to introduce the virus phenomenon. Virus authors come from a variety of communities. Motives and ideologies of authors are discussed, and examples of viruses are offered. Also mentioned is the growing number of viruses developed, isolated, and never distributed to the public at large, but kept within the antivirus research community. Virus examples are offered as well. Viruses are distributed not only through bulletin boards and shareware, but also from areas previously assumed to be safe, including the threat of receiving a virus through a standard in-house function, such as an in-house hardware maintenance shop. Three categories of viruses are presented: File Infecter viruses, Boot Sector Infecters, and the new category of Directory Entry Infecter virus. Also discussed are crossover viruses, that is, viruses which utilize a variety of techniques to ensure survival. An explanation of what is occurring within every stage of various viruses is given. Replication strategies common to all three types are noted, mainly the two different replication strategies of memory resident infecters and active selection infecters. A detailed definition, description, and application of a stealth virus is presented. Detection strategies are discussed as each topic in this section is completed; a high level schemata of the operation of various virus detection programs ispresented. Since most eradication today is done using virus detection/eradication software, this paper attempts to reveal the techniques used by these packages. Included in the paper is the topic of manual eradication. DOE

INTEGRATING INTERFACE SLICING INTO SOFTWARE ENGINEERING PROCESSES

Jon Beck (West Virginia Univ., Morgantown.) 15 Aug. 1993 10 p
(Contract NCC9-16)
(NASA-CR-192761; NAS 1.26:192761) Avail: CASI HC A02/MF A01

Interface slicing is a tool which was developed to facilitate software engineering. As previously presented, it was described in terms of its techniques and mechanisms. The integration of interface slicing into specific software engineering activities is considered by discussing a number of potential applications of interface slicing. The applications discussed specifically address the problems, issues, or concerns raised in a previous project. Because a complete interface slicer is still under development, these applications must be phrased in future tenses. Nonetheless, the interface slicing techniques which were presented can be implemented using current compiler and static analysis technology. Whether implemented as a standalone tool or as a module in an integrated development or reverse engineering environment, they require analysis no more complex than that required for current system development environments. By contrast, conventional slicing is a methodology which, while showing much promise and intuitive appeal, has yet to be fully implemented in a production language environment despite 12 years of development. AN EFFICIENT PARALLEL ALGORITHM FOR MATRIX-VECTOR MULTIPLICATION

B. Hendrickson, R. Leland, and S. Plimpton Mar. 1993 21 p
(Contract DE-AC04-76DP-00789)
(DE93-015125; SAND-92-2765) Avail: CASI HC A03/MF A01

The multiplication of a vector by a matrix is the kernel computation of many algorithms in scientific computation. A fast parallel algorithm for this calculation is therefore necessary if one is to make full use of the new generation of parallel supercomputers. This paper presents a high performance, parallel matrix-vector multiplication algorithm that is particularly well suited to hypercube multiprocessors. For an n x n matrix on p processors, the communication cost of this algorithm is O(n/(radical)p + log(p)), independent of the matrix sparsity pattern. The performance of the algorithm is demonstrated by employing it as the kernel in the well-known NAS conjugate gradient benchmark, where a run time of 6.09 seconds was observed. This is the best published performance on this benchmark achieved to date using a massively parallel supercomputer. DOE

REVIEWS OF COMPUTING TECHNOLOGY: OBJECT-ORIENTED TECHNOLOGY

D. C. Skeen 1 Mar. 1993 56 p
(Contract DE-AC09-89SR-18035)
(DE93-014740; WSRC-IM-90-83-9) Avail: CASI HC A04/MF A01

A useful metaphor in introducing object-oriented concepts is the idea of a computer hardware manufacturer assembling products from an existing stock of electronic parts. In this analogy, think of the parts as pieces of computer software and of the finished products as computer applications. Like its counterpart, the object is capable of performing its specific function in a wide variety of different applications. The advantages to assembling hardware using a set of prebuilt parts are obvious. The design process is greatly simplified in this scenario, since the designer needs only to carry the design down to the chip level, rather than to the transistor level. As a result, the designer is free to develop a more reliable and feature rich product. Also, since the component parts are reused in several different products, the parts can be made more robust and subjected to more rigorous testing than would be economically feasible for a part used in only one piece of equipment. Additionally, maintenance on the resulting systems is simplified because of the part-level consistency from one type of equipment to another. The remainder of this document introduces the techniques used to develop objects, the benefits of the technology, outstanding issues that remain with the technology, industry direction for the technology, and the impact that object-oriented technology is likely to have on the organization. While going through this material, the reader will find it useful to remember the parts analogy and to keep in mind that the overall purpose of object-oriented technology is to create software parts and to construct applications using those parts. ON-LINE UPGRADE OF PROGRAM MODULES USING AdaPT Technical Report, 1 May 1990 - 31 Mar. 1993

Raymond S. Waldrop (Texas A&M Univ., College Station.), Richard A. Volz (Texas A&M Univ., College Station.), Gary W. Smith (Texas A&M Univ., College Station.), Stephen J. Goldsack (Imperial Coll. of Science and Technology, London, England.), and A. A. Holzbach-Valero (Imperial Coll. of Science and Technology, London, England.) 17 Jun. 1993 34 p
(Contract NCC9-16; RICIS Proj. SE-35)
(NASA-CR-194331; NAS 1.26:194331) Avail: CASI HC A03/MF A01

One purpose of our research is the investigation of the effectiveness and expressiveness of AdaPT, a set of language extensions to Ada 83, for distributed systems. As a part of that effort, we are now investigating the subject of replacing, e.g. upgrading, software modules while the software system remains in operation. The AdaPT language extensions provide a good basis for this investigation for several reasons: they include the concept of specific, self-contained program modules which can be manipulated; support for program configuration is included in the language; and although the discussion will be in terms of the AdaPT language, the AdaPT to Ada 83 conversion methodology being developed as another part of this project will provide a basis for the application of our findings to Ada 83 and Ada 9X systems. The purpose of this investigation is to explore the basic mechanisms of the replacement process. With this purpose in mind, we will avoid including issues whose presence would obscure these basic mechanisms by introducing additional, unrelated concerns. Thus, while replacement in the presence of real-time deadlines, heterogeneous systems, and unreliable networks is certainly a topic of interest, we will first gain an understanding of the basic processes in the absence of such concerns. The extension of the replacement process to more complex situations can be made later. A previous report established an overview of the module replacement problem, a taxonomy of the various aspects of the replacement process, and a solution to one case in the replacement taxonomy. This report provides solutions to additional cases in the replacement process taxonomy: replacement of partitions with state and replacement of nodes. The solutions presented here establish the basic principles for module replacement. Extension of these solutions to other more complicated cases in the replacement taxonomy is direct, though requiring substantial work beyond the available funding. Derived from text

A DESCRIPTION OF THE COMPUTER PROGRAM CALDK38 WHICH CONTROLS INSTRUMENTATION SET-UP AND DATA ACQUISITION DURING DEADWEIGHT CALIBRATION USING AN HBM DK 38 S6 DIGITAL MEASURING UNIT

C. W. MacKenzie Jul. 1993 147 p
(LTR-ST-1935; CTN-93-60862) Avail: Micromedia Ltd., Technical Information Centre, 165 Hotel de Ville, Place du Portage, Phase 2, Hull, Quebec J8X 3X2, Canada HC/MF

The calibration of force transducers, using deadweight machines to apply the force and electronic manually-read readout instruments to measure the transducer output, has been a tedious, time consuming task because of the more than 90 readings required for a typical calibration. High precision, computer controllable digital measuring systems can aid considerably in

this task. A description is presented of such a system (the DK 38 S6 by Hottinger Baldwin Messtechnik) and the computer code CALD38.BAS that was developed for it. CALD38.BAS is the main control and data acquisition program for performing a 3 run, 30 reading calibration. The measuring unit, computer hardware, and program modules are described with sufficient detail to allow a user to run the program and make minor programming modifications if required; however, a detailed calibration procedure or operations/reference manual is not provided. IMPLEMENTATION AND EXPERIMENTATION WITH A MOTION PLANNING SYSTEM M.S. Thesis
Amir Livne Jun. 1991 100 p
(ITN-93-85213) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

In the present work, a system was implemented and used experimentally for solving the general motion planning problem with two degrees of freedom. The algorithm on which the work is based can solve any motion planning problem with two degrees of freedom; it is both asymptotically efficient, with a slightly super-linear running time, and relatively simple. Experiments with the system have shown that in some, non-trivial cases, the actual running time is favorable. The theoretical background of the work is described, with details of the implementation and experimental results. Chapter 1 is an introduction to the thesis. Chapter 2 outlines the theoretical background of the motion planning problem with two degrees of freedom and the general solution. Chapter 3 describes the implementation of the system. The goals of the implementation, mainly that the system work for real-life inputs and that the system will be easy to expand, are discussed. The input, ouput and logic of the system are also described. Chapter 4 describes experimentation with the system. A few instances of the motion planning problem with two degrees of freedom that the system is able to solve are discussed and performance-related data are given. Chapter 5 is a manual for a would-be user who may wish to expand or modify the system. The architecture, interfaces, and data-structures of the system are explained. A number of possible expansions of the system are described. Finally, in Chapter 6, various outputs of the system are given.

ORGBUG: A WINDOWS-BASED COMBINATORIAL GEOMETRY DEBUGGER
T. J. Burns Jun. 1993 21 p
(Contract DE-AC05-84OR-21400)
(DE93-016640; ORNL/TM-12020) Avail: CASI HC A03/MF A01

ORGBUG is the second half of a two part graphical display and debugging system for combinatorial geometry. The first part of the system consists of a 'view' generator, CGVIEW. ORGBUG itself is a Microsoft Windows-based application designed to run on a 386 personal computer and to display the 'view' produced by CGVIEW as an aid to debugging. ORGBUG also includes specific tools to facilitate the identification of geometric features which are inconsistent or in error. DOE

AN OVERVIEW OF PARALLEL SCIENTIFIC VISUALIZATION
S. Whitman Apr. 1993 12 p Presented at the 1st Bilkent Computer Graphics Conference: Advanced Techniques in Animation, Rendering, and Visualization, Ankara, Turkey, 12-14 Jul. 1993
(Contract W-7405-eng-48)
(DE93-017105; UCRL-JC-113690; CONF-9307104-1) Avail: CASI HC A03/MF A01

In this document, the usage of high performance computers (SIMD, MIMD, and vector) for scientific visualization is discussed. Various institutions and companies are investigating how to best utilize supercomputers and massively parallel processors for visualizing scientific data. Approaches which have been taken include the use of visualization servers, parallelizing existing commercial scientific visualization packages, and custom solutions utilizing various high performance computers. A synopsis of some recent approaches is included, and a brief analysis as to the applicability of the various efforts is offered. DOE

(DE93-015651; SAND-93-1386C; CONF-9306195-1) Avail: CASI HC A03/MF A01

The advent of sophisticated automation equipment and computer hardware and software is changing the way manufacturing is performed. To compete in the global marketplace, manufacturing companies must integrate these new technologies into their factories. In addition, they must integrate the planning, control, and data management methodologies needed to make effective use of these technologies. This paper provides an overview of recent approaches to achieving this enterprise integration. It then describes, using simulation as a particular example, a new tool's perspective of enterprise integration. DOE

PARADIGMS FOR VERY FAST PARALLEL ALGORITHMS Ph.D. Thesis
Omer Berkman 1 Aug. 1989 116 p
(ITN-93-85212) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Unusually fast parallel algorithms are presented for several problems. All use abstract parallel computation models which are members of the parallel random access machine (PRAM) family. All the algorithms have a linear time-processor product and are, therefore, optimal. Merging and prefix-minima problems run in triply-logarithmic time. It is shown that, by using the fast algorithms for merging, two sorted arrays of numbers in the domain (1...s) can be merged in O(log log log s) time using an optimal number of processors and O(ns(exp epsilon)) space. An algorithm is given for the prefix-minima problem, which runs in O(log log log s) time, using an optimal number of processors and O(ns(exp epsilon)) space on a Priority CRCW PRAM. These new algorithms for merging and prefix-minima suggest that the current lower bounds for minimum and merging are not satisfactory and that future research should try to consider the domain of the input. Problems which run in log-star time include the level-ancestor and the prefix-minima problems. A class of algorithms was developed which run in Inverse-Ackerman time, O(alpha(n)) time, in which alpha(n) is the inverse of the extremely slow-growing Ackerman's function. These algorithms are enabled to run by means of the recursive star-tree parallel data structure. Star-tree applications include the Lowest-Common Ancestor, the Parentheses Matching and the Inverse-Ackerman Time Reducibilities problems. On the CRCW-bit PRAM, a non-standard PRAM version, the above three problems which require Inverse-Ackerman running time can be solved in constant time using n processors or in other words are fully-parallelizable. INTEGRATING PAW, A GRAPHICAL ANALYSIS INTERFACE TO SYBASE
A. Fry and I. Chow Apr. 1993 10 p Presented at the 5th Annual International Industrial Symposium on the Super Collider and Exhibition, San Francisco, CA, 6-8 May 1993
(Contract DE-AC35-89ER-40486)
(DE93-014172; SSCL-Preprint-218; CONF-930537-35) Avail: CASI HC A02/MF A01

The program PAW (Physics Analysis Workstation) enjoys tremendous

popularity within the high energy physics community. It is implemented on a large number of platforms and is available to the high energy physics community free of charge from the CERN computing division. PAW combines extensive graphical display capability (HPLOT/HIGZ), with histogramming (HBOOK4), file and data handling (ZEBRA), vector arithmetic manipulation (SIGMA), user defined functions (COMIS), powerful function minimization (MINUIT), and a command interpreter (KUIP). To facilitate the possibility of using relational databases in physics analysis, we have added an SQL interface to PAW. This interface allows users to create PAW N-tuples from Sybase tables and vice versa. We discuss the implementations below. DOE

SWITCHOVER SOFTWARE RELIABILITY ESTIMATE FOR PADUCAH FREEZER/SUBLIMER COMPUTER SYSTEMS
D. M. Flanagan and J. N. Davis Apr. 1993 74 p
(Contract DE-AC05-84OR-21400)
(DE93-013844; ORNL/TM-12234) Avail: CASI HC A04/MF A01

The K-25 Engineering Division purchased a series of redundant computer systems and developed software for the purpose of providing continuous process monitoring and control for the Freezer/Sublimer equipment in the gaseous diffusion process at the Paducah Gaseous Diffusion Plant. The application software is loaded on two central processing units (CPU) so that in the event of the failure of the primary unit, the processing can switch to the backup unit and continue processing without error. It is the purpose of this document to demonstrate the reliability of this system with respect to its ability to switch properly between redundant CPUs. The total reliability estimation problem--which considers the computer hardware, the operating system software, and the application software--has been reduced to one that considers only the application software directly involved in the switchover process. Estimates are provided for software reliability and the testing coverage. Software and hardware reliability models and reliability growth models are considered in addition to Bayesian approaches. ON THE SOLUTION OF A CLASS OF GRAPH PROBLEMS BY PARALLEL ALGORITHMS Ph.D. Thesis - Toulouse Univ. [CONTRIBUTION A LA RESOLUTION DE PROBLEMES D'OPTIMISATION DANS LES GRAPHES PAR DES ALGORITHMES PARALLELES]
Thierry Gayraud 1992 150 p In FRENCH
(LAAS-92514; ETN-93-94362) Avail: CASI HC A07/MF A02

Basic concepts on models of parallel computation and parallel computers are examined. The two parallel computers used for experiments are described: Sequent Balance machine (10 processors shared memory MIMD computer) and T-Node machine (32 processor distributed memory MIMD commuter). The parallel algorithms proposed to solve three graph problems are considered. The first problem is all-pairs shortest path problem. Two parallel algorithms are designed. The first one based on Floyd-Warshall sequential algorithm uses data partitioning. The second one based on Dijkstra algorithm uses a Fibonacci heap data structure in order to reduce algorithm complexity. Implementations on the two kinds of parallel computers are described. The second problem is the minimum spanning tree problelm. Two parallel algorithms are designed. They use a graph decomposition technique with overlapping and it is proved that the global solution is included into the unions of local solutions. One is based on Krustkal algorithm, the other on Prim algorithm and Fibonacci heap and their experimental results are discussed. The third problem is the Steiner minimum tree problem which is a NP-Complete problem. Only heuristics can be used to solve large instances. A new class of sequential and parallel heuristics based on shortest path techniques is proposed. The complexity of these heuristics was reduced by using Fibonacci heaps and the speed up of the parallel heuristics is almost linear. ESA

VERIFICATION OF CRITICAL SOFTWARE BY STATISTICAL TESTING Ph.D. Thesis - Toulouse Univ. [VERIFICATION DE LOGICIELS CRITIQUES PAR LE TEST STATISTIQUE]
Helene Waeselynck 1993 181 p In FRENCH
(LAAS-93006; ETN-93-94364) Avail: CASI HC A09/MF A02

The use of statistical testing as a verification technique for critical software, that is, software having ultra high dependability requirements, is considered. Statistical testing involves exercising a program with random inputs, the test profile and the number of generated inputs being determined according to criteria based on software structure or software functionalities: the probabilistic generation allows the imperfect connection of current criteria with respect to the faults they aim at tracking down to be compensated, making them quite insufficient for critical software. The potentialities of this approach are justified by studying the theoretical reasons for a test to be unsuccessful: its feasibility and efficiency are confirmed by experiments involving a software from the nuclear field. As regards unit testing, the proposed approach combines structural statistical testing with a separate deterministic test of extremal values. As regards testing complex software components, random input data are designed from behavioral models extracted from the specification. Classical models are first investigated (finite state machines and decision tables); then the approach is refined by considering more sophisticated models, namely Statecharts. ESA

ROBUST NON CONVEX OPTIMIZATION ALGORITHMS: CODES AND NUMERICAL SIMULATION OF LARGE SCALE Ph.D. Thesis [ALGORITHMES ROBUSTES EN OPTIMISATION NON CONVEXE. CODES ET SIMULATIONS NUMERIQUES EN GRANDE DIMENSION]
Abderrazek Chine 1991 177 p In FRENCH
(ETN-93-94354) Avail: CASI HC A09/MF A02

Some non-convex optimization algorithms, the implementation of codes devoted to industrial application, and numerical simulations of concrete problems of large scale were studied. Quadratic problems (convex or not convex) with linear or quadratic constraints as well as constrained or unconstrained trust region methods to minimize a smooth function were studied. The non-convex optimization (classification, duality, stability and subgradient algorithms) were addressed. Numerical simulations of large scale concrete problems are presented and discussed. ESA

Distributed programs are dependent on explicit message passing between disjoint components of the computation. This paper is concerned with investigating an approach for proving correctness of distributed programs under an assumed data-exchange capability. Stated informally, the data exchange assumption is that every message is passed correctly, i.e., neither lost nor corrupted. One approach for constructing a proof under this assumption would be to embed an abstract model of the data communications mechanism into the program specification. The Message Passing Interface (MPI) standard provides a basis for such a model. In support of our investigations, we have developed a high-level specification using the ASLAN specification language. Our specification is based on a generalized communications model from which the MPI model may be derived. We describe the specification of this model and an approach to the specification of distributed programs with explicit message passing based on a verifiable data exchange model. DOE

The class of gene linear models is extended to develop a class of nonparametric regression models known as generalized smooth models. The technique of local scoring is used to estimate a generalized smooth model and the estimation procedure based on locally weighted regression is shown to produce local likelihood estimates. The asymptotically correct distribution of the deviance difference is derived and its use in comparing the fits of generalized linear models and generalized smooth models is illustrated. The relationship between generalized smooth models and generalized additive models is also discussed. DOE

Portability of FORTRAN code is a major concern these days, since hardware and commercial software change faster than the codes themselves. Hence, using public domain, portable, mathematical subroutines is imperative. Here we present a collection of subroutines we have used in the past, and found to be particularly useful. They are: 2-dimensional splines, contour tracing of flux surface (based on 2-D spline), and singular Value Matrix Decomposition (for Chi-square minimization). DOE

(Contract DE-AC05-84OS-21400)
(DE93-017233; Y/EN-4612/R1) Avail: CASI HC A03/MF A01

This document has been developed to provide guidance in the interchange of electronic CAD data with Martin Marietta Energy Systems, Inc., Oak Ridge, Tennessee. It is not meant to be as comprehensive as the existing standards and specifications, but to provide a minimum set of practices that will enhance the success of the CAD data exchange. It is now a Department of Energy (DOE) Oak Ridge Field Office requirement that Architect-Engineering (A-E) firms prepare all new drawings using a Computer Aided Design (CAD) system that is compatible with the facility manager's (FM) CAD system. For Oak Ridge facilities, the CAD system used for facility design by the FM, Martin Marietta Energy Systems, Inc., is Intergraph. The format for interchange of CAD data for Oak Ridge facilities will be the Intergraph MicroStation format. DOE

The solution of Grand Challenge Problems will require computations which are too large to fit in the memories of even the largest machines. Inevitably, new designs of I/O systems will be necessary to support them. Through our implementations of an out-of-core LU factorization, we have learned several important lessons about what I/O systems should be like. In particular we believe that the I/O system must provide the programmer with the ability to explicitly manage storage. One method of doing so is to have a partitioned secondary storage in which each processor owns a logical disk. Along with operating system enhancements which allow overheads such as buffer copying to be avoided, this sort of I/O system meets the needs of high performance computing. DOE

The rapid emergence of large heterogeneous networks, distributed systems, and massively parallel computers has resulted in economies of scale, enhanced productivity, efficient communication, resource sharing, and increased reliability, which are computationally beneficial. In addition to these benefits, networking presents technical challenges and problems with respect to maintaining and ensuring the security, design, compatibility, integrity, functionality, and management of these systems. In this paper we describe a computer security tool, Network Evaluation and Analysis Tool (NEAT), that we have developed to address these concerns. DOE

The implementation of multicluster operation in the Cronus distributed computing environment is presented. A cluster is a collection of hosts on one or more networks. Clusters are formed to organize and control the relationship between organizations for reasons of security and administration. The mechanisms to support intercluster object addressing are presented; these mechanisms form the basis for multicluster operation. Object-oriented distributed computing environments strive to present a uniform environment for building distributed applications by providing host and network transparent access to resources. Previously, the Cronus distributed environment operated in an environment of different types of hosts executing across several local area networks connected by gateways. Cronus achieved a uniform environment by treating the set of hosts as a single system in terms of authentication and in binding object identifiers to their locations. To extend Cronus to large environments, it is necessary to decompose the environment into collections of hosts. Decomposition is crucial to system scalability. It speeds up the location of objects and reduces the number of global name spaces DTIC

PARALLELIZING TIMED PETRI NET SIMULATIONS Final Report
David M. Nicol 31 Aug. 1993 91 p
(Grant NAG1-1060)
(NASA-CR-194278; NAS 1.26:194278) Avail: CASI HC A05/MF A01

The possibility of using parallel processing to accelerate the simulation of Timed Petri Nets (TPN's) was studied. It was recognized that complex system development tools often transform system descriptions into TPN's or TPN-like models, which are then simulated to obtain information about system behavior. Viewed this way, it was important that the parallelization of TPN's be as automatic as possible, to admit the possibility of the parallelization being embedded in the system design tool. Later years of the grant were devoted to examining the problem of joint performance and reliability analysis, to explore whether both types of analysis could be accomplished within a single framework. In this final report, the results of our studies are summarized. We believe that the problem of parallelizing TPN's automatically for MIMD architectures has been almost completely solved for a large and important class of problems. Our initial investigations into joint performance/reliability analysis are two-fold; it was shown that Monte Carlo simulation, with importance sampling, offers promise of joint analysis in the context of a single tool, and methods for the parallel simulation of general Continuous Time Markov Chains, a model framework within which joint performance/reliability models can be cast, were developed. However, very much more work is needed to determine the scope and generality of these approaches. The results obtained in our two studies, future directions for this type of work, and a list of publications are included. Author (revised)

MOBILE HOST INTERNETWORKING USING IP LOOSE SOURCE ROUTING
David B. Johnson Feb. 1993 23 p
(Contract MDA972-90-C-0035; ARPA Order 7330)
(AD-A265713; CMU-CS-93-128) Avail: CASI HC A03/MF A01

Internetworking protocols such as IP currently do not allow 'mobile hosts' to interoperate easily or conveniently with other hosts on the network. A host's IP address encodes the network number to which the host is connected, which prevents IP datagrams from reaching the host when it moves to a new location and connects to the Internet within a different network. A new protocol for allowing mobile hosts to transparently interoperate in the Internet using IP is presented. The protocol is designed to make use of existing facilities of the IP protocol architecture where possible, in order to minimize any changes necessary to existing protocol software. The protocol takes advantage of the standard IP loose source routing option for routing datagrams correctly to mobile hosts, while allowing the hosts to retain their normal 'home' IP address even when connected to a foreign network. The protocol is simple and scales well to large numbers of mobile hosts. It requires fewer changes to existing software and adds less overhead to the network than previous IP mobile host internetworking protocols. DTIC

HIGH SPEED PACKET SWITCHING Final Report
Oct. 1991 43 p
(Contracts NAS5-30629; F30602-89-C-0014; SBIR-07.04-2800)
(NASA-CR-191334; NAS 1.26:191334) Avail: CASI HC A03/MF A01

This document constitutes the final report prepared by Proteon, Inc. of Westborough, Massachusetts under contract NAS 5-30629 entitled High-Speed Packet Switching (SBIR 87-1, Phase 2) prepared for NASA-Greenbelt, Maryland. The primary goal of this research project is to use the results of the SBIR Phase 1 effort to develop a sound, expandable hardware and software router architecture capable of forwarding 25,000 packets per second through the router and passing 300 megabits per second on the router's internal busses. The work being delivered under this contract received its funding from three different sources: the SNIPE/RIG contract (Contract Number F30602-89-C-0014, CDRL Sequence Number A002), the SBIR contract, and Proteon. The SNIPE/RIG and SBIR contracts had many overlapping requirements, which allowed the research done under SNIPE/RIG to be applied to SBIR. Proteon funded all of the work to develop new router interfaces other than FDDI, in addition to funding the productization of the router itself. The router being delivered under SBIR will be a fully product-quality machine. The work done during this contract produced many significant findings and results, summarized here and explained in detail in later sections of this report. The SNIPE/RIG contract was completed. That contract had many overlapping requirements with the SBIR contract, and resulted in the successful demonstration and delivery of a high speed router. The development that took place during the SNIPE/RIG contract produced findings that included the choice of processor and an understanding of the issues surrounding inter processor communications in a multiprocessor environment. Many significant speed enhancements to the router software were made during that time. Under the SBIR contract (and with help from Proteon-funded work), it was found that a single processor router achieved a throughput significantly higher than originally anticipated. For this reason, a single processor router was developed and the final delivery under this contract will include a single processor CNX-500 router. The router and its interface boards (2 FDDIs and 2 dual-ethernets) are all product-quality components. Derived from text

In order to simulate the effects of the impingement of hot exhaust jets of High Performance Aircraft on landing surfaces a multi-disciplinary computation coupling flow dynamics to heat conduction in the runway needs to be carried out. Such simulations, which are essentially unsteady, require very large computational power in order to be completed within a reasonable time frame of the order of an hour. Such power can be furnished by the latest generation of massively parallel computers. These remove the bottleneck of ever more congested data paths to one or a few highly specialized central processing units (CPU's) by having many off-the-shelf CPU's work independently on their own data, and exchange information only when needed. During the past year the first phase of this project was completed, in which the optimal strategy for mapping an ADI-algorithm for the three dimensional unsteady heat equation to a MIMD parallel computer was identified. This was done by implementing and comparing three different domain decomposition techniques that define the tasks for the CPU's in the parallel machine. These implementations were done for a Cartesian grid and Dirichlet boundary conditions. The most promising technique was then used to implement the heat equation solver on a general curvilinear grid with a suite of nontrivial boundary conditions. Finally, this technique was also used to implement the Scalar Penta-diagonal (SP) benchmark, which was taken from the NAS Parallel Benchmarks report. All implementations were done in the programming language C on the Intel iPSC/860 computer. Derived from text

THE KSR1: EXPERIMENTATION AND MODELING OF POSTSTORE
E. Rosti (Milan Univ., Italy.), E. Smirni, T. D. Wagner, A. W. Apon, and L. W. Dowdy Feb. 1993 34 p
(Contract DE-AC05-84OR-21400)
(DE93-012539; ORNL/TM-12287) Avail: CASI HC A03/MF A01

Kendall Square Research introduced the KSR1 system in 1991. The architecture is based on a ring of rings of 64-bit microprocessors. It is a distributed, shared memory system and is scalable. The memory structure is unique and is the key to understanding the system. Different levels of caching eliminate physical memory addressing and leads to the ALLCACHE(trademark) scheme. Since requested data may be found in any of several caches, the initial access time is variable. Once pulled into the local (sub)cache, subsequent access times are fixed and minimal. Thus, the KSR1 is a Cache-Only Memory Architecture (COMA) system. This paper describes experimentation and an analytic model of the KSR1. The focus is on the poststore programmer option. With the poststore option, the programmer can elect to broadcast the updated value of a variable to all processors that might have a copy. This may save time for threads on other processors, but it delays the broadcasting thread and

places additional traffic on the ring. The specific issue addressed is to determine under what conditions poststore is beneficial. The analytic model and the experimental observations are in good agreement. They indicate that the decision to use poststore depends both on the application and the current system load. DOE

EFFICIENT, MASSIVELY PARALLEL EIGENVALUE COMPUTATION

Yan Huo (Princeton Univ., NJ.) and Robert Schreiber Jan. 1993 17 p Submitted for publication

(Contract NAS2-13721; NSF CDA-91-21709)

(NASA-CR-194289; NAS 1.26:194289; RIACS-TR-93-02) Avail: CASI HC A03/MF A01

In numerical simulations of disordered electronic systems, one of the most common approaches is to diagonalize random Hamiltonian matrices and to study the eigenvalues and eigenfunctions of a single electron in the presence of a random potential. An effort to implement a matrix diagonalization routine for real symmetric dense matrices on massively parallel SIMD computers, the Maspar MP-1 and MP-2 systems, is described. Results of numerical tests and timings are also presented.

KERBEROS: A UNIX-TCP/IP NETWORK AUTHENTICATION SYSTEM

W. H. Rahe and G. D. Machin 1993 11 p Presented at the 15th Computer Security Group, Mission Possible, Connected and Protected Training Conference, Albuquerque, NM, 3-6 May 1993

(Contract DE-AC04-76DP-00789)

(DE93-011677; SAND-93-0908C; CONF-9305151-5) Avail: CASI HC A03/MF A01 (US Sales Only)

Vulnerabilities inherent in network transmissions reduce the security protections provided by multiple remote authentication processes. The 'trusted systems' concept also provides potential for inadvertent or deliberate abuse of computing resources. Additionally, since the owner of a workstation potentially has complete control of a particular workstation, including the ability to edit all files and add customer accounts through the use of privileged accounts, additional security concerns exist including file integrity, file privacy, and customer masquerade. In a networked computing environment, both the customer/client and the server identities become more difficult to assure. The possibility of disclosure and non-assurance of information integrity transmitted on the network media are markedly increased In recognition of these difficulties, Digital Equipment Corporation (DEC) and International Business Machines (IBM) provided funding for the creation of Project Athena at (MIT) whose charter was to address distributed computing including security. Kerberos is an application developed by this project to provide centralized 'third-party' authentication in a distributed network. Network access control may be provided by Kerberos for each of the computing resources within either a local or remote network. Kerberos contains a database of principals and encryption keys in a Key Distribution Center (KDC). The KDC contains the keys (passwords) or all customers and must reside on a tightly controlled, limited access system. The KDC provides non-corruptible authentication credentials which are used in conjunction with the local authorization file and local services to perform the authentication and authorization functions for local and remote customer requests. QUANTUM MONTE CARLO BY MESSAGE PASSING

J. Bonca and J. E. Gubernatis 1993 13 p Presented at the Mardi Gras Conference on Concurrent Computing in the Physical Sciences, Baton Rouge, LA, 18-20 Feb. 1993

(Contract W-7405-eng-36)

(DE93-012645; LA-UR-93-1296; CONF-9302112-2) Avail: CASI HC A03/MF A01

We summarize results of quantum Monte Carlo simulations of the degenerate single-impurity Anderson model using the impurity algorithm of Hirsch and Fye. Using methods of Bayesian statistical inference, coupled with the principle of maximum entropy, we extracted the single-particle spectral density from the imaginary-time Green's function. The variations of resulting spectral densities with model parameters agree qualitatively with the spectral densities predicted by NCA calculations. All the simulations were performed on a cluster of 16 IBM R6000/560 workstations under the control of the message-passing software PVM. We described the trivial parallelization of our quantum Monte Carlo code both for the cluster and the CM-5 computer. Other issues for effective parallelization of the impurity algorithm are also discussed. DOE

OVERVIEW OF THE SCALABLE COHERENT INTERFACE, IEEE STD 1596 (SCI)
D. B. Gustavson, D. V. James (Apple Computer, Inc., Cupertino, CA.), and H. A. Wiggers (Hewlett-Packard Co., Palo Alto, CA.) Oct. 1992 3 p Presented at the IEEE Nuclear Science Symposium and Medical Imaging Conference, Orlando, FL, 26-31 Oct. 1992
(Contract DE-AC03-76SF-00515)
(DE93-015247; SLAC-PUB-5967; CONF-921005-34) Avail: CASI HC A01/MF A01

The Scalable Coherent Interface standard defines a new generation of interconnection that spans the full range from supercomputer memory 'bus' to campus-wide network. SCI provides bus-like services and a shared-memory software model while using an underlying, packet protocol on many independent communication links. Initially these links are 1 GByte/s (wires) and 1 GBit/s (fiber), but the protocol scales well to future faster or lower-cost technologies. The interconnect may use switches, meshes, and rings. The SCI distributed-shared-memory model is simple and versatile, enabling for the first time a smooth integration of highly parallel multiprocessors, workstations, personal computers, I/O, networking, and data acquisition. EXECUTION METHODS, AND PARALLEL VIRTUAL MACHINES FOR DISTRIBUTED IMPLEMENTATION OF THE LCS PARALLEL PROGRAMMING LANGUAGE Ph.D. Thesis - Toulouse Univ. [METHODES D'EXECUTION ET MACHINES VIRTUELLES PARALLELES POUR L'IMPLANTATION DISTRIBUEE DU LANGAGE DE PROGRAMMATION PARALLELE LCS]
Thierry LeSergent 1993 161 p In FRENCH
(LAAS-93032; ETN-93-94365) Avail: CASI HC A08/MF A02

The implementation of a high level parallel programming language on parallel physical machines with shared or distributed memory is considered. The language support of the study, LCS, combines the high level concepts of the functional language Standard ML, and the CCS communicating processes paradigm. The operational semantics of LCS is defined by an abstract machine. The LCS compiler produces code for a virtual machine that implements this abstract machine. The parallel virtual machine is designed as a small number of elementary virtual sequential machines which share all the objects built in a heap. The main contributions concern the management of the shared memory and the management of the processes. The management of the shared heap uses a garbage collector executed on parallel on elementary machines, incrementally with computations on each of them. An original mechanism of scan credit, and distributed algorithms for allocations, lead to a total cooperation between machines. On target machines with distributed memory, the heap is built by the distributed shared virtual memory technique, efficiently integrated with the garbage collector by the use in both cases of access protections on memory pages. The number of the LCS processes can be very high and may quickly vary. The management of processes is distributed between the elementary machines. A load balancing algorithm, based on dynamic bounds, was designed. Its properties are proved, and the results confirmed by simulation. The implementation shows the qualities of the parallel garbage collector designed. ESA

COMPLETING FAULT MODELS FOR ABDUCTIVE DIAGNOSIS
E. Knill, P. T. Cox (Nova Scotia Technical Coll., Halifax.), and T. Pietrzykowski (Nova Scotia Technical Coll., Halifax.) Nov. 1992 21 p Presented at the 13th International Joint Conference on Artificial Intelligence, Chambery, Savoie, France, 29 Aug. - 3 Sep. 1993
(Contract W-7405-eng-36)
(DE93-003832; LA-UR-92-3770; CONF-930848-1) Avail: CASI HC A03/MF A01

In logic-based diagnosis, the consistency-based method is used to determine the possible sets of faulty devices. If the fault models of the devices are incomplete or nondeterministic, then this method does not necessarily yield abductive explanations of system behavior. Such explanations give additional information about faulty behavior and can be used for prediction. Unfortunately, system descriptions for the consistency-based method are often not suitable for abductive diagnosis. Methods for completing the fault models for abductive diagnosis have been suggested informally by Poole and by Cox et al. Here we formalize these methods by introducing a standard form for system descriptions. The properties of these methods are determined in relation to consistency-based diagnosis and compared to other ideas for integrating consistency-based and abductive diagnosis. DOE

EFFICIENT DYNAMIC OPTIMIZATION OF LOGIC PROGRAMS
Phil Laird Jun. 1992 7 p Submitted for publication
(NASA-TM-109251; FIA-92-20; NAS 1.15:109251) Avail: CASI HC A02/MF A01

A summary is given of the dynamic optimization approach to speed up learning for logic programs. The problem is to restructure a recursive program into an equivalent program whose expected performance is optimal for an unknown but fixed population of problem instances. We define the term 'optimal' relative to the source of input instances and sketch an algorithm that can come within a logarithmic factor of optimal with high probability. Finally, we show that finding high-utility unfolding operations (such as EBG) can be reduced to clause reordering. Author (revised)

ARTIFICIAL INTELLIGENCE SUPPORT FOR SCIENTIFIC MODEL-BUILDING
Richard M. Keller Aug. 1992 6 p Submitted for publication
(NASA-TM-109252; FIA-92-29; NAS 1.15:109252) Avail: CASI HC A02/MF A01

Scientific model-building can be a time-intensive and painstaking process, often involving the development of large and complex computer programs. Despite the effort involved, scientific models cannot easily be distributed and shared with other scientists. In general, implemented scientific models are complex, idiosyncratic, and difficult for anyone but the original scientific development team to understand. We believe that artificial intelligence techniques can facilitate both the model-building and model-sharing process. In this paper, we overview our effort to build a scientific modeling software tool that aids the scientist in developing and using models. This tool

includes an interactive intelligent graphical interface, a high-level domain specific modeling language, a library of physics equations and experimental datasets, and a suite of data display facilities. Author (revised)

AN ANALOG CLUSTERING NETWORK FROM A BIOLOGICAL MODEL

P. A. Shoemaker, C. G. Hutchens, and S. B. Patil Apr. 1993 4 p

(AD-A265637) Avail: CASI HC A01/MF A01

One reason for the recent resurgence of interest in neural network-like computational models has been the prospect of compact and fast implementations of these networks in integrated circuit form. While analog implementations offer considerable advantages with regard to speed and density, their precision and noise immunity are important concerns. Some researchers have built analogues of biological structures for early sensory processing, and they have emphasized that tolerance of noisy and imprecise components is a natural emergent feature of these networks. However, the ways in which higher or cognitive functions might be learned and computed with such components for the most part remains unknown. In addition, learning itself remains problematic in analog circuitry. Means proposed for long-term, modifiable analog weight storage (e.g., floating-gate MOS devices) are sensitive, difficult to control, and of limited precision. We have chosen to implement a model of olfactory processing which we believe to be an instructive paradigm for computation in a learning system with low-precision weights and weight changes. The model has been shown capable of performing a hierarchical clustering of vectors on its input space. This capability is of potential interest for a range of applications, from automatic target recognition (ATR) to surveillance and detection. The network requires only coarse-valued weights (three to five bits resolution) and its operation relies on the statistical properties of large assemblages of sparsely interconnected neurons, rather than high precision processing. This project's purpose is to develop and implement control algorithms for a kinematically redundant robotic manipulator. The manipulator is being developed concurrently by Odetics Inc., under internal research and development funding. This SBIR contract supports algorithm conception, development, and simulation, as well as software implementation and integration with the manipulator hardware. The Odetics Dexterous Manipulator is a lightweight, high strength, modular manipulator being developed for space and commercial applications. It has seven fully active degrees of freedom, is electrically powered, and is fully operational in 1 G. The manipulator consists of five self-contained modules. These modules join via simple quick-disconnect couplings and self-mating connectors which allow rapid assembly/disassembly for reconfiguration, transport, or servicing. Each joint incorporates a unique drive train design which provides zero backlash operation, is insensitive to wear, and is single fault tolerant to motor or servo amplifier failure. The sensing system is also designed to be single fault tolerant. Although the initial prototype is not space qualified, the design is well-suited to meeting space qualification requirements. The control algorithm design approach is to develop a hierarchical system with well defined access and interfaces at each level. The high level endpoint/configuration control algorithm transforms manipulator endpoint position/orientation commands to joint angle commands, providing task space motion. At the same time, the kinematic redundancy is resolved by controlling the configuration (pose) of the manipulator, using several different optimizing criteria. The center level of the hierarchy servos the joints to their commanded trajectories using both linear feedback and model-based nonlinear control techniques. The lowest control level uses sensed joint torque to close torque servo loops, with the goal of improving the manipulator dynamic behavior. The control algorithms are subjected to a dynamic simulation before implementation. Author (revised)

PARAMETRIC BINARY DISSECTION Final Report

Shahid H. Bokhari (University of Engineering and Technology, Lahore, Pakistan.), Thomas W. Crockett (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.), and David M. Nicol (College of William and Mary, Williamsburg, VA.) Washington Jul. 1993 38 p Submitted for publication

(Contracts NAS1-19480; NAS1-18605; NSF CCR-92-01195; RTOP 505-90-52-01)

(NASA-CR-191496; NAS 1.26:191496; ICASE-93-39) Avail: CASI HC A03/MF A01

Binary dissection is widely used to partition non-uniform domains over parallel computers. This algorithm does not consider the perimeter, surface area, or aspect ratio of the regions being generated and can yield decompositions that have poor communication to computation ratio. Parametric Binary Dissection (PBD) is a new algorithm in which each cut is chosen to minimize load + lambda x(shape). In a 2 (or 3) dimensional problem, load is the amount of computation to be performed in a subregion and shape could refer to the perimeter (respectively surface) of that subregion. Shape is a measure of communication overhead and the parameter permits us to trade off load imbalance against communication overhead. When A is zero, the algorithm reduces to plain binary dissection. This algorithm can be used to partition graphs embedded in 2 or 3-d. Load is the number of nodes in a subregion, shape the number of edges that leave that subregion, and lambda the ratio of time to communicate over an edge to the time to compute at a node. An algorithm is presented that finds the depth d parametric dissection of an embedded graph with n vertices and e edges in O(max(n log n, de)) time, which is an improvement over the O(dn log n) time of plain binary dissection. Parallel versions of this algorithm are also presented; the best of these requires O(n/p) log(sup 3)p) time on a p processor hypercube, assuming graphs of bounded degree. How PBD is applied to 3-d unstructured meshes and yields partitions that are better than those obtained by plain dissection is described. Its application to the color image quantization problem is also discussed, in which samples in a high-resolution color space are mapped onto a lower resolution space in a way that minimizes the color error. ADAPTIVE CONTROL OF INTERFACE BY TEMPERATURE AND INTERFACE PROFILE FEEDBACK IN TRANSPARENT MULTI-ZONE CRYSTAL GROWTH FURNACE Final Technical Report, 25 Sep. 1989 - 31 May 1991

Celal Batur 1991 32 p

(Contract NCC3-150)

(NASA-CR-194140; NAS 1.26:194140) Avail: CASI HC A03/MF A01

The objective of this research is to control the dynamics of multizone programmable crystal growth furnaces. Due to the inevitable heat exchange among different heating zones and the transient nature of the process, the dynamics of multizone furnaces is time varying, distributed, and therefore complex in nature. Electrical power to heating zones and the translational speed of the ampoule are employed as inputs to control the dynamics. Structural properties of the crystal is the ultimate aim of this adaptive control system. These properties can be monitored in different ways. Following an order of complexity, these may include: (1) on line measurement of the material optical properties such as the refractive index of crystal; (2) on line x-ray imaging of the interface topology; (3) on line optical quantification of the interface profile such as the determination of concavity or convexity of the interface shape; and (4) on line temperature measurement at points closest to the material such as measurements of the ampoule's outside and inside surface temperatures. The research performed makes use of the temperature and optical measurements, specified in (3) and (4) as the outputs of furnace dynamics. However, if the instrumentation is available, the proposed control methodology can be extended to the measurements listed in (1) and (2). Author (revised)

SELF TUNING AND ADAPTIVE CONTROL: EVALUATIONS AND IMPROVEMENTS OF ALGORITHMS M.S. Thesis

Tzvika Friedman Oct. 1990 253 p

(ITN-93-85192) Copyright Avail: Issuing Activity (Tel-Aviv. Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Astrom and Hagglund's self-tuning regulator (STR) theory, based on the relay feedback identification method, is examined and an extended theory is developed. The self-tuning procedure was successfully implemented on several industrial systems. Several methods for on-line identification for an adaptive control were tested, using a true electromechanical system in a closed loop. This eliminated nonlinear phenomena and ensured controllability of the system and a safe response in all identification phases. Furthermore, closed-loop identification complies with the identification and estimation forms for an adaptive control. A different approach was used for adaptive control, owing to the necessity for compromise between identification quality and system performance. The approach used combines a priori knowledge of the physical structure of the system and working conditions. The main feature of this approach is that there is on-line decision and incomplete identification or on-line updating of controller parameters at every sampling. The physical structure and phenomena of an electromechanical system are examined and identification methods which detect the working conditions in the system are presented. ISA

CLOSE RANGE 3-D POSITION SENSING USING STEREO VISION AND POINT-OF-CORRESPONDANCE THROUGH MATHEMATICAL MORPHOLOGY Ph.D. Thesis
Mohamed T. Boraie 1989 154 p
(ISBN-0-315-61012-3; CTN-93-60720) Copyright Avail: Micromedia Ltd., Technical Information Centre, 165 Hotel de Ville, Place du Portage, Phase 2, Hull, Quebec J8X 3X2, Canada HC/MF

A procedure is introduced for calibrating two charge coupled device cameras for the purpose of close range position sensing. The procedure results in an over-determined set of linear algebraic equations that can be utilized in determining the coordinate position of some identifiable feature in the scene relative to any set of orthogonal axes. The proposed approach relaxes the geometrical constraint required by most of the available procedures. The performance is then evaluated and both accuracy and repeatability are examined. For the purpose of determining the feature position in a multi-feature image, the point of correspondence (POC) problem is discussed, and a procedure for the POC problem in stereoscopic vision is introduced. The procedure utilizes mathematical morphology as an image processing tool in finding edge-strength images and in determining the location of the POC. Finally, lens distortion parameters are introduced to the calibration process, and the effect of each parameter is illustrated.

REASONING WITH UNCERTAIN AND INCOMPLETE INFORMATION IN AEROSPACE APPLICATIONS
J. C. Donker 25 Sep. 1991 21 p Presented at the AGARD symposium on Machine Intelligence for Aerospace Electronic Systems, Lisbon, Portugal, 16 May 1991
(NLR-TP-91366-U; ETN-93-94338) Avail: CASI HC A03/MF A01

The applicability of the Dempster-Shafer theory to reason with information that is uncertain or incomplete was investigated. Parts of the initiation and identification problems in multiradar tracking were modeled. It is shown that the Dempster-Shafer theory promises improvements over the Bayesian approach, but also that the latter currently is a more advanced theory than the former. Notions used in reasoning with incomplete or uncertain information are presented together with an overview of existing methods.

ROBOT-TASK COMPLIANCE: THE ENERGY CRITERION M.S. Thesis
Eli Profeta Jan. 1991 133 p In HEBREW
(ITN-93-85196) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

To help to define the criteria for selection of a robot for a task, robots are classified according to intelligence, manipulator type and drive system. The various tasks performed by robots are described and the special characteristics required of a robot to perform each task are noted. Limitations on the extensive use of robots are then described. In defining the criteria and composing the algorithms used in selection of a robot for a given task, special consideration is given to workspace requirements, degrees of freedom and manipulator design, from the point of view of their influence of the suitability of a robot to perform the task. The energy criterion was developed to enable all the above-mentioned considerations to be combined; it can be used to choose a robot for a task and to optimize the operation of the robot. This enables the inherently most efficient robot to be chosen for a task and for it then to be operated and controlled in the most energy efficient way. This criterion directly conflicts with time-optimal control of robot joints, and also with other optimization rules such as torque control, path optimization, trajectory or workspace optimization. Its benefit lies in lowering the stresses on moving parts and, hence, the wear on components; a further economic benefit is the reduced operational cost which arises from the low energy consumption of energy-efficient robots. Stages in developing the criterion are: Calculation of the task energy; comparison of that energy with the mechanical motion energy of the various types of robots, and then, after choosing the type of robot, programming its links to move in an energy efficient way by its electrical motors. A REVIEW AND ANALYSIS OF NEURAL NETWORKS FOR CLASSIFICATION OF REMOTELY SENSED MULTISPECTRAL IMAGERY
Justin D. Paola and Robert A. Schowengerdt Jun. 1993 49 p
(Contract NAS2-13721; NAG5-2198)
(NASA-CR-194291; NAS 1.26:194291; RIACS-TR-93-05) Avail: CASI HC A03/MF A01

A literature survey and analysis of the use of neural networks for the classification of remotely sensed multispectral imagery is presented. As part of a brief mathematical review, the backpropagation algorithm, which is the most common method of training multi-layer networks, is discussed with an emphasis on its application to pattern recognition. The analysis is divided into five aspects of neural network classification: (1) input data preprocessing, structure, and encoding; (2) output encoding and extraction of classes; (3) network architecture, (4) training algorithms; and (5) comparisons to conventional classifiers. The advantages of the neural network method over traditional classifiers are its non-parametric nature, arbitrary decision boundary capabilities, easy adaptation to different types of data and input structures, fuzzy output values that can enhance classification, and good generalization for use with multiple images. The disadvantages of the method are slow training time, inconsistent results due to random initial weights, and the requirement of obscure initialization values (e.g., learning rate and hidden layer size). Possible techniques for ameliorating these problems are discussed. It is concluded that, although the neural network method has several unique capabilities, it will become a useful tool in remote sensing only if it is made faster, more predictable, and easier to use.

ANNS: AN X WINDOW BASED VERSION OF THE AFIT NEURAL NETWORK SIMULATOR M.S. Thesis
Ching-Seh Wu Jun. 1993 172 p
(AD-A266540; AFIT/GCE/ENG/93J-01) Avail: CASI HC A08/MF A02

This thesis presents an X Window based neural network simulation environment developed at Air Force Institute of Technology (AFIT) using the techniques of modern software engineering. This artificial neural network simulator is a tool running on Sun SPARCstations and supporting two user modes: end-users and client-programmers. End-users interact with neural network paradigms developed by client-programmers for the purpose of studying and analyzing the execution of a particular Neural Network (NN) paradigm or class of NN algorithms. Client programmers maintain the system and use this environment for the development of new NN paradigms or algorithms for end-users. The development follows a hybrid software engineering paradigm which combines the best characteristics of the classic life cycle, prototype, and iterative methodologies through requirements, design, implementation, and testing. An object-oriented approach is used for the design including preliminary and detailed design. The system is implemented with the C programming language on Sun workstation and uses the XView window-based environment. It provides users with a variety of control and input options: simulation speed control, multiple and simultaneous NN algorithm simulations, and simulation environment control. DTIC

The development and application of an experimental robotic tactile sensing system is described. The system is used for the active (exploratory) tactile perception of three dimensional object geometric profiles. The hardware developments consist of a 16-by-16 tactile probe and an instrumented passive compliant wrist. The software contributions consist of an interactive graphic display package and a library of basic image processing functions implemented as C-language programs. A two-dimensional correlation technique was developed to recover at the sub-pixel level the pose position errors occurring during the sequential tactile exploration of the large planar object surfaces. DEVELOPMENT OF A COMPUTER VISION SYSTEM TO SUPPLEMENT THE ACTIVE TACTILE SENSING CAPABILITY IN A STRUCTURED ENVIRONMENT
Emil Petriu, Taco Bieseman, Niculae Trif, and Trevor James 1991 45 p
(DSIS-93-00072; CTN-93-60774) Avail: CASI HC A03

An orignal and nontraditional approach to the three dimensional object visual recognition problem is discussed. The proposed technique is based on a permanent encoding of all visible object surfaces with binary symbols corresponding to the terms of a large-size pseudo-random binary array. The applicability of the proposed method is restricted to applications such as space stations, nuclear plants, and hazardous but controllable environments which allow for object encoding and a-priori mapping of all encoded object surfaces in a geometric database. However, in these few recommended applications, the two-dimensional pseudo-random encoding provides a robust and computationally efficient means for visual object recognition. It would also allow for an easy integration with the tactile sensor system in a model-based multi-sensor data fusion system. Experiments were conducted on five encoded objects to validate the viability of the proposed method for object recognition in the space station environment. The results demonstrate the practicability of two-dimensional pseudo-random coding for visual recognition of three dimensional objects. Author (CISTI)

A DISTRIBUTED, VISUAL OBJECT SYSTEM USING AGGREGATION OBJECTS WITH A LOCAL NAMESPACE
David M. Morton Oct. 1992 38 p
(IME-MET-TR-007; NRCC-35853; CTN-93-60834) Avail: CASI HC A03/MF A01

A design for a distributed object system is described. Active objects are used to group other objects. Objects in the group may share specialized behavior and may reference each other by name. The distributed system is implemented in Audition, an object oriented language that extends the theatrical paradigm of performers and stages introduced in Rehearsal World. In Audition, Stages aggregate other objects and manage local namespaces; in Distributed Audition they are also active objects. Stages can themselves be named and can be members of a group of objects defined on another stage. Stages can be moved to any workstation on a network, thus, providing a global partitioned namespace. Stages maintain multiple threads and a queue of incoming messages. A potential intelligent simulation application is an air traffic control system. Author (CISTI)

Some generalizations and some simpler derivations of results by Fuhrmann are presented. In spite of the fact that Hankel operators have become, after the seminal paper of Adamjan, Arov and Krein, a central tool in systems theory and in interpolation theory, some of its features have been studied in detail only recently. Among the relevant results are the connection between restricted shift realizations and between the singular values of the original operator and those of its Nehari extension. A simple derivation of these results and some generalizations are presented. ESA

TUNING OF GAUSSIAN STOCHASTIC CONTROL SYSTEMS
J. H. VanSchuppen Oct. 1992 32 p Submitted for publication
(CWI-BS-R9223; ETN-93-94154) Copyright Avail: CASI HC A03/MF A01

A study aimed at exploring the question of which adaptive controllers for Gaussian stochastic control systems achieve tuning in closed loop is presented. A closed loop consisting of a control system and an adaptive controller is called 'tuning' for a specified control objective if the real system and the ideal system defined below achieve the same value for the control objective. The 'real system' is the system consisting of the unknown control system in closed loop with the adaptive controller in which the parameters of the adaptive controller have been determined by identification under feedback or in closed loop. The 'ideal system' is the system consisting of the unknown control system in closed loop with a controller in which the controller has been synthesized with knowledge of the unknown control system and such that the closed loop system satisfies the control objective. For which adaptive controllers does tuning hold? This question is considered for both a Gaussian stochastic control system with full observations and with partial observations. The approach to the problem is based on stochastic realization theory for Gaussian systems. The question is answered positively for the control objectives of minimum variance control and pole placement. Necessary conditions for tuning are discussed. ESA

SELF-TUNING CONTROL TECHNIQUES FOR MULTIVARIABLE SYSTEMS M.S. Thesis [TECNICAS DE CONTROLE AUTO-SINTONIZADO PARA SISTEMAS MULTIVARIAVEIS]
Suely Silva Feb. 1992 105 p In PORTUGESE
(INPE-5449-TDI/495) Avail: CASI HC A06/MF A02

This work presents the development of a control algorithm of the self-tuning type for the control of multivariable systems when the number of outputs is greater than the number of inputs. For its application, the system dynamics is supposed unknown and represented by a difference equation, accordingly to which the future observations are obtained from the past values observations and inputs. As a worked out example, the attitude control of a low altitude satellite with triaxial stabilization is given. The observations are provided by measurements supposedly acquired through solar and horizon sensors and gyrometers. An optimal algorithm uses them to estimate the parameters that define the attitude of the satellite. The inputs are the three control torques that are respectively applied on the three axes by means of gas jets and according to the attitude simulator used for the tests. Finally, the results of the tests that evaluate the feasibility of the proposed procedure are presented. Author

THE BIRIS SERVER: INTEGRATION OF A THREE-DIMENSIONAL RANGE SENSOR INTO A HARMONY-BASED REALTIME ARCHITECTURE
D. A. Green and F. Blais Apr. 1992 19 p
(ERB-1036; NRC-33183; CTN-93-60822) Copyright Avail: CASI HC A03/MF A01

The BIRIS three dimensional laser range sensor has been interfaced to a multiprocessor system running under the Harmony realtime operating system. The method and rationale used in the interfacing are described, with emphasis on a description of a server that presents to the application programmer a clear abstraction of the BIRIS system so that control of the device and access to its data are uncomplicated. The system described is a component of a mobile robot system developed by the Autonomous Systems Laboratory at the National Research Council of Canada. BIRIS is initially being implemented on the mobile robot using a single laser projector and two video fields per acquisition (azimuth scanning only). The BIRIS system configured for this application offers short range sensing limited to about 3.5 m. BIRIS will be used primarily as a source of realtime range data for local navigation purposes. Description of the BIRIS server includes the system hardware configuration, interface mechanics, Harmony task structure in the software configuration, high level software interface, and initialization of the server. STOCHASTIC BOUNDS FOR A POLLING SYSTEM
O. J. Boxma (Tilburg Univ., Netherlands.) and M. Kelbert Nov. 1992 15 p Submitted for publication Sponsored in part by the Commission of the European Communities
(CWI-BS-R9230; ETN-93-94161) Copyright Avail: CASI HC A03/MF A01

Two queueing systems are considered: a symmetric polling system with gated service at all N queues and with switchover times, and a single server single queue model with one arrival stream of ordinary customers and N additional permanently present customers. It is assumed that the combined arrival process at the queues of the polling system coincides with the arrival process of the ordinary customers in the single queue model, and that the service time and switchover time distributions of the polling mode coincide with the service time distributions of the ordinary and permanent customers, respectively, in the single queue model. A complete equivalence between both models is accomplished by the following queue insertion of arriving customers. In the single queue model, an arriving ordinary customer occupies with probability p(sub i) a position at the end of the queue section behind the i-th permanent customer, i = 1,...,N. In the cyclic polling model, an arriving customer with probability p(sub i) joins the end of the i-th queue to be visited by the server, measured from its present position. For the single queue model it is proved that, if two queue insertion distributions (p(sub i), i = 1, ..., N) and (q(sub i), i = 1,...,N) are stochastically ordered, then also the workload and queue length distribution in the corresponding two single queue versions are stochastically ordered. This immediately leads to equivalent stochastic orderings in polling models. The single queue model with Poisson arrivals and p(sub 1) = 1 is studied in detail. ESA

DEVELOPMENT OF AN hp-VERSION FINITE ELEMENT METHOD FOR COMPUTATIONAL OPTIMAL CONTROL Semiannual Progress Report, 22 Feb. - 21 Aug. 1993
Dewey H. Hodges and Michael S. Warner 21 Aug. 1993 14 p
(Grant NAG1-1435)
(NASA-CR-194149; NAS 1.26:194149) Avail: CASI HC A03/MF A01

The purpose of this research effort is to develop a means to use, and to ultimately implement, hp-version finite elements in the numerical solution of optimal control problems. The hybrid MACSYMA/FORTRAN code GENCODE was developed which utilized h-version finite elements to successfully approximate solutions to a wide class of optimal control problems. In that code the means for improvement of the solution was the refinement of the time-discretization mesh. With the extension to hp-version finite elements, the degrees of freedom include both nodal values and extra interior values associated with the unknown states, co-states, and controls, the number of which depends on the order of the shape functions in each element. DECENTRALIZED CONTROL OF UNCERTAIN SYSTEMS VIA SENSITIVITY MODELS
D. A. Schoenwald and U. Oezguener 1993 5 p Presented at the 12th IFAC World Congress, Sydney, Australia, 19-23 Jul. 1993
(Contract DE-AC05-84OR-21400)
(DE93-012963; CONF-930781-1) Avail: CASI HC A01/MF A01

In this paper, we present a decentralized strategy for optimal control of interconnected systems exhibiting parametric uncertainty. First, we demonstrate that sensitivity models for linear interconnected systems can be generated at each subsystem using only locally available information. Second, we present an optimal control law that incorporates sensitivity functions in the feedback path. The control scheme is completely decentralized and is proposed as a means of making the closed loop system less sensitive to parameter deviations. Finally, we give an example of an interconnected system and show how this control strategy is implemented. DOE

RETRIEVAL PROPERTIES OF NEURAL NETWORKS WITH INFINITELY MANY MARKED PATTERNS
Stam Nicolis (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 5 Mar. 1990 12 p Sponsored by EEC
(Preprint-729; ETN-93-94367) Avail: CASI HC A03/MF A01

An extension of the Hopfield model, where a certain number of 'privileged' (or 'marked') patterns enters the Hebb rule with weight 1, while the remaining enter with weight gamma less than 1, was studied. Both sets are infinite. Assuming replica symmetry, the zero temperature capacity minus gamma and overlap minus gamma diagrams are calculated and compared with numerical simulations, when both sets hold the same number of patterns. The transitions from the retrieval to the spin glass phase are found to be first order. ESA

IDENTIFICATION OF CONTINUOUS-TIME DYNAMICAL SYSTEMS: NEURAL NETWORK BASED ALGORITHMS AND PARALLEL IMPLEMENTATION
R. M. Farber, A. S. Lapedes, R. Rico-Martinez (Princeton Univ., NJ.), and I. G. Kevrekidis (Princeton Univ., NJ.) 1993 5 p Presented at the 6th Society for Industrial and Applied Mathematics (SIAM) Conference on Parallel Processing for Scientific Computing, Norfolk, VA, 21-24 Mar. 1993
(Contract W-7405-eng-36)
(DE93-014427; LA-UR-93-1565; CONF-930331-11) Avail: CASI HC A01/MF A01

Time-delay mappings constructed using neural networks have proven successful performing nonlinear system identification; however, because of their discrete nature, their use in bifurcation analysis of continuous-tune systems is limited. This shortcoming can be avoided by embedding the neural networks in a training algorithm that mimics a numerical integrator. Both explicit and implicit integrators can be used. The former case is based on repeated evaluations of the network in a feedforward implementation; the latter relies on a recurrent network implementation. Here the algorithms and their implementation on parallel machines (SIMD and MIMD architectures) are discussed. DOE

PASSIVE RECOVERY OF SCENE GEOMETRY FOR AN UNMANNED GROUND VEHICLE Annual Report, Nov. 1991 - Nov. 1992
Robert C. Bolles May 1993 34 p
(Contract DACA76-92-C-0003; DARPA Order 8323)
(AD-A266670; TEC-0033) Avail: CASI HC A03/MF A01

The primary goal of this project is to develop a passive technology for recovering scene geometry in order to support an Unmanned Ground Vehicle (UGV) operating in a general outdoor environment. We focus on our evaluation of current stereo techniques. We report the results of the first phase of this evaluation and discuss plans for the second phase. In addition, we briefly describe our progress in the following areas: development of new object tracking techniques; application of a new scene modeling technique (developed on a parallel contract at SRI) to UGV tasks; and development of two auxiliary techniques to support our research--a technique for generating synthetic stereo pairs and a technique for multiplexing imagery from a pair of moving cameras onto a single videotape. SMART MATERIALS/STRUCTURES TECHNICAL ANALYSIS Final Report, 26 Nov. 1990 - 30 Nov. 1992
Phillip A. Parrish, Carlos J. Coe, and Norman M. Wereley 3 Jun. 1993 52 p
(Contract DAAL03-91-C-0002)
(AD-A266771; BDM-VAS-0784-93-TR; ARO-28608.1-MS) Avail: CASI HC A04/MF A01

'Smart' materials and structures have the capability to respond to their environment to a significant degree, by virtue of intrinsic properties and/or built-in sensor/actuator systems. The words 'smart' or 'intelligent' as applied to materials/structures are used in an idealistic and imprecise way to indicate an analogy with the integrated sensor/actuator/control systems evolved by living beings. The programmatic objectives of this proposal suggest the following definition of Smart materials/structures (SMS): Smart materials/structures (SMS) are structural systems based upon materials with the ability to 'sense' their own response to environmental and operational stimuli and able to modify that response in such as way as to maintain or optimize structural performance, utilizing embedded sensors and actuators interfaced with closed-loop adaptive control systems based on system stimulus-response models. In this effort, BDM Federal, Inc., a subsidiary of BDM International, Inc. conducted a technical analysis of Smart Materials and Structures in order to assist DARPA in planning a future initiative in this area. DETERMINING NEURAL NETWORK CONNECTIVITY USING EVOLUTIONARY PROGRAMMING
John R. McDonnell and Don Waagen Mar. 1993 6 p
(AD-A266853) Avail: CASI HC A02/MF A01

This work investigates the application of evolutionary programming, a stochastic search technique, for determining connectivity in feedforward neural networks. The method is capable of simultaneously evolving both the connection scheme and the network weights. The number of synapses are incorporated into an objective function so that network parameter optimization is done with respect to a connectivity cost as well as mean pattern error. Experimental results are shown using feedforward networks for simple binary mapping problems. DTIC

A ROBUST MULTILEVEL SIMULTANEOUS EIGENVALUE SOLVER Final Report
Sorin Costiner (Weizmann Inst. of Science, Rehovoth, Israel.) and Shlomo Taasan Washington Jun. 1993 21 p
(Contracts NAS1-19480; NAS1-18605; RTOP 505-90-52-01)
(NASA-CR-191491; ICASE-93-35; NAS 1.26:191491) Avail: CASI HC A03/MF A01

Multilevel (ML) algorithms for eigenvalue problems are often faced with several types of difficulties such as: the mixing of approximated eigenvectors by the solution process, the approximation of incomplete clusters of eigenvectors, the poor representation of solution on coarse levels, and the existence of close or equal eigenvalues. Algorithms that do not treat appropriately these difficulties usually fail, or their performance degrades when facing them. These issues motivated the development of a robust adaptive ML algorithm which treats these difficulties, for the calculation of a few eigenvectors and their corresponding eigenvalues. The main techniques used in the new algorithm include: the adaptive completion and separation of the relevant clusters on different levels, the simultaneous treatment of solutions within each cluster, and the robustness tests which monitor the algorithm's efficiency and convergence. The eigenvectors' separation efficiency is based on a new ML projection technique generalizing the Rayleigh Ritz projection, combined with a technique, the backrotations. These separation techniques, when combined with an FMG formulation, in many cases lead to algorithms of O(qN) complexity, for q eigenvectors of size N on the finest level. Previously developed ML algorithms are less focused on the mentioned difficulties. Moreover, algorithms which employ fine level separation techniques are of O(q(sub 2)N) complexity and usually do not overcome all these difficulties. Computational examples are presented where Schrodinger type eigenvalue problems in 2-D and 3-D, having equal and closely clustered eigenvalues, are solved with the efficiency of the Poisson multigrid solver. A second order approximation is obtained in O(qN) work, where the total computational work is equivalent to only a few fine level relaxations per eigenvector. Author (revised)

We present a method to determine whether a set of equations has a non-negative integer solution. The method is designed for the particular occurence of this problem in the context of compiler analysis of parallel programs. The system of equations is first transformed to Smith normal form to determine if any integer solutions exist. In case of multiple integer solutions, a parameterized solution space representing all non-negative solutions is obtained. Fourier-Motzkin elimination is employed to determine if the real solution space is empty. If the solution space is not empty, either the existence of an integer solution is readily verified, or a simplified convex region is obtained such that the original system of equations has a solution if and only if this convex region contains an integer point. The main result of the paper is a set of new heuristic search procedures that are used to identify an integer solution in a convex region, or to prove that no integer solution exists. These are based on the geometrical properties of convex regions that are not empty but do not contain integer points. This method is an exact and efficient way of solving integer programming problems arising in dependence and synchronization analysis of parallel programs. DTIC

A HYBRID PADE-GALERKIN TECHNIQUE FOR DIFFERENTIAL EQUATIONS Final Report
James F. Geer and Carl M. Andersen (College of William and Mary, Williamsburg, VA.) Washington Jul. 1993 25 p Submitted for publication
(Contract NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-191494; NAS 1.26:191494; ICASE-93-38) Avail: CASI HC A03/MF A01

A three-step hybrid analysis technique, which successively uses the regular perturbation expansion method, the Pade expansion method, and then a Galerkin approximation, is presented and applied to some model boundary value problems. In the first step of the method, the regular perturbation method is used to construct an approximation to the solution in the form of a finite power series in a small parameter epsilon associated with the problem. In the second step of the method, the series approximation obtained in step one is used to construct a Pade approximation in the

form of a rational function in the parameter epsilon. In the third step, the various powers of epsilon which appear in the Pade approximation are replaced by new (unknown) parameters (delta(sub j)). These new parameters are determined by requiring that the residual formed by substituting the new approximation into the governing differential equation is orthogonal to each of the perturbation coordinate functions used in step one. The technique is applied to model problems involving ordinary or partial differential equations. In general, the technique appears to provide good approximations to the solution even when the perturbation and Pade approximations fail to do so. The method is discussed and topics for future investigations are indicated. Author (revised)

ACTIVE CONTROL OF ACOUSTIC PRESSURE FIELDS USING SMART MATERIAL TECHNOLOGIES Final Report

H. T. Banks (North Carolina State Univ., Raleigh.) and R. C. Smith (National Aeronautics and Space Administration. Langley Research Center, Hampton, VA.) Washington Jun. 1993 31 p Presented at the Workshop on Flow Control, Minneapolis, MN, 16-20 Nov. 1992 Submitted for publication

(Contracts NAS1-18605; NAS1-19480; AF-AFOSR-0091-90; RTOP 505-90-52-01)

(NASA-CR-191480; NAS 1.26:191480; ICASE-93-31) Avail: CASI HC A03/MF A01

An overview describing the use of piezoceramic patches in reducing noise in a structural acoustics setting is presented. The passive and active contributions due to patches which are bonded to an Euler-Bernoulli beam or thin shell are briefly discussed and the results are incorporated into a 2-D structural acoustics model. In this model, an exterior noise source causes structural vibrations which in turn lead to interior noise as a result of nonlinear fluid/structure coupling mechanism. Interior sound pressure levels are reduced via patches bonded to the flexible boundary (a beam in this case) which generate pure bending moments when an out-of-phase voltage is applied. Well-posedness results for the infinite dimensional system are discussed and a Galerkin scheme for approximating the system dynamics is outlined. Control is implemented by using linear quadratic regulator (LQR) optimal control theory to calculate gains for the linearized system and then feeding these gains back into the nonlinear system of interest. The effectiveness of this strategy for this problem is illustrated in an example. Author (revised)

SIMPLIFICATION-DRIVEN AUTOMATED PARTIAL EVALUATION

J. M. Boyle 21 Nov. 1992 13 p Presented at the ACM SIGPLAN Symposium on Partial Evaluation and Semantics Based Program Manipulation, Gothenburg, Sweden, 14-16 Jun. 1993

(Contract W-31-109-eng-38)

(DE93-012890; ANL/MCS/CP-78726; CONF-9306162-1) Avail: CASI HC A03/MF A01

I describe an automated approach to partial evaluation based on simplification and implemented by program transformations. The approach emphasizes program algebra and relies on canonical forms and distributive laws to expose instances to which simplifications can be applied. I discuss some of the considerations that led to the design of this approach. This design discussion should be useful both in understanding the structure of the partial evaluation transformations and as an example of how to approach the design of automated program transformations in general. This approach to partial evaluation has been applied to a number of practical examples of moderate complexity, including the following: the running example used in this paper, proving an identity for lists, and eliminating a virtual data structure from a specification of practical interest. The chief practical barrier to its wider application is the growth of the intermediate program text during partial evaluation. Despite this limitation, this approach has the virtues of being implemented, automated, and able to partially evaluate specifications containing implicit data, including some specifications of practical interest. ROBUST STABILITY OF DIAMOND FAMILIES OF POLYNOMIALS WITH COMPLEX COEFFICIENTS

Zhong Ling Xu 1993 16 p

(Grant NAG5-2210)

(NASA-CR-194132; NAS 1.26:194132) Avail: CASI HC A03/MF A01

Like the interval model of Kharitonov, the diamond model proves to be an alternative powerful device for taking into account the variation of parameters in prescribed ranges. The robust stability of some kinds of diamond polynomial families with complex coefficients are discussed. By exploiting the geometric characterizations of their value sets, we show that, for the family of polynomials with complex coefficients and both their real and imaginary parts lying in a diamond, the stability of eight specially selected extreme point polynomials is necessary as well as sufficient for the stability of the whole family. For the so-called simplex family of polynomials, four extreme point and four exposed edge polynomials of this family need to be checked for the stability of the entire family. The relations between the stability of various diamonds are also discussed. Author

THE SILENT STEP IN TIME

A. S. Klusener Jun. 1992 76 p

(CWI-CS-R9221; ETN-93-94163) Copyright Avail: CASI HC A05/MF A01

In untimed process algebras such as CCS and ACP (Algebra of Communicating Sequential Process), the silent step enables abstraction from internal actions. Several formalizations of abstraction have been introduced, such as observational congruence, delay bisimulation, and branching bisimulation. However, in real time process algebras such as ACP(rho), the silent step has not yet been solved. A formalization of these semantics regarding the silent step in real time process algebra is presented. The characterizing laws, which correspond closely to the untimed laws, are studied. An investigation as to which of the semantics is appropriate in the context of ACP(rho) is performed. Restriction is made to process terms without recursion and completeness, and decidability for branching bisimulation equivalence is obtained. ESA

ON THE FOUNDATIONS OF FINAL SEMANTICS: NON-STANDARD SETS, METRIC SPACES, PARTIAL ORDERS

Jan. J. M. M. Rutten and Daniele Turi Nov. 1992 56 p Submitted for publication Sponsored in part by Stichting voor Fundamenteel Onderzoek der Materie

(CWI-CS-R9241; ETN-93-94167) Copyright Avail: CASI HC A04/MF A01

Canonical solutions of domain equations are shown to be 'final coalgebras', not only in a category of nonstandard sets (as already known), but also in categories of metric spaces and partial orders. Coalgebras are simple categorical structures generalizing the notion of post-fixed point. They are also used here for giving a new comprehensive presentation of the (still) nonstandard theory of 'non-well-founded sets' (as non standard sets are usually called). This paper is meant to provide a basis to a more general project aiming at a full exploitation of the finality of the domains in the semantics of programming languages. Such a 'final semantics' enjoys uniformity and generality. For instance, semantic observational equivalences like bisimulation can be derived as instances of a single 'coalgebraic' definition (introduced elsewhere), which is parametric of the functor appearing in the domain equation. Some properties of this general form of equivalence are also studied. ESA

ROBUST FILTERS FOR IMAGE SMOOTHING
T. Kurita and P. Boulanger (National Research Council of Canada, Ottawa, Ontario.) Dec. 1990 35 p
(ERB-1033; NRC-31798; CTN-93-60824) Copyright Avail: CASI HC A03/MF A01

The properties of some rank filters such as median, least median squared, and trimmed median squared, are discussed in the context of robust statistics. The efficient computation of these filters is discussed and their stability to the outlier is compared with the standard median filter. Using the robust estimator as an outliers detector, a new type of filter can be designed which performs smoothing on the remaining pixels after removing the outliers. The Gaussian reweighted median (GRM) filter uses Gaussian weights inhibited at the outlier positions to smooth images. This filter inherits the properties of both median and Gaussian filters. Experimental results are presented showing comparisons between corrupted digital images and the same images processed by the various filters. It is demonstrated experimentally that the GRM filter is the best filter overall since it operates like a median filter on impulse noises and reduces the Gaussian noise. Comparison of the GRM filter and the Gaussian filter shows that the GRM filter can preserve sharp edges while small details of the image are smoothed. Subroutines for finding location estimates are appended.

PRECONDITIONING AND THE LIMIT TO THE INCOMPRESSIBLE FLOW EQUATIONS
E. Turkel, A. Fiterman, and B. vanLeer Washington Jul. 1993 23 p Submitted for publication
(Contracts NAS1-18605; NAS1-19480; RTOP 505-90-52-01)
(NASA-CR-191500; ICASE-93-42; NAS 1.26:191500) Avail: CASI HC A03/MF A01

The use of preconditioning methods to accelerate the convergence to a steady state for both the incompressible and compressible fluid dynamic equations are considered. The relation between them for both the continuous problem and the finite difference approximation is also considered. The analysis relies on the inviscid equations. The preconditioning consists of a matrix multiplying the time derivatives. Hence, the steady state of the preconditioned system is the same as the steady state of the original system. For finite difference methods the preconditioning can change and improve the steady state solutions. An application to flow around an airfoil is presented. Author

CANONICAL FORMS OF MULTIDIMENSIONAL STEADY INVISCID FLOWS Final Report
Shlomo Taasan Washington Jun. 1993 15 p Submitted for publication
(Contracts NAS1-19480; NAS1-18605; RTOP 505-90-52-01)
(NASA-CR-191488; NAS 1.26:191488; ICASE-93-34) Avail: CASI HC A03/MF A01

Canonical forms and canonical variables for inviscid flow problems are derived. In these forms the components of the system governed by different types of operators (elliptic and hyperbolic) are separated. Both the incompressible and compressible cases are analyzed, and their similarities and differences are discussed. The canonical forms obtained are block upper triangular operator form in which the elliptic and non-elliptic parts reside in different blocks. The full nonlinear equations are treated without using any linearization process. This form enables a better analysis of the equations as well as better numerical treatment. These forms are the analog of the decomposition of the one dimensional Euler equations into characteristic directions and Riemann invariants. Author (revised)

NON-UNIQUENESS IN DYNAMIC RATE-INDEPENDENT NON-ASSOCIATED PLASTICITY Technical Report, 15 Jun. 1989 - 31 Mar. 1992
Ivan S. Sandler and Thomas A. Pucik (Logicon R and D Associates, Los Angeles, CA.) 1 Jun. 1993 37 p
(Contract DNA001-89-C-0052)
(AD-A266342; WA-9204; DNA-TR-92-108) Avail: CASI HC A03/MF A01

Ground shock calculations often use rate-independent plasticity models with non-associated flow. By means of a 'constructive' mathematical proof, it is demonstrated here that this approach leads to multiple (and therefore spurious) solutions for dynamic initial/boundary value problems; in other words, uniqueness is lost. Although a simple class of multiple solutions is presented, the results are shown to be generally valid, implying that normality of flow is a necessary (as well as a sufficient) condition for uniqueness in dynamic applications of rate-independent plasticity. This finding implies an inherent lack of robustness in numerical analyses utilizing models based on non-associated flow. Because the use of such models is widespread in ground shock (and structural) calculations, the fact that uniqueness breaks down is significant; it casts serious doubt on any (and every) calculation based on these constitutive representations. It is strongly recommended that all ground shock calculators promptly abandon their reliance on such models. To describe the situation most bluntly, these models do not provide a rational basis for the computations needed for prediction, design and/or analysis applications. In all cases for which an associated flow rule is deemed inadequate to fit observed material behavior, an approach other than rate-independent plasticity must be sought in order to represent such behavior in a reliable, self-consistent and rational manner. HIGH ORDER HYBRID NUMERICAL SIMULATIONS OF TWO DIMENSIONAL DETONATION WAVES Final Report
Wei Cai (North Carolina Univ., Charlotte.) Washington Jul. 1993 42 p
(Contract NAS1-19480; RTOP 505-90-52-01; NSF ASC-91-13895)
(NASA-CR-191506; ICASE-93-47; NAS 1.26:191506) Avail: CASI HC A03/MF A01

In order to study multi-dimensional unstable detonation waves, a high order numerical scheme suitable for calculating the detailed transverse wave structures of multidimensional detonation waves was developed. The numerical algorithm uses a multi-domain approach so different numerical techniques can be applied for different components of detonation waves. The detonation waves are assumed to undergo an irreversible, unimolecular reaction A yields B. Several cases of unstable two dimensional detonation waves are simulated and detailed transverse wave interactions are documented. The numerical results show the importance of resolving the detonation front without excessive numerical viscosity in order to obtain the correct cellular patterns. Author (revised)

ON THE SUPERCONVERGENCE OF GALERKIN METHODS FOR HYPERBOLIC IBVP
David Gottlieb (Brown Univ., Providence, RI.), Bertil Gustafsson (Uppsala Univ., Sweden.), Pelle Olsson, and Bo Strand (Uppsala Univ., Sweden.) Aug. 1993 22 p
(Contracts NAS2-13721; AF-AFOSR-0090-93; N00014-91-J-4016; NSF DMS-92-11820; NUTEK-89-02539P)
(NASA-CR-194293; NAS 1.26:194293; RIACS-TR-93-07) Avail: CASI HC A03/MF A01

Finite element Galerkin methods for periodic first order hyperbolic equations exhibit superconvergence on uniform grids at the nodes, i.e., there is an error estimate 0(h(sup 2r)) instead of the expected approximation order 0(h(sup r)). It will be shown that no matter how the approximating subspace S(sup h) is chosen, the superconvergence property is lost if there are characteristics leaving the domain. The implications of this result when constructing compact implicit difference schemes is also discussed. Author (revised)

OPEN BOUNDARY CONDITIONS FOR INCOMPLETELY PARABOLIC SYSTEMS
Ivar Lie 23 Sep. 1992 47 p
(FFI/RAPPORT-92/7029; ETN-93-93975) Avail: CASI HC A03/MF A01

A theory for the construction of open boundary conditions for incompletely parabolic perturbations of hyperbolic systems is presented, and the use of this theory on equations for nonlinear acoustic propagation in seawater is demonstrated. Comparisons with the correction method for hyperbolic systems are discussed. The boundary conditions derived contain first derivatives in space. Implementation of the open boundary conditions are discussed in the context of the Chebyshev spectral collocation method. Numerical experiments are presented to show that the boundary conditions work well in practice. ESA

ON THE GEOMETRY OF EXTERNAL SPECTRAL FACTORS AND THE RICCATI INEQUALITY
Andrea Gombani (Consiglio Nazionale delle Ricerche, Padua, Italy.) Oct. 1992 15 p Sponsored in part by CNR, and NATO
(CWI-BS-R9227; ETN-93-94158) Copyright Avail: CASI HC A03/MF A01

The geometric structure of the spectral factors of a given spectral density is studied. It is shown that these factors can be associated to a set of invariant subspaces, and the manifold structure of this set is exhibited, providing also an explicit parametrization for it. Some connection with the set of solutions to the Riccati inequality is also made. ESA

The set I(sup p)(sub n) of p by p complex matrix valued rational inner functions of fixed McMillan degree is considered. This set is shown to have a smooth manifold structure, and two atlases for it are exhibited; one is based on realization theory and exhibits I(sub p)(sub n) as the product of the manifold of equivalence classes of observable pairs and the unitary group U(p); the second studies I(sub p)(sub n) as transfer functions and rests on Schur parameters. Similar results are obtained for the real valued functions. ESA

LEAST-SQUARES FINITE ELEMENT SOLUTIONS FOR THREE-DIMENSIONAL BACKWARD-FACING STEP FLOW
Bo-Nan Jiang, Lin-Jun Hou, and Tsung-Liang Lin (Livermore Software Technology Corp., CA.) Aug. 1993 23 p Presented at the Fifth International Symposium on Computational Fluid Dynamics, Sendai, Japan, 31 Aug. - 3 Sep. 1993
(Contract NCC3-233; RTOP 505-90-5K)
(NASA-TM-106353; ICOMP-93-31; E-8136; NAS 1.15:106353) Avail: CASI HC A03/MF A01

Comprehensive numerical solutions of the steady state incompressible viscous flow over a three-dimensional backward-facing step up to Re equals 800 are presented. The results are obtained by the least-squares finite element method (LSFEM) which is based on the velocity-pressure-vorticity formulation. The computed model is of the same size as that of Armaly's experiment. Three-dimensional phenomena are observed even at low Reynolds number. The calculated values of the primary reattachment length are in good agreement with experimental results. Author (revised)

The nonlinear stability of compact schemes for shock calculations is

investigated. In recent years compact schemes were used in various numerical simulations including direct numerical simulation of turbulence. However to apply them to problems containing shocks, one has to resolve the problem of spurious numerical oscillation and nonlinear instability. A framework to apply nonlinear limiting to a local mean is introduced. The resulting scheme can be proven total variation (1D) or maximum norm (multi D) stable and produces nice numerical results in the test cases. The result is summarized in the preprint entitled 'Nonlinearly Stable Compact Schemes for Shock Calculations', which was submitted to SIAM Journal on Numerical Analysis. Research was continued on issues related to two and three dimensional essentially non-oscillatory (ENO) schemes. The main research topics include: parallel implementation of ENO schemes on Connection Machines; boundary conditions; shock interaction with hydrogen bubbles, a preparation for the full combustion simulation; and direct numerical simulation of compressible sheared turbulence. EXTREMAL POLYGON CONTAINMENT PROBLEMS AND OTHER ISSUES IN PARAMETRIC SEARCHING M.S. Thesis
Sivan Toledo Apr. 1991 73 p
(ITN-93-85214) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

A parametric search seeks a value for a parameter, in a problem whose solution depends on that parameter and on a known input. The value sought for the parameter is that which leads to a desired property of the solution. Several polygon containment problems are solved, in which a location is sought for the largest copy of a convex polygonal object, P, in an environment, Q, comprising polygonal obstacles. P must not intersect the polygons, following permitted translation, rotation and scaling. Solution of the general problem also involves solution of the fixed-size problem, which comprises determination of whether a fixed-size copy of P can be placed in Q. An algorithm is used which finds a superset of placements, not all of which are valid. The solution runs in time, O(k(exp 2)nlambda(sub 4)(kn)log(exp 3)(kn)log log(kn)), in which k and n are the complexities of P and Q, respectively, and lambda(sub q)(r) is the maximum length of an (r,q)-Davenport-Schinzel sequence, which is almost linear in r for any fixed q. Some restricted variants of the general case are solved. In one, Q is the interior of a convex polygon and P is not allowed to rotate; it is solved in a time which is linear in the sum of the complexities of P and Q. In a second variant, disjoint copies of two convex polygons, P(sub 1) and P(sub 2), which may not rotate, are placed inside a convex polygon, Q; the complexities are k(sub 1), k(sub 2) and n, respectively. This variant is solved in time, O(n + k(sub 1) + k(sub 2))log(exp 2)(n + k(sub 1) + k(sub 2)). ISA

The development of effective solution strategies to solve the global nonlinear equations which arise in implicit finite element analysis has been the subject of much research in recent years. Robust algorithms are needed to handle the complex nonlinearities that arise in many implicit finite element applications such as metalforming process simulation. The authors experience indicates that robustness can best be achieved through adaptive solution strategies. In the course of their research, this adaptivity and flexibility has been refined into a production tool through the development of a solution control language called ISLAND. This paper discusses aspects of adaptive solution strategies including iterative procedures to solve the global equations and remeshing techniques to extend the domain of Lagrangian methods. Examples using the newly developed ISLAND language are presented to illustrate the advantages of embedding temporal, algorithmic, and spatial adaptivity in a modern implicit nonlinear finite element analysis code. An optimization problem is formulated motivated by the desire to remove temperature peaks, i.e., 'hot spots', along the bounding surfaces of containers of fluid flows. The heat equation of the solid container is coupled to the energy equations for the fluid. Heat sources can be located in the solid body, the fluid, or both. Control is effected by adjustments to the temperature of the fluid at the inflow boundary. Both mathematical analyses and computational experiments are given. Author (revised)

A general framework of scaling functions and wavelets is developed. From this framework, explicit formulas of interpolatory spline-wavelets, compactly supported spline-wavelets, their duals, wavelets on a bounded interval, and trigonometric wavelets are derived. On the other hand, by using the scale of 3 instead of 2, we are able to construct compactly supported orthonormal symmetric scaling functions and their corresponding pair of symmetric and antisymmetric wavelets. To avoid aliasing and other undesirable effects in wavelet decompositions, we introduce a continuous multiresolution analysis that generates the dyadic wavelets of Mallat and Zhong. Another approach is to consider frames. In this regard, we derive Littlewood-Paley inequalities and identities for frames. As an important application, we prove two oversampling theorems: one for generating frames from frames, and another to insure that tight frames remain tight. For further decomposition of the higher octave bands, wavelet packets are studied and a stability result is obtained. In a different project, we use ridge functions to construct neural networks with one hidden layer and prove that all such networks only give global approximations. Our study of systems reduction is again based on the AAK approach. We obtained rates of convergence of the rational symbol functions. DTIC

The electric behavior of intra-chip transmission structures with any cross section is determined by means of an analysis of a field theory supported structure and a signal analysis in time area. Linear boundary elements were used for extraction of parameters like R, L, and C for some examples such as monoconductor, two conductor system, and multiconductor transmission lines with a dielectric interface. Conductor losses were examined by means of two dimensional simulations taking into account current penetration in conductors in terms of wideband skin and proximity effects. Current penetration problem was formulated with electrodynamic potentials. The influence of conductor profile deformation due to galvanic reinforcement or corrosion in alternative current impedance and capacity was discussed. Resulting transmission properties were included in a signal analysis for examining the behavior of pulses used as data support in digital systems. Pulse response is found to be strongly dependent on conductor cross section shape. ESA

We describe research on the problem of generating multiple closed tours of an mxn chessboard by a knight, subject to the constraint that the search scheme used to solve the problem is non-backtracking; i.e., that the search engine never visits a node in the search tree that will ultimately lead to a dead end. We describe our experiences and results in the context of KTC, a search program developed to undertake this task. We describe the implementation of KTC, the search constraints we discovered, and KTC's performance to date, illustrating that a limited amount of domain knowledge can lead to near-perfect search on this class of Hamiltonian circuit construction problems. We close by suggesting promising directions for achieving a perfect search on this problem and the implications of such an achievement. DTIC

STOCHASTIC DYNAMICS: CROSSOVER FROM 1/f(SUP 3) TO FLICKER NOISE
E. Canessa and V. L. Nguyen Jan. 1993 25 p
(DE93-622862; IC-93/8) Avail: CASI HC A03/MF A01 (US Sales Only)

Finite time processes within the limits of the Newton equation and zero inertia motion (i.e., road to chaos) are studied by numerically solving the ordinary, stochastic Langevin equation in 1D for a free particle with inertial moving in a medium with viscosity (gamma). In these simulations, the scaling behavior of particle trajectories chi(t) and velocities v(t) with time are derived and the inclusion of non-zero particle masses is shown to define the asymptotic time limit tau(sub c) at which - independently of gamma - the system evolves into the well-known statistically stationary state characterized by /chi(sup 2)(t)/ is proportional to t and flicker noise. The time tau(sub c) is further analyzed from the correlation length given by the 2-point autocorrelation function of the particle velocity at each value of gamma. It is found that the noise power spectrum of v(t) is characterized by flicker noise for frequencies f less than or = f(sub c) approx. 1/tau(sub c), whereas for f greater than f(sub c), the noise power spectra behave as 1/f(sup upsilon), where upsilon varies between the limits of Newton's equation (i.e., upsilon = 3) and road to chaos (i.e., upsilon = 1). Furthermore, at times tau less than tau(sub c) and 0 less than gamma less than infinity, an ad-hoc exponent for the scaling of the variance of particle velocities with time is shown to characterize a subset of multifractal dimensions d(sub f)(gamma) while the single particle trajectories are shown to display a rather different subset of exponents on increasing gamma. Generic features of this transition are nicely given by Poincare maps in the velocity space. DOE

A NEW METHOD TO ASSESS MONTE CARLO CONVERGENCE
R. A. Forster, T. E. Booth, and S. P. Pederson 1993 12 p Presented at the Advanced Monte Carlo Computer Programs for Radiation Transport, Saclay, France, 27-29 Apr. 1993
(Contract W-7405-eng-36)
(DE93-012667; LA-UR-93-1446; CONF-9304131-3) Avail: CASI HC A03/MF A01

The central limit theorem can be applied to a Monte Carlo solution if the following two requirements are satisfied: (1) the random variable has a finite mean and a finite variance; and (2) the number N of independent observations grows large. When these are satisfied, a confidence interval based on the normal distribution with a specified coverage probability can be formed. The first requirement is generally satisfied by the knowledge of the type of Monte Carlo tally being used. The Monte Carlo practitioner has only a limited number of marginally quantifiable methods that use sampled values to assess the fulfillment of the second requirement; e.g., statistical error reduction proportional to 1/the square root of N with error magnitude guidelines. No consideration is given to what has not yet been sampled. A new method is presented here to assess the convergence of Monte Carlo solutions by analyzing the shape of the empirical probability density function (PDF) of history scores, f(x), where the random variable x is the score from one particle history and the integral evaluated from -infinity to infinity of f(x)dx = 1. Since f(x) is seldom known explicitly, Monte Carlo particle random walks sample f(x) implicitly. Unless there is a largest possible history score, the empirical f(x) must eventually decrease more steeply than 1/x(exp 3) for the second moment (the integral evaluated from -infinity to infinity of x(exp 2)f(x)dx) to exist. BAYESIAN ESTIMATION OF MOTION FIELDS FROM IMAGE SEQUENCES Ph.D. Thesis
Janusz Konrad Jun. 1989 257 p
(ISBN-0-315-57212-4; CTN-93-60724) Copyright Avail: Micromedia Ltd., Technical Information Centre, 165 Hotel de Ville, Place du Portage, Phase 2, Hull, Quebec J8X 3X2, Canada HC/MF

The ill-posed problem of estimating two dimensional motion in time varying images is addressed. The approach proposed uses the theory of stochastic processes at the formulation and solution stages. Independent Gaussian random variables are used to model the relationship between motion fields and images, and vector and binary Markov random fields are used to model motion and motion discontinuity fields, respectively. These models, combined using the Bayes rule, result in a Gibbsian a posteriori probability distribution from which the maximum a posteriori (MAP) and the minimum expected cost (MEC) estimation criteria are derived. Optimization of these criteria is performed using stochastic relaxation. The MAP estimation is extended to handle large displacements via a hierarchical approach. Deterministic approximations to some of the stochastic algorithms proposed

are derived and compared with their stochastic counterparts. The color information is incorporated into the estimation process. Numerous experimental results are presented. Two of the methods proposed are applied to motion compensated interpolation and shown to reduce certain types of errors. Author (CISTI)

MAXIMUM LIKELIHOOD ESTIMATION FOR CONSTRAINED OR MISSING DATA MODELS Technical Report
Alan E. Gelfand and Bradley P. Carlin 5 May 1993 20 p
(Contract N00025-92-J-1264)
(AD-A266563; TR-468) Avail: CASI HC A03/MF A01

In statistical models involving constrained or missing data, likelihoods constraining integrals emerge. In the case of both constrained and missing data, the result is a ratio of integrals, which for multivariate data may defy exact or approximate analytic expression. Seeking maximum likelihood estimates in such a setting, we propose Monte Carlo approximants for these integrals, and subsequently maximize the resulting approximate likelihood. Iteration of this strategy expedites the maximization, while the Gibbs sampler is useful for the required Monte Carlo generation. As a result, we handle a class of models broader than the customary EM setting without using an EM-type algorithm. Implementation of the methodology is illustrated in two numerical examples. DTIC

STOCHASTIC REALIZATION OF FINITE-VALUED PROCESSES AND PRIMES IN THE POSITIVE MATRICES
G. Picci and J. H. VanSchuppen Oct. 1992 10 p Repr. from Recent Advances in Mathematical Theory of Systems, Control, Networks, and Signal Processing 2: Proceedings of the International Symposium MTNS-1991, (Tokyo, Japan, Mita Press), 1992 p 227-232 Presented at the International Symposium MTNS-1991, Tokyo, Japan, 1991
(CWI-BS-R9222; ETN-93-94153) Copyright Avail: CASI HC A02/MF A01

A study aimed at showing that the stochastic realization problem of finite valued processes reduces to the problem of factorization of positive matrices is presented. The stochastic realization problem of finite valued processes asks for the classification of all minimal finite stochastic systems such that the output process of such a system equals a given process in distribution. This problem is motivated by the use of stochastic models in signal processing, communication, and control. The problem of characterizing the minimal number of states in this problem leads to a factorization problem for positive matrices and hence to the study of positive linear algebra. The results are a characterization of primes in the positive matrices and examples of such primes. ESA

STATISTICAL ANALYSIS OF THE m RANKINGS PROBLEM: KENDALL'S PROTOTYPE AND THE GROUPING ESTIMATE METHOD BASED ON NORMAL SCORES
Tuan A. Vu Aug. 1992 44 p
(DSIS-93-00139; DMS-RN-4-92; CTN-93-60785) Avail: CASI HC A03/MF A01

The statistical analysis of the theory of ranks has been developed extensively over the past fifty years. This subject considers the relationship between the rankings that a group of m judges assigns to a set of n objects. Kendall's contributions to the m rankings problem are considered. These include the formulae of the correlation coefficient between two rankings, the coefficient of Concordance W among judges, and significance tests of W as well as the best estimate based on the order of the sums of natural number ranks for each object. Based on the concept of normal scores and order statistics, a new procedure to find the best estimate is developed in which groups of objects which should be ranked the same are formed, based on the test of consecutive order statistics of normal score ranks' sums for each object after sorting in ascending order. Computer program listings for performing various ranking calculations are appended. Author (CISTI)

The dependent arrival processes MDAP (Markov Decision Arrival Processes) were introduced by Hordijk and Koole to model special arrival processes into controlled queueing networks. These were applied to solve control problems with several controllers having a common objective, where the output from one controlled network is fed into a second one. In case that objectives of the controllers are different, one may choose a min-max (worst case) approach where typically a controller tries to obtain the best performance under the worst possible (unknown) strategies of the other controllers. In this study MDAP is used to model such situations or situations of control in an unknown environment. This approach is applied to several scheduling problems, including scheduling of customers and scheduling of servers. Different information patterns including delayed information are considered. For all these models several structural results of the optimal policies are obtained. ESA

HYBRID S(SUB N)/MONTE CARLO RESEARCH AND RESULTS
R. S. Baker 1993 13 p Presented at the Advanced Monte Carlo Computer Programs for Radiation Transport, Saclay, France, 27-29 Apr. 1993
(Contract W-7405-eng-36)
(DE93-012677; LA-UR-93-1392; CONF-9304131-2) Avail: CASI HC A03/MF A01

The neutral particle transport equation is solved by a hybrid method that iteratively couples regions where deterministic (S(sub N)) and stochastic (Monte Carlo) methods are applied. The Monte Carlo and S(sub N) regions are fully coupled in the sense that no assumption is made about geometrical separation or decoupling. The hybrid Monte Carlo/S(sub N) method provides a new means of solving problems involving both optically thick and optically thin regions that neither Monte Carlo nor S(sub N) is well suited for by themselves. The hybrid method has been successfully applied to realistic shielding problems. The vectorized Monte Carlo algorithm in the hybrid method has been ported to the massively parallel architecture of the Connection Machine. Comparisons of performance on a vector machine (Cray Y-MP) and the Connection Machine (CM-2) show that significant speedups are obtainable for vectorized Monte Carlo algorithms on massively parallel machines, even when realistic problems requiring variance reduction are considered. However, the architecture of the Connection Machine does place some limitations on the regime in which the Monte Carlo algorithm may be expected to perform well. DOE

DECONVOLUTION FOR POSITIVE SIGNALS
D. M. Goodman Oct. 1992 10 p Presented at the Symposium on Fundamentals of Discrete Time Systems, Chicago, IL, 26-27 Jun. 1992
(Contract W-7405-eng-48)
(DE93-013044; UCRL-JC-111956; CONF-9206371-1) Avail: CASI HC A02/MF A01

We consider estimating an unknown positive signal from an observed signal that has been corrupted by known linear dynamics and additive noise. In many experiments the goal is to estimate energy or power as a function of time; consequently, the positive deconvolution problem occurs frequently in a wide variety of scientific disciplines. We present two new methods. One is based on Mallows' C(sub L) statistic, and the other is based on conjugate gradients. We describe several other methods. This paper considers 'small sample' problems. This fact and the imposition of positivity constraints makes analytic comparisons of the methods impossible. Therefore, we include preliminary Monte-Carlo comparisons. DOE

Self organized criticality refers to the tendency of highly dissipative systems to drive themselves to a critical state. This has been proposed to explain why observed physics often displays a wide disparity of length and time scales. The phenomenon can be studied in simple cellular automaton models. DOE

DEVELOPMENT AND APPLICATION OF THE AUTOMATED MONTE CARLO BIASING PROCEDURE IN SAS4
J. S. Tang and B. L. Broadhead 1993 21 p Presented at the Advanced Monte Carlo Computer Programs for Radiation Transport Conference, Saclay, France, 27-29 Apr. 1993
(Contract DE-AC05-84OR-21400)
(DE93-015205; CONF-9304131-7) Avail: CASI HC A03/MF A01

An automated approach for biasing Monte Carlo shielding calculations is described. In particular, adjoint fluxes from a one-dimensional discrete-ordinates calculation are used to generate biasing parameters for a three-dimensional Monte Carlo calculation. The automated procedure consisting of cross-section processing, adjoint flux determination, biasing parameter generation, and the initiation of a MORSE-SGC/S Monte Carlo calculation has been implemented in the SAS4 module of the SCALE computer code system. The automated procedure has been used extensively in the investigation of both computational and experimental benchmarks for the NEACRP working group on shielding assessment of transportation packages. The results of these studies indicate that with the automated biasing procedure, Monte Carlo shielding calculations of spent fuel casks can be easily performed with minimum effort and that accurate results can be obtained at reasonable computing cost. The systematic biasing approach described in this paper can also be applied to other similar shielding problems. DOE

THE EFFECTS OF INTERNAL FLUCTUATIONS ON A CLASS OF NONEQUILIBRIUM STATISTICAL FIELD THEORIES
M. M. Millonas 1993 5 p Presented at the 12th International Conference on Noise in Physical Systems and 1/f Fluctuations, Saint Louis, MO, 16-20 Aug. 1993
(Contract W-7405-eng-36)
(DE93-016620; LA-UR-93-2132; CONF-930866-3) Avail: CASI HC A01/MF A01

A class of models with applications to swarm behavior as well as many other types of spatially extended complex biological and physical systems is studied. Internal fluctuations can play an active role in the organization of the phase structure of such systems. In particular, for the class of models studied here the effect of internal fluctuations due to finite size is a renormalized decrease in the temperature near the point of spontaneous symmetry breaking. OPTIMAL MAINTENANCE POLICIES OF A MARKOVIAN SYSTEM M.S. Thesis
Nir Douer Jun. 1991 69 p In HEBREW
(ITN-93-85216) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

We consider a Markovian system, deteriorating in time, which can be either replaced or partially repaired after each inspection. After a repair or replacement, the system may also be found in a worse state (as a consequence of the maintenance activity). Under reasonable assumptions on the costs of operating, replacing or repairing the system, we show that there exists a generalized control limit rule such that there is a state i* below which no repair or replacement actions are taken and a state, j such that for j greater than or equal to i*, a maintenance action must be performed. We show the above for both discrete and continuous state space, and prove optimality of the generalized control limit rule policy for both the criteria: (1) total expected discounted cost; and (2) long run average cost. DISTRIBUTIONAL INFERENCES FOR A LOCATION PARAMETER Thesis [VERDELINGSPRAKEN VOOR EEN LOCATIEPARAMETER]
H. J. Guichelarr Oct. 1992 30 p In DUTCH
(W-9219; ETN-93-94102) Avail: CASI HC A03/MF A01

Distribution inferences were made about a stochastic unknown in the form of a probability Q. An inference is evaluated by means of the risks for a loss function L(y, Q). Sometimes the real value of y can be found, allowing a real evaluation of the inferences. Distributional inferences were also made for location parameter problems. The choice of the optimal equivariance procedure to make distributional inferences is discussed. ESA

ROBUST ESTIMATORS AND TESTS IN ONE-SAMPLE LOCATION PROBLEM WITH PARTICULAR CONSIDERATION ON MODIFIED MAXIMUM LIKELIHOOD PROCESS Ph.D. Thesis [ROBUSTE SCHAETZER UND TESTS IM EINSTICHPROBEN-LAGEPROBLEM UNTER BESONDERER BERUECKSICHTIGUNG DES MODIFIZIERTEN MAXIMUM-LIKELIHOOD-VERFAHRENS]
Ung-Hee Lee 1992 195 p In GERMAN
(ETN-93-94391) Avail: CASI HC A09/MF A03

M, L, and R estimators are examined with the maxmin criterion for short and long tailed distributions and finite populations using Monte Carlo simulations. For L estimator, selector statistics were used for classification of distribution type data and trimming and winsorization medians were defined; the swindle method was introduced in a simulation in order to obtain precise results of the variance of location estimators. Several examples of possible influence functions for M estimators were given and a numerical estimation was performed using Newton method. Some alternative location tests instead of classical student tests were considered in which test robustness was examined under deviations of normal distributions for finite populations. For assessment of study reliability, assumptions of distribution symmetry and data dependence such as serial or constant correlation and autoregression were examined. ESA

SPARE PARTS ANALYSIS OF THE MK.32B-751 AAR POD
Michael K. Ormrod Jan. 1993 15 p
(DSIS-93-00737; ORAE-PR-614; CTN-93-60839) Avail: CASI HC A03/MF A01

To provide air refuelling support, maintain airlift capability, and contribute to the modernization of the air reserves, Canada's Department of National Defence purchased five C130H tankers and outfitted them with Mk32B-751 air-to-air refuelling (AAR) pods. A study was undertaken to determine if the

quantity of spares initially procured for the AAR pods is adequate to maintain a 75 percent operational availability. The initial spares were analyzed using the ROSAM program which predicted the operational availability of the pod to be 98 percent. In addition, a sensitivity analysis of the estimated mean time before failure (MTBF), operating hours, and contractor repair time was also performed. By halving the MBTF of the parts or doubling the operating hours of the pod, availability fell to 90 percent. By doubling the time required for the contractor to repair any part, availability dropped to 92 percent. In all cases, the operational availability of the pod was well above the 75 percent target. GATE ASSIGNMENT USING LINEAR PROGRAMMING M.S. Thesis
C. G. vanRhee Jul. 1992 254 p
(LR-698; ETN-93-94010) Avail: CASI HC A12/MF A03

A method for optimizing the aircraft to gate assignment with the use of linear programming is presented. The Automatic Optimal Resource and Tarmac Allocation (AORTA) program is able to handle many real life assignment criteria. The purpose of the development of a program using linear programming was to investigate whether this method could be effectively used to provide a practical solution to the problem. This means that all kinds of practical constraints must be incorporated and all kinds of assignment rules must be taken into account. The effectiveness of the program is tested with data from Schiphol Airport. The results show that the AORTA program can be used to solve assignment problems. ESA

GAUGING THE OCTONION ALGEBRA
A. K. Waldron and G. C. Joshi 1992 19 p
(DE93-622864; UM-P-92/60) Avail: CASI HC A03/MF A01 (US Sales Only)

By considering representation theory for non-associative algebras the fundamental adjoint representations of the octonion algebra is constructed. It is then shown how these representations by associative matrices allow a consistent octonionic gauge theory to be realized. It was found that non-associativity implies the existence of new terms in the transformation laws of fields and the kinetic term of an octonionic Lagrangian. DOE

RARE ATTRIBUTES IN FINITE UNIVERSE: HYPOTHESES TESTING SPECIFICATION AND EXACT RANDOMIZED UPPER CONFIDENCE BOUNDS
T. Wright Mar. 1993 33 p
(Contract DE-AC05-84OR-21400)
(DE93-012783; ORNL/TM-12269) Avail: CASI HC A03/MF A01

When attributes are rare and few, or none are observed, in the selected sample from a finite universe, sampling statisticians are increasingly being challenged to use whatever methods are available to declare with high probability or confidence that the universe is near or completely attribute-free. This is especially true when the attribute is undesirable. Approximations such as those based on normal theory are frequently inadequate with rare attributes. For simple random sampling without replacement, an appropriate probability distribution for statistical inference is the hypergeometric distribution. But even with the hypergeometric distribution, the investigator is limited from making claims of attribute-free with high confidence unless the sample size is quite large using nonrandomized techniques. In the hypergeometric setting with rare attributes, exact randomized tests of hypothesis are investigated to determine the effect on power of how one specifies the null hypothesis. In particular, specifying the null hypothesis as zero attributes does not always yield maximum possible power. We also consider the hypothesis specification question under complex sampling designs including stratified random sampling and two-stage cluster sampling (one case involves random selection at first stage and another case involves probability proportional to size without replacement selection at first stage). Also under simple random sampling, this article defines and presents a simple algorithm for the construction of exact 'randomized' upper confidence bounds which permit one to possibly report tighter bounds than those exact bounds obtained using 'nonrandomized' methods. STABILITY OF SUBHARMONICS AND ESCAPE PHENOMENA IN THE TWIN-WELL POTENTIAL DUFFING SYSTEM
J. Janicki and W. Szemplinska-Stupnicka Jun. 1993 67 p
Avail: CASI HC A04/MF A01

Low order subharmonic resonances in the twin-well potential Duffing system are studied: 1:1, 1:2, 1:3 of one-well motion and 1:1, 1:3 of cross-well motion. Solutions for the resonances are found using a modification of the near-linear perturbation method. Then Hill's variational equation allows us to examine stability of the solutions. Due to the above methods major bifurcations of subharmonics can be located approximately in the parameter space: folds, period-doublings and symmetry-breakings. Results of numerical experiment are included for comparison. They show that the analysis of the local bifurcations can estimate phenomena of escape from potential well. Two types of chaotic attractor catastrophes are also found in the system: one is invertible with respect to parameter changes, the other is not and involves hysteresis. The former type seems to be related to the local bifurcations of regular orbits, the latter corresponds to the boundary crisis. Author

EVALUATION FOR RHEOLOGICAL CONSTITUTIVE RELATIONS, USING THE INDENTATION TECHNIQUE Ph.D. Thesis
Lei Fang 1992 185 p
Avail: Univ. Microfilms Order No. DA9311630

A simple experimental method of determining the rheological constitutive relations is proposed. The method relies upon an analysis of the frictionless contact of a rigid spherical indenter and the rheological materials. The proposal addresses problems in two fields: rheological constitutive models and contact mechanics. It attempts to evaluate the rheological constitutive relations using an indentation technique. A systematic, optimization-based material parameter/function indentation model is proposed. The identification algorithm is based on a modified Marquardt-Levenberg method. A new integral constitutive equation for viscoelastic materials is derived. The derivation is carried out so that a damage function is included in the model in a relatively convenient form. Inclusion of damage effects makes this constitutive equation considerably more general than the widely accepted K-BKZ integral model. The single-step and double-step stress relaxation indentation experiments on asphalt materials were performed. The K-BKZ,

Wagner, and nonlinear Volterra models were evaluated. It is demonstrated that the new integral constitutive model shows a very good agreement with the experimental data. The idea of damage function is introduced not only to have a better fit of data, but the damage (or irreversibility) is observed experimentally. Also, the creep indentation tests on composites were presented. A multiaxial theory of creep deformation for particle-strengthened metal matrix composites (Zhu-Weng Theory) was evaluated. The goal of the proposed research is to develop the indentation technique for use in basic mechanical studies. From the indentation test, material response is measured. The data are used in conjunction with the material parameter identification model to optimally back calculate the constitutive relations. Comparing the experimental data between the indentation test and other experiment method demonstrates the viability of the proposed approach. Dissert. Abstr.

THREE-STAGE LINEAR, SPLIT-STIRLING CRYOCOOLER FOR 1 TO 2K MAGNETIC COLD STAGE
R. C. Longsworth Aug. 1993 101 p Original contains color illustrations
(Contract NAS2-13180)
(NASA-CR-4538; A-93105; NAS 1.26:4538) Avail: CASI HC A06/MF A02; 3 functional color pages

A long-life, linear, high efficiency 8K split Stirling cycle cryocooler was designed, built, and tested. The refrigerator is designed for cooling a 50 mW, 1.5K magnetic cold stage. Dual opposed piston compressors are driven by moving-coil linear motors. The three stage expander, although not completed, is also driven by a linear motor and is designed to produce 1 SW at 60K, 4W at 16K, and 1.2W at 8K. The cold regenerator employs a parallel gap construction for high efficiency. The key technology areas addressed include warm and cold flexible suspension bearings and a new cold regenerator geometry for high efficiency at 8K. Author (revised)

THERMAL CONDUCTANCE OF PRESSED METALLIC CONTACTS AUGMENTED WITH INDIUM FOIL OR APIEZON-N (TM) GREASE AT LIQUID HELIUM TEMPERATURES
Louis J. Salerno, Peter Kittel, and Alan L. Spivak (Trans-Bay Electronics, Richmond, CA.) Jul. 1993 11 p
(RTOP 582-09-11)
(NASA-TM-108779; A-93035; NAS 1.15:108779) Avail: CASI HC A03/MF A01

The thermal conductance of pressed contacts which have been augmented with Indium foil or Apiezon-N (tm) grease was measured over the temperature range of 1.6 to 6.0 K, with applied forces from 22 N to 670 N. The sample pairs were fabricated from OFHC copper, 6061-T6 aluminum, free-machining brass, and 304 stainless steel. Although the thermal conductance was found to increase with increasing applied contact force, the force dependence was less than in earlier work. The addition of Indium foil or Apiezon-NT grease between the contact surfaces resulted in an improvement over uncoated surfaces ranging from a factor of approximately 3 for stainless steel to an order of magnitude for copper contacts. THEORY OF THE NEGATIVE MAGNETORESISTANCE IN MAGNETIC METALLIC MULTILAYERS
R. Q. Hood and L. M. Falicov Apr. 1993 12 p Presented at the Spring Meeting of the MRS, San Francisco, CA, 12-16 Apr. 1993
(Contract DE-AC03-76SF-00098)
(DE93-013912; LBL-33948; CONF-930405-10) Avail: CASI HC A03/MF A01

The Boltzman equation is solved for a system consisting of alternating ferromagnetic normal metallic layers. The in-plane conductance of the film is calculated for two configurations: successive ferromagnetic layers aligned parallel and antiparallel to each other. Results explain the giant negative magnetoresistance encountered in these systems when an initial antiparallel arrangement is changed into a parallel configuration by application of an external magnetic field. The calculation depends on the following: geometric parameters (the thicknesses of the layers); intrinsic metal parameters (number of conduction electrons, magnetization and effective masses in the layers); bulk sample properties (conductivity relaxation times); and interface scattering properties (diffuse scattering versus potential scattering at the interfaces). It is found that a large negative magnetoresistance requires, in general, considerable asymmetry in the interface scattering for the two spin orietations. All qualitative features of the experiments are reproduced. Quantitative agreement can be achieved with sensible values of the parameters. The effect can be conceptually explained based on considerations of phase-space availability for an electron of a given spin orientation as it travels through the multilayer sample in the various configurations and traverses the interfaces. VIBRATIONAL RELAXATION IN HYPERSONIC FLOW FIELDS
Willard E. Meador, Gilda A. Miner, and John H. Heinbockel (Old Dominion Univ., Norfolk, VA.) Sep. 1993 23 p
(RTOP 506-40-62-01)
(NASA-TP-3367; L-17238; NAS 1.60:3367) Avail: CASI HC A03/MF A01

Mathematical formulations of vibrational relaxation are derived from first principles for application to fluid dynamic computations of hypersonic flow fields. Relaxation within and immediately behind shock waves is shown to be substantially faster than that described in current numerical codes. The result should be a significant reduction in nonequilibrium radiation overshoot in shock layers and in radiative heating of hypersonic vehicles; these results are precisely the trends needed to bring theoretical predictions more in line with flight data. Errors in existing formulations are identified and qualitative comparisons are made. Author

Apr. 1993 70 p Transl. into ENGLISH of Le probleme du bang sonique pour de futurs avions de transport a haute vitesse (Paris, France, ONERA) 1990 p 1-52 Original language document announced as N93-30020
(ESA-TT-1286; ONERA-NT-1990-3; ETN-93-94584) Avail: CASI HC A04/MF A01

The sonic boom origin and propagation in the atmosphere are reviewed. The main effects on structures and living creatures are described. The only appreciable nuisance resulting from the boom is due to the startle reaction. No acceptability threshold was defined up until now. However, the startle reactions appear to become rare for boom intensities less than 50 pascals or for booms having a low intensity forward shock front followed by progressive compression. The following studies are recommended to be

carried out: on the startle reactions so as to define tolerable booms of unconventional shapes; and on the aerodynamics of the shapes of aircraft liable to generate such booms. ESA

AN EXPERIMENTAL ASSESSMENT OF THE USE OF GROUND-LEVEL MICROPHONES TO MEASURE THE FLY-OVER NOISE OF JET-ENGINED AIRCRAFT
R. C. Payne Jan. 1993 38 p Sponsored by Dept. of Transport, London, United Kingdom
(NPL-RSA(EXT)-0039; ETN-93-94466) Copyright Avail: National Physical Laboratory, Teddington, Middlesex TW11 0LW, United Kingdom HC

During aircraft flight trials to measure the noise levels of six different military jet aircraft types in low altitude high speed operations, noise measurements were performed using microphones at ground level and at a height of 1.2 m. The program provided reliable data on the difference between sound pressure levels from the two microphone arrangements, for sound incident over a range of angles, from 0 deg (aircraft overhead) to approximately 80 deg. Substantial differences from ground level to 1.2 m were observed in measurements of maximum perceived noise level, effective perceived noise level and maximum A-weighted sound pressure level. For sound waves incident to the ground at angles less than approximately 60 deg from vertical, these differences were found to be independent of angle of incidence for all the six aircraft and all flight procedures. Within this range of sound incidence angles the ground plane arrangement produced data that closely approximated pressure doubled values. The conventional 1.2 m high microphone gave rise to noise levels approximately 4 dB lower. For sound incident at angles greater than 60 deg from vertical, the difference between noise levels measured using the two microphone configurations was found to depend on angle of incidence, reducing to zero at approximately 75 deg. When noise measurements are made using the ground plane arrangement, the effects of meteorological conditions must be considered in relation to sound incident at angles greater than approximately 60 deg. STUDY ON THE POSSIBILITIES TO APPLY SPECTRUMINDEX
Juhani Parmanen and Pauli Sysioe Aug. 1992 41 p Sponsored by NORDTEST
(VTT-PUBS-109; ISBN-9-51-384277-4; ETN-93-94483) Copyright Avail: CASI HC A03/MF A01

Possibilities to apply spectrumindex in building acoustics are studied. Spectrumindex refers to the difference of two sound pressure levels caused by the same sound field and measured using two separate frequency weightings. The purpose of the study is to develop a simple method in which one can apply the spectrumindex to evaluate the traffic noise reduction indices existing already in a NORDTEST method. The spectrumindex principle was applied to a test material of 20 different windows. Two alternatives were used as basic sound reduction indices. The equation including the best realizable sound insulation curves was chosen as the most feasible estimation method. It is shown that reliable estimation results can be obtained. The deviation is at the most 1 dB from the correct value calculated in accordance with the NORDTE[illegible] The study is completed by using a material consisting of 11 exterior doors and one single pane window. UNDERWATER HEARING: A REVIEW
M. Al-Masri, A. Martin, and J. Nedwell May 1993 54 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(ISVR-TR-212) Copyright Avail: Issuing Activity

In view of the prevalence of hearing loss among commercial divers and the absence of widely accepted noise exposure limits for occupational underwater use, a review of studies of underwater hearing thresholds and hearing mechanisms was undertaken with the ultimate aim of developing noise exposure limits. Previous studies of underwater hearing thresholds appear to show that the ear underwater is less sensitive than compared with air. However, a surprisingly wide range of values for underwater hearing thresholds was reported, for example 35-90 dB SPL(re 20 MuPa) at 0.25 kHz and 30-80 dB at 1 kHz. No representative single threshold curve can be extracted with any validity. Possible reasons for such a wide scatter of results include high underwater ambient noise levels which may have masked the subjects underwater hearing thresholds, ill defined stimuli and underwater sound fields, and variable and informal audiometric methodology. Previous authors have proposed three somewhat interlinked theories to explain how sound is transmitted from water to the cochlea. These involve: the 'auricular' conduction pathway, the bone conduction pathway, and the dual conduction pathway. Up to this day, no one pathway has been shown to predominate, and all of them have been poorly evaluated. It is also possible that the presence of air bubbles in the ear canal and increased water depth may have significant effects on underwater hearing thresholds. These effects may be dependent on the underwater hearing mechanism. Again, the studies reviewed give conflicting results and no valid conclusion can be drawn. It is apparent that further experimental studies are required to establish underwater hearing thresholds and to provide an understanding of the mechanisms of hearing underwater. These should be based upon suitable facilities and methodologies for testing hearing thresholds underwater following modern and scientific audio metric practice. Author (revised)

FLATDAN BEAMFORMER ENHANCEMENTS AND TESTING
Roberto Racca, Ian Schumacher, and P. Kraeutner Jul. 1992 46 p
(Contract DREP-W7708-1-0980-01-XSA)
(DSIS-93-00287; DREP-CR-92-47; CTN-93-60798) Avail: CASI HC A03

FLATDAN is a program that implements a Farfield Line Array Time Domain beamformer for processing large amounts of acoustic data. Upsampling is used to increase the time delay resolution beyond that of the input sampling frequency. However, decimation after the beamforming operation ensures that the output data rate per beam is the same as the input data rate per sensor. The beamformer can accommodate up to 256 input sensor channels and can provide output for up to 256 beams. The beamformer expects input data for all sensors to be in a single file written using the Defence Research Establishment Pacific Ocean Acoustics .DAT format. Beam output data is written in the same format. An information manual for FLATDAN users is presented, describing the beamformer design, program operation, and program structure. Modifications to the file input/output routines since the original introduction of FLATDAN are noted. A performance analysis of the beamformer code was conducted using a VAX performance and coverage analyzer utility. Results are given, showing how much total execution time is spent at given locations in the program. Sample plots from test runs using simulated input data are included. CISTI

ACTIVE CONTROL OF FAN-GENERATED PLANE WAVE NOISE
Carl H. Gerhold, William E. Nuckolls (Analytical Services and Materials, Inc., Hampton, VA.), Odillyn L. SantaMaria, and Scott D. Martinson Aug. 1993 28 p Sponsored by NASA. Washington
(RTOP 535-03-11-02)
(NASA-TM-109008; NAS 1.15:109008) Avail: CASI HC A03/MF A01

Subsonic propulsion systems for future aircraft may incorporate ultra-high

bypass ratio ducted fan engines whose dominant noise source is the fan with blade passage frequency less than 1000 Hz. This low frequency combines with the requirement of a short nacelle to diminish the effectiveness of passive duct liners. Active noise control is seen as a viable method to augment the conventional passive treatments. An experiment to control ducted fan noise using a time domain active adaptive system is reported. The control sound source consists of loudspeakers arrayed around the fan duct. The error sensor location is in the fan duct. The purpose of this experiment is to demonstrate that the in-duct error sensor reduces the mode spillover in the far field, thereby increasing the efficiency of the control system. In this first series of tests, the fan is configured so that predominantly zero order circumferential waves are generated. The control system is found to reduce the blade passage frequency tone significantly in the acoustic far field when the mode orders of the noise source and of the control source are the same. The noise reduction is not as great when the mode orders are not the same even though the noise source modes are evanescent, but the control system converges stably and global noise reduction is demonstrated in the far field. Further experimentation is planned in which the performance of the system will be evaluated when higher order radial and spinning modes are generated. Author (revised)

STUDY OF CHEMICAL REACTIONS UNDER THE INFLUENCE OF ULTRASOUND
Kien-Yin Lee 1993 5 p Presented at the Ultrasonics International 1993, Vienna, Austria, 6-8 Jul. 1993
(Contract W-7405-eng-36)
(DE93-016458; LA-UR-93-2331; CONF-930799-1) Avail: CASI HC A01/MF A01

At Los Alamos, the author is interested in sonochemistry because there is potential for accelerating reactions involving the synthesis of certain nitro compounds and for reducing the possibility of decomposition under milder reaction conditions. The author has initiated the study of the nitration of 2,4-dihydro-3H-1,2,4-triazol-3-one with concentrated nitric acid under sonication. The preparation of 4,5-tetrazine, and oxidation of 3,6-diamino-1,2,4,5-tetrazine were also studied. Sonication reaction conditions and results of these reactions under ultrasound are discussed in detail. DOE

72 ATOMIC AND MOLECULAR PHYSICS

ELECTRIC CHARGE QUANTIZATION
R. Foot (Southampton Univ., England.), H. Lew (Purdue Univ., West Lafayette, IN.), and R. R. Volkas Jun. 1992 17 p
(DE93-622901; UM-P-92/52; OZ-92/19; SHEP-91/92) Avail: CASI HC A03/MF A01 (US Sales Only)

Experimentally it has been known for a long time that the electric charges of the observed particles appear to be quantized. An approach to understanding electric charge quantization that can be used for gauge theories with explicit U(1) factors - such as the standard model and its variants - is pedagogically reviewed and discussed in this article. This approach used the allowed invariances of the Lagrangian and their associated anomaly cancellation equations. It is demonstrated that charge may be de-quantized in the three-generation standard model with massless neutrinos, because differences in family-lepton-numbers are anomaly-free. The relevant experimental limits are also reviewed. This approach to charge quantization suggests that the minimal standard model should be extended so that family-lepton-number differences are explicitly broken. Some candidate extensions such as the minimal standard model augmented by Majorana right-handed neutrinos are also briefly discussed. DOE

TOP QUARK POLARIZATION AND T-ODD SPIN CORRELATIONS AS TOOLS FOR TESTING (NON) STANDARD MODEL PREDICTIONS
W. Bernreuther (Ecole Polytechnique, Palaiseau, France.), J. P. Ma, and T. Schroeder (Heidelberg Univ., Germany.) 1992 17 p
(DE93-622956; UM-P-92/63; OZ-92/27; HD-THEP-92-30) Avail: CASI HC A03/MF A01 (US Sales Only)

In this paper a number of T-odd spin-momentum correlations are defined for t and t-bar quarks and directly measurable correlations involving the momenta of the charged leptons and/or b jets from t and t-bar decay are identified. It concentrates on observables which can be classified as being even under a CP symmetry transformation in the case of e(sup +)e(sup -) yields tt-bar X or pp-bar yields tt-bar X (unpolarized or transversely polarized beams). These correlations project onto absorptive parts of the scattering matrix which are induced by CP-conserving interactions. In order to estimate the effects of the Standard Model interactions the Quantum Chromodynamics and Higgs boson contributions were calculated to a number of these observables. Several of them are considered to be useful tools for a detailed study of the tt-bar system at future hadron colliders. DOE

MEDIUM ENERGY HADRON-NUCLEUS SCATTERING IN THE 1/N EXPANSION FORMALISM
S. Kuyucak (Australian National Univ., Canberra.) and I. Morrison 1992 31 p
(DE93-622957; UM-P-92/66) Avail: CASI HC A03/MF A01 (US Sales Only)

The algebraic-eikonal approach to the medium energy hadron-nucleus scattering is generalized to arbitrary interactions and boson types using the 1/N expansion technique for the interacting boson model. The results are used in a comparative study of proton scattering from deformed nuclei in the sd and sdg boson models. The two models give almost identical results for a pure quadrupole interaction but widely differ when a hexadecapole interaction is included. DOE

ELECTROMAGNETIC DEFLECTION OF SPINNING PARTICLES
J. P. Costella and B. H. J. McKellar 1992 13 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-622866; UM-P-92/93) Avail: CASI HC A03 (US Sales Only)

It is shown that it is possible to obtain self-consistent and physically acceptable relativistic classical equations of motion for a point-like spin-half particle possessing an electric charge and magnetic dipole moment, directly from a manifestly covariant Lagrangian, if the classical degrees of freedom are appropriately chosen. The equations obtained encompass the well-tested Lorentz force and Thomas-Bargmann-Michel-Telegdi spin equations, as well as providing a definite specification of the classical magnetic dipole force, whose exact form has been the subject of recent debate. Radiation reaction - the force and torque on an accelerated particle due to its self-interaction - is neglected at this stage. DOE

Mason (Victoria Univ., British Columbia.), A. Olin (Victoria Univ., British Columbia.), J. L. Beveridge (Tri-Univ. Meson Facility, Vancouver, British Columbia.), G. M. Marshall (Tri-Univ. Meson Facility, Vancouver, British Columbia.), J. H. Brewer (British Columbia Univ., Vancouver.), and B. M. Forster (British Columbia Univ., Vancouver.) 1992 6 p Presented at the Ascona Workshop on Muonic Atomic and Molecules, Ascona, Switzerland, 5-9 Apr. 1992
(Contract DE-FG02-87ER-40333)
(DE93-010253; DOE/ER-40333/137; CONF-9204241-1) Avail: CASI HC A02/MF A01

Negative muons are stopped in solid layers of hydrogen and neon. Muonic hydrogen atoms can drift to the neon layer where the muon is immediately transferred. It was found that the time structure of the muonic neon X-rays follows the exponential law where the rate is the same as the disappearance rate of (mu)(-)p atoms. The pp(mu)-formation rate and the muon transfer rate to deuterium are deduced. DOE

SOLITONS AND 1/f NOISE IN MOLECULAR CHAINS

H. Rosu and E. Canessa Jan. 1993 15 p
(DE93-622898; IC-93/22) Avail: CASI HC A03/MF A01 (US Sales Only)

Davydov's model of solitons in (alpha)-helix protein chains is shown to display features of self-organized criticality (SOC), i.e., power law behavior of correlations in space and 1/f noise, as a consequence of considering random peptide group displacements from their (periodic) equilibrium positions along a chain. This may shed light on a basic mechanism leading to obtain flicker noise in (alpha)-helix protein chains and to predict a SOC regime in biomolecular structures from first principles. We believe our treat of 1/f noise to be of some relevance to recent findings due to Voss on DNA (Phys. Rev. Lett. 68, 3805 (1992)). DOE

CHARGED SCALAR PARTICLES AND (TAU) LEPTONIC DECAY
Zhijian Tao Feb. 1993 11 p
(DE93-622969; IC-93/31) Avail: CASI HC A03/MF A01 (US Sales Only)

Charged scalar particles introduced in some extensions of the standard model can induce (tau) leptonic at tree level. We find that with some charged SU(2)-singlet scalar particles, like ones introduced in Zee-type model, (tau) leptonic decay width is always smaller than what is predicted by the standard model, therefore they may offer a natural solution to (tau) decay puzzle. To be more specific, we examine some Zee-type models in detail to see if at the same time they are acceptable in particle physics, cosmology and astrophysics. It is shown that (tau) decay data do put some constraints on these models. DOE

MOLECULAR SOLVENT-DYNAMICAL EFFECTS ON ACTIVATED ELECTRON-TRANSFER KINETICS: HOW IMPORTANT IS SOLVENT FRICTION? Technical Report
Michael J. Weaver Apr. 1993 26 p
(Contract N00014-91-J-1409)
(AD-A265886; TR-142) Avail: CASI HC A03/MF A01

The likely extent of retardation exerted by solvent friction upon the rates of activated electron-transfer (ET) processes is explored and evaluated with reference to some extent solvent-dependent data for metallocene ET self exchanges. Barrier-crossing frequencies extracted from the experimental kinetic and barrier data for suitably adiabatic reactions are compared with solvent inertial frequencies (i.e. the zero-friction limit) as estimated from currently available analytic expressions. The additional extent of rate retardation seen in going from low-friction to ostensibly strongly overdamped solvents as deduced in this manner is seen to be substantially muted in comparison with the predictions of conventional Debye-continuum approaches, although follows a solvent functionality that is nevertheless roughly in accord with the latter. The likely importance of more rapid dynamics associated with short-range (molecular) solvation is addressed in the light of these findings. DTIC

MEASUREMENTS OF SCATTERING PROCESSES IN NEGATIVE ION-ATOM COLLISIONS
T. J. Kvale 1993 13 p
(Contract DE-FG05-88ER-13971)
(DE93-013863; DOE/ER-13971/20) Avail: CASI HC A03/MF A01

This research project is designed to provide measurements of various scattering processes which occur in H(-) collisions with atomic (specifically, noble gas and atomic hydrogen) targets at intermediate energies. These processes include elastic scattering, single- and double-electron detachment, and target excitation/ionization. For the elastic and target inelastic processes where H(-) is scattered intact, the experimental technique of Ion Energy-Loss Spectroscopy (IELS) will be employed to identify the final target state(s). In most of the above processes, cross sections are unknown both experimentally and theoretically. The measurements in progress will provide either experimentally determined cross sections or set upper limits to those cross sections. In either case, these measurements will be stringent tests of our understanding in energetic negative ion-atom collisions. In addition secondary negative particle emission yields for H(sup 0) on Cu in the 3 to 50 keV range are shown. DOE

NO-LOST THEOREM FOR PARITY VIOLATING NUCLEON-NUCLEON SCATTERING EXPERIMENTS
T. Goldman 1993 8 p Presented at the Future Directions in Particle and Nuclear Physics at Multi-GeV Hadron Beam Facilities, Upton, NY, 4-6 Mar. 1993
(Contract W-7405-eng-36)
(DE93-012737; LA-UR-93-1532; CONF-930389-10) Avail: CASI HC A02/MF A01

A purely left-chiral model of the weak interactions is used to show that the total parity-violating asymmetry in quark-quark scattering must grow with increasing energy. In the absence of other new physics, non-observation of a large asymmetry can therefore be used to infer an upper bound on the mass scale for new right-chiral weak vector bosons. Applying this idea to actual nucleon-nucleon scattering requires more involved calculations, as the dominant contribution appears to come from a component of diquark-quark scattering related to, but not identical to, wavefunction-mixing. Earlier criticism of this model by Simonius and Unger is refuted, and a new calculation is proposed as an additional check on the result. Finally, we argue that the so-called 'spin crisis' does not affect our conclusions. DOE

LOW ENERGY NEUTRAL ATOM IMAGING TECHNIQUES
Herbert O. Funsten, David J. McComas, and Earl E. Scime 1993 13 p Presented at the Annual Meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA, 11-16 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012744; LA-UR-93-1509; CONF-930722-1) Avail: CASI HC A03/MF A01

The potential scientific return from low energy neutral atom (LENA) imaging of the magnetosphere is extraordinary. The technical challenges of LENA detection include the following: (1) removal of LENA's from the tremendous ambient UV without losing information of their incident trajectories, (2) quantification of their trajectories, and (3) obtaining high sensitivity measurements. Two techniques that have been proposed for this purpose are based on fundamentally different atomic interaction mechanisms between LENA's and a solid: LENA transmission through an ultrathin foil and LENA reflection from a solid surface. Both of these methods provide LENA ionization (for subsequent removal from the UV by electrostatic deflection) and secondary electron emission (for start pulse generation for time-of-flight and/or coincidence). We present a comparative study of the transmission and reflection techniques based on differences in atomic interactions with solids and surfaces. We show that transmission methods yield an order of magnitude greater secondary electron emission than reflection methods. Transmission methods are shown to be sufficient for LENA energies of approximately 1 keV to greater than 30 keV. Reflection methods using low work function surfaces could be employed for LENA ionization for energies less than several keV. DOE

EXPERIMENTAL AND THEORETICAL STUDY OF INHOMOGENEOUS ELECTRON TRANSFER IN BETAINE: COMPARISONS OF MEASURED AND PREDICTED SPECTRAL DYNAMICS
Alan E. Johnson, Nancy E. Levinger, Wlodzimierz Jarzeba, Ralph E. Schlief, and Dahv A. Kliner 15 May 1993 63 p
(Contract N00014-89-J-1746)
(AD-A265703; TR-3) Avail: CASI HC A04/MF A01

New tunable pump and probe data are reported for the S(sub 1)-S(sub 0) reverse electron transfer in betaine in solution. The observed dynamics are a dramatic function of probe wavelength due to energy deposition into solute and solvent molecular degrees of freedom from the electron transfer. These data indicate that in nonpolar solvents, this energy is primarily deposited into intramolecular modes, but some is specifically deposited into polar collective motions of the solvent, i.e. the solvent coordinate. Modern theories of electron transfer that include diffusive motion along the solvent coordinate as a driving mechanism for electron transfer predict this specific energy deposition into the solvent coordinate. A model by Walker et al. is extended to predict the spectral dynamics due to solvent coordinate heating caused by the electron transfer and compare to experimental results. It is shown that the diffusive electron transfer mechanism creates a displaced distribution along the solvent coordinate that is characterized by an absorption spectrum that is red-shifted from the equilibrium ground-state distribution, in agreement with experimental observations. The model is not in quantitative agreement with experiment, however, because it neglects the contributions of vibrational heating of the intramolecular modes to the spectral dynamics. This type of vibrational heating is evident in the observed dynamics in nonpolar solvents. DTIC

(DE93-014044; BNL-48649; CONF-930173-9) Avail: CASI HC A02/MF A01

We present the results of Lambda and K(sub s)(sup o) production from Si and Pb targets with 14.6 x Lambda Gev/c Si beams. The measured rapidity distributions and the transverse mass exponential slopes are presented and compared with models. DOE

N94-13101# Brookhaven National Lab., Upton, NY.
POLARIZATION AND COLOR TRANSPARENCY
G. Bunce 1993 4 p Presented at the Future Directions in Particle and Nuclear Physics At Multi-GeV Hadron Beam Facilities, Upton, NY, 4-6 Mar. 1993
(Contract DE-AC02-76CH-00016)
(DE93-014319; BNL-48832; CONF-930389-12) Avail: CASI HC A01/MF A01

Color transparency offers an interesting experimental test of our understanding of hadronic polarization effects which have been seen at high energy. Large polarization effects have been seen for exclusive high momentum transfer reactions which are incompatible with lowest order pQCD. It is proposed to filter these reactions by scattering inside a nucleus. We expect that only color transparent hadrons would survive, and that these should be products of 'hard' scattering. If the polarization arises from a non-perturbative 'soft' effect, the nucleus should filter these reaction products away. We should see no polarization remaining after the reaction is filtered by a large nucleus. DOE

N94-13149# Brookhaven National Lab., Upton, NY.
MEASUREMENT OF THE SPIN OF A PARTICLE USING UNDULATOR RADIATION
A. Luccio 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract DE-AC02-76CH-00016)
(DE93-014334; BNL-48237; CONF-930511-75) Avail: CASI HC A01/MF A01

The use of many-period wigglers to rotate the spin of particles in accelerators has been proposed. An added advantage of this scheme is that a spectrum of synchrotron radiation will be produced that contains a contribution due to the spin, so that the device can be effectively used as spin polarimeter, with advantages compared to Compton backscattering methods. Results are presented for two high energy proton storage rings: RHIC and the SSC. DOE

RECENT STUDY OF BEAM STABILITY IN THE PSR
T. S. F. Wang, R. Cooper, D. Fitzgerald, S. Frankle, T. Hardek, R. Hutson, R. Macek, C. Ohmori, M. Plum, and H. Thiessen et al 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-7405-eng-36)
(DE93-014473; LA-UR-93-1874; CONF-930511-112) Avail: CASI HC A01/MF A01

A fast transverse instability with beam loss has been observed in the 800 MeV Los Alamos Pro Ring (PSR) when the injected beam intensity reaches 2 - 4(10)(exp 13) protons per pulse. Previous observations indicate that the instability is most likely driven by electrons trapped within the proton beam. Theoretical study shown that beam leakage into the inter-bunch gap leads to electron trapping. Recent experiments were carried out by using the newly implemented 'pinger' and by varying the machine transition

gamma to explore further the 'e-p' instability and the nature of the instability. This paper summarizes some of these recent experimental results and theoretical studies. DOE

DOUBLE SEMI-LEPTONIC CHARM DECAY IN HELIOS-I 450 GeV/c p-Be DATA
A. Pierre and P. A. Pomianowski 1992 3 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Batavia, IL, 10-14 Nov. 1992
(Contract DE-FG02-91ER-40646)
(DE93-013493; CONF-921122-54-App-1) Avail: CASI HC A01/MF A01

Data taken in 1989 by HELIOS-I (NA34) at the CERN SPS (450 GeV/c proton beam on Be target) have been examined for e(+/-)(mu)(-/+) or mu(+-)(mu)(-+) pairs with the associated missing energy. Such pairs arise from semi-leptonic decay of both members of a c(bar-c) pair. The e(mu) and mu(mu) samples are consistent with expectations from charm decay, allowing a quantitative limit to be placed on other physics. DOE

BETA/GAMMA TEST PROBLEMS FOR ITS
G. T. Mei 1993 5 p Presented at the DOE Radiation Protection Conference, Las Vegas, NV, 13-15 Apr. 1993
(Contract DE-AC05-84OR-21400)
(DE93-013522; CONF-9304128-8) Avail: CASI HC A01/MF A01

The Integrated Tiger Series of Coupled Electron/Photon Monte Carlo Transport Codes (ITS 3.0, PC Version) was used at Oak Ridge National Laboratory (ORNL) to compare with and extend the experimental findings of the beta/gamma response of selected health physics instruments. In order to assure that ITS gives correct results, several beta/gamma problems have been tested. ITS was used to simulate these problems numerically, and results for each were compared to the problem's experimental or analytical results. ITS successfully predicted the experimental or analytical results of all tested problems within the statistical uncertainty inherent in the Monte Carlo method. DOE

LOW ENERGY RESPONSE OF THE DO CALORIMETER AND JET ENERGY MEASUREMENT
P. C. Bhat Nov. 1992 5 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Batavia, IL, 10-14 Nov. 1992

(Contract DE-AC02-76CH-03000)
(DE93-013569; FNAL/C-93/049-E; CONF-921122-57) Avail: CASI HC A01/MF A01

Previous studies of the DO calorimeter with electron and hadron beams above 10 GeV/c have shown excellent linearity of response and AN e/pi ratio close to one. Here we report on our measurements of the response of the DO central calorimeter modules down to 2 GeV/c. The measured low energy response for electrons and pions are convoluted with jet fragmentation from the PYTHIA Monte Carlo code to obtain the corrections for jet energy. DOE

FURTHER STUDY OF THE X(1910) MESON
D. Alde et al 1991 7 p Submitted for publication Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-621443; IFVE-OEF-91-40) Avail: CASI HC A02 (US Sales Only)

New data on eta' eta system produced in pi(sup -) p charge-exchange reaction at 38 GeV/c momentum are presented. The data confirm the existence of the narrow eta' eta resonance X(1910). The hypothesis of X(1910) quantum numbers to be J(sup PC)=1(sup -+), forbidden for qq-bar meson, is discussed to explain both extremely low limits obtained for X(1910) decays through pi(sup 0) pi(sup 0), eta eta and K(sub S)(sup 0) K(sub S)(sup 0) channels and flat t-dependence of X(1910) production cross section. VARIANCE REDUCTION UNIQUE TO COUPLED ELECTRON/PHOTON MONTE CARLO TRANSPORT
J. A. Halbleib, R. P. Kensek, and G. D. Valdez 1993 9 p Presented at the Advanced Monte Carlo Computer Programs for Radiation Transport, Saclay, France, 27-29 Apr. 1993
(Contract DE-AC04-76DP-00789)
(DE93-014999; SAND-93-0482C; CONF-9304131-5) Avail: CASI HC A02/MF A01

The disparity between the mean free paths of electrons and photons leads to unique variance-reduction procedures for coupled transport at intermediate energies. It is electrons that ultimately deposit charge and energy; yet electron transport is much more expensive than photon transport. The objective, then, is to control the variance of the energy, angular, and spatially dependent populations of the two species within the generation and transport of the cascade in such a way that all contributions to electron flux in the vicinity of the detector are represented to a degree commensurate with their importance. However, in beta/gamma transport, biasing techniques are often unique to one or the other of the species. DOE

QUASI-ELASTIC NEUTRON SCATTERING STUDIES OF PROTEIN DYNAMICS
H. E. Rorschach 25 May 1993 6 p
(Contract DE-FG05-88ER-60721)
(DE93-015074; DOE/ER-60721/6) Avail: CASI HC A02/MF A01

Results that shed new light on the study of protein dynamics were obtained by quasi-elastic neutron scattering. The triple axis instrument H-9 supplied by the cold source was used to perform a detailed study of the quasi-elastic spectrum and the Debye-Waller factor for trypsin in powder form, in solution, and in crystals. A preliminary study of myoglobin crystals was also done. A new way to view the results of quasi-elastic scattering experiments is sketched, and the data on trypsin are presented and analyzed according to this new picture. DOE

ULTRAFAST PHOTOINDUCED ELECTRON TRANSFER REACTIONS IN SUPRAMOLECULAR ARRAYS: STUDIES OF ELECTRONIC COUPLING AND SOLVATION
M. R. Wasielewski, G. P. Wiederrecht, and W. A. Svec 1993 5 p Presented at the 17th Solar Photochemistry Research Conference, Brainerd, MN, 6-10 Jun. 1993
(Contract W-31-109-eng-38)
(DE93-012910; ANL/CHM/CP-79459; CONF-9306113-1) Avail: CASI HC A01/MF A01

Research in our laboratory focuses on developing supramolecular arrays that produce long-lived charge separation by limiting the electronic coupling between the separated charges, and on the role of solvation in determining the rates and energetics of photoinitiated electron transfer reactions. Arrays have been developed that closely mimic the electronic coupling that was observed only for long-lived radical pairs produced in photosynthetic glassy solids. A series of 36 fixed-distance donor-acceptor molecules using porphyrin donors, triptycene spacers, and 9 different acceptors has been prepared; these are used to probe the dependence of photoinduced charge separation rates on free energy of reaction as a function of solvent both in liquid and solid solution. Data were obtained on rates of charge separation in dioxane, MTHF, butyronitrile, toluene, chlorobenzene, and benzonitrile. DOE

ELECTRON EMISSION RESULTING FROM FAST ION IMPACT ON THIN METAL FOILS: IMPLICATIONS OF THESE DATA FOR DEVELOPMENT OF TRACK STRUCTURE MODELS
R. D. DuBois and C. G. Drexler Apr. 1993 31 p Presented at the DOE Monte Carlo Workshop, Irving, CA, 28-29 Apr. 1993
(Contract DE-AC06-76RL-01830)
(DE93-013506; PNL-SA-22200; CONF-9304148-1) Avail: CASI HC A03/MF A01

Experimental information useful in improving and testing theoretical models of energy deposition and redistribution in particle-condensed phase media is discussed. An overview of information available from previous, and ongoing, studies of the electron emission from thin foils is presented and the need for doubly differential electron energy and angular distribution data stressed. Existing data are used to demonstrate that precisely known, and controllable, surface and bulk conditions of the condensed-phase media are required for experimental studies of this type. Work in progress and improvements planned for future studies at the Pacific Northwest Laboratory are outlined. DOE

ADVANCES IN LOW ENERGY NEUTRAL ATOM IMAGING TECHNIQUES
E. E. Scime, H. O. Funsten, D. J. McComas, K. R. Moore, and M. Gruntman 1993 11 p Presented at the Annual Meeting of the Society of Photo-Optical Instrumentation Engineers, San Diego, CA, 11-16 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012745; LA-UR-93-1508; CONF-930722-2) Avail: CASI HC A03/MF A01

Recently proposed low energy neutral atom (LENA) imaging techniques use a collisional process to convert the low energy neutrals into ions before detection. At low energies, collisional processes limit the angular resolution and conversion efficiencies of these devices. However, if the intense ultraviolet light background can be suppressed, direct LENA detection is possible. We present results from a series of experiments designed to develop a novel filtering structure based on free-standing transmission gratings. If the grating period is sufficiently small, free standing transmission gratings can be employed to substantially polarize ultraviolet (UV) light in the wavelength range 300 to 1500 A. If a second grating is placed behind the first grating, with its axis of polarization oriented at a right angle to the first's, a substantial attenuation of UV radiation is achievable. The neutrals will pass through the remaining open area of two gratings and be detected without UV background complications. We have obtained nominal 2000 A period (1000 A bars with 1000 A slits) free standing, gold transmission

gratings and measured their UV and atomic transmission characteristics. The geometric factor of a LENA imager based on this technology is comparable to that of other proposed LENA imagers. In addition, this type of imager does not distort the neutral trajectories, allowing for high angular resolution. DOE

N94-13494# Fermi National Accelerator Lab., Batavia, IL.
INCLUSIVE SINGLE MUONS AT DO
K. A. Bazizi (California Univ., Riverside.) Nov. 1992 5 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Batavia, IL, 10-14 Nov. 1992
(Contract DE-AC02-76CH-03000)
(DE93-012779; FNAL/C-93/048/E; CONF-921122-53) Avail: CASI HC A01/MF A01

We report preliminary results on b-quark production in p(bar-p) collisions at (the square root of s) = 1.8 TeV from the current Run 1a of the Tevatron collider. Using an inclusive muon data sample which corresponds to an integrated luminosity of 50-70 nb(exp -1) and by further requiring the muon to be accompanied by a jet, we obtain an almost background free sample of muons consistent with b(bar-b) (yields) (mu)X decay. A preliminary p(sub T)(exp mu) spectrum and some characteristics of this decay, compared to the Monte Carlo expectations, are presented. DOE

EFFECTS OF ADDITIONAL ISOSCALAR VECTOR BOSONS IN e(SUP +)e)(SUP -)(YIELDS)ff-BAR PROCESSES AT THE TRISTAN AND LEP ENERGIES
A. A. Pankov, S. S. Gershtejn, A. A. Likhoded, and O. P. Yushchenko 1991 15 p Submitted for publication Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-621451; IHEP-OTF-91-137) Avail: CASI HC A03 (US Sales Only)

The phenomenological manifestation of the additional Y(Y(sub L)) boson arising in the models with the composite structure of electroweak interactions is studied for the process e(sup +)e(sup -) yields ff-bar at the TRISTAN and LEP energies. It is shown that the presence of the additional isoscalar boson, yields a measurable effect in the cross-section of e(sup +)e(sup -) yields mu(sup +)mu(sup -) (hadrons) processes at LEP. This effect in the muon and hadron cross-sections at the energies M(sub Z) +/- Gamma(sub Z)/2 can be approx. 1.5-2% for small values of the gamma-Y mixing parameter. DOE

A PROGRAM OF CORRELATED OBSERVATIONS USING THE EGRET INSTRUMENT ON GRO AND THE IMB NEUTRINO DETECTOR Final Technical Report
Robert C. Svoboda 1992 9 p
(Grant NAG5-1520)
(NASA-CR-194367; NAS 1.26:194367) Avail: CASI HC A02/MF A01

A reliable, real-time supernova monitoring system was devised using the IMB neutrino detector to serve as an 'early-warning' system for EGRET and other instruments on GRO. New methods and software were developed to allow the IMB monitoring computer in Cleveland to: recognize that a trigger burst had occurred; make a judgement on whether the burst was spurrious or an actual supernova; prepare brief summary files and 'quick-look' data so that a final disposition could be made by a trained scientist; and contact the 'watch' scientist via personal beeper in Baton Rouge. This system ran from Dec. 1990 to Apr. 1991, when the neutrino detector failed for unrelated reasons. In addition to the supernova system, high-energy neutrino data was prepared and formatted for comparison with EGRET gamma-ray data. Author (revised)

MEASUREMENT OF THE Fe-56(n,p)Mn-56, Al-27(n,p)Mg-27 AND Al-27(n,ALPHA)Na-24 CROSS SECTIONS AT 16.0, 17.0 AND 18.3 MeV
P. Kolkowski, T. B. Ryves, and A. C. Hooley Dec. 1992 33 p
(NPL-RSA(EXT)-38; ETN-93-94465) Copyright Avail: National Physical Laboratory, Teddington, Middlesex TW11 0LW, United Kingdom HC

The cross sections of the Fe-56(n,p)Mn-56, Al-27(n,p)Mg-27, and the Al-27(n,alpha)Na-24 reactions were determined using the activation technique at neutron energies of 16.0, 17.0, and 18.3 MeV. The neutron fluences were measured using a proton recoil telescope, employing neutron-proton scattering cross section data from the most accurate values available. Corrections were applied for the effect of low energy neutrons produced by the d+D and other reactions. These ranged from under 0.2% at 16 and 17 MeV to 30% at 18.3 MeV for the worst case: that of the Al-27(n,p)Mg-27 reaction. The results are in good agreement with those found in the literature. At 18 MeV the results are less consistent probably on account of the increased effect of the low energy neutron component. ESA

QUARK AND GLUON JETS AT CDF
N. Wainer Nov. 1992 5 p Presented at the Meeting of the Division of Particles and Fields of the American Physical Society, Batavia, IL, 10-14 Nov. 1992
(Contract DE-AC02-76CH-03000)
(DE93-014919; FNAL/C-92/345-E; CONF-921122-66) Avail: CASI HC A01/MF A01

Jet shapes at the square root of s = 1.8 TeV have been measured by CDF at the Fermilab Tevatron Collider. The jet shape is mainly formed by parton emission before hadronization. The jet shapes may also be used to differ between quark and gluon jets. Two approaches are tried. Jet shape variables are input to a feed forward neural network trained on QCD Monte Carlos. We observe a variation of the quark content of jets as a function of jet transverse energy. The second approach consists of constructing a likelihood function, based on Monte Carlo predictions, with the Mellin moments of the momentum of charged tracks in jets. Differences are found between gluon-like jets in 2-jet events and quark-like jets in photon-jet events. DOE

CHARGE-EXCHANGE REACTIONS AND WEAK INTERACTION RATES FOR TYPE 2 SUPERNOVAE
M. B. Aufderheide Dec. 1992 19 p Presented at the Workshop on Nuclear Physics in the Universe, Oak Ridge, TN, 24-26 Sep. 1992
(Contract W-7405-eng-48)
(DE93-015104; UCRL-JC-111448; CONF-9209239-6) Avail: CASI HC A03/MF A01

The role of weak interactions, such as electron capture and beta decay on fp shell nuclei, during pre-supernova evolution of massive stars is examined. The utility of charge-exchange experiments for calibrating these rates is discussed. Recent (n,p) measurements indicate that the presently used rates need to be recalculated because the location of the Gamow-Teller resonances which dominate the rates in the presupernova environment could not be accurately determined. How these measurements allow us to calibrate our shell model calculations, and thus these rates, is explained. The general character of beta decay rates in this environment is then examined. It is shown that the creation and destruction rates for electrons appear to balance just after core silicon burning. A one zone model is used to examine how the beta decays will affect the evolution of the electron number and entropy. The consequences for collapse models are briefly examined. DOE

OBSERVATION OF THE COALESCING OF BEAM INTO AN ASYMMETRIC RF BUCKET BY STOCHASTIC COOLING
A. M. Halling and Xian-Ping Lu May 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May

1993
(Contract DE-AC02-76CH-03000)
(DE93-015133; FNAL/C-93/126; CONF-930511-135) Avail: CASI HC A01/MF A01

Antiprotons in the debuncher ring at Fermilab have been observed to be bunched outside of the 'barrier bucket' when cooled to small (Delta)p/p by stochastic cooling. This bunching occurs in the same location as a very small, stable bucket in the RF waveform. The stochastic cooling appears to be causing antiprotons that were originally uniformly distributed to be captured in this stable bucket. DOE

RESONANT X RAY RAMAN SCATTERING FROM ATOMS AND MOLECULES
P. L. Cowan 1992 34 p Presented at the International Conference on Anomalous Scattering (ICAS) Conference, Hamburg, Germany, 17-21 Aug. 1992
(Contract W-31-109-eng-38)
(DE93-015158; ANL/PHY/CP-79637; CONF-9208186-3) Avail: CASI HC A03/MF A01

Inelastic x-ray scattering and elastic x-ray scattering are fundamentally related processes. When the x-ray photon energy is near the ionization threshold for an inner shell, the inelastic channel is dominated by resonant x-ray Raman scattering. Studies of this emission not only illuminate the resonant scattering process in general, they also point to new opportunities for spectral studies of electronic structure using x-rays. Atoms in the form of a free gas provide an ideal target for testing the current theoretical understanding of resonant x-ray Raman scattering. In addition, x-ray scattering from molecular gases demonstrates the effect of bonding symmetry on the polarization and angular distribution of the scattered x-rays. Comparisons of experimental data with theory demonstrate both the successes and limitations of simple, single-electron interpretations of the scattering process. DOE

HIGH ENERGY HADRON-HADRON COLLISIONS
T. T. Chou 1992 16 p
(Contract DE-FG09-84ER-40160)
(DE93-015584; DOE/ER-40160/9) Avail: CASI HC A03/MF A01

Results of a study on high energy collisions with the geometrical model are summarized in three parts: (1) the elastic hadron-hadron collision, (2) the inelastic hadron-hadron collision, and (3) e(sup +)e(sup (minus)) annihilation. For elastic scattering, a modified form for the hadronic matter form factor of the proton was proposed which is still dipole in form but contains an energy-dependent range parameter. This new expression of the opacity function fits the elastic (bar p)p scattering very well from the ISR to S(bar p)pS energies. Extrapolation of this theory also yielded results in good agreement with the (bar p)p differential cross section measured at the Tevatron. For inelastic hadron-hadron collisions, we have made a systematic investigation of the single-particle momentum spectra in the entire S(bar p)pS energy region. Results are useful for the extrapolation of angular distribution to the higher SSC energies. In e(sup +)e(sup (minus)) annihilation, a detailed analysis of all available experimental multiplicity data from PETRA to LEP energies has been performed. The cluster size of emitted hadrons increases gradually with energy. Aside from high-energy collisions, the giant fullerene molecules were studied and precise algebraic eigenvalue expressions of the Hueckel problem for carbon-240 were obtained. DOE

DYNAMICAL MODEL FOR THE DISTRIBUTION OF GEOMAGNETICALLY TRAPPED ANOMALOUS-COMPONENT IONS
J. B. Blake, M. Schulz, and M. C. McNab 1 Jun. 1993 8 p
(ATR-91(9558)-6) Avail: CASI HC A02/MF A01

Geomagnetically trapped ions having energies E approximately equal to 1-10 MeV/nucleon are presumed to originate from the anomalous component of the cosmic-ray spectrum. The mechanism is straightforward: singly-charged anomalous component ions which happen to reach low altitude near their geomagnetic cutoffs may be stripped by the residual atmosphere. The stripping can reduce an ion's rigidity sufficiently to ensure durable trapping. Because the atmospheric grammage required to strip an anomalous-component ion is orders of magnitude smaller than that required to stop the ion, the newly-trapped ion can have a lifetime of days to weeks. The above-described suggestion of Blake and Friesen elicited little interest for years because of the dearth of available measurements. However, analysis of data from the Space Shuttle experiment TRIS, studies of observations from a long series of Soviet experiments, and the formation of the U.S.-U.S.S.R. Joint Working Group on the Charge State of the Anomalous Component have lead to renewed interest in studies of the anomalous component and the geomagnetic trapping of its constituent ions. It also seems clear that, because high-Z, low-energy solar particles are only partially ionized, this same mechanism will result in the trapping of energetic solar particles. Blake made an estimate of spectral shape, lifetime, and L-value distribution of the trapped anomalous component by invoking the formalism used to analyze the injection of Cosmic Ray Albedo Neutrons into the Earth's magnetosphere. The predicted spectral shape, in particular, appears to be borne out by the observations. Further positive results from the studies of the Joint Working Group argue for more rigorous theoretical studies. The purpose of this brief report is to describe some preliminary results of this latter work. Author (revised)

INDIRECT PROCESSES IN ELECTRON IMPACT IONIZATION OF Kr(24+) AND Kr(25+)
M. H. Chen and K. J. Reed Sep. 1992 4 p Presented at the 6th International Conference on Physics of Highly Charged Ions, Manhattan, KS, 28 Sep. - 2 Oct. 1992
(Contract W-7405-eng-48)
(DE93-014129; UCRL-JC-111717; CONF-920948-13) Avail: CASI HC A01/MF A01

Electron-impact ionization cross sections have been calculated for magnesium-like Kr(24+) and sodium-like Kr(25+). Electron-impact ionization is an important atomic process in hot dense plasmas. It can affect the ionization balance, electron temperature, electron density, and level population in the plasma. In the past decade, theoretical and experimental studies have revealed that indirect processes can make significant contributions to the cross sections for electron impact ionization of positive ions. The most important indirect process is excitation of an inner-shell electron followed by Auger emission. Higher-order processes such as resonant excitation followed by sequential double Auger emission can also contribute significantly. The contributions of excitation-autoionization and resonant excitation double autoionization (REDA) were included, in addition to the cross sections for direct ionization of a 3s electron. The calculations were carried out using the relativistic distorted wave methods and the multiconfiguration Dirac-Fock model. For Kr(25+), the total cross section

is about 5 times the direct ionization cross section. For the Kr(24+), the indirect contribution is about 2.5 times the direct ionization cross section. The REDA process produces many strong resonances and contributes about 20% to the average ionization cross section. DOE

THE E2 N(YIELDS)(DELTA) TRANSITION FROM POLARIZED COMPTON SCATTERING
A. M. Sandorfi, G. Blanpied (South Carolina Univ., Columbia.), M. C. Blecher (Virginia Polytechnic Inst. and State Univ., Blacksburg.), A. Caracappa, and C. Dijalali (South Carolina Univ., Columbia.) 1993 2 p Presented at the 13th International Conference on Particles and Nuclei, Peruigia, Italy, 27 Jun. - 3 Jul. 1993
(Contract DE-AC02-76CH-00016)
(DE93-012522; BNL-48717; CONF-930637-1) Avail: CASI HC A01/MF A01

The tensor interaction between the quarks in a proton is predicted to produce a D-wave component in its wave function, which breaks spherical symmetry and results in a static deformation for the proton's first excited state, the Delta resonance at approximately 320 MeV. The Delta is photo-excited mainly by M1 radiation. However, if its wavefunction contains a D-wave component, then the N approaches Delta transition can also be excited by E2 photons. The magnitude and sign of the E2/M1 mixing ration in the N approaches Delta transition are quite sensitive to the internal structure of the proton and have been of great interest in recent years. The extraction of a small E2 amplitude is complicated by the presence of non resonant background contributions. In elastic (Compton) scattering of polarized photons most background contributions cancel in the polarization asymmetry. This has not been previously exploited, since such measurements are technically demanding. Extraction of the E2 component is presently underway. Derived from text

SELECTIVE EXCITATION, RELAXATION, AND ENERGY CHANNELING IN MOLECULAR SYSTEMS
W. C. Rhodes Aug. 1993 32 p
(Contract DE-FG05-86ER-60473)
(DE93-018819; DOE/ER-60473/7) Avail: CASI HC A03/MF A01

Research involves theoretical studies of response, relaxation, and correlated motion in time-dependent behavior of large molecular systems ranging from polyatomic molecules to protein molecules in their natural environment. The underlying theme is subsystem modulation dynamics. Another main idea is that quantum mechanical correlations between components of a system develop with time, playing a major role in determining the balance between coherent and dissipative forces. Central theme is interplay of coherence and dissipation in determining the nature of dynamic structuring and energy flow in molecular transformation mechanisms. Subsystem equations of motion are being developed to show how nonlinear, dissipative dynamics of a particular subsystem arise from correlated interactions with the rest of the system (substituent groups, solvent, lattice modes, etc.); one consequence is resonance structures and networks. Quantum dynamics and thermodynamics are being applied to understand control and energy transfer mechanisms in biological functions of protein molecules; these mechanisms are both global and local. Besides the above theory, the research deals with phenomenological aspects of molecular systems. DOE

MEASURING PARITY VIOLATION USING THE NEUTRON CAPTURE REACTION
C. M. Frankle, J. D. Bowman, S. J. Seestrom, N. R. Roberson (Duke Univ., Durham, NC.), and E. I. Sharapov (Joint Inst. for Nuclear Research, Dubna, USSR.) 1993 7 p *Presented at the International Workshop/Time Reversal Invariance and Parity Violation in Neutron Physics, Dubna, Russia, 4-7 May 1993*
(Contracts W-7405-eng-36; DE-FG05-88ER-40441; DE-FG05-91ER-40619) (DE93-016629; LA-UR-93-2066; CONF-9305235-1) Avail: CASI HC A02/MF A01

Measuring parity violation using the total capture reaction has certain advantages over neutron transmission experiments. Very much less material is required for targets, a necessity when dealing with separated isotopes. The capture reaction is also quite sensitive to very weak resonances. These advantages indicated the need to construct a near 4(pi) gamma ray detector for use at LANSCE. A design for such a detector has been completed. Issues influencing the design and the final design parameters are discussed in detail. DOE

[SCATTERING CALCULATIONS AND CONFINING INTERACTIONS] Final Report, 1984-1992
Warren W. Buck and Khin M. Maung 1993 70 p
(Grant NAG1-477)
(NASA-CR-194242; NAS 1.26:194242) Avail: CASI HC A04/MF A01

Most of the research work performed under this grant were concerned with strong interaction processes ranging from kaon-nucleon interaction to proton-nucleus scattering calculations. Research performed under this grant can be categorized into three groups: (1) parametrization of fundamental interactions, (2) development of formal theory, and (3) calculations based upon the first two. Parametrizations of certain fundamental interactions, such as kaon-nucleon interaction, for example, were necessary because kaon-nucleon scattering amplitude was needed to perform kaon-nucleus scattering calculations. It was possible to calculate kaon-nucleon amplitudes from the first principle, but it was unnecessary for the purpose of the project. Similar work was also done for example for anti-protons and anti-nuclei. Formal developments to some extent were also pursued so that consistent calculations can be done. For individual titles, see N94-14550 through N94-14552.

RELATIVISTIC PROTON-NUCLEUS SCATTERING AND ONE-BOSON-EXCHANGE MODELS
Khin Maung Maung (Hampton Univ., VA.), Franz Gross (College of William and Mary, Williamsburg, VA.), J. A. Tjon (Utrecht State Univ., Netherlands.), L. W. Townsend, and S. J. Wallace (Maryland Univ., College Park.) *In* Hampton Univ., Scattering Calculations and Confining Interactions 1993 11 p Repr. from Physical Review C (American Physical Society), v. 43, no. 3, Mar. 1991 p 1378-1388 Sponsored in part by DOE (For primary document see N94-14549 02-72)
Avail: CASI HC A03/MF A01

Relativistic p-(Ca-40) elastic scattering observables are calculated using four sets of relativistic NN amplitudes obtained from different one-boson-exchange (OBE) models. The first two sets are based upon a relativistic equation in which one particle is on mass shell and the other two sets are obtained from a quasipotential reduction of the Bethe-Salpeter equation. Results at 200, 300, and 500 MeV are presented for these amplitudes. Differences between the predictions of these models provide a study of the uncertainty in constructing Dirac optical potentials from OBE-based NN amplitudes. Author

ISOSPIN FLIP AS A RELATIVISTIC EFFECT: NN INTERACTIONS
W. W. Buck *In its* Scattering Calculations and Confining Interactions 1993 10 p Prepared in cooperation with Continuous Electron Beam Accelerator Facility, Newport New, VA. (For primary document see N94-14549 02-72)
(Grant NSF RII-87-04038)
(CEBAF-PR-89-023; HUPhy-89-1) Avail: CASI HC A02/MF A01

Results are presented of an analytic relativistic calculation of a OBE nucleon-nucleon (NN) interaction employing the Gross equation. The calculation consists of a non-relativistic reduction that keeps the negative energy states. The result is compared to purely non-relativistic OBEP results and the relativistic effects are separated out. One finds that the resulting relativistic effects are expressable as a power series in (tau(sub 1))(tau(sub 2)) that agrees, qualitatively, with NN scattering. Upon G-parity transforming this NN potential, one obtains, qualitatively, a short range NN spectroscopy in which the S-states are the lowest states. Author

PROTON-PROTON SCATTERING CONTRIBUTION TO EMITTANCE GROWTH
T. Garavaglia May 1993 5 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993 Submitted for publication
(Contract DE-AC35-89ER-40486)
(DE93-016090; SSCL-Preprint-409; CONF-930511-186) Avail: CASI HC A01/MF A01

Proton-proton scattering contributes to the emittance growth of the SSC. A formulation is given and used to estimate the mean scattering angle, which is used to determine the contribution to SSC emittance growth resulting from elastic pp scattering. The method is based upon Lorentz invariants, and it permits the determination of the cross section for scattering in the center of mass (c.m.) system, as well as scattering from a fixed target (f.t.). Also an example is given for the case of electromagnetic pp scattering, which results from single virtual photon exchange. DOE

DIRECT DETERMINATION OF ALPHA PARTICLE TRANSPORT COEFFICIENTS
J. Guo and G. H. Miley 1992 10 p Presented at the Meeting of the Division of Plasma Physics of the American Physical Society, Seattle, WA, 16-20 Nov. 1992
(Contract DE-FG02-90ER-54092)
(DE93-013488; CONF-921103-12-App-A) Avail: CASI HC A02/MF A01

Many studies have been reported on the simulation of impurity transport phenomena in the Tokamak fusion plasma using the MIST code (1,2,3). The MIST code is to solve the multi-ionization state impurity transport equations by assuming that the transport fluxes of different ionization states are known. In most simulations, the transport fluxes of impurities are usually expressed in terms of diffusion coefficient and convective velocities. By considering the 'inverse' problem (vs.MIST), the basic idea of this research is to solve the one dimensional (ONE-D, with cylindrical geometry) impurity transport equations to determine the transport coefficients from the experimental impurity density evolution data. We have developed a computer code which is labelled as 'DASH' to solve this problem. The alpha particle transport coefficients can be obtained and inter-corrected by using the MIST and this DASH code. This code also provides a way to check the simulation results of MIST code. DOE

COMPARING THE Z(SUP 0) MASS AND INCLUSIVE WIDTHS TO THE STANDARD ELECTROWEAK THEORY
Arianna Borrelli (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), Luciana Maiana (Istituto Nazionale di Fisica Nucleare, Rome, Italy.), and Renata Sisto (Istituto Nazionale di Fisica Nucleare, Rome, Italy.) 4 Apr. 1990 11 p Sponsored in part by Ministry of University and Scientific and Technological Research, Italy
(Preprint-731; ETN-93-94369) Avail: CASI HC A03/MF A01

The Z(sup 0) mass and inclusive widths measured by Large Electron-Positron (LEP) storage ring experiments are compared with the predictions of the standard electroweak theory. A strategy analogous to the one adopted by Ellis and Fogli is followed and the value of sine squared theta(sub w) as function of m(sub t) derived from each partial width is compared with that obtained from the Z(sup 0) mass. It is pointed out that the comparison is quite insensitive to m(sub t), but rather it can give a precise test of the theory itself. ESA

CHARGE STORAGE AND SWITCHING PHENOMENA WITH MOLECULAR ASSEMBLIES OF METAL COMPLEXES Final Report, Jan. 1990 - Apr. 1993
M. K. DeArmond 31 May 1993 14 p
(Contract DAAL03-90-G-0036)
(AD-A266673; ARO-26744.1-CH-SAH) Avail: CASI HC A03/MF A01

The central theme of the four research areas has been and is intramolecular and intermolecular charge separation in materials (metal complexes and oligomeric thiophene) directed towards the preparation of molecular assemblies useful in molecular electronics. The multi-electron redox materials study has been completed and the generality of the charge localization scheme proposed by us for (Ru(L3))(2+) materials has beenestablished for n = 1 through 5 electrons. The one and two electron reduction are best adapted as intramolecular switching molecules. The liquid-liquid media has been established as an appropriate media for intermolecular charge separation using an external electric field to control the charge switching. The use of sol-gel media in the liquid-liquid experimental arrangement allows durable and portable charge separation assemblies. The oligomer-polymer materials provide a concentrated and durable molecular species capable of intermolecular and intramolecular charge separation at interfaces (liquid-liquid) and in Langmuir-Blodgett assemblies. The pendant Ru(2) complexes and the orthogonal thiophene oligomers both possess the perpendicular arrangement of pi electron systems that can lead to charge storage and molecular switching. The mixed metal complex/fatty acid Langmuir-Blodgett films provide the organized molecular assembly system with the best potential for molecular electronics. Our development of a technique for producing durable and portable LB films with a great range of metal complex types implies that this approach may be preferable to the fluid solution L-L-sol-gel approach. TESTS OF NON-LOCAL INTERFERENCES IN KAON PHYSICS AT ASYMMETRIC PHI-FACTORIES
P. H. Eberhard 16 Apr. 1993 34 p Presented at the UCLA Workshop on Asymmetric Phi Factories, Los Angeles, CA, 28 Oct. 1992
(Contract DE-AC03-76SF-00098)
(DE93-013905; LBL-33937; CONF-9210336-2) Avail: CASI HC A03/MF A01

Tests of non-local interference effects in the two-kaon system are proposed. The first kind of tests consists of measuring the amount of destructive interference between K(sub S) yields K(sub L) regeneration processes of two distant kaons. The second kind deals with constructive interference. These tests could be performed at an asymmetric phi-factory. Estimates are given of the number of events predicted by orthodox quantum mechanics and kaon regeneration theory in various suitable experimental conditions. The impact on local theories if the predictions of quantum mechanics hold is discussed. DOE

Work performed by the University of Alabama in Huntsville's (UAH) Center for Applied Optics (CAO) entitled Atomic Research is documented. Atomic oxygen (AO) effects on materials have long been a critical concern in designing spacecraft to withstand exposure to the Low Earth Orbit (LEO) environment. The objective of this research effort was to provide technical expertise in the design of instrumentation and experimental techniques for analyzing materials exposed to atomic oxygen in accelerated testing at NASA/MSFC. Such testing was required to answer fundamental questions concerning Space Station Freedom (SSF) candidate materials and materials exposed to atomic oxygen aboard the Long-Duration Exposure Facility (LDEF). The primary UAH task was to provide technical design, review, and analysis to MSFC in the development of a state-of-the-art 5eV atomic oxygen beam facility required to simulate the RAM-induced low earth orbit (LEO) AO environment. This development was to be accomplished primarily at NASA/MSFC. In support of this task, contamination effects and ultraviolet (UV) simulation testing was also to be carried out using NASA/MSFC facilities. Any materials analysis of LDEF samples was to be accomplished at UAH. Author (revised)

Foil stripping of H(-) directly to H(+) is being considered for proton injection in the next generation of high-current proton storage rings. This technique can result in significant losses because excited states of HO, which are also produced in the foil, are field stripped in the downstream bending magnets. Without due care in the injection system design, many of the resulting protons will be outside the acceptance of the storage ring and will be quickly lost. We measured the production of such H(sup 0) excited states at the LAMPF High Resolution Atomic Beam Facility. An 800-MeV H(-) beam was passed through carbon foils of thicknesses 70, 100, 200, and 300 (mu)g/cm(sup 2), and the excited states were analyzed by a special magnet downstream of the foil. The magnet had a linear field gradient so that the trajectories of the outgoing protons could be used to reconstruct the field values at which the various H(sup 0) stripped. We found that about 1% of the H(sup 0) emerge in excited states which can be stripped to protons by ring-bending magnets. DOE

Since its inception in 1986, the Electron Beam Ion Trap (EBIT) at LLNL has been used to produce and study highly charged ions up to U-82(+). It has focused on the determination of electron-ion collision cross sections dielectronic recombination, electron-impact excitation, resonance excitation, and ionization as well as precise atomic structure models. The recent advance of SuperEBIT has extended the available ionization stages to bare U-92(+). An extraction system allows us to perform experiments outside EBIT. This includes experiments in an external Penning trap under construction. Furthermore, current x-ray spectroscopic techniques will be supplemented by the future addition of a Fourier-Transform Ion Cyclotron Resonance (FT-ICR) mass spectrometry system. EBIT is geared to study not only a large variety of atomic physics but also nuclear physics phenomena, such as the bound state beta decay of fully stripped (sup 163)Dy-66(+). DOE

BEAM HALO FORMATION FROM SPACE-CHARGE DOMINATED BEAMS IN UNIFORM FOCUSING CHANNELS
J. S. OConnell (Booz-Allen and Hamilton, Inc., Washington, DC.), T. P. Wangler, R. S. Mills, and K. R. Crandall (AccSys Technology, Inc., Pleasanton, CA.) 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-7405-eng-36)
(DE93-014458; LA-UR-93-1919; CONF-930511-49) Avail: CASI HC A01/MF A01

In space-charge dominated beams, the nonlinear space-charge forces produce a filamentation pattern, which results in a 2-component beam consisting of an inner core and an outer halo. The halo is very prominent in mismatched beams, and the potential for accelerator activation is of concern for a next generation of cw, high-power proton linacs that could be applied for intense neutron generators to process nuclear materials. We present new results about beam halo and the evolution of space-charge dominated beams from multiparticle simulation of initial laminar beams in a uniform linear focusing channel, and from a model consisting of single particle interactions with a uniform-density beam core. We study the energy gain from particle interactions with the space-charge field of the core, and we identify the resonant characteristic of this interaction as the basic cause of the separation of the beam into the two components. We identify three different particle-trajectory types, and we suggest that one of these types may lead to continuous halo growth, even after the halo is removed by collimators. DOE

A NEW FORMULATION OF LONGITUDINAL COHERENT INSTABILITIES
S. Y. Zhang and W. T. Weng 1993 4 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract DE-AC02-76CH-00016)
(DE93-014288; BNL-48233; CONF-930511-127) Avail: CASI HC A01/MF A01

The quadrature response of longitudinal impedance is shown to be the effective impedance for the beam instability. The results of the application of this formulation are compared with that obtained using the Robinson-Pedersen approach and the Sacherer integral equation. The formulation is further generalized to the rigid bunch motion using the signal analysis method, where a form factor shows up naturally. Finally, the formulation is applied to solve the coupled bunch instabilities. Examples of the AGS Booster and the AGS coupled bunch instabilities are used to illustrate the applications of the formulation. DOE

DESIGN FOR LOW BEAM LOSS IN ACCELERATORS FOR INTENSE NEUTRON SOURCE APPLICATIONS
R. A. Jameson 1993 6 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract W-7405-eng-36)
(DE93-014557; LA-UR-93-1816; CONF-930511-82) Avail: CASI HC A02/MF A01

Control of beam loss in intense ion linacs involves keeping beam spill below parts in 10(sup -5) - 10(sup -8)/m by preventing total beam size from extending to the limiting apertures. Starting from good rms design practices, new analysis of the machine architecture is described in terms of the effects of the machine tune with space-charge, free-energy constraint, and halo-producing mechanisms. It is shown that halos are produced by the time- (or position-) varying nature of common linac aspects (such as misalignment, mismatching, acceleration, and construction techniques) through collective core/single-particle interaction dynamics plus resonances. DOE

The multi-ion, multi-event study of ion cyclotron resonance heating was funded to study ion energization through ion cyclotron resonance with low frequency broadband electromagnetic turbulence. The initial work on the ion cyclotron resonance heating (ICRH) of oxygen ions was presented in Crew et al. Crew and his co-authors developed a two-parameter representation of selected oxygen conic distributions and modeled the conic formation in terms of resonance heating. The first year seeks to extend the work of Crew and his co-authors by testing the applicability of the ICRH mechanism to helium ion conic distributions, using data obtained from the Energetic Ion Composition Spectrometer and the Plasma Wave Instrument on Dynamics Explorer 1. The longitudinal wall impedance instability is of great interest for a heavy ion fusion (HIF) driver because complete stabilization of this mode via momentum spread is impractical due to requirements of focusing the beam onto the inertial confinement fusion target. This instability is being studied with the WARPrz particle-in-cell code. The impedance of the induction linac modules is modeled as a wall impedance corresponding to a continuum of resistors and capacitors in parallel. We discuss simulations of this instability including reflections of perturbations off the beam end, the effects of finite temperature, and simulations of errors in intermittently-applied axial confining fields. We also present very long simulations in which we look for beam equilibria. DOE

(DE93-012592; UCRL-JC-108982; CONF-920792-58) Avail: CASI HC A02/MF A01

There is little information in the literature on the performance of working microchannel plate (MCP) detectors at high x-ray energies. We have measured the absolute efficiency of a microchannel-plate-intensified, subnanosecond, one dimensional unaging x-ray detector developed at LLNL in the 1 to 100 keV range and at 1.25 MeV. The detector consists of a gold photocathode deposited on the front surface of the MCP (optimized for Ni K(sub (alpha)) x-rays) to convert x-rays to electrons, an MCP to amplify the electrons, and a fast In:CdS phosphor that converts the electron's kinetic energy to light. The phosphor is coated on fiber-optic faceplate to transmit the light out of the vacuum system. Electrostatic focusing electrodes compress the electron current out of the MCP in one dimension while preserving spatial resolution in the other. The calibration geometry, dictated by a recent experiment, required grazing incidence x-rays (15.6(degree)) onto the MCP detector in order to maximize deliverable current. The experiment also used a second detector made up of 0.071 in. thick BC422 plastic scintillator material from the Bicron corporation. We compare the absolute efficiencies of these two detectors in units of optical W/sq cm into 4(pi) per x-ray, W/sq cm incident. At 7.47 keV and 900 volts MCP bias, the MCP detector delivers approximately 1400 times more light than the scintillator detector. DOE

CHARACTERISTICS OF A HIGH ENERGY MUON(+)MUON(-) COLLIDER BASED ON ELECTRO-PRODUCTION OF MUONS
W. A. Barletta and A. M. Sessler (California Univ., Berkeley. Lawrence Berkeley Lab.) Feb. 1993 9 p Presented at the Mini Workshop on Muon(+)Muon(-) Colliders: Particle Physics and Design, Napa Valley, CA, 9-11 Dec. 1992
(Contracts W-7405-eng-48; DE-AC03-76SF-00098)
(DE93-017154; UCRL-JC-113093; CONF-921284-1) Avail: CASI HC A02/MF A01

This paper presents an analysis of the possibility of designing a high energy muon(+)muon(-) collider based on electro-production of muons. An analytic expression for the pair production cross-section yields an expression for the electron-to-muon conversion efficiency. This quantity is connected to the luminosity definition via the beam power on the production target. Sets of consistent parameters are then derived as a function of electron beam and collider characteristics. DOE

COLOR IMAGE PROCESSING FOR FLAT PANEL VISUAL DISPLAY MODELING Technical Report, 1 Nov. 1992 - 30 Apr. 1993
Allen M. Peterson and Ramin Samadani 1993 13 p
(Contract NCC2-777)
(NASA-CR-193660; NAS 1.26:193660) Avail: CASI HC A03/MF A01

Cathode ray tubes (CRT's), liquid crystal displays (LCD's) and many other flat panel displays use spatially separated color pixel components to produce color images. The new manufacturing techniques for flat panel displays support a wider range of possible pixel shapes and geometric layouts than those possible with CRT manufacturing technology. We describe an algorithm comprised of several image processing steps that allows the user to specify arbitrary color component shapes and to specify the geometrical description for the layout of these components. The algorithm is based in part on the theory of periodic plane tilings. This theory is quite general and it allows for the unified treatment of the display pixel shapes and layouts that may arise in practice. This algorithm may be used by display designers to simulate various display designs in order to study tradeoffs for the visibility of sampling and display reconstruction artifacts. Author (revised)

LASER-INDUCED FLUORESCENCE OVER OPTICAL FIBERS FOR REAL TIME IN SITU MEASUREMENT OF PETROLEUM HYDROCARBONS IN SEAWATER
S. H. Lieberman, S. M. Inman, and G. A. Theriault Apr. 1993 8 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-A265106) Avail: CASI HC A02

A fiber optic-based fluorometer system is described that uses a pulsed laser to induce fluorescence and a time-gated linear photodiode array coupled to a spectrograph for rapid measurement of fluorescence emission spectra and fluorescence decay times. Data is presented from studies conducted in San Diego Bay where the system has been used for real-time in situ measurements of temporal and spatial variability of petroleum hydrocarbons in seawater. Results show that the optical fiber fluorometer system is capable of direct quantification of low level (parts-per-billion diesel fuel marine equivalent) concentrations of petroleum hydrocarbons. Analysis times for measurement of complete fluorescence emission spectra are fast (tens of milliseconds) and compare with the temporal response characteristics for temperature and conductivity sensors that are used for measuring standard physical hydrographic parameters. Results obtained with the fiber optic fluorometer system during a mapping study in San Diego Bay show good correlation with GC-MS analysis of total polycyclic aromatic hydrocarbons (PAHs) measured on discrete samples collected during the study. THE OPTICAL CONSTANTS AND SPECTRAL SPECULAR REFLECTIVITY OF HIGHLY ORIENTED PYROLYTIC GRAPHITE (HOPG)
M. A. Havstad, M. A. Schildbach, and W. McLean, II Oct. 1992 3 p Presented at the National Conference and Exposition on Heat Transfer, Atlanta, GA, 8-11 Aug. 1993
(Contract W-7405-eng-48)
(DE93-011894; UCRL-JC-111969; CONF-930830-11) Avail: CASI HC A01/MF A01

The measurements were made using two independent optical systems, and good agreement was obtained. The spectral directional-hemispherical reflectivity at normal incidence varies from 0.41 at 0.55 micron to 0.74 at 8.45 microns. Components of complex index of refraction increase smoothly with wavelength, the index increasing from 3.10 at 0.55 micron to 7.84 at 8.45 microns. Extinction coefficient varies from 2.01 to 6.66 over the same range. An attempt was made to fit the complex index to a model with both free and bound carriers. DOE

INFRARED TRANSMISSION AND PATH RADIANCE THROUGH DUST AND FOG Final Report
James Williams Apr. 1993 31 p
(AD-A265825; ARL-MR-35) Avail: CASI HC A03/MF A01

The obscurant effects of dust and fog can significantly degrade the performance of infrared (IR) sensors engaged in target acquisition. To quantify these effects, computer runs were conducted using the EOSAEL model FCLOUD for the 3-5 and 8-12 micrometers wavebands. FCLOUD was used to calculate beam transmission and path radiance through homogeneous ellipsoidal dust and fog clouds. Both advective and radiative fogs were considered. The EOSAEL models XSCALE and LOWTRAN 7 were also run to calculate transmission over the same wavebands for fog. These results compare favorably with FCLOUD. This study suggests that the performance of IR sensors in the wavebands investigated will be severely degraded in the presence of heavy or moderate fog. Under the dust conditions studied, IR transmission is considerably better than for fog. There is an expected transmission loss, however, with the inclusion of multiple scattering effects and a progressively greater loss as the cloud path length increases. DTIC

FUNDAMENTALS AND TECHNIQUES OF NONIMAGING OPTICS
R. Winston Apr. 1993 53 p
(Contract DE-FG02-87ER-13726)
(DE93-013145; DOE/ER-13726/6) Avail: CASI HC A04/MF A01

For many tasks in illumination and collection, the acceptance angle is required to vary along the reflector. If the acceptance angle function is known, then the reflector profile can be calculated as a function of it. The total flux seen by an observer from a source and its brightness (radiance) is proportional to the sum of the view factor of the source and its reflection. This allows one to calculate the acceptance angle function necessary to produce a certain flux distribution and thereby construct the reflector profile. We demonstrate the method for several examples including finite size sources with reflectors directly joining the source. DOE

MEASUREMENTS OF OPTICAL PROPERTIES OF WAVESHIFTING OPTICAL FIBER FOR LIQUID SCINTILLATOR HADRON CALORIMETRY
C. Cochran, M. Lowry, C. Wuest, P. Armatis, G. Graham, and E. Ables Sep. 1992 14 p Presented at the Society of Photo-Optical Instrumentation Engineers International Symposium on Optical Applied Science and Engineering, San Diego, CA, 19-24 Jul. 1992
(Contract W-7405-eng-48)
(DE93-012606; UCRL-JC-109421; CONF-920792-52) Avail: CASI HC A03/MF A01

Measurements have been made on optical properties of Bicron BCF-91 waveshifting optical fiber. This fiber is proposed as a means of converting UV and blue light emitted from a liquid scintillator when exposed to ionizing radiation. The conversion is accomplished by coiling the fiber in a reservoir filled with liquid scintillator and coated internally with reflective paint. The UV and blue light is absorbed by the waveshifting dyes in the fiber and reemitted light is channeled into the core of the fiber and output to photodetectors. It has been proposed to outfit the hadron calorimeter subsystem of the GEM detector to be built at the Superconducting Super Collider with 800,000 separate liquid scintillator/waveshifting fiber cells. The measurements described in this work deal with the optical performance of the fiber: spectral emission, response as a function of input wavelength, response as a function of irradiated length, propagation length, and output numerical aperture. The theoretical response of an ideal calorimeter cell is studied based on the results of the measurements presented. DOE

THREE DIMENSIONAL TRACKING OF FOUR POINT PLANAR PATTERNS USING CORNERS Ph.D. Thesis
Michael J. Frendo 1989 170 p
(ISBN-0-315-52149-X; CTN-93-60725) Copyright Avail: Issuing Activity (Micromedia Ltd., Technical Information Centre, 165 Hotel de Ville, Place du Portage, Phase 2, Hull, Quebec J8X 3X2, Canada HC)

Tracking of planar shapes using a single camera view is investigated. Two dimensional silhouette projections of planar shapes randomly oriented and positioned in the camera field of view are processed to determine their position and rotational orientation with respect to the camera. This information can then be provided to robots or automated guided vehicles for automated assembly, docking, shape identification, and retrieval. Silhouettes are initially encoded in the system as a linked list of vertex points representing changes in the direction of the contour. This contour is employed to get an initial estimate of the shape's position. Corner feature points of the shape are then more accurately located using a fast corner location algorithm. A photogrammetric solution is then applied to the projection points of the corners to determine the three dimensional position of the shape. The photogrammetric technique employed does not require a least squares fit as does the traditional photogrammetric approach. This new approach is contrasted with the traditional method in terms of accuracy and computational complexity. Author (CISTI)

A FOURIER TRANSFORM MICROSCOPE FOR X RAY AND/OR GAMMA RAY IMAGING Patent Application
Kent S. Wood, inventor (to Navy) 15 Mar. 1993 34 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(AD-D015742; US-Patent-Appl-SN-031410; Navy-Case-73566) Avail: CASI HC A03

A Fourier transform microscope for use in imaging a source of x-ray and/or gamma-ray radiation includes first and second grids arranged in proximity to the source. The first grid includes an arrangement of first subgrids elements with a first predetermined number n of approximately parallel, equally-spaced linear first radiation-transparent regions which are arranged in alternation with the first ribs. The second grid includes an arrangement of second subgrids elements which are larger than the first subgrids elements, and which have a common field of view with corresponding first subgrid elements. Each second subgrid element has a second predetermined number n + m of approximately parallel, equally-spaced linear second ribs which are opaque to the radiation of interest, and second radiation-transparent regions which alternate with the second ribs. Each first subgrid element and its corresponding second subgrid element is termed a 'subgrid system'. Each subgrid system can be used to derive an amplitude and phase of an associated Fourier component. A position-sensitive detector detects a Moire or fringe pattern from wach subgrids system and generates a signal indicative of the radiation intensity distribution image of the source in spatial frequency domain which can be converted into a radiation intensity distribution image of the source in spatial domain using a Fourier transform. HIGH SPEED ALL-OPTICAL NETWORKS Final Report, 1 May 1989 - 1 Feb. 1993
Imrich Chlamtac 1 Feb. 1993 5 p
(Grant NAG2-578)
(NASA-CR-194384; NAS 1.26:194384; UM-522746) Avail: CASI HC A01/MF A01

An inherent problem of conventional point-to-point WAN architectures is that they cannot translate optical transmission bandwidth into comparable user available throughput due to the limiting electronic processing speed of the switching nodes. This report presents the first solution to WDM based WAN networks that overcomes this limitation. The proposed Lightnet architecture takes into account the idiosyncrasies of WDM

switching/transmission leading to an efficient and pragmatic solution. The Lightnet architecture trades the ample WDM bandwidth for a reduction in the number of processing stages and a simplification of each switching stage, leading to drastically increased effective network throughputs.

IMPLEMENTATION OF MANUFACTURING TECHNIQUES FOR PLANAR, SINGLE MODE WAVEGUIDES ON LITHIUM NIOBATE Final Report, 1 Jul. 1990 - 31 Mar. 1991
Velimir M. Ristic and Wujun Zhou Mar. 1991 55 p
(DSIS-93-00101; CTN-93-60776) Avail: CASI HC A04

An extensive study was conducted to examine the possibilities of eliminating or controlling optical damage in lithium niobate based optical waveguides. Impurities and thermal treatments are seen as key factors in optical damage (or photorefractive effect). Planar, single mode waveguides such as Mg:Ti:LiNbO3, Mg:Ti:Mg:LiNbO3, Ti:Mg:LiNbO3, and Zn:LiNbO3 were fabricated using vacuum deposition and thermal diffusion techniques with the highest purity materials available. The impurity levels in the materials were analyzed using secondary ion mass spectrometry and mass spectroscopy. The waveguide properties and optical damage were measured in the TM(0) and TE(0) modes using the Mach-Zehnder inteferometer. The study demonstrates the present day limitations in what can be achieved in improving the optical damage resistance in LiNbO3 based waveguides.

The integrated optic spectrum analyzer (IOSA) performs a spectrum analysis of radio frequency (RF) signals in real time, with potential applications in electronic warfare receivers. The distinguising characteristics of the IOSA include small size, low weight, high rigidity, low cost, and low RF power requirements compared to bulk acoustic-optic devices. The IOSA consists of an optical waveguide, two integrated optic lenses, a surface acoustic wave (SAW) transducer, a laser diode, and a photodetector array. System design, waveguide design, and SAW transducer design are described, along with the processes used for fabrication of the lens, waveguide, and SAW transducer. The IOSA system was then tested and results are presented. The dynamic range of the system was over 30 dB. The acousto-optic diffraction efficiency of the SAW transducer was better than 50 percent/1 W RF. The 5-dB bandwidth of acousto-optic diffraction was around 350 MHz. The RF frequency resolution was 6.4 MHz. The test results showed that most specifications surpassed the design targets.

GAMMA-INSENSITIVE OPTICAL FOCAL PLANE ARRAY
H. Kruger Oct. 1992 69 p
(Contract W-7405-eng-48)
(DE93-013100; UCRL-ID-112223) Avail: CASI HC A04/MF A01

Two types of optical focal plane array concepts are proposed which use semitransparent photocathodes and gas avalanche multiplication to count an optical photon or a gamma as submicrosecond pulses with a charge that can be adjusted to be as large as 106 electrons. Avalanche diameters are sufficiently small to allow use of pixel sizes of tens of microns. Currently available photocathode materials permit operation at ultraviolet/visible wavelengths with approximately 10-20% quantum efficiency and in the near-infrared with approximately 0.1-0.3% quantum efficiency. The dark current of these photocathodes is sufficiently low so that they can be operated at room temperature. The weight of these gas avalanche focal plane designs is small and negligible compared to that required for data processing. The first concept, using a quartz cathode plate, is a relatively simple mechanical design. It detects a gamma mainly through the Cerenkov photons radiated in the quartz by the high-energy end of the gamma-produced Compton electron spectrum. It can operate in a high gamma flux; however, it has little capability to discriminate between optical photon and gamma counts. The second concept uses scintillating fiberoptic cathode and anode plates to detect all the gamma-produced electrons. It is a more complicated design; however, it is inherently capable of discriminating between optical photon and gamma events on the basis of pulse height and pixel count pattern. It can operate in a gamma flux of 10(exp 10) to 10(exp 11) gammas/sq cm/sec if built with scintillating glass fibers. Use of plastic scintillation fibers increases the tolerable gamma flux to approximately 10(exp 12)-10(exp 13) gammas/sq cm/sec, but makes the mechanical design of the gas avalanche focal plane array more difficult. Prototype gas avalanche focal plane arrays need to be built and tested to verify feasibility of this optical sensor concept. DOE

POLARIZATION EFFECTS IN OPTICAL FIBER CURRENT SENSORS BASED ON SAGNAC INTERFEROMETERS WITH 3 BY 3 COUPLERS
K. B. Rochford (National Inst. of Standards and Technology, Boulder, CO.), G. W. Day (National Inst. of Standards and Technology, Boulder, CO.), and P. R. Forman 1993 5 p Presented at the 9th Optical Fiber Sensors Conference, Firenze, Italy, 4-6 May 1993
(Contract W-7405-eng-36)
(DE93-012665; LA-UR-93-1449; CONF-930588-2) Avail: CASI HC A01/MF A01

Response functions of an ideal Sagnac optical fiber current sensor based on a 3 x 3 coupler fundamentally depend on the polarization state of light catering coupler, even for a zero birefringence system. The desired response functions, cosinusoids separated by 120(degrees) phase shifts, are obtained only for circularly polarized light. The response functions for linearly polarized and depolarized inputs are cosinusoids separated by 180(degrees), and yield only zero-slope small-signal responses. Also, two outputs are degenerate, so that the response is similar to that observed in 2 x 2 systems. Thus, 3 x 3 couplers offer no advantage over 2 x 2 systems for linear polarized light. This result increases system complexity in that polarization control optics are required to supply the proper polarization, even for an ideal, zero-birefringence system. DOE

This study explores parametrically as a function of wavelength the degrading effects of several common optical aberrations (defocus, astigmatism, wavefronttilts, etc.), using the heterodyne mixing efficiency factor as the merit function. A 60 cm diameter aperture beam expander with an expansion ratio of 15:1 and a primary mirror focal ratio of f/2 was designed for the study. An HDOS copyrighted analysis program determined the value of merit function for various optical misalignments. With sensitivities provided by the analysis, preliminary error budget and tolerance allocations were made for potential optical wavefront errors and boresight errors during laser shot transit time. These were compared with the baseline 1.5 m CO2 laws and the optical fabrication state of the art (SOA) as characterized by the Hubble Space Telescope. Reducing wavelength and changing optical design resulted in optical quality tolerances within the SOA both at 2 and 1 micrometer. However, advanced sensing and control devices would be necessary to be tightened by a factory of 1.8 for a 2 micrometer system and by 3.6 for a 1 micrometer system relative to the baseline CO2 LAWS. Available SOA components could be used for operation at 2 micrometers but operation at 1 micrometer does not appear feasible. Author

QUANTITATIVE LUMINESCENCE IMAGING SYSTEM
C. R. Batishko, K. A. Stahl, and B. A. Fecht 1992 48 p Presented at the Workshop on 3-dimensional Graphics Modeling of RFR Distribution in Humans, Brooks AFB, TX, 8-9 Dec. 1992
(Contract DE-AC06-76RL-01830)
(DE93-015691; PNL-SA-21677; CONF-921281-1) Avail: CASI HC A03/MF A01

The goal of the Measurement of Chemiluminescence project is to develop and deliver a suite of imaging radiometric instruments for measuring spatial distributions of chemiluminescence. Envisioned deliverables include instruments working at the microscopic, macroscopic, and life-sized scales. Both laboratory and field portable instruments are envisioned. The project also includes development of phantoms as enclosures for the diazoluminomelanin (DALM) chemiluminescent chemistry. A suite of either phantoms in a variety of typical poses, or phantoms that could be adjusted to a variety of poses, is envisioned. These are to include small mammals (rats), mid-sized mammals (monkeys), and human body parts. A complete human phantom that can be posed is a long-term goal of the development. Taken together, the chemistry and instrumentation provide a means for imaging rf dosimetry based on chemiluminescence induced by the heat resulting from rf energy absorption. The first delivered instrument, the Quantitative Luminescence Imaging System (QLIS), resulted in a patent, and an R&D Magazine 1991 R&D 100 award, recognizing it as one of the 100 most significant technological developments of 1991. The current status of the project is that three systems have been delivered, several related studies have been conducted, two preliminary human hand phantoms have been delivered, system upgrades have been implemented, and calibrations have been maintained. Current development includes sensitivity improvements to the microscope-based system; extension of the large-scale (potentially life-sized targets) system to field portable applications; extension of the 2-D large-scale system to 3-D measurement; imminent delivery of a more refined human hand phantom and a rat phantom; rf, thermal and imaging subsystem integration; and continued calibration and upgrade support. MANUFACTURING AND EXAMINATION OF INTEGRATED OPTICAL WAVEGUIDE COMPONENTS IN SILICON Ph.D. Thesis [HERSTELLUNG UND UNTERSUCHUNG INTEGRIERT OPTISCHER WELLENLEITERKOMPONENTEN IN SILIZIUM]
Joachim Schmidtchen 1992 127 p In GERMAN
(ETN-93-94393) Avail: CASI HC A07/MF A02

Waveguides are manufactured with a method developed for titanium diffused lithium niobate waveguides. Germanium was used for increasing refractivity and an alloy of germanium and silicon was employed as doping material in order to avoid problems in the beginning of the diffusion process. Waveguide losses inferior to 0.5 dB/cm were obtained by optimization of layer thickness and strip breath. Monomode rib waveguides were manufactured by isotropic and anisotropic etching of a silicon on insulator. SIMOX (Separation by Isolated Oxygen) process was used for production of a silica layer of 0.2 micrometers. The near field intensity profile of a rib waveguide was recorded and compared with a simulated equivalent waveguide. It is concluded that silicon can be used in optical communication technology for realization of integrated optoelectronic devices. ESA

TWO DIMENSIONAL MEASUREMENT AND EVALUATION OF POINT IMAGES AT MICROSCOPE OBJECTIVES Ph.D. Thesis [ZWEIDIMENSIONALE MESSUNG UND AUSWERTUNG VON PUNKTBILDERN AN MIKROOBJEKTIVEN]
Roman Castaneda-Sepulveda 1993 153 p In GERMAN
(ETN-93-94397) Avail: CASI HC A08/MF A02

A process for two dimensional measurement and evaluation of point images is developed, which allows the reproduction quality of a given test object to be obtained on the basis of quantitative assessment of symmetry and energy distribution of the point image. The process was realized by considering the production of a test object with the Airy muster method, the measurement of axial and nonaxial point images with subpixel scanning, and the evaluation of point image by using the moment method. A digital image processing system was used as a receiver because of the simple positioning of charge coupled device cameras and the high velocity for recording two dimensional pictures. Corrections were made with difference image and low pass filtration methods in order to guarantee accuracy of measurements. Moments were calculated until the fourth order for estimation of symmetry parameters of point images, such as mean quadratic radius, eccentricities, energy and coma factors, which are shown to be invariant with coordinate transformations and are proved to be good estimators in the sense of Hertel definition of objective quality criteria. TWO-DIMENSIONAL SIMULATIONS OF FOIL IMPLOSION EXPERIMENTS ON THE LOS ALAMOS CAPACITOR BANK
D. L. Peterson, R. L. Bowers, J. H. Brownell, A. E. Greene, H. Lee, and W. Matuska 1993 9 p Presented at the 3rd International Conference on Dense z-Pinches, London, England, 19-23 Apr. 1993
(Contract W-7405-eng-36)
(DE93-012676; LA-UR-93-1393; CONF-9304126-7) Avail: CASI HC A02/MF A01

A number of z-pinch experiments have been conducted at Los Alamos on the Pegasus capacitor bank in which 2-cm high, 5-cm radius, thin foil loads were imploded with currents in excess of 3 MA. Two-dimensional radiation magnetohydrodynamic (RMHD) simulations of these implosions have been performed to model the implosion dynamics and subsequent generation of an x-ray pulse. Comparison of the simulation instability development with visible light framing camera photographs show good agreement and illustrate the instability evolution from short to long wavelengths and a final disruption of the imploding plasma shell. The calculations also show good agreement with experimental timing and measured current and voltage waveforms, and also reproduce features characteristic of the x-ray output. These include a broad pulsewidth, and the presence of multiple peaks and small time scale structures, features which cannot be reproduced by one-dimensional models. X-ray spectra obtained from the calculated pinch also reproduce qualitative features in the measured spectra. DOE

A 3D GYROKINETIC PARTICLE-IN-CELL SIMULATION OF FUSION PLASMA MICROTURBULENCE ON PARALLEL COMPUTERS
T. J. Williams Dec. 1992 6 p Presented at the 1993 International Simulators Conference on High Performance Computing, Arlington, VA, 29 Mar. - 1 Apr. 1993
(Contract W-7405-eng-48)
(DE93-012503; UCRL-JC-111840; CONF-930372-10) Avail: CASI HC A02/MF A01

One of the grand challenge problems now supported by HPCC is the Numerical Tokamak Project. A goal of this project is the study of low-frequency micro-instabilities in tokamak plasmas, which are believed to cause energy loss via turbulent thermal transport across the magnetic field lines. An important tool in this study is gyrokinetic particle-in-cell (PIC) simulation. Gyrokinetic, as opposed to fully-kinetic, methods are particularly well suited to the task because they are optimized to study the frequency and wavelength domain of the microinstabilities. Furthermore, many researchers now employ low-noise delta(f) methods to greatly reduce statistical noise by modelling only the perturbation of the gyrokinetic distribution function from a fixed background, not the entire distribution function. In spite of the increased efficiency of these improved algorithms over conventional PIC algorithms, gyrokinetic PIC simulations of tokamak micro-turbulence are still highly demanding of computer power--even fully-vectorized codes on vector supercomputers. For this reason, we have worked for several years to redevelop these codes on massively parallel computers. We have developed 3D gyrokinetic PIC simulation codes for SIMD and MIMD parallel processors, using control-parallel, data-parallel, and domain-decomposition message-passing (DDMP) programming paradigms. This poster summarizes our earlier work on codes for the Connection Machine and BBN TC2000 and our development of a generic DDMP code for distributed-memory parallel machines. We discuss the memory-access issues which are of key importance in writing parallel PIC codes, with special emphasis on issues peculiar to gyrokinetic PIC. We outline the domain decompositions in our new DDMP code and discuss the interplay of different domain decompositions suited for the particle-pushing and field-solution components of the PIC algorithm. ADVANCED MAGNETIC FLUX COMPRESSION GENERATOR DEVELOPMENT ISSUES: A COMPARISON OF COAXIAL AND DISK GENERATORS
M. G. Sheppard and B. L. Freeman Apr. 1993 33 p
(Contract W-7405-eng-36)
(DE93-014025; LA-12482-MS) Avail: CASI HC A03/MF A01

Three magnetic flux compression generator (FCG) geometries are reviewed and compared for their suitability as high-current, high-power drivers for z-pinch implosion programs at Los Alamos. They are the inside-out coaxial FCG, the disk FCG, and the outside-in coaxial FCG. A wide range of issues is discussed for each type FCG including current-carrying capability, current densities, robustness, explosive mass and shape, initiation schemes, efficiency, operating times, complexity, and expense associated with development and fabrication. Equations are derived and used in simple scaling studies. The results of these studies are supported by MHD calculations and references to relevant experiments both here and in Russia. The inside-out coaxial FCG is shown to be suitable, both for the very high current applications and for anticipated future Trailmaster concepts. Based upon this analysis and results reported in the Russian literature, the inside-out coaxial FCG is more suitable than the disk FCG for the high-current applications considered, and the two are roughly equivalent when applied to lower-current Trailmaster concepts. The outside-in coaxial FCG is unsuitable for either application because of its limited current-carrying capability and the large investment required for initial development. DOE

INVESTIGATION OF DYNAMICS OF PLASMA FLUXES GENERATED BY THE QUASI-STATIONARY PLASMA ACCELERATOR P-50
A. Yu. Voloshko, I. E. Garkusha, D. G. Solyakov, V. I. Tereshin, and V. V. Chebotarev 1991 16 p In RUSSIAN
(DE93-621665; KFTI-91-15) Avail: CASI HC A03/MF A01 (US Sales Only)

The results of experimental research on electric and magnetic field distribution in plasma fluxes generated by the P-50 accelerator in different work regimes are represented. Current vortices and regions with increased potential in plasma fluxes behind the accelerator cut are discovered. On the base of E and H-field experimental distribution, values of electron and ion local velocities and density in plasma flux were numerically calculated in the frame of MHD approximation. This research shows the advantages of pilot cathode compared with usual one and the necessity of anode gas supply in accelerating channel. DOE

THEORY OF FIELD-REVERSED CONFIGURATIONS
L. C. Steinhauer 29 Jan. 1993 24 p
(Contract DE-AC06-80ER-53098)
(DE93-015611; DOE/ER-53098/T9) Avail: CASI HC A03/MF A01

This report summarizes results from the theoretical program on field reversed configurations (FRC) at STI Optronics. The program, which has spanned the last 13 years, has included analytical as well as computational

components. It has led to published papers on every major topic of FRC theory. The report is outlined to summarize results from each of these topic areas: formation, equilibrium, stability, and confinement. Also briefly described are Steinhauer's activities as Compact Toroid Theory Listening Post. Appendix A is a brief listing of the major advances achieved in this program. Attached at the back of this report is a collection of technical papers in archival journals that resulted from work in this program. The discussion within each subsection is given chronologically in order to give a historical sense of the evolution of understanding of FRC physics. DOE

PLASMA DIFFUSION THROUGH MULTIDIPOLE MAGNETIC FIELDS

Jose Leonardo Ferreira 1993 24 p Submitted for publication

(INPE-5460-PRE/1768) Avail: CASI HC A03/MF A01

The diffusion of a cold plasma through multidipole fields of a magnetic picket fence is presented. The ion diffusion and trapping is determined by electric potentials inside the multidipole fields. The electron diffusion is regulated by an anomalous transport process driven by an ion acoustic instability inside the magnetic sheath. Particles drifting with velocities above the ion acoustic speed generates high amplitude turbulent waves responsible for all anomalous diffusion process. Author (revised)

TEST APPARATUS FOR ITER BLANKET COOLING WATER DISTRIBUTION DESIGN

Hiroshi Yoshida (Japan Atomic Energy Research Inst., Naka.), Mikio Enoeda (Japan Atomic Energy Research Inst., Naka.), Shingo Hirata (Kawasaki Heavy Industries Ltd., Tokyo, Japan.), and Hideki Ito (Kawasaki Heavy Industries Ltd., Tokyo, Japan.) May 1992 55 p

(DE93-753157; JAERI-M-92-070) Avail: CASI HC A04/MF A01

Current Japanese breeding blanket concept being developed for the ITER driver blanket is comprised of three breeding layers, nine multiplier layers and five water cooling panels. In order to meet design requirements of tritium release efficiency and material temperature restrictions, configuration of these layers should be designed to achieve optimum temperature profiles in the radial direction of the blanket. Such temperature conditions are attained by appropriate water flow rate distribution in each cooling panel. Furthermore, the cooling panel must be designed to accommodate variation of D-T burning plasma density during ITER operation. An engineering test apparatus composed of three parallel cooling panel models was developed. It was designed to examine performance of orifice type passive distributions for cooling header design. The apparatus can be operated under ITER blanket design conditions: temperature range: 60 - 100 C; water pressure: 1.5 MPa; flow rate: 0.5-5 m/s; pressure drop: up to 50 kPa; heat flux of heater: 20-2000 kW/m(sup 2). DIMENSIONALLY SIMILAR DISCHARGES WITH CENTRAL RF HEATING ON THE D3-D TOKAMAK

C. C. Petty, T. C. Luce, and R. I. Pinsker Apr. 1993 4 p Presented at the 10th Topical Conference on Radio Frequency Power in Plasmas, Boston, MA, 1-3 Apr. 1993

(Contract DE-AC03-89ER-51114)

(DE93-012776; GA-A-21257; CONF-9304112-11) Avail: CASI HC A01/MF A01

The scaling of L-mode heat transport with normalized gyroradius is investigated on the D3-D tokamak using central RF heating. A toroidal field scan of dimensionally similar discharges with central ECH and/or fast wave heating show gyro-Bohm-like scaling both globally and locally. The main difference between these results and those using NBI heating on D3-D is that with RF heating the deposition profile is not very sensitive to the plasma density. Therefore central heating can be utilized for both the low-B and high-B discharges, whereas for NBI the power deposition is decidedly off-axis for the high-B discharge. DOE

GROWTH CURVE ANALYSIS FOR PLASMA PROFILES USING SMOOTHING SPLINES

K. Imre May 1993 14 p

(Contract DE-FG02-91ER-54131)

(DE93-015741; DOE/ER-54131/2) Avail: CASI HC A03/MF A01

We are developing a profile analysis code for the statistical estimation of the parametric dependencies of the temperature and density profiles in tokamaks. Our code uses advanced statistical techniques to determine the optimal fit, i.e. the fit which minimized the predictive error. For a forty TFTR Ohmic profile dataset, our preliminary results indicate that the profile shape depends almost exclusively on q(sub a') but that the shape dependencies are not Gaussian. We are now comparing various shape models on the TFTR data. In the first six months, we have completed the core modules of the code, including a B-spline package for variable knot locations, a data-based method to determine the optimal smoothing parameters, self-consistent estimation of the bias errors, and adaptive fitting near the plasma edge. Visualization graphics already include three dimensional surface plots, and discharge by discharge plots of the predicted curves with error bars together with the actual measurements values, and plots of the basis functions with errors. HIGHLY CHARGED IONS IN HOT, DENSE PLASMAS

A. L. Osterheld, R. S. Walling, B. K. F. Young, W. H. Goldstein, G. Shimkaveg, B. J. MacGowan, L. DaSilva, C. Keane, B. Hammel, and R. London et al Sep. 1992 12 p Presented at the 6th International Conference on Physics of Highly Charged Ions, Manhattan, KS, 28 Sep. - 2 Oct. 1992

(Contract W-7405-eng-48)

(DE93-013348; UCRL-JC-111868; CONF-920948-12) Avail: CASI HC A03/MF A01

Highly-charged ions play a critical role in hot, dense plasmas. They affect the energy balance and hydrodynamic evolution of transient plasmas. The radiation emitted by highly charged ions may be used in several practical applications, such as inertial confinement fusion, short wavelength lasers, and x-ray sources for lithography and microscopy applications. This radiation may also be used to diagnose the conditions in plasmas. In recent years, models have been developed to describe the atomic kinetics of complex ionization states of highly charged ions in plasmas. However, reliable atomic calculations and careful experiments which test both the fundamental atomic physics and the assumptions of the plasma emission models are required. DOE

This issue of the ICF Quarterly contains seven articles that describe recent progress in Lawrence Livermore National Laboratory's ICF program. The Department of Energy recently initiated an effort to design a 1-2 MJ glass laser, the proposed National Ignition Facility (NIF). These articles span various aspects of a program which is aimed at moving forward toward such a facility by continuing to use the Nova laser to gain understanding of NIF-relevant target physics, by developing concepts for an NIF laser driver and by envisioning a variety of applications for larger ICF facilities. This report discusses research on the following topics: Stimulated Rotational Raman Scattering in Nitrogen; A Maxwell Equation Solver in LASNEX for the Simulation of Moderately Intense Ultrashort Pulse Experiments; Measurements of Radial Heat-Wave Propagation in Laser-Produced Plasmas; Laser-Seeded Modulation Growth on Directly Driven Foils; Stimulated Raman Scattering in Large-Aperture, High-Fluence Frequency-Conversion Crystals; Fission Product Hazard Reduction Using Inertial Fusion Energy; and the Use of Inertial Confinement Fusion for Nuclear Weapons Effects Simulations. ION CYCLOTRON HEATING EXPERIMENTS AND PLANS FOR THE ADVANCED TOROIDAL FACILITY (ATF)

D. A. Rasmussen, D. B. Batchelor, R. J. Goulding, D. J. Hoffman, E. F. Jaeger, J. A. Rome, and C. E. Thomas 1993 4 p Presented at the 10th Topical Conference on Radio Frequency Power in Plasmas, Boston, MA, 1-3 Apr. 1993

(Contract DE-AC05-84OR-21400)

(DE93-012965; CONF-9304112-10) Avail: CASI HC A01/MF A01

In the Advanced Toroidal Facility (ATF) Ion Cyclotron Resonant Frequency (ICRF) experiments to date, a single-strap tunable antenna with carbon limiters has been used at power densities up to 13.6 MW/m(sup 2) (900 kW). Hydrogen minority heating experiments at 14.4 MHz were performed in deuterium plasmas formed initially with both second-harmonic electron cyclotron heating (ECH) and helium neutral beam injection (NBI). No ICRF heating was observed in the low-density ECH target plasmas. Two distinct NBI plus ICRF operating modes are described. The moderate heating of these discharges is probably limited by impurities sputtered from the vessel walls and/or poorly confined orbits for the heated particles. A two-strap, phased antenna, designed to reduce impurities and capable of both minority and direct electron heating is described. A second antenna design for optimizing the coupling to well confined ion orbits, additional ICRF heating schemes, and methods for reducing the RF edge interactions in a stellarator geometry are also being considered. Experiments have been performed which measured the global absorption and thermal efficiency of laser sustained hydrogen plasmas for the first time. Results include global absorption as high as 90% and thermal efficiency as high as 80%. These results validate laser propulsion as a feasible orbital transfer technology. A kinetic nonequilibrium model of laser sustained hydrogen plasmas has been formulated and solved. This model is the first of its kind and includes a discretized beam raytrace with a variable index of refraction based upon plasma electron number density. Model results have compared favorably with experimental results and the model has been used to provide predictions of LSP performance well outside the realm of experiments. Multiple model solutions have been obtained which are dependent upon initial conditions. No significant kinetic nonequilibrium was observed in LSP core regions for incident powers up to 700 kW. Beam refraction by the LSP has been observed to have a major effect on LSP performance. The methodology formulated in this document has direct applicability to two temperature modeling of arcjet plasmas, work which is currently underway at UIUC. DTIC

EQUILIBRIUM RECONSTRUCTION OF THE q-PROFILE IN TOKAMAKS FROM MOTIONAL STARK EFFECT DATA

S. P. Hirshman, D. K. Lee, F. M. Levinton, S. H. Batha (Fusion Physics and Technologies, Torrance, CA.), M. Okabayashi, and R. M. Wieland (Princeton Univ., NJ.) 1993 8 p Presented at the 20th European Conference on Contrrolled Fusion and Plasma Physics, Lisbon, Portugal, 26-30 Jul. 1993

(Contract DE-AC05-84OR-21400)

(DE93-015815; CONF-930720-12) Avail: CASI HC A02/MF A01

The motional Stark effect (MSE) diagnostic has been implemented on the Tokamak Fusion Test Reactor (TFIR) and the Princeton Beta Experiment (PBX-M) to obtain q-profile measurements in the presence of a finite-beta plasma. A multichannel MSE parameter system has obtained data for several plasma conditions including L-mode, Supershot, current ramps, and high beta(sub p). Accurate measurement of the q-profile is essential for analysis of the equilibrium, stability, and transport properties of a tokamak. Many externally observed phenomena, such as sawteeth and the beta collapse, can be analyzed principally in terms of the q and q' (i.e., shear) profiles. Thus, the MSE measurement supplements the standard diagnostic suite of external magnetic probes to provide a new set of internal profile data which was previously unavailable. Using the MSE data, together with magnetic probe data, it is possible to obtain a self-consistent equilibrium reconstruction of the q-profile. Before describing the reconstruction technique, a brief review of the MSE diagnostic will be presented in this paper. DOE

(Contract DE-AI03-79DP-40092)

(DE93-013372; DOE/DP-40092/9) Avail: CASI HC A02/MF A01

The Nike laser system is progressing well. All of the amplifiers through the first E-beam pumped amplifier have been installed. The pulse-power reliability problems with the 20 cm e-beam amplifier have been solved, and this amplifier now operates in a highly-reproducible fashion at five minute intervals, at full power. A computerized control system and a computerized data acquisition system for monitoring the laser have been installed and successfully operated. A prototype computer-controlled automatic laser alignment system has been successfully tested. The assembly and testing of the large 60 cm amplifier pulsed power is progressing well. The optical system for the main NIKE beamlines is complete through the power discharge amplifiers. Sufficient optics have now arrived to test the full energy capability of the laser through the 20 cm amplifier using six 20 nsec angularly-multiplexed beams. DOE

ICE/ISEE PLASMA WAVE DATA ANALYSIS Final Report, Jan. 1990 - Dec. 1991

E. W. Greenstadt Mar. 1992 8 p

(Contract NAS5-33046)

(NASA-CR-194375; NAS 1.26:194375) Avail: CASI HC A02/MF A01

The interval reported on, from Jan. 1990 to Dec. 1991, has been one of continued processing and archiving of ICE plasma wave (pw) data and transition from analysis of ISEE 3 and ICE cometary data to ICE data taken along its cruise trajectory, where coronal mass ejections are the focus of attention. We have continued to examine with great interest the last year of ISEE 3's precomet phase, when it spent considerable time far downwind from Earth, recording conditions upstream, downstream, and across the very weak, distant flank bow shock. Among other motivations was the apparent similarity of some shock and post shock structures to the signatures of the bow wave surrounding comet Giacobini-Zinner, whose ICE-phase data was revisited. While pursuing detailed, second-order scientific inquiries still pending from the late ISEE 3 recordings, we have also sought to position ourselves for study of CME's by instituting a data processing format new to the ISEE 3/ICE pw detector. Processed detector output has always been summarized and archived in 24-hour segments, with all pw channels individually plotted and stacked one above the next down in frequency, with each channel calibrated separately to keep all data patterns equally visible in the plots, regardless of gross differences in energy content at the various frequencies. Since CME's, with their preceding and following solar wind plasmas, can take more than one day to pass by the spacecraft, a more condensed synoptic view of the pw data is required to identify, let alone assess, CME characteristics than has been afforded by the traditional routines. This requirement is addressed in a major new processing initiative in the past two years. Besides our own ongoing and fresh investigations, we have cooperated, within our resources, with studies conducted extramurally by distant colleagues irrespective of the phase of the ISEE 3/ICE mission under scrutiny. The remainder of this report summarizes our processing activities, our investigations, both internal and cooperative, our scientific results, and our publication activity. Author (revised)

During the last six months, our efforts concentrated on studying the excitation of electromagnetic waves in the whistler frequency range by an anisotropic electron beam. A paper entitled 'Electron Cyclotron Wave Generation by Relativistic Electrons' was submitted to Journal of Geophysical Research and was accepted for publication. This paper is in collaboration with Dr. M. L. Goldstein at Goddard Space Flight Center. It was shown that an anisotropic electron beam (or gyrating electron beam) is capable of generating electron cyclotron waves with frequency from above to below the electron plasma frequency in a low density plasma. This instability may account for the observed Z mode and the electromagnetic component of auroral hiss in the Earth's polar region. The abstract of this paper is

enclosed. For a high density plasma in which the electron plasma frequency is considerably higher than the electron cyclotron frequency, a new left-hand electromagnetic wave at whistler frequencies, which is also driven unstable by an anisotropic electron beam, was found. The basic notion of this new instability is the significant change of the dispersion equation due to the contribution of the beam component, which can shift the usual right hand whistler waves into left hand waves. EFFECT ON ANTENNA STRUCTURE OF HIGH POWER RF DURING PLASMA OPERATION
G. R. Haste, C. E. Thomas, A. Fadnek, M. D. Carter, B. Beaumont, A. Becoulet, H. Kuus, and B. Saoutic 1993 4 p Presented at the 10th Topical Conference on Radio Frequency Power in Plasmas, Boston, MA, 1-3 Apr. 1993
(Contract DE-AC05-84OR-21400)
(DE93-013278; CONF-9304112-12) Avail: CASI HC A01/MF A01

High-power, long-pulse operation on the Tore Supra tokamak results in considerable stress on the plasma-facing components. The ICH antennas must deliver high-power RF (up to 4 MW per antenna) in this environment. The antenna structure is therefore subjected to the power flux resulting from the interaction between RF and the edge plasma. The structure's response during operation is described, as is the condition of the antenna after prolonged use. DOE

We report on computer simulation results for a new laser plasma interaction regime. Our report concentrates on the collisionless, kinetic nature of the plasma motion. It is found that even for normal incidence, the absorption of the laser light by the plasma electrons near critical can be as high as 60%, and that, the temperature of the hot electrons produced can be predicted simply by knowing the associated ponderomotive potential of the incident laser. We also describe a new odd harmonic generation mechanism due to the interaction of the laser with the plasma electrons near critical. DOE

The association of computing with magnetic fusion research has a history of more than 30 years. Then, as now, the mathematical complexity of describing plasma phenomena has made the computer an indispensable tool in extending the theory. Our first area of application addressed fluid MHD models to represent ideal and resistive plasmas as well as equilibria. A second equally important area of research was in the solution of kinetic plasma models. Both Vlasov and Fokker-Planck models have been solved in the codes we developed, the latter allowing us to make realistic estimates of the transport of heat and particles in reacting fusion plasmas. The critical importance of computing to plasma physics research led us to the development of the dedicated computing facilities at NERSC (National Energy Research Supercomputer Center, Livermore). Aspects of these theoretical and institutional developments will be presented in a historical retrospective view. DOE

Electrodynamic properties of a hybrid slowing down structure consisting of co-axial beam and plasma were investigated theoretically. Dispersion relations for axial-symmetric waves in this system were found in hydrodynamic approximation. It was shown that in presence of a plasma column the phase velocity increases compared with that in case of a spiral in vacuum. Analytical expressions for increments of excited fields for beams of small and large density were obtained. At a sufficiently large beam density not only dispersion of the system changes, but the mechanism of vibration excitation changes too. Namely, with the beam density increase, splitting of its dispersion curve leads to disappearance of Cherenkov instability and appearance of anomal Doppler effect instability. Field topography for spiral-plasma system was investigated analytically and experimentally. DOE

(DE93-013184; UCRL-JC-111546; CONF-920610-16) Avail: CASI HC A02/MF A01

The study of parametric instabilities in laser plasmas is of vital importance for inertial confinement fusion (ICF). The long scale-length plasma encountered in the corona of an ICF target provides ideal conditions for the growth of instabilities such as stimulated Brillouin scattering (SBS), stimulated Raman scattering (SRS), and filamentation. These instabilities can have detrimental effects in ICF, and their characterization and understanding is of importance. Scattering instabilities are driven through a feedback loop by which the beating between the electromagnetic EM fields of the laser and the scattered light matches the frequency of a local longitudinal mode of the plasma. Any process which interferes with the coherence of this mechanism can substantially alter the behavior of the instability. Of particular interest is the study of laser beam smoothing techniques on parametric instabilities. These techniques are used to improve irradiation uniformity which can suppress hydrodynamic instabilities. Laser beam smoothing techniques have the potential to control the scattering level from parametric instabilities since they provide not only a smoother laser intensity distribution, but also reduced coherence. Beam smoothing techniques that affect the growth of parametric instabilities include spatial smoothing and temporal smoothing by laser bandwidth. Spatial smoothing modifies the phase fronts and temporal distribution of intensities in the focal volume. The transverse intensity spectrum is shifted towards a higher spatial wavenumber and can significantly limit the growth of filamentation. Temporal smoothing reduces the coherence time and consequently limits the growth time. Laser bandwidth is required for most smoothing techniques and can have an independent effect on the instabilities as well. DOE

INSTABILITY HEATING OF THE HDZP
R. H. Lovberg (California Univ., San Diego, La Jolla.), R. A. Riley, and J. S. Shlachter 1993 10 p Presented at the Third International Conference on Dense Z-Pinches, London, England, 19-23 Apr. 1993
(Contract W-7405-eng-36)
(DE93-012641; LA-UR-93-1318; CONF-9304126-5) Avail: CASI HC A02/MF A01

We present a model of dense Z-Pinch heating. For pinches of sufficiently small diameter and high current, direct ion heating by m = 0 instabilities becomes the principal channel for power input. This process is particularly important in the present generation of dense micro-pinches (e.g., HDZP-2) where instability growth times are much smaller than current risetimes, and a typical pinch diameter is several orders smaller than that of the chamber. Under these conditions, m = 0 formation is not disruptive; the large E(sub z) field reconnects the instability cusps externally, after which the ingested magnetic flux decays into turbulent kinetic energy of the plasma. The continuous process is analogous to boiling of a heated fluid. A simple analysis shows that an equivalent resistance R(sub t) = (l/4(the square root of (Nm(sub i))(mu(sub 0)/pi)(exp 3/2)I/r appears in the driving circuit, where I is the pinch current, N is the line density, l is the pinch length, m(sub i) is the ion mass, and r is the pinch radius. A corresponding heating term has been added to the ion energy equation in a 0-D, self-similar simulation, which had been written previously to estimate fusion yields and radial expansion of D(sub 2) fiber pinches. The simulation results agree well with the experimental results from HDZP-2, where the assumption of only joule heating produced gross disagreement. Turbulent ion heating should be the dominant process in any simple pinch carrying meg-ampere current that has a submillimeter radius. DOE

Detailed summaries of research projects conducted at the University of Saskatchewan's Plasma Physics Laboratory during 1991-92 are presented in the fields of tokamak experiments and reactor studies, basic plasma physics, and theories of instabilities and anomalous transport in tokamaks. The tokamak projects include discharge conditions and plasma diagnostics in the STOR-M tokamak, plasma modes and oscillations, edge density and magnetic fluctuations, diamagnetic measurements, and alternating current tokamak operation. Basic plasma physics projects include studies of radio frequency ion heating, parametric excitation of nonlinear asymmetric sheath oscillations, and dispersion function for a half-Maxwellian velocity distribution. Progress is also reported on developing the compact toroid fueller, intended for accelerating a compact toroid plasmoid to a velocity sufficient for central penetration into the Tokamak de Varennes, and on the compact torus injector project. The injector will be installed on the STOR-M tokamak to study compact torus injection into tokamak discharges. Abstracts of publications during 1991/92 are also included. CISTI

THE RESONANCE BROADENING THEORY REVISITED
A. Hirose and O. Ishihara (Texas Technological Univ., Lubbock.) Jan. 1993 12 p Presented at the Interdisciplinary Workshop on Statistical Description of Transport in Plasma, Astro- and Nuclear Physics, Les Houches, France, Feb. 1993
(PPL-134; CTN-93-60788) Avail: CASI HC A03/MF A01

It is shown that the velocity variance in one dimensional electrostatic turbulence is not pure Brownian but subdiffusive and increasing with time, with a corresponding diffusivity decreasing with time. The fractional Brownian motion associated with the diffusion process is attributed to non-Markovian statistics of particle trajectories. The anomalous spatial diffusivity across a sheared magnetic field caused by low frequency electric and/or magnetic fields is analogous to the velocity diffusivity and has the same scaling with the turbulence level and time. The theory has been tested favorably by numerical test particle simulations. Author (CISTI)

NONLINEAR EVOLUTION OF TEARING MODES IN INHOMOGENEOUS PLASMAS
A. I. Smolyakov Oct. 1992 48 p
(PPL-133; CTN-93-60789) Avail: CASI HC A03/MF A01

The effects of plasma gradients on the nonlinear dynamics of magnetic islands are considered. It is shown that the diamagnetic effects can substantially change island dynamics from the standard Rutherford's regime. In particular, the effects of plasma inhomogeneities can lead to the nonlinear excitation of magnetic islands with finite threshold in a situation when the linear drift-tearing modes are stable. Nonlinear differential equations are derived for the time evolution of magnetic island width and rotational frequency. Using these equations, it is found that the magnetic islands are stable in a wide range of plasma parameters. The general Grad-Shafranov type equation is also considered for neighboring equilibrium in a finite pressure plasma. Analysis of pressure effect on the saturation of m = 2 tearing modes in a tokamak gives an unexpected result in the non-monotonic behavior of the magnetic island width with a pressure rise. An equation is also derived for the nonlinear evolution of a m = 1 magnetic island. This saturated state is shown to be stable, and the combining effect of plasma pressure and toroidal magnetic field reduces the width of saturated islands. It is noted that the considered theory of nonlinear evolution of tearing modes could be used to understand the basic phenomena of plasma turbulence and anomalous transport. CISTI

(Contract DE-AC05-84OR-21400)
(DE93-013274; CONF-9304112-13) Avail: CASI HC A01/MF A01

The folded waveguide (FWG) has been tested to the megawatt level in RFTF and shows great promise for tokamak use. It has three primary advantages: low electric field (anywhere) per unit power coupled to the plasma, strong structural capabilities, and better spectral content than loops. A tokamak test is now needed. Potential candidates include C-Mod at 80 MHz and FTU at 433 MHz. The waveguide test on the first machine will be directed at conventional ion cyclotron heating, while the test on the latter will be directed at direct electron heating. In addition, a variation of the folded waveguide is proposed to be tested on Phaedrus-T. In this paper, we discuss the advantages of the waveguide, the design layout, some of the potential physics programs, and how these programs may have an impact on its potential use in ITER. DOE

INVESTIGATION OF AN ALTERNATING CURRENT PLASMA AS AN ELEMENT SELECTIVE ATOMIC EMISSION DETECTOR FOR HIGH-RESOLUTION CAPILLARY GAS CHROMATOGRAPHY AND AS A SOURCE FOR ATOMIC ABSORPTION AND ATOMIC EMISSION SPECTROMETRY Ph.D. Thesis
Jackson M. Ombaba 1992 223 p
Avail: Univ. Microfilms Order No. DA9305335

This thesis deals with the construction and evaluation of an alternating

current plasma (ACP) as an element-selective detector for high resolution capillary gas chromatography (GC) and as an excitation source for atomic absorption spectrometry (AAS) and atomic emission spectrometry (AES). The plasma, constrained in a quartz discharge tube at atmospheric pressure, is generated between two copper electrodes and utilizes helium as the plasma supporting gas. The alternating current plasma power source consists of a step-up transformer with a secondary output voltage of 14,000 V at a current of 23 mA. The device exhibits a stable signal because the plasma is self-seeding and reignites itself every half cycle. A tesla coil is not required to commence generation of the plasma if the ac voltage applied is greater than the breakdown voltage of the plasma-supporting gas. The chromatographic applications studied included the following: (1) the separation and selective detection of the organotin species, tributyltin chloride (TBT) and tetrabutyltin (TEBT), in environmental matrices including mussels (Mvutilus edullus) and sediment from Boston Harbor, industrial waste water and industrial sludge, and (2) the detection of methylcyclopentadienyl manganesetricarbonyl (MMT) and similar compounds used as gasoline additives. An ultrasonic nebulizer (common room humidifier) was utilized as a sample introduction device for aqueous solutions when the ACP was employed as an atomization source for atomic absorption spectrometry and as an excitation source for atomic emission spectrometry. Plasma diagnostic parameters studied include spatial electron number density across the discharge tube, electronic, excitation and ionization temperatures. Interference studies both in absorption and emission modes were also considered. Figures of merits of selected elements both in absorption and emission modes are reported. The evaluation of a computer-aided optimization program, Drylab GC, using spearmint oil and Environmental Protection Agency (EPA) standard mixture as probes is also discussed. The program supplied by LC Resources (Lafayette, CA) is used for separation optimization and prediction of gas chromatographic parameters. Column dead-time and average plate number were used as input data in conjunction with the retention times and peak areas of solutes at two different temperature programming rates. Once input data are entered into an IBM or IBM compatible personal computer, the program produces a 'relative resolution map' (RRM) which guides the analyst in selecting the most favorable temperature programming rate for the separation. Dissert. Abstr.

STUDIES OF NON-INDUCTIVE CURRENT DRIVE IN THE CDX-U TOKAMAK Ph.D. Thesis
Yong-Seok Hwang 1993 127 p
Avail: Univ. Microfilms Order No. DA9311198

Two types of novel, non-inductive current drive concepts for starting-up and maintaining tokamak discharges, dc-helicity injection and internally-generated pressure-driven currents, have been developed on the CDX-U tokamak. To study the equilibrium and transport of these plasmas, a full set of magnetic diagnostics was installed. By applying a finite element method and a least squares error fitting technique, internal plasma current distributions are reconstructed from the measurements. Also, electron density distributions were obtained from 2 mm interferometer measurements by a similar least squares error technique utilizing magnetic flux configurations obtained by the magnetic analysis. Neoclassical pressure-driven currents in ECH plasmas are modeled with the reconstructed magnetic structure, using the electron density distribution and the electron temperature profile measured by a Langmuir probe. In a trapped particle geometry, precessional currents contribute significantly to the net toroidal plasma current. As closed flux surfaces are formed, particle detrapping generates bootstrap current as a major contributor while decreasing the precessional current. These neoclassical currents always predict a hollow profile, while the local and global magnetic measurements indicate a centrally-peaked profile. Indeed, we find that the non-hollow current density profile, with non-classical transport using Boozer's term in Ohm's law, gives better agreement to the internal magnetic structure measured by movable magnetic probes than does the hollow profile. This confirms the existence of a non-classical current transport. This non-classical current transport should be applicable to other forms of non-inductive current drive situations, including the helicity injected case. In the dc-helicity injection scheme, the need to increase injection current and maintain plasma equilibrium restricts possible arrangements. Several injection configurations were investigated, with the best found to be outside injection with a single divert or configuration, where the cathode is placed at the low field side of the x-point. In this geometry, plasma current as high as IO kA and edge safety factor q(sub a) similar to 5-10 were achieved. The formation of closed flux surfaces is shown by a two-dimensional magnetic reconstruction based on measurements. Experimental data and helicity balance show a good power efficiency and current drive efficiency independent of density. Both pressure-driven and dc-helicity injected tokamaks show the importance of plasma equilibrium in obtaining high plasma current. Noting that initial current generation requires smaller vertical fields in both techniques, programmed vertical field operation has proven to be very important in achieving high plasma current. These non-inductive current drive techniques show great potential as efficient current drive methods (due to their relatively density-independent efficiency) for future steady-state and/or long-pulse fusion reactors. Dissert. Abstr.

EXPERIMENTS ON THE CURRENT RAMPDOWN PHASE IN THE STOR-M TOKAMAK FOR AC OPERATION
O. Mitarai, G. Conway, A. Hirose, H. M. Skarsgard, C. Xiao, L. Zhang, and W. Zhang Oct. 1992 22 p
(PPL-132; CTN-93-60790) Avail: CASI HC A03/MF A01

The current rampdown phase followed by nondisruptive current termination is studied for future alternating current (AC) operations in the STOR-M tokamak. The plasma current is smoothly reduced to zero without disruptions with the rampdown rate of around minus 1.5 kA/ms. The plasma density in the current rampdown phase is controlled by gas puffing. The plasma current-density trace in the Hugill diagram follows a straight line, accompanied by slow inward shift in the major radius direction just before the current termination. At the current termination, a residual plasma density of (0.58 to 2.9)times 10 to the eighteenth per cubic meter is observed, with a corresponding Murakami parameter of ((0.41 to 2.1)times 10 to the eighteenth)/m2/T. After the current termination, the low density plasma remains for 5 to 20 ms, which would allow AC operation in the STOR-M tokamak if the radiation barrier does not affect the subsequent current evolution. SMALL SCALE MAGNETIC ISLANDS IN COLLISIONLESS PLASMAS
A. I. Smolyakov and A. Hirose Sep. 1992 9 p
(PPL-131; CTN-93-60791) Avail: CASI HC A02/MF A01

Several investigations have indicated that skin-size electromagnetic turbulence is a plausible candidate responsible for anomalous transport in tokamaks. Results are presented from a study of nonlinearly saturated magnetic islands (spontaneous breaking of magnetic symmetry) having a characteristic dimension in the range of the skin depth, taking into account the longitudinal inertia of electrons. The existence of these islands is discussed in terms of a hydrodynamic nonlinear dispersion relation for a nonuniform plasma in a sheared magnetic field. A nonlinear equation to describe the steady-state magnetic island having a characteristic width of the order of skin depth is derived and solved. The anomalous electron thermal diffusivity based on the skin-size magnetic turbulence contains the electron temperature gradient (eta) in the form of 1/2 + 1/eta.

PLASMA AUTO-BIASING DURING OHMIC H-MODE IN THE STOR-M TOKAMAK
W. Zhang, C. Xiao, and A. Hirose Mar. 1993 29 p Sponsored by Natural Sciences and Engineering Research Council and Atomic Energy of Canada Ltd.
(PPL-136; CTN-93-60786) Avail: CASI HC A03/MF A01

Application of a short current pulse on a nominal Ohmic discharge in the STOR-M tokamak triggers the Ohmic H-mode characterized by reduced H sub alpha radiation, increased electron density, and reduced edge density/magnetic fluctuations. Measurements of plasma floating potential at the plasma edge and in the scrape-off layer indicate that the Ohmic H-mode is accompanied by negative plasma autobiasing which leads to a steeper radial electric field profile at the edge. Since the duration of the current pulse is shorter than the resistive skin time of about 1 ms, preferential edge heating is expected, which is believed to be responsible for changes in the edge discharge condition favorable for inducing the Ohmic H-mode. The electron density profile becomes steeper at the edge during the H-mode, and clear formation of a density pedestal has been seen. The evolution of the density profile suggests the presence of particle pinch. It is found that

the electrostatic modes are dominant in the scrape-off layer while electromagnetic modes dominate in the main plasma. A similar H-mode is induced by external negative electrode biasing. Author (CISTI)

ON ENERGY TRANSPORT EQUATIONS FOR TURBULENT MAGNETIZED PLASMA
A. I. Smolyakov (Wisconsin Univ., Madison.) and A. Hirose Mar. 1993 21 p Sponsored in part by Natural Sciences and Engineering Research Council
(Contract DE-FG02-86ER-53218)
(PPL-135; CTN-93-60787) Avail: CASI HC A03/MF A01

By imposing drift ordering on the standard Braginskii magnetohydrodynamic equations, anomalous transport equations for a plasma in the presence of electromagnetic fluctuations are derived. The structure of convective energy fluxes and source terms in the energy balance equation is investigated in some detail. For low frequency electrostatic turbulence, the energy flux has a unique numerical factor 3/2 in its convective part. However, for magnetic turbulence, the convective energy flux, which is proportional to the particle flux induced by magnetic fluctuations, has a numerical factor 5/2. The physical meaning of the source terms in the energy balance equation is clarified. Author (CISTI)

SEMI-LOCAL KINETIC ANALYSIS OF THE TOROIDAL ION TEMPERATURE GRADIENT MODE
A. Hirose Jul. 1992 10 p
(PPL-130; CTN-93-60792) Avail: CASI HC A02/MF A01

In analyzing linear stability of plasma modes, the local approximation continues to be a useful method for making at least qualitative estimates of growth rates. The accuracy of this approximation improves if the norms of all differential operators are close to the exact values. A semi-local kinetic analysis is presented of the growth rate of the toroidal ion temperature gradient mode in tokamaks, with differential norms based on a simple eigenfunction. The semi-local kinetic dispersion relation is shown to yield growth rates in quantitative as well as qualitative agreement with the rigorous integral equation formulation. CISTI

ANOMALOUS TRANSPORT DUE TO THE ION ACOUSTIC INSTABILITY IN TOKAMAKS
A. Hirose, A. Smolyakov, and O. Ishihara (Texas Technological Univ., Lubbock.) Jul. 1992 16 p
(PPL-129; CTN-93-60793) Avail: CASI HC A03/MF A01

A hydrodynamic ion acoustic instability in isothermal tokamaks is analytically predicted and confirmed by a semi-local kinetic dispersion relation. The ion magnetic drift efficiently mitigates the ion Landau damping, and the marginally stable ion acoustic mode is strongly destabilized by trapped electron magnetic drift resonance. The quasilinear electron thermal diffusivity estimated for the instability is proportional to the 3/2 power of the electron temperature, divided by the product of the poloidal and toroidal magnetic fields. COLLISIONAL EFFECTS OF TRAPPED ELECTRONS ON THE ANOMALOUS PARTICLE AND THERMAL PINCHES
A. Hirose May 1992 12 p
(PPL-128; CTN-93-60794) Avail: CASI HC A03/MF A01

A small collisionality parameter is shown to be sufficient to deactivate the anomalous pinch effects of particles and/or heat caused by drift-type, low frequency electrostatic modes of turbulence in tokamaks. As the parameter is increased from zero, deactivation of anomalous pinches occurs before instabilities are quenched. Therefore, a collisionless assumption remains qualitatively valid for instabilities themselves, although transport coefficients are sensitively dependent on the collisionality parameter. NUMERICAL STUDIES OF COLLISIONLESS CURRENT LAYERS Final Technical Report
Kevin B. Quest 19 Jan. 1993 2 p Submitted for publication
(Grant NAGw-1712)
(NASA-CR-194337; NAS 1.26:194337) Avail: CASI HC A01/MF A01

The purpose of this proposal was to investigate collisionless current layers using a variety of analytic and numerical tools. The first year of the contract was dedicated to analytical studies, to the porting and adaption of codes being used in this study, and to the numerical simulation of collisionless current layers. The second year entailed the development of multi-dimensional hybrid algorithms as well as the re-examination of the problem of integro-differential equations that occur in the linear stage of plasma instabilities. ON MHD MODE EQUATIONS IN TOROIDAL PLASMAS
A. Hirose Jun. 1993 15 p
(PPL-139; CTN-93-60747) Avail: CASI HC A03/MF A01

It is shown that the electron density perturbation proposed by Hirose (1985) maintains the parallel electric field associated with ideal toroidal magnetohydrodynamic modes to order b, the finite ion Larmor radius parameter, while the electron density perturbation conventionally employed makes the parallel electric field much larger, on the order of the square root of b. The magnetohydrodynamic ballooning mode equation is unaffected by the degree of plasma compressibility and is given by the form known in the compressible limit. The stability boundary of the ballooning mode becomes dependent on the inverse aspect ratio, which has a stabilizing influence. Author (CISTI)

In this paper we discuss the observed variation in plasma performance with plasma shape; in particular, we shall compare single and double null diverted plasmas. The product (beta)(center dot)(tau) has been used as a figure-of-merit for comparing different toroidal magnetic configurations. Here we shall use it as the figure-of-merit for comparing differing configurations within the D3-D tokamak. DOE

Results from fundamental investigations of low-temperature plasma systems were used to improve chamber-to-chamber reproducibility and reliability in commercial plasma-etching equipment. The fundamental studies were performed with a GEC RF Reference Cell, a laboratory research system designed to facilitate experimental and theoretical studies of plasma systems. Results and diagnostics from the Reference Cell studies were then applied to analysis and rectification of chamber-to-chamber variability on a commercial, multichamber, plasma reactor. Pertinent results were transferred to industry. DOE

HEAT AND SEED RECOVERY TECHNOLOGY PROJECT
W. M. Swift, M. Petrick, and K. Natesan 1993 14 p Presented at the MHD Contractor's Review Meeting, Pittsburgh, PA, 2-4 Feb. 1993
(Contract W-31-109-eng-38)
(DE93-009203; ANL/CMT/CP-78930; CONF-930270-1) Avail: CASI HC A03/MF A01

The objective of this work is to address technical issues related to both the MHD topping and bottoming cycles and to their integration. Design information will be obtained through modeling and experimentation. This information, together with the insults of long duration testing at DOE's Coal Fired Flow Facility (CFFF) and Component Development and Integration Facility (CDIF), can be used to reliably design the first-generation MHD retrofit plant. Work during the reporting period focused on the following tasks: (1) computer modeling of the integrated topping-cycle power train

(combustor/nozzle/channel/diffuser); (2) evaluation of materials for the bottoming steam cycle; (3) systems analysis of an MHD/CO2 cycle; and (4) the completion of a topical report on the reactivation of the ANL superconducting magnet system. Accomplishments in these areas are described briefly. DOE

STABILITY AND CONFINEMENT PROPERTIES OF SMALL-ASPECT-RATIO TOKAMAK

Ricardo M. O. Galvao and Marisa Roberto (Universidade Estadual de Paulista, Guaratingueta, Brazil.) Nov. 1992 9 p

(INPE-5463-PRE/1771) Avail: CASI HC A02/MF A01

The stability of compact magnetic confinement configurations with axial symmetry is investigated with respect to ballooning modes using equilibrium profiles characteristic of high-beta discharges produced in large tokamaks. It is shown that average beta values (Beta factor is approximately 0.l0) are readily obtained for configurations with a substantial paramagnetic effect. The stability to trapped particle modes in the collisionless regime can also be achieved by reversal of single particle drifts caused by toroidal effects. Author (revised)

ANOMALOUS TRANSPORT DUE TO SMALL SCALE ELECTROMAGNETIC AND LARGE SCALE ELECTROSTATIC MODES IN TOKAMAKS

A. Hirose and A. I. Smolyakov (Wisconsin Univ., Madison.) Jul. 1993 16 p Presented at the Transport, Chaos, and Plasma Physics Workshop, Marseille, France, 5-9 Jul. 1993 Sponsored in part by Natural Sciences and Engineering Research Council

(Contract DE-FG02-86ER-53218)

(PPL-140; CTN-93-60858) Avail: CASI HC A03/MF A01

Stability of skin-size electromagnetic drift mode and long wavelength electrostatic ion acoustic transit mode in a low beta collisionless tokamak discharge was investigated in terms of a semi-local kinetic formulation in which kinetic resonances and nonlocal ballooning nature are implemented. Both modes are driven unstable through electron kinetic resonances under realistic discharge conditions. The ion acoustic mode persists even when ion temperature approximates electron temperature, as ion Landau damping is effectively suppressed by the ion magnetic drift provided the mode propagates in the electron diamagnetic drift. The anomalous electron thermal diffusivities estimated from the instabilities appear to explain some features of transport anomalies, including the radial profile of electron thermal diffusivity, particle pinch, isotope effect, and Bohm (rather than gyro-Bohm) scaling of the diffusivities. DIRECT ELECTRON HEATING AND CURRENT DRIVE WITH FAST WAVES IN D3-D

R. I. Pinsker, C. C. Petty, R. W. Callis, W. P. Cary, S. C. Chiu, R. L. Freeman, J. S. deGrassie, R. W. Harvey, T. C. Luce, and M. J. Mayberry et al Sep. 1992 9 p Presented at the 14th International Conference on Plasma Physics and Controlled Nuclear Fusion Research, Wurzburg, Germany, 30 Sep. - 7 Oct. 1992

(Contracts DE-AC03-89ER-51114; DE-AC05-84OR-21400; W-7405-eng-48)

(DE93-013028; GA-A-21046; CONF-9209290-9; IAEA-CN-56/E-2-4) Avail: CASI HC A02/MF A01

Experiments on the D3-D tokamak have been performed to evaluate noninductive current drive with direct electron absorption of the fast Alfven wave (FW) in the ion cyclotron range of frequencies. These experiments have employed a 2 MW 60 NM transmitter connected to a four-element toroidally phased array of loop antennas located at the outside midplane of the D3-D vacuum vessel. Efficient direct electron heating was obtained with (0, (pi), 0, (pi)) antenna phasing; H-mode confinement was obtained with direct electron absorption of the fast wave as the sole source of auxiliary heating. Current drive experiments were performed with (0, (pi)/2, (pi), 3(pi)/2) antenna phasing at fast wave power levels up to 1.2 MW. Preheating with 60 GHz ECH was used to increase the single-pass absorption of the fast wave with a directive spectrum. When the fast wave is launched in the direction that aids the inductively driven current (co-current drive), up to 40% of the 0.4 MA plasma current is sustained noninductively. Counter-current drive strongly affects the sawtoothing behavior and results in highly peaked electron temperature profiles (T(sub e)(0) approximately less than 6 keV) but much smaller driven currents. MEASURING OPACITY OF SHOCK GENERATED ARGON PLASMAS

D. Erskine, B. Rozsnyai, and M. Ross Sep. 1992 6 p Presented at the International Conference on the Physics of Strongly Coupled Plasmas, Rochester, NY, 17-21 Aug. 1992

(Contract W-7405-eng-48)

(DE93-013038; UCRL-JC-111903; CONF-9208135-5) Avail: CASI HC A02/MF A01

Plasmas are generated by passage of a strong planar shock wave through gas. Initial experiments in argon have produced plasmas with 2 eV temperature, 0.004 gm/cu cm density, and coupling parameter Gamma approximately 0.3 - 0.7. Plasmas having Gamma greater than 1 are attainable with greater initial gas pressure. The opacity of the plasma is measured versus wavelength by recording the risetime of emitted light. Initial measurements are in visible light. Preliminary results are compared with calculations using the HOPE code. DOE

IMPLICIT MULTI-FLUID SIMULATION OF INTERPENETRATING PLASMAS

P. W. Rambo and J. Denavit 3 Nov. 1992 13 p Presented at the 1992 Nuclear Explosives Code Developers Conference, Sunnyvale, CA, 2-6 Nov. 1992

(Contract W-7405-eng-48)

(DE93-013351; UCRL-JC-112302; CONF-9211128-8) Avail: CASI HC A03/MF A01

A one dimensional simulation code for interpenetrating multi-component plasmas is presented. Separate fluid equations for multiple species and the Poisson equation for the electric field are solved implicitly to allow stable accurate solutions over a wide range of the time scale parameters omega(sub p)(Delta)t and nu(sub c)(Delta)t (omega(sup p) is the plasma frequency, nu(sub c) a typical collision frequency, and (Delta)t the time step). In regions where omega(sub p)(Delta)t much less than 1 and nu(sub c)(Delta)t much less than 1, electron dynamics and space-charge effects are resolved, while in regions where omega(sub p)(Delta)t much greater than 1 and/or nu(sub c)(Delta)t much greater than 1, the ambipolar and/or diffusion models are recovered. In regions of low collisionality, particles may be created and deleted which are followed using particle and cell techniques combined with scatter and drag due to collisions with the fluids. Applications of this code to interpenetrating laser generated plasmas are presented. DOE

Lasnier (Lawrence Livermore National Lab., CA.), G. D. Porter (Lawrence Livermore National Lab., CA.), R. Wood (Lawrence Livermore National Lab., CA.), T. W. Petrie, N. H. Brooks, T. E. Evans, and A. W. Leonard et al May 1993 4 p Presented at the 20th European Conference on Controlled Fusion and Plasma Physics, Lisbon, Portugal, 26-30 Jul. 1993

(Contracts DE-AC03-89ER-51114; W-7405-eng-48; DE-AC04-76DP-00789; DE-FG03-89ER-51121)

(DE93-015475; GA-A-21311; CONF-930720-8) Avail: CASI HC A01/MF A01

We report here the results of experiments aimed at quantifying the advantages of increasing the X-point to target-plate distance in a diverter tokamak operating with H-mode confinement. Larger distances should lower the peak electron temperature at the target plates, thereby reducing sputtering and lowering the impurity concentration in the core plasma. When gas puffing is used to reduce the diverter heat flux, extra field-line length may increase the volume available for radiation and increase gas isolation between the core and diverter regions. DOE

PHYSICS OF GAS BREAKDOWN FOR ION BEAM TRANSPORT IN GAS

C. L. Olson, J. W. Poukey, D. D. Hinshelwood, D. V. Rose (JAYCOR, Vienna, VA.), R. F. Hubbard, M. Lampe, J. M. Neri, P. F. Ottinger, S. P. Slinker, and S. J. Stephanakis 1993 10 p Presented at the International Symposium on Heavy Ion Fusion, Frascati, Italy, 25-28 May 1993
(Contract DE-AC04-76DP-00789)
(DE93-015646; SAND-93-1289C; CONF-9305136-2) Avail: CASI HC A02/MF A01

Detailed analysis, experiments, and computer simulations are producing a new understanding of gas breakdown during intense ion beam transport in neutral gas. Charge neutralization of beam micro-clumps is shown to limit the net clump potentials to a non-zero value (pi)(sub min), which can lead to divergence growth and axial energy spreading. At pressures approximately greater than 1 Torr, plasma shielding should substantially reduce this effect. Current neutralization has been studied in experiments on the GAMBLE 2 accelerator. The importance of fast electrons (knockons and runaways) has been established in IPROP simulations, which are in agreement with the experiments. For light ion fusion parameters with pressures approximately greater than 1 Torr, very small net current fractions (much less than 1%) appear feasible, permitting ballistic transport in gas. Self-pinched requires higher net current fractions (greater than or equal to 2%) and preliminary IPROP code results indicate that this appears achievable for small-radius intense beams in lower pressure gases (approximately less than 1 Torr). Several self-pinched transport concepts look promising. The importance of these results for both light ion fusion and heavy ion fusion is discussed. DOE

REVIEW OF THE PROCYON EXPLOSIVE PULSED POWER SYSTEM
J. H. Goforth, H. Oona, and A. E. Greene et al 1993 39 p Presented at the 9th IEEE Pulsed Power Conference, Albuquerque, NM, 21-23 Jun. 1993
(Contract W-7405-eng-36)
(DE93-016562; LA-UR-93-2255; CONF-930616-10) Avail: CASI HC A03/MF A01

#he Procyon explosive pulsed power system is designed for powering plasma z-pinch experiments. It begins with a helical explosive-driven magnetic flux compression generator (MCG) for amplifying seed current from a capacitor bank into a storage inductor. One conductor element of the storage inductor is an explosively formed fuse (EFF) opening switch tailored to divert current to a plasma flow switch (PFS) in less than 3 microseconds. The PFS, in turn, delivers current to a z-pinch load. Experiments to date have concentrated on the explosive pulsed power components and PFS. This paper focuses on the results of a recent full energy MCG/EFF/PFS test. DOE

KINETIC SIMULATIONS OF ULTRA-INTENSE LASER PLASMA INTERACTIONS
W. L. Kruer and S. C. Wilks Jun. 1992 5 p Presented at the International Conference on Plasma Physics (ICPP) - Joint Conference of the 9th Kiev International Conference on Plasma Theory and the 9th International Congress on Waves and Stabilities in Plasma (ICWI), Innsbruck, Austria, 29 Jun.
(Contract W-7405-eng-48)
(DE93-014419; UCRL-JC-110953; CONF-9206359-1) Avail: CASI HC A01/MF A01

Kinetic simulations are used to investigate the interaction of an ultra-intense, small spot-size laser beam with a preformed plasma. The beam is sufficiently intense to drive the electrons relativistically and to impart a pressure in excess of hundreds of Mbars to the plasma. Key features of the interaction include generation of electrons and inward-directed ions with energies in the Mev range and strong hole boring which enhances the absorption. The simulations also show self-generated magnetic fields of order 10(exp 8) Gauss, a Rayleigh-Taylor like instability of the light-plasma interface, as well as self-focusing of the laser beam and strong Raman backscatter. A novel imaging diagnostic for the investigation of edge plasma density fluctuations was recently installed on the D3-D tokamak. The diagnostic, which is based on the Zernike phase contrast method, was developed in response to the need for spatially resolved, long wavelength fluctuation measurements. Unique features of this system include: Large bandwidth (100 MHz), high sensitivity ((tilde n)(sub e) is approximately equal to 10(exp 9) cm(exp -3)), and absolute calibration capability. Initial results are presented on the fluctuation suppression at the L- to H-mode transition and on the bursts of turbulent activity which occur during ELM's. DOE

THE ROLE OF ELECTRIC FIELD SHEAR STABILIZATION OF TURBULENCE IN THE H-MODE TO VH-MODE TRANSITION IN D3-D
K. H. Burrell, T. H. Osborne, R. J. Groebner, and C. L. Rettig (California Univ., Los Angeles.) May 1993 4 p Presented at the 20th European Conference on Controlled Fusion and Plasma Physics, Lisbon, Portugal, 26-30 Jul. 1993
(Contract DE-AC03-89ER-51114)
(DE93-015474; GA-A-21308; CONF-930720-7) Avail: CASI HC A01/MF A01

VH-mode plasmas exhibit energy confinement times up to 2.4 times the DIII-D/JET H-mode scaling relation and up to 3.9 times the value given by ITER89-P L-mode scaling. If this confinement improvement can be exploited in reactor plasmas, smaller prototype reactors with significantly lower unit cost can be produced. Accordingly, understanding and optimizing the confinement improvement is of significant interest. One of the possible explanations for this bulk confinement improvement is stabilization of turbulence by shear in the radial electric field, similar to the present

explanation for the confinement improvement at the extreme plasma edge at the L to H transition. Preliminary measurements have shown that the region of the plasma where the electric field gradient is steepest broadens when the plasma goes from H-mode to V-mode. More recent measurements have confirmed this broadening and have shown that the change in the electric field gradient occurs prior to the change in the thermal transport. In addition, transport analysis shows that the electric field shear increases in the same region between magnetic flux coordinate rho = 0.6 and 0.9 where the local thermal transport decreases. Furthermore, far infrared (FIR) scattering measurements have detected density fluctuations in the region around rho = 0.8 which could be responsible for enhanced transport and which disappear at the time that the electric field shear increases. These fluctuations appear as bursts of density fluctuations in the 0.5 to 1.5 MHz range. The time between bursts increases as the electric field shear increases. Once these bursts disappear, the major change in confinement takes place in most discharges. When isolated bursts occur, the heat and angular momentum pulse connected with the burst are detectable on the plasma profile diagnostics. Derived from text

IMPEDANCE-POWER EFFECTS ON PLASMA POLYMER SURFACE FINISH USING A HELICAL RESONATOR DISCHARGE
R. Brusasco, S. W. Ferguson, and R. Stever Dec. 1992 8 p Presented at the 205th American Chemical Society National Meeting, Denver, CO, 28 Mar. - 2 Apr. 1993
(Contract W-7405-eng-48)
(DE93-016454; UCRL-JC-112361; CONF-930304-30) Avail: CASI HC A02/MF A01

Plasma polymerized organic coatings are used in the fabrication of targets for experiments in the Inertial Confinement Fusion (ICF) program at Lawrence Livermore National Laboratory. The authors are performing experiments to understand the process conditions leading to the preparation of smooth (approx. 100 Angstroms) plasma polymer surfaces while maintaining the highest deposition rate possible. It had been reported by Howling et al., that the formation of particulate matter in the deposition of silicon by the plasma reaction of silane affected the plasma impedance. This suggested that experiments designed to examine the correlation of surface texture with plasma impedance would be of interest. Furthermore, it is possible that an impedance change may cause a change in the power coupling efficiency from the transmitter to the plasma. Preliminary work in the authors laboratory indicated that the reactor temperature influenced the surface texture. The focus of this paper is to carefully examine the effects of reactor temperature on the surface texture of the plasma polymer, ensuring constant reactor conditions especially with respect to RF power. DESIGN OF THE ION CYCLOTRON SYSTEM FOR TPX
D. Swain, S. Shipley, J. Yugo, R. Goulding, D. Batchelor, D. Stallings, and E. Fredd (Princeton Univ., NJ.) 1993 4 p Presented at the 10th Topical Conference on Radio Frequency Power in Plasmas, Boston, MA, 1-3 Apr. 1993 Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-AC05-84OR-21400)
(DE93-012961; CONF-9304112-9) Avail: CASI HC A01

The TPX experiment will operate for very long pulse times (greater than or equal to 1000 s) and will require current drive of several different types to explore the advanced physics operating modes as one of its main missions. Fast wave current drive (FWCD) using ion cyclotron waves in the 40-80 MHz range will be used as one of the main current-drive mechanisms. For initial operation, 8 MW of RF will be supplied, along with 8 MW of neutral beams and 1.5 MW of lower hybrid power. The ion cyclotron (IC) system is a major part of the TPX heating and current drive system. The IC system must: supply 8 MW of power through two main horizontal ports; be upgradable to provide up to 12 MW of RF power through two ports; operate, for 1000-s pulses every 75 min; drive current using FWCD with high reliability; be bakeable to 350(degree)C for cleaning; and incorporate shielding to attenuate the neutron and gamma flux from DD operation so that hands-on maintenance can be performed exterior to the vacuum vessel. The system will consist of four modified FMIT power units that will be upgraded to deliver 2 MW each to the plasma. Two antennas, each with six current straps, will be located in adjacent ports. A sophisticated matching system is needed to provide experimental flexibility and reliability. DOE

ANOMALOUS ION TRANSPORT AND FEEDBACK CONTROL
1993 25 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contract DE-FG02-87ER-53257)
(DE93-018324; DOE/ER-53257/6) Avail: CASI HC A03

The slab branch of the ITG mode was produced by a DC ion acceleration heating scheme and definitively identified in CLM under the previous DOE grant. A transit-time RF heating scheme was used to produce a more Maxwellian ion population to produce and identify a more predictable slab ITG mode. These experiments are partly based on some theoretical work on the substantial effects of anisotropy in eta(sub i) on the slab mode. The progress under the present DOE grant is described. DOE

TIME RESOLVED MEASUREMENT OF ELECTRON TEMPERATURES OF EXPLODING FOIL X RAY LASER PLASMAS
B. K. F. Young, A. L. Osterheld, G. M. Shimkaveg, R. L. Shepherd, R. S. Walling, W. H. Goldstein, and R. E. Stewart 14 Apr. 1993 15 p Presented at the Radiative Properties of Hot Dense Matter Conference, Santa Barbara, CA, 2-6 Nov. 1992
(Contract W-7405-eng-48)
(DE93-017161; UCRL-JC-111844; CONF-9211211-2) Avail: CASI HC A03/MF A01

The authors present results of recent experiments to measure the plasma conditions present in a neon-like x-ray laser plasma. They measure the time-resolved K-shell emission spectra of low Z tracer material doped into a yttrium exploding foil target. They determine the plasma conditions by analyzing the K-shell emission spectra assuming a quasi-steady state approximation. Two-dimensional LASNEX hydrodynamics simulations are in reasonable agreement with these time-resolved electron temperatures. DOE

BREADBOARD ACTIVITIES FOR ADVANCED PROTEIN CRYSTAL GROWTH Semiannual Report No. 2, 3 Feb. - 3 Aug. 1993
Franz Rosenberger and Michael Banish 1993 2 p
(Grant NAG8-931)
(NASA-CR-193559; NAS 1.26:193559) Avail: CASI HC A01/MF A01

The proposed work entails the design, assembly, testing, and delivery of a turn-key system for the semi-automated determination of protein solubilities as a function of temperature. The system will utilize optical scintillation as a means of detecting and monitoring nucleation and crystallite growth during temperature lowering (or raising, with retrograde solubility

systems). The deliverables of this contract are: (1) turn-key scintillation system for the semi-automatic determination of protein solubilities as a function of temperature, (2) instructions and software package for the operation of the scintillation system, and (3) one semi-annual and one final report including the test results obtained for ovostatin with the above scintillation system. FLUX-PINNING RELATED DEFECT STRUCTURES IN MELT-PROCESSED YBa2Cu3O(7-x)
Z. L. Wang, R. Kontra, A. Goyal, D. M. Kroeger, and L. F. Allard 1993 3 p Presented at the Annual Meeting of the Electron Microscopy Society of America, Cincinnati, OH, 1-6 Aug. 1993
(Contract DE-AC05-84OR-21400)
(DE93-012759; CONF-930822-5) Avail: CASI HC A01/MF A01

High resolution transmission electron microscopy (HRTEM) was used to observe defects in Y123. Stacking faults lying parallel to the (001) basal plane are observed near the Y211/Y123 (Y2BaCu5O/YBa2Cu3O(7-delta)) interfaces in Y123. These stacking faults are produced by either excess single Cu-O layers or double Cu-O and Y-O layers. Y enrichment and Ba depletion were observed near the Y211/Y123 interface; this is consistent with dissolution of trapped Y211. Such diffusion effects and stress due to lattice mismatch at Y211/Y123 interfaces may be the mechanisms for generating stacking faults around the Y211 particles in the Y123 matrix. A new type of defect with displacement vector 1/6(032) or 1/6(302) was also observed. DOE

ON THE NEUTRON EDM SEARCH IN THE LAUE DIFFRACTION BY THE CRYSTAL WITHOUT A CENTRE OF SYMMETRY
V. V. Fedorov, V. V. Voronin, and E. G. Lapin 1991 30 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-622971; LIYaF-1644) Avail: CASI HC A03 (US Sales Only)

A new method of neutron electric dipole moment (EDM) searching is proposed. It is based on the spin dependence of the pendelous phase of a neutron diffracted by the noncentrosymmetric crystal. A two-crystal set up is proposed and analyzed to get the big enough luminosity. With the strong interplanar electric field of the crystal and the sufficiently long time of the neutron passage through the crystals for the Bragg angles close to (pi)/2 it makes possible to exceed the sensitivity achieved with the ultra cold neutron method. LIQUID PHASE EPITAXY OF GALLIUM ARSENIDE: A REVIEW
D. Alexiev, M. Edmondson, K. S. A. Butcher (MacQuarie Univ., North Ryde, Australia.), and T. Tansley (MacQuarie Univ., North Ryde, Australia.) Jul. 1992 20 p
(DE93-622212; ANSTO-E-702) Avail: CASI HC A03/MF A01 (US Sales Only)

Liquid phase epitaxy of gallium arsenide has been investigated intensively from the late 1960's to the present and has now a special place in the manufacture of wide band, compound semiconductor radiation detectors. Although this particular process appears to have gained prominence in the last three decades, the authors point out that its origins reach back to 1836 when Frankenheim made his first observations. A brief review is presented from a semiconductor applications point of view on how this subject developed. DOE

ADVANCED PROTEIN CRYSTAL GROWTH PROGRAMMATIC SENSITIVITY STUDY Final Report
Jul. 1992 130 p
(Contract NAS8-39352)
(NASA-CR-193827; NAS 1.26:193827) Avail: CASI HC A07/MF A02

The purpose of this study is to define the costs of various APCG (Advanced Protein Crystal Growth) program options and to determine the parameters which, if changed, impact the costs and goals of the programs and to what extent. This was accomplished by developing and evaluating several alternate programmatic scenarios for the microgravity Advanced Protein Crystal Growth program transitioning from the present shuttle activity to the man tended Space Station to the permanently manned Space Station. These scenarios include selected variations in such sensitivity parameters as development and operational costs, schedules, technology issues, and crystal growth methods. This final report provides information that will aid in planning the Advanced Protein Crystal Growth Program. Author (revised)

THE STUDY OF STRUCTURE-PROCESSING-PROPERTY RELATIONS IN COPPER OXIDE BASED HIGH (Tc) SUPERCONDUCTORS
A. I. Kingon Jun. 1993 6 p
(Contract DE-FG05-88ER-45359)
(DE93-015066; DOE/ER-45359/2) Avail: CASI HC A02/MF A01

The objective of this project is the investigation of critical current limiting processes in bulk superconductors. Since the grain boundaries play a key role here, we focus on the electrical characterization of single grain boundaries. Electrical contact to thin polished sections is established with thermosonic wire bonding. Laser cutting is used to isolate a single grain boundary. Results on YBa2Cu3O(x) showed that two different types of grain boundaries are present. Most grain boundaries showed current voltage characteristics typical for flux pinning effect and little or no change in low magnetic fields. However, the Josephson effect could also be found in some grain boundaries exhibiting a remarkable decrease of I(sub c) in low magnetic fields. Both types could be found in the same sample. Additionally we are working on Bi2Sr2CaCu2O(x) thick films grown on silver foil or MgO substrates. The films showed metallic behavior and T(sub c) = 80K. Preliminary results showed that the grain boundaries are of the flux pinning type. DOE

DETERMINATION OF CHANNELING PERSPECTIVES FOR COMPLEX CRYSTAL STRUCTURES
W. R. Allen Mar. 1993 27 p
(Contract DE-AC05-84OR-21400)
(DE93-012872; ORNL/TM-12170) Avail: CASI HC A03/MF A01

Specification of the atomic arrangement for axes and planes of high symmetry is essential for crystal alignment using Rutherford backscattering and for studies of the lattice location of impurities in single crystals. By rotation of an inscribed orthogonal coordinate system, a visual image for a given perspective of a crystal structure can be specified. Knowledge of the atomic arrangement permits qualitative channeling perspectives to be visualized and calculation of continuum potentials for channeling. Channeling angular-yield profiles can then be analytically modeled and, subsequently, shadowing by host atoms of positions within the unit cell predicted. Software to calculate transformed atom positions for a channeling perspective in a single crystal are described and illustrated for the spinel crystal structure. DOE

GRAIN-BOUNDARY ELECTRONIC STATES BY MULTIPLE-SCATTERING THEORY
E. C. Sowa and A. Gonis Aug. 1992 6 p Presented at the 2nd International Conference and Exhibition on Computer Applications to Materials and Molecular Science and Engineering, Yokohama, Japan, 22-25 Sep. 1992
(Contract W-7405-eng-48)
(DE93-013198; UCRL-JC-109651; CONF-920927-4) Avail: CASI HC A02/MF A01

In order to calculate the electronic structure of grain boundaries, it is necessary to treat properly the lack of translational symmetry in directions perpendicular to the interface between two half solids. This treatment can be provided on the basis of multiple-scattering theory. We have developed a formalism which allows the exact treatment of the Schroedinger equation for systems with reduced translational symmetry, yielding solutions which in the converged limit satisfy the proper boundary conditions imposed by the geometry of the system. We report the first application of this real-space multiple-scattering theory to the calculation of the local density of states (DOS) at metallic grain boundaries. We exhibit and compare local DOS's at selected sites for both unrelaxed and relaxed (Sigma)5 (100) 36.9 degrees twist and (Sigma)5 (310) tilt grain boundaries in Cu, where the atomic coordinates of the relaxed configurations were obtained with the Embedded Atom Method. We discuss briefly the mainfeatures of our method, and give our plans for future work. DOE

LATTICE SITE OF HELIUM IMPLANTED IN Si AND DIAMOND
W. R. Allen 1992 10 p Presented at the 16th Material Research Society International Symposium on the Scientific Basis for Nuclear Waste Management Fall Meeting, Boston, MA, 30 Nov. - 5 Dec. 1992
(Contract DE-AC05-84OR-21400)
(DE93-015365; CONF-921101-130) Avail: CASI HC A02/MF A01

Single crystals of silicon and diamond were implanted at 300K with 70 keV He-3. Ion channeling analyses were executed by application of Rutherford backscattering spectrometry and nuclear reaction analysis. Helium exhibits a non-random lattice site in the channeling angular distributions for silicon and diamond. A major fraction of the implanted He-3 was qualitatively identified to be near to the tetrahedral interstice in both materials. However, greater occupation of tetrahedral interstices was noted in Si. PROCEEDINGS OF THE WORKSHOP ON APPLICATIONS OF SYNCHROTRON RADIATION TO TRACE IMPURITY ANALYSIS FOR ADVANCED SILICON PROCESSING
S. Laderman (Hewlett-Packard Co., Palo Alto, CA.) and P. Pianetta Mar. 1993 159 p Workshop held in Stanford, CA, 21 Oct. 1992
(Contract DE-AC03-76SF-00515)
(DE93-013389; SLAC-415; SLAC/SSRL-0009; CONF-9210277) Avail: CASI HC A08/MF A02

Wafer surface trace impurity analysis is essential for development of competitive Si circuit technologies. Today's grazing incidence x-ray fluorescence techniques with rotating anodes fall short of requirements for the future. Hewlett Packard/Toshiba experiments indicate that with second generation synchrotron sources such as SSRL, the techniques can be extended sufficiently to meet important needs of the leading edge Si circuit industry through nearly all of the 1990's. This workshop was held to identify people interested in use of synchrotron radiation-based methods and to document needs and concerns for further development. Viewgraphs are included for the following presentations: microcontamination needs in silicon technology, analytical methods for wafer surface contamination, trace impurity analysis of liquid drops using synchrotron radiation, TRXRF using synchrotron sources, potential role of synchrotron radiation TRXRF in Si process R&D, potential development of synchrotron radiation facilities, and identification of goals, needs, and concerns. NONLINEAR LASER SPECTROSCOPY STUDIES OF SEMICONDUCTOR HETEROSTRUCTURES Final Report, 15 Dec. 1989 - 14 Jan. 1993
Duncan Steel 14 Jan. 1993 81 p
(Grant AF-AFOSR-0100-90)
(AD-A265728; AFOSR-93-0397TR) Avail: CASI HC A05/MF A01

Research progress in quantum optoelectronics has dominated much of the recent literature in semiconductors because of the new physical phenomena which can be observed and because of the potential for new smaller and higher speed devices of importance to communications, computing, and other high information density applications. Much of the work has focused on 3-5 compounds because it is believed these materials may provide improved performance over silicon. In addition since they are a direct band gap semiconductor, there are also potential optical applications. Under this AFOSR grant, our laboratory has been involved in the general area of the study of the optical physics of semiconductors. These studies have provided new insight into the nature of optical properties as well as material properties. The work has emphasized the application of coherent nonlinear laser spectroscopy methods in the study of bulk GaAs and GaAs/AlGaAs quantum wells. This work is based on frequency and time domain four-wave mixing techniques, many of which were developed by our group under earlier AFOSR support. These experiments are enabling us to measure many properties of these systems, as well as showing that in heterostructures, the effects of disorder must be included in order to provide a complete understanding. Walker (California Univ., Irvine.), and H. Hopster (California Univ., Irvine.) 1993 6 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contract DE-AC02-76CH-00016)
(DE93-014327; BNL-48954; CONF-930405-14) Avail: CASI HC A02/MF A01

With spin polarized electron spectroscopies, the authors have investigated ordered Gd(0001) films deposited on W(110). The photoemission features of the gadolinium 5d surface state, the 4f levels, and the background exhibit considerable spin polarization along the same direction in the plane of the film, indicative of ferromagnetic coupling between the surface and the bulk. The 4f spin polarized photoemission data provides strong evidence that the surface 4f polarization differs from the bulk 4f polarization for Gd(0001). The temperature dependent measurements with spin polarized secondary electron spectroscopy conclusively establishes that the surface of clean Gd(0001) possesses a perpendicular polarization component which persists to an enhanced surface Curie temperature. Small amounts of contamination at the surface result in the disappearance of the perpendicular component and, therefore, a more perfect ferromagnetic coupling between the surface and the bulk. DOE

ATOMIC STRUCTURE OF THE 310 TWIN IN NIOBIUM: THEORETICAL PREDICTIONS AND COMPARISON WITH EXPERIMENTAL OBSERVATION
G. H. Campbell, W. E. King, S. M. Foiles, and M. Ruehle Nov. 1992 8 p Presented at the 16th Material Research Society International Symposium on the Scientific Basis for Nuclear Waste Management Fall Meeting, Boston, MA, 30 Nov. - 5 Dec. 1992
(Contract W-7405-eng-48)
(DE93-013421; UCRL-JC-112067; CONF-921101-120) Avail: CASI HC A02/MF A01

High-resolution transmission electron microscopy (HREM) has been used to characterize the atomic structure of the symmetric 36.9(degrees) tilt grain boundary with zone (001) tilt axes forming a twin about (310) in Nb. The projected structure was imaged along two different directions in the plane of the boundary and was compared to model structures through high-resolution image simulation. The atomic structure of this (Sigma)-5 boundary was predicted with atomistic simulations using interatomic potentials derived from the Embedded Atom Method (EAM), Finnis-Sinclair (FS), and the Model Generalized Pseudopotential Theory (MGPT). The EAM and FS predicted structures with translations of the adjacent crystals which break mirror symmetry. The MGPT predicted one stable structure with mirror symmetry. The atomic structure of the (310) twin in Nb was found by HREM to be mirror symmetric. These findings indicate that the angular dependent interactions modeled in the MGPT are important for determining the grain boundary structures of bcc transition metals. DOE

(DE93-623204; AECS-PH/FRSR-62) Avail: CASI HC A03/MF A01 (US Sales Only)

Thermal annealing of the two hole traps H(sub 4) and H(sub 5) in room-temperature electron-irradiated In P Schottky diodes was investigated. Electron-irradiation energy ranging between 0.15 and 1.5 MeV with doses ranging between 5 x 10(sup 14) and 10(sup 16) e/cm(sup 2). DLTS technique with double-phase detector was used in this study. Contrary to what is generally admitted, we found that H(sub 5) anneals out at about 150 C(sup o) with an activation energy of 1 eV. We have shown that H(sub 4) is a complex defect having two components that we could resolve. While the first one, having lower emission cross section and higher capture cross section with (Delta)E = 0.37 eV anneals out at about 110 C(sup o). The other component, with (Delta)E = 0.50 eV is thermally stable even above 170 C(sup o). DOE

The solution of the linearized kinetic equation used by Mamun et al (Phys. Rev. B, 1991, 44, 8685) is incorrect since it is derived using an unjustified approximation which conflicts with the ordering given in the paper itself. This solution, in contrast with the standard gyrokinetic one, exhibits no features essential for a magnetized plasma. Therefore, it cannot be employed as a basis for the construction of the nonlinear response as well as for obtaining the linear dispersion relation. DOE

COLORIMETRIC QUALIFICATION OF SHEAR SENSITIVE LIQUID CRYSTAL COATINGS
Joseph J. Muratore, Jr. Aug. 1993 26 p Original contains color illustrations
(Contract NCC2-704)
(NASA-CR-194126; NAS 1.26:194126; MCAT-93-17) Avail: CASI HC A03/MF A01; 6 functional color pages

The work that has been done to date on the Shear Sensitive Liquid Crystal Project demonstrated that cholesteric liquid crystal coatings respond to both the direction and magnitude of a shearing force. The response of the coating is to selectively scatter incident white light into a spectrum of colors. Discernible color changes at a fixed angle of observation and illumination are the result of an applied shear stress. The intention was to be able to convert these observable color patterns from a flow visualization technique into a quantitative tool. One of the earlier intentions was to be able to use liquid crystals in dynamic flow fields. This was assumed possible because liquid crystals had made it possible to visualize transients in surface shear forces. Although the transients were visualized by color changes to an order one micro second, the time response of a coating to align to a shearing force is dependent on the magnitude of the change between its initial and final states. Unfortunately, the response is not instantaneous. It is for this reason any future attempt at quantifying the magnitude and directions of a shearing force are limited to surface shear stress vector fields in three dimensional steady state flows. This limitation does not significantly detract from the utility of liquid crystal coatings. The measurement of skin friction in the study of transition on wings, prediction of drag forces, performance assessment, and the investigation of boundary layer behavior is of great importance in aerodynamics. There exist numerous examples of techniques for the measurement of surface shear stress. Most techniques require arduous calibrations and necessitate extensive preparation of the receiving surfaces. However, the main draw back of instruments such as Preston tubes, hot films, buried wire gages, and floating element balances is that they only provide a point measurement. The advantages of capturing global shear data would be appreciable when compared with conventional point measurement sensors. It has yet to be

determined if a repeatable correlation exists between the measured color of a liquid crystal coating and the magnitude/directional components of a shear vector imposed onto it. Author (revised)

MEASUREMENTS ON TWO-DIMENSIONAL ARRAYS OF MESOSCOPIC JOSEPHSON JUNCTIONS Technical Report
Thomas S. Tighe Feb. 1993 190 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(Contracts N00014-89-J-1023; N00014-89-J-1565)
(AD-A265129; TR-35) Avail: CASI HC A09

Measurements on two-dimensional arrays of Josephson junctions with junction sizes down to 60 nm by 60 nm are reported. Due to their small size, these junctions belong to the class of mesoscopic systems: they show behavior which reveals the underlying quantum mechanical properties. Two energies characterize the junctions, the Josephson energy E(sub j) and the charging energy E(sub c). Arrays in which E(sub j) much greater than E(sub c) are superconducting around zero bias and at zero temperature, while arrays in which E(sub c) much greater than E(sub j), called charging arrays, are instead insulating. This is the basis of the superconductor-to-insulator (S-I) transition. Author (DTIC)

METASTABLE ENHANCEMENT OF C(+) AND O(+) CAPTURE REACTIONS
E. W. Thomas 31 Jul. 1992 7 p
(Contract DE-FG05-87ER-13745)
(DE93-015075; DOE/ER-13745/3) Avail: CASI HC A02/MF A01

The project is devoted to the study of charge transfer neutralization of carbon and oxygen ions in H and H2 gases at energies from 10 to 500 eV. A major motivation was to provide cross section data to support analysis of edge plasmas in Tokamak Fusion devices. The first objective was to measure cross sections for metastable, excited, singly charged ions separately from the cross sections for ground state ions. Previously published values are confusing because the beams used included unknown fractions of metastables, and these metastables have cross sections that are greatly different from the ground states. The program was fully accomplished, and metastable cross sections were found to be over an order of magnitude greater than ones for the ground state. The existing discrepancies in the literature were resolved. Considerable effort was devoted to the design and operation of ion source configurations where the metastable content of the ion beam was known. Subsequently, study progressed to the neutralization of multiply charged C and 0 ions in the same targets. First there has been a need to develop ion sources which can produce useful beams of multiply charged species. This has now been accomplished. The intent is to use these sources for the measurement of cross sections with an attempt to differentiate between the behavior of ground and metastably excited species. DOE

BARIUM FLUORIDE RESEARCH AND DEVELOPMENT AT LAWRENCE LIVERMORE NATIONAL LABORATORY
C. R. Wuest, B. A. Fuchs, and W. Kway 24 Jul. 1992 127 p
(Contract W-7405-eng-48)
(DE93-014682; UCRL-ID-113834) Avail: CASI HC A07/MF A02

Lawrence Livermore National Laboratory (LLNL) has been asked to provide R&D on new methods of barium fluoride (BaF2) crystal surface preparation, as well as optical coating methods to improve the efficiency of transport of scintillation light through the crystal to the photodetector. The goal of the R&D is to identify a method (or methods) for preparing the surface to eliminate the amorphous layer that has been found to be a product of the surface preparation techniques used when the crystals are manufactured in China and provide a crystalline surface free from oxygen and other contamination, with suitable flatness for optical coating. Ultraviolet reflective coatings have been identified that are suitable for the wavelengths of the scintillation light (220 nm peak). The coating consists of a layer of aluminum with a magnesium fluoride over-layer. This coating can be applied in a uniform layer or in a graded layer, with reflectance varying as a function of position. It is ultimately desired that the UV coating be applied with graded reflectance to linearize the response of the crystal along its length. DOE

CRYSTAL GROWTH OF ZnSe AND RELATED TERNARY COMPOUND SEMICONDUCTORS BY PHYSICAL VAPOR TRANSPORT Final Report
Ching-Hua Su 23 Aug. 1993 41 p
(Contract NAS8-39718)
(NASA-CR-193834; NAS 1.26:193834) Avail: CASI HC A03/MF A01

The materials to be investigated are ZnSe and related ternary semiconducting alloys (e.g., ZnS(x)Se(1-x), ZnTe(x)Se(1-x), and Zn(1-x)Cd(x)Se). These materials are useful for opto-electronic applications such as high efficient light emitting diodes and low power threshold and high temperature lasers in the blue-green region of the visible spectrum. The recent demonstration of its optical bistable properties also makes ZnSe a possible candidate material for digital optical computers. The investigation consists of an extensive ground-based study followed by flight experimentation, and involves both experimental and theoretical work. The objectives of the ground-based work are to establish the characteristics of the crystals grown on Earth as a basis for subsequent comparative evaluations of the crystals grown in a low gravity environment and to obtain the experimental data and perform the analyses required to define the optimum parameters for the flight experiments. During the six months of the Preliminary Definition Phase, the research efforts were concentrated on the binary compound ZnSe - the purification of starting materials of Se by zone refining, the synthesis of ZnSe starting materials, the heat treatments of the starting materials, the vapor transport rate measurements, the vapor partial pressure measurements of ZnSe, the crystal growth of ZnSe by physical vapor transport, and various characterization on the grown ZnSe crystals. EMPIRICAL TIGHT-BINDING PARAMETERS FOR SOLID C(SUB 60)
N. Tit and V. Kumar Jan. 1993 18 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-623061; IC-93/6) Avail: CASI HC A03 (US Sales Only)

We present a tight-binding model for the electronic structure of C(sub 60) using four (1s and 3p) orbitals per carbon atom. The model has been developed by fitting the tight-binding parameters to the ab-initio pseudopotential calculation of Troullier and Martins (Phys. Rev. B46, 1754 (1992)) in the face-centered cubic (Fm3-bar) phase. Following this, calculations of the energy bands and the density of electronic states have been carried out as a function of the lattice constant. Good agreement has been obtained with the observed lattice-constant dependence of T(sub c) using McMillan's formula. Furthermore, calculations of the electronic structure are presented in the simple cubic (Pa3-bar) phase. DOE

THEORETICAL SIS MIXER RESEARCH Final Technical Report, 1 Jun. 1990 - 30 Nov. 1992
Marc J. Feldman Jun. 1993 10 p
(Grant AF-AFOSR-0316-90)
(AD-A266323; AFOSR-93-0437TR) Avail: CASI HC A02/MF A01

Theoretical research has been conducted to elucidate the basic physics behind the properties of superconductor-insulator-superconductor (SIS) tunnel junction receiving devices. The properties of SIS mixers using nonideal junctions and finite LO power, were determined by analytic expansion of the equations of the quantum theory of mixing, and also by computer simulations of SIS receivers over the entire range of experimental parameters. The result is a new coherent and intuitive picture of SIS mixer behavior. Many of the outstanding mysteries and questions about SIS receivers are resolved, and this contributes greatly to the design and interpretation of SIS mixer experiments. Other calculations show how to achieve sub-quantum noise temperatures in the phase sensitive SIS mixer, an important step towards realization of ultra-low-noise detectors. A simplified model casts doubt on the superlative experimental results reported for the RF-series dc-parallel biased array SIS mixer. DTIC

A CONTINUUM THEORY FOR LIQUID CRYSTALS DESCRIBING DIFFERENT DEGREES OF ORIENTATIONAL ORDER Ph.D. Thesis
Stefan Blenk 1992 126 p
(ETN-93-94392) Avail: CASI HC A07/MF A02

Starting out with the mesoscopic concept, the phenomenological orientational balance equations for liquid crystals in alignment tensor

formulation are rederived. The dissipation inequality is exploited by Coleman-Noll's method to get restrictions for the constitutive equations of nematics. The macroscopic concept yields beside the alignment tensor other macroscopic variable and constitutive equations being in connection with the alignment tensor balance. The latter is as well derived as the macroscopic spin balance. Equilibrium properties of the constitutive equations resulting from the dissipation inequality are investigated, and the stress tensor in equilibrium is determined. Also the Landau conditions for equilibrium in liquid crystals are derived and extended to inhomogeneous alignment. The free energy and the couple stress tensor are calculated and in the case of total alignment compared to Ericksen-Leslie's results. It turned out that using the mesoscopic concept, more information and more essential restrictions to constitutive equations are obtained than without it. Therefore the mesoscopic approach does not only give a better understanding of liquid crystal theories but does also give an efficient tool for investigating their constitutive equations. ESA

CHANGES IN ELECTRICAL DEVICE CHARACTERISTICS DURING THE FORMATION OF DISLOCATIONS IN SITU IN THE TEM
F. M. Ross, R. Hull, D. Bahnck, J. C. Bean, L. J. Peticolas, C. A. King, and R. R. Kola Mar. 1993 4 p Presented at the 8th Conference on Microscopy of Semiconducting Materials, Oxford, England, 5-8 Apr. 1993
(Contract DE-AC03-76SF-00098)
(DE93-013910; LBL-33886; CONF-9304150-1) Avail: CASI HC A01/MF A01

By adding electrical connections to a specimen heating holder for a transmission electron microscope, we have measured the characteristics of electronic devices such as diodes while they remain under observation in the microscope. We have made electron-transparent specimens from metastable GeSi/Si p-n junction diodes and introduced dislocations by heating in situ. The combination of electrical measurement and real-time observation of dislocation formation allows us to examine the electrical properties of dislocations in individual devices and the influence of defects on device performance. Data collection using the Advanced Solid-state Array Spectroradiometer (ASAS) during the Hydrologic Atmospheric Pilot Experiment in the Sahel (HAPEX-II Sahel) field campaign in the Republic of Niger, West Central Africa from 22 Aug. to 19 Sep. 1992 is documented. Details on the ASAS system such as the hardware, data collection methods, information on system calibration, and data processing procedures are included. The ASAS configuration deployed for HAPEX-II Sahel contains several new components, including a new sensor array and pointing system. Because of this, new calibration procedures are being developed at the same time that the first ASAS images from HAPEX-II Sahel are being processed. These new calibration procedures will be documented in a future publication. Author (revised)

OPTICAL AND PHYSICAL PROPERTIES OF THE LiSrAlF6:Cr LASER CRYSTAL
L. K. Smith, S. A. Payne, J. B. Tassano, L. D. DeLoach, W. L. Kway, and W. F. Krupke 18 May 1993 5 p Presented at the 8th Optical Society of America (OSA) Meeting on Advanced Solid-State Lasers, New Orleans, LA, 1-3 Feb. 1993
(Contract W-7405-eng-48)
(DE93-014657; UCRL-JC-111851; CONF-9302116-2) Avail: CASI HC A01/MF A01

We have measured several of the physical and optical parameters of LiSrAlF6:Cr or Cr:LiSAF laser material. The parameters in question are the ones that are important to its laser performance including the thermomechanical properties, water durabilities, and Auger upconversion constants. A thermomechanical figure-of-merit has been determined from measurements of the fracture toughness, expansion coefficient, thermal conductivity, Young's modulus, and heat capacity. Tests of water durability suggest that a neutral pH of 7 is optimum to minimize water dissolution. The Auger effect was found to be a significant factor at higher Cr concentration, where excited-state migration leads to an increase in the upconversion rate. DOE

HIGH-RESOLUTION Z-CONTRAST IMAGING AND HOLE CONCENTRATION MAPPING OF YBCO THIN FILMS
S. J. Pennycook, N. D. Browning, S. Zhu, R. Feenstra, D. P. Norton, D. H. Lowndes, and M. F. Chisholm May 1993 5 p Presented at the International Workshop on Superconductivity, Hokkaido, Japan, 28 Jun. - 1 Jul. 1993
(Contract DE-AC05-84OR-21400)
(DE93-015803; CONF-930682-2) Avail: CASI HC A01/MF A01

Atomic-resolution Z-contrast electron microscopy provides a directly interpretable image showing the location of high-Z atomic columns without the need for any structural models. Usually, the type of column may be identified from its intensity, and the structure and morphology of interfaces, ultrathin films, and superlattices are directly revealed. This has generated many insights into growth and relaxation phenomena. Since the Z-contrast image uses only electrons scattered through large angles, electron energy loss spectroscopy may be performed simultaneously using the transmitted beam, providing information on the local hole concentration from the fine structure of the oxygen-K absorption edge. The resolution achieved is below the coherence length, allowing a microscopic interpretation of transport properties. DOE

OPTIMIZATION OF THE PROCESSING PARAMETERS OF HIGH TEMPERATURE SUPERCONDUCTING GLASS-CERAMICS: CENTER DIRECTOR'S DISCRETIONARY FUND FINAL REPORT
E. C. Ethridge and W. F. Kaukler (Alabama Univ., Huntsville.) Sep. 1993 24 p
(NASA-TM-108421; NAS 1.15:108421) Avail: CASI HC A03/MF A01

A number of promising glass forming compositions of high Tc superconducting Ba-Sr-Ca-Cu-O (BSCCO) materials were evaluated for their glass-ceramic crystallization ability. The BSCCO ceramics belonging to the class of superconductors in the Ba-Sr-Ca-Cu-O system were the focus of this study. By first forming the superconducting material as a glass, subsequent devitrification into the crystalline (glass-ceramic) superconductor can be performed by thermal processing of the glass preform body. Glass formability and phase formation were determined by a variety of methods in another related study. This study focused on the nucleation and crystallization of the materials. Thermal analysis during rapid cooling aids in the evaluation of nucleation and crystallization behavior. Melt viscosity is used to predict glass formation ability. Author (revised)

CESIUM IODIDE (CsI) CRYSTAL MANUFACTURE
S. R. Childress and R. E. Ray, Jr. 28 Aug. 1992 6 p
(Contract DE-AC02-76CH-03000)
(DE93-012146; DOE/FTR-93012146) Avail: CASI HC A02/MF A01 (US Sales Only)

The CsI calorimeter, which is to be assembled by the KTeV collaboration, is 2.0 meters by 2.0 meters square and consists of pure Cesium Iodide crystals. The crystals are 500 mm or 27 radiation lengths long and come in two transverse sizes: 25 mm square and 50 mm square. The crystals may be single units or they may be made from pairs of glued crystals. The mechanical tolerances and light output characteristics required of the crystals by KTeV are fairly stringent and are just at the edge of the state-of-the-art. We have visited the three companies who are bidding on

the KTeV CsI order in order to evaluate their abilities to produce crystals sufficient for our purposes as well as to evaluate their production capabilities. DOE

COMBUSTION SYNTHESIS AND ENGINEERING OF NANOPARTICLES FOR ELECTRONIC, STRUCTURAL, AND SUPERCONDUCTOR APPLICATIONS
G. C. Stangle, V. R. W. Amarakoon, and W. A. Schulze 28 May 1993 21 p
(Contract DE-FG02-93ER-12128)
(DE93-016286; DOE/ER-12128/1) Avail: CASI HC A03/MF A01

Fully dense, nanocrystalline ceramic articles were prepared by the new nanofabrication process. The process consists of two steps: synthesis of ceramic nanoparticles and fabrication of dense, nanocrystalline ceramic parts. The synthesis step produced 10-nanometer-diameter crystallites, and is capable of being scaled up to kilogram/hour production rates. The fabrication step produced dense parts at significantly reduced sintering temperatures and times -- representing a factor of 10-100 reduction in process energy requirements. The process was demonstrated by producing ultrafine-grained yttria-stabilized ZrO2, an important material with a variety of energy-related applications (solid electrolytes, oxygen sensors, electrode materials, thermal barrier coatings, etc.). Results from this period clearly illustrate the capabilities of this energy-efficient and directly commercializable process for producing dense, nanocrystalline, multicomponent oxide ceramics. DOE

ELECTRICAL AND OPTICAL PROPERTIES OF MULTIPLE QUANTUM WELL STRUCTURES AND THEIR APPLICATIONS TO INFRARED DETECTORS Ph.D. Thesis - Tech. Univ. Munich
Petter Helgsen 23 Oct. 1992 77 p
(FFI-92/7012; ETN-93-93972) Avail: CASI HC A05/MF A01

The subband nature of semiconductor Multiple Quantum Wells (MQW's) using photoconductance spectroscopy, optical absorption, and tunneling experiments combined with model calculations, is reported. The aim was to study and fabricate intersubband infrared detectors. Interband protoconductivity experiments on InGaAsP/InP MQW's led to a better understanding of the photoconductivity processes and to a very precise determination of the band offsets in this material system. The sequential tunneling is one of the major noise sources for well doped GaAs/AlGaAs MQW intersubband infrared detectors. The observed 1-5 characteristics of a MQW structure are described by taking the nonresonant tunneling properly into account. The design, fabrication, modeling, and characterization are described for both a bound-to-bound state and a bound-to-continuum state GaAs/AlGaAs intersubband detector. The intersubband absorption process is, in addition, examined separately with emphasis on the dependence of the integrated absorption and the linewidth on quantum well design parameters. The performances of GaAs/AlGaAs intersubband detectors and HgCdTe detectors are reviewed. Intersubband detectors are shown to be very promising with detection levels approaching those of state of the art HgCdTe detectors. ESA

FREE-EXCITON RECOMBINATION IN GaAs
D. J. Wolford, G. D. Gilliland, T. F. Kuech, J. A. Bradley (IBM Research Lab., Yorktown Heights, NY.), and H. P. Hjalmarson 1992 5 p Presented at the International Conference on the Physics of Semiconductors, Beijing, China, 10-14 Aug. 1993
(Contract DE-AC04-76DP-00789)
(DE93-009843; SAND-92-0824C; CONF-930880-3) Avail: CASI HC A01/MF A01

We have studied the kinetics of free-exciton recombination in 'ideal' GaAs structures. Our studies include detailed photoluminescence kinetics measurements versus laser excitation power, temperature, sample structure, and surface treatment. The primary goal in these studies is to understand the mechanism precipitating free-exciton recombination and the role, if any, that polaritons play. Additionally, we have assessed the effects free-carriers and a variety of different sample structures and surface treatments have on these kinetics. DOE

N94-14083# Sandia National Labs., Albuquerque, NM.
INTRINSIC AND INTERFACIAL RECOMBINATION IN OMVPE- AND MBE-PREPARED GaAs/Al(x)Ga(1-x)As HETEROSTRUCTURES
G. D. Gilliland, D. J. Wolford, T. F. Kuech, J. A. Bradley (IBM Research Lab., Yorktown Heights, NY.), J. Klem, and H. P. Hjalmarson 1993 4 p Presented at the International Conference on the Physics of Semiconductors, Beijing, China, 10-14 Aug. 1993
(Contract DE-AC04-76DP-00789)
(DE93-009844; SAND-93-0609C; CONF-930880-1) Avail: CASI HC A01/MF A01

We have studied intrinsic free-carrier recombination in a variety of GaAs structures, including: OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As double heterostructures, Na2S passivated GaAs structures and bare GaAs structures. We find OMVPE prepared structures are superior to all of these other structures with 300 K lifetimes of approximately 2.5 micro-s and negligible nonradiative interface and bulk recombination, and thus are truly surface-free (S less than 40 cm/s). Moreover, we observe systematic trends in optical properties versus growth conditions. Lastly, we find that the presence of free-exciton recombination in the low-temperature photoluminescence spectra is a necessary but not sufficient condition for optimal optical properties (i.e. long minority-carrier lifetimes). DOE

STRUCTURAL AND ELECTRONIC STUDIES OF a-SiGe:H ALLOYS
W. Paul Apr. 1993 64 p Prepared in cooperation with Harvard Univ., Cambridge, MA
(Contract DE-AC02-83CH-10093)
(DE93-010021; NREL/TP-411-5457) Avail: CASI HC A04/MF A01

This report describes work to produce alloys of a-Si(1-x)Ge(x):H of improved photoelectronic quality by plasma-enhanced chemical vapor deposition (PECVD). The goal was to discover optimum preparation conditions for the end-component, a-Ge:H, to establish whether modification of the usual practice of starting from a-Si:H preparation conditions was advisable. Such modification, found to be necessary, gave films of a-Ge:H with efficiency-mobility-lifetime products ((eta)(mu)(tau)) 10(exp 2) to 10(exp 3) higher than were earlier available, in homogeneous environmentally stable material. Both a-Ge:H and a-Si(1-x)Ge(x):H of large x were studied in detail. Alloy material was shown to have (eta)(mu)(tau) 10(exp 2) larger than found earlier. However, just as the (eta)(mu)(tau) of a-Si:H decreases when Ge is added, so also the (eta)(mu)(tau) of these alloys with Si addition. By contrast, the ambipolar diffusion lengths, L(sub o) which are governed by the hole mobility, vary by only a factor of two over the whole alloy series. Using the experimental finding of a small valence band offset between a-Si:H and a-Ge:H compositional fluctuations on a 10-mm scale are suggested to explain the behavior of (eta)(mu)(tau) and L(sub o). The implications for eventual improvement of the alloys are profound, but require direct experimental tests of the postulated compositional fluctuations. DOE

MEASUREMENT OF PENETRATION DEPTH LAMBDA(T) IN YBa2Cu3O(7-DELTA) THIN FILM
J. Y. Lee (Ohio State Univ., Columbus.), T. R. Lemberger (Ohio State Univ., Columbus.), S. Foltyn, and X. D. Wu 1993 3 p Presented at the Conference of the International Union of Pure and Applied Physics on Low Temperature Physics (LT 20), Eugene, OR, 1-11 Aug. 1993
(Contract W-7405-eng-36)
(DE93-014587; LA-UR-93-1705; CONF-930801-2) Avail: CASI HC A01/MF A01

We present the magnetic penetration depth lambda(T) in two laser ablated YBa2Cu3O(7-delta) thin films, determined by the two-coil method. The slope of 1/lambda(exp 2)(T) near T(sub c), the only exactly measurable quantity, extrapolates to 930 A at T = 0, which compares well with 830 A in the high quality single crystal recently reported and which exhibited a linear T dependence at low T. For T less than 30K, we find lambda(T)/lambda(0)-1 = a(T/T(sub c))(exp 2) where a = 0.5. DOE

ON THE HARDENING AND SOFTENING OF NANOCRYSTALLINE MATERIALS
G. E. Fougere, J. R. Weertman, and R. W. Siegel Apr. 1993 7 p Presented at the Conference on Nanostructured Materials, Cancun, Mexico, 21-25 Sep. 1992
(Contracts W-31-109-eng-38; DE-FG02-86ER-45229)
(DE93-012901; ANL/MSD/CP-79532; CONF-920947-5) Avail: CASI HC A02/MF A01

Nanocrystalline Pd and Cu samples have been thermally treated to determine whether the relation between hardness and grain size depend on the method used to vary the grain sizes. Previous reports indicate that hardening with decreasing grain size resulted from data obtained using individual samples, while softening with decreasing grain size resulted from data from a given sample that had been thermally treated. Hardening and softening regimes were evident for the nanocrystalline Cu, and the hardness improvements over the original as-consolidated state were maintained throughout the thermal treatments. This review examines our hardness results for Cu and Pd and those for other nanocrystalline materials. DOE

The Institute for Microstructural Sciences (IMS) supports the mission of the National Research Council of Canada by providing leadership, in collaboration with industry, in the development of a strategic base for information technology. IMS achieves its objectives through such means as the performance of research and development, the development of vital expertise and knowledge, and making sophisticated infrastructure accessible in collaborative research projects. IMS's organization is based around ten functional groups in five program areas (advanced semiconductor devices, optoelectronics, acoustics, electronic and photonic materials, and solid state physics) subdivided into 25 major projects. Reports of activities in these programs are presented, including overall objectives, lists of specific projects, research facilities and capabilities, and lists of publications. Highlights of 1991/92 projects include development of a prototype ridge waveguide microwave spectrometer with 8 GHz resolution, successful construction of novel wavelength division demultiplexers, design and fabrication of a novel field effect transistor, and production of strained layer InGaAs/GaAs lasers having application in photonic integrated circuits. The Institute for Microstructural Sciences (IMS) supports the mission of the National Research Council of Canada by providing leadership, in collaboration with industry, in the development of a strategic base for information technology. IMS achieves its objectives through such means as the performance of research and development, the development of vital expertise and knowledge, and making sophisticated infrastructure accessible in collaborative research projects. IMS's organization is based around ten functional groups in five program areas (advanced semiconductor devices, optoelectronics, acoustics, electronic and photonic materials, and solid state physics) subdivided into 25 major projects. Reports of activities in these programs are presented, including overall objectives, lists of specific projects, research facilities and capabilities, and lists of publications. Highlights of 1991/92 projects include development of a prototype ridge waveguide microwave spectrometer with 8 GHz resolution, successful construction of novel wavelength division demultiplexers, design and fabrication of a novel field effect transistor, and production of strained layer InGaAs/GaAs lasers having application in photonic integrated circuits. A QUARTZ CRYSTAL MICROBALANCE STUDY OF LITHIUM INSERTION AND REMOVAL INTO EVAPORATED FILMS MO(Y) (M = Mo, Fe, AND V)
E. Andrukaitis and R. S. McMillan (National Research Council of Canada, Ottawa, Ontario.) 1991 11 p
(DSIS-93-00649; CTN-93-60841) Avail: CASI HC A03

The reversible Li insertion in WO3 containing MoO3, V2O5, and Fe2O3 evaporated films was examined using the electrochemical quartz crystal microbalance (EQCM) technique. Amorphous films in their highest oxidation state were thermally evaporated and vacuum deposited onto 5 MHz quartz crystals. The frequency (mass) change for Li intercalation followed the 1 e- transfer reaction given by: xLi+ + xe- + MO(y) = Li(x)MO(y), where M = Mo, Fe, V, and/or W. Initial insertion and removal cycles have a low utilization of the electrode surface, with the reversibility of the Li intercalation dependant on stoichiometry. The Li was found to accumulate in the film by the EQCM technique during the electrochemical reduction and oxidation of these films. Surface changes such as film dissolution and electrolyte decomposition were detected by the EQCM technique during constant current cycling. Author (CISTI)

THEORY OF THE ELECTRONIC AND STRUCTURAL PROPERTIES OF SOLID STATE OXIDES

J. R. Chelikowsky 1993 34 p

(Contract DE-FG02-89ER-45391)

(DE93-016051; DOE/ER-45391/4) Avail: CASI HC A03/MF A01

Emphasis has been on the electronic materials: silica, titania, and ruthenia. Fundamental interest centered on nature of microstructure of these solids in the amorphous state, or mixed oxide state. New theoretical techniques have been implemented to examine such issues, based on ab initio pseudopotential methods and interatomic potentials. Some areas examined under this project are: (1) Nature of the amorphization transformation of quartz under pressure. Specific focus is on the microscopic nature of the amorphous material and the driving forces for amorphization. (2) Equation of states of crystalline silica polymorphs. (3) Elastic anomalies in silica. In particular, the existence of a 'negative' Poisson ratio in high temperature, low density forms of crystalline silica. (4) Optical and structural properties of titania and mixed oxides such as Ru(sub x)Ti(sub 1-x)O(sub 2). DOE

PRISM-FILM COUPLING IN ANISOTROPIC PLANAR WAVEGUIDES OF EPITAXIAL (101) RUTILE THIN FILMS

C. M. Foster, S. K. Chan, H. L. M. Chang, R. P. Chiarello, and D. J. Lam Apr. 1993 7 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993

(Contract W-31-109-eng-38)

(DE93-012912; ANL/MSD/CP-78008; CONF-930405-4) Avail: CASI HC A02/MF A01

We report optical waveguiding in single-crystal, epitaxial (101) oriented rutile (TiO2) thin films grown on (1120) sapphire (alpha-Al2O3) substrates using the MOCVD technique. The propagation-constants for asymmetric planar waveguides composed of an anisotropic dielectric media applicable to these films are derived. Modifications to the prism-film coupling theory for this anisotropic case are also discussed. By application of this model to (101) oriented rutile thin films, we directly obtain values of the ordinary and extraordinary refractive indexes, n(sub o) and n(sub e), of the rutile thin films as well as film thicknesses. We obtain typical values of the refractive indexes (n(sub o) = 2.5701 +/- 0.0005; n(sub e)=2.934 +/- 0.001) near to those for bulk rutile single crystals indicating the exceptional quality of these films. MONTE CARLO SIMULATION OF THE OCP FREEZING TRANSITION

H. E. DeWitt, W. L. Slattery (Los Alamos National Lab., NM.), and Juxing Yang (Harvard Medical School, Boston, MA.) Sep. 1992 10 p Presented at the International Conference on the Physics of Strongly Coupled Plasmas, Rochester, NY, 17-21 Aug. 1992

(Contract W-7405-eng-48)

(DE93-013039; UCRL-JC-111904; CONF-9208135-6) Avail: CASI HC A02/MF A01

The One Component Plasma (OCP) in three dimensions is a system of classical point charges moving in a fixed uniform neutralizing background. In nature the OCP is a rough approximation of the conditions in a white dwarf star in which one has fully ionized nuclei such as carbon, oxygen, and smaller amounts of heavier elements up to iron all moving in a nearly uniform background provided by relativistically degenerate electrons. The OCP is also a mathematical limiting model for a non-neutral plasma of ions in a Penning trap and cooled to strongly coupled conditions. Similarly, a collection of charge colloidal suspensions in water can exhibit the Coulomb freezing behavior of the OCP. A single dimensionless parameter, Gamma, is sufficient to describe the system. For very weak coupling, Gamma much less than 1, the thermodynamic properties of the OCP are given rigorously by the Debye-Huckel theory. This paper reports on Monte Carlo simulation of the freezing of the OCP from a random start for particle numbers ranging from 500 to 2000. In one case the authors obtained a perfect bcc lattice, but in most cases the final state would be an imperfect crystal or two different microcrystals, fcc and bcc, growing into each other. With a cluster analysis program the authors looked at the formation of nucleating clusters, and followed the actual freezing process. Roughly 80 particles are needed in a cluster before it starts to grow rapidly and freeze. DOE

SHOCK COMPRESSION AND QUASIELASTIC RELEASE IN TANTALUM

J. N. Johnson, R. S. Hixson, D. L. Tonks, and G. T. Gray, III 1993 5 p Presented at the 14th International Conference on High Pressure Science and Technology and the 1993 Technical Meeting of the Topical Group on Shock Compression of Condensed Matter, Colorado Springs, CO, 28 Jun. - 3 Jul. 1993

(Contract W-7405-eng-36)

(DE93-014566; LA-UR-93-1785; CONF-9306167-3) Avail: CASI HC A01/MF A01

Previous studies of quasielastic release in shock-loaded FCC metals have shown a strong influence of the defect state on the leading edge, or first observable arrival, of release wave, due to large density of pinned dislocation segments behind the shock front, their relatively large pinning separation, and a very short response time as determined by drag coefficient in shock-compressed state. This effect is entirely equivalent to problems associated with elastic moduli determination using ultrasonic methods. This is particularly true for FCC metals, which have an especially low Peierls stress, or inherent lattice resistance, that has little influence in pinning dislocation segments and inhibiting anelastic deformation. BCC metals, on the other hand, have a large Peierls stress that essentially holds dislocation segments in place at low net applied shear stresses and thus allows fully elastic deformation to occur in the complete absence of anelastic behavior. Shock-compression and release experiments have been performed on tantalum (BCC), with the observation that the leading release disturbance is indeed elastic. This conclusion is established by examination of experimental VISAR records taken at the tantalum/sapphire (window) interface in a symmetric-impact experiment which subjects the sample to a peak longitudinal stress of approximately 7.3 GPa, in comparison with characteristic code calculations. EFFECT OF SPONTANEOUS DECAY OF SUPERCONDUCTOR QUASIPARTICLES IN THE TUNNELING DENSITY OF STATES

D. Coffey 1993 9 p Presented at the Conference on Spectroscopies in Novel Superconductors, Santa Fe, NM, 17-19 Mar. 1993

(Contract W-7405-eng-36)

(DE93-012681; LA-UR-93-1384; CONF-930367-3) Avail: CASI HC A02/MF A01

Superconductivity has been successfully described with either the Landau-Ginzburg theory of second order phase transitions or with strong-coupling versions of the original BCS theory for almost fifty years. Recent tunneling and photoemission data on the cuprate oxide superconductors may now provide evidence of corrections to the mean field approximation. It has been shown by Zasadzinski et al. that there is a dip at eV (approx equal) 3(Delta)(sub 0) in the SIS tunneling conductance, which is the derivative of the current across a superconductor-insulator-superconductor junction with respect to the applied voltage, for a set of cuprate superconductors whose (Tc)'s range from 5.5 to 100 K. Recently L. Coffey and I proposed an explanation of this feature in terms of the spontaneous decay of mean field quasiparticles. We showed that corrections to the mean field approximation for a superconductor lead to different frequency thresholds for spontaneous quasiparticle decay with different superconductor order parameter symmetries. These effects lead to features in the superconductor density of states and in the SIS tunneling conductance and provide experimental evidence of d-wave symmetry for the superconductor order parameter in the cuprates. I discuss model and also evidence of quasiparticle decay in ARPES data on Bi2Sr2CaCu2O8.

EFFECTS OF GROWTH CONDITIONS AND SUBSTRATE ORIENTATION ON THE PROPERTIES OF InSb
R. M. Biefeld and K. C. Baucom 1992 7 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contract DE-AC04-76DP-00789)
(DE93-013766; SAND-92-2508C; CONF-930405-7) Avail: CASI HC A02/MF A01

Two new organometallic Sb sources, tris(dimethylamino)antimony (TDMASb), and tertiarybutyldimethylantimony (TBDMSb) are being investigated. Growth of InSb using TDMASb, or TBDMSb and TMIn was investigated at 350 to 475 C using a range of 5/3 ratios, growth rates and pressures. Misoriented InSb substrates were also used for selected growth conditions. The growth rates of InSb using TMIn and either TDMASb or TBDMSb at temperatures less than or equal to 425 C were proportional to both the TMIn flow rate and the temperature. The surface morphology of InSb grown using either TDMASb or TBDMSb was very rough for growth temperatures less than or equal to 425 C. This may be due to the complex decomposition mechanisms involved and the presence of methyl groups on the surface. Smoother backgrounds were generally found when using off axis substrates. The details of the defects observed on the surfaces were dependent on the type of misorientation and can be related to the atomic structure of the surface steps. Both n- and p-type InSb were grown using TBDMSb or TDMASb and TMIn with mobilities up to 68,990 and 7773 cm(exp 2)/Vs, respectively, at 77 K. The mobility for InSb using either TDMASb or TBDMSb was optimized by going to lower temperatures, pressures and 5/3 ratios. The opposite was true for surface morphology which improved with higher temperature, pressure, and 5/3 ratio. The growth of high mobility InSb with smooth surfaces at T less than or equal to 425 C was not achieved with TDMASb or TBDMSb and TMIn under the conditions investigated in this work.

MICROSTRUCTURAL MECHANISMS THAT ENHANCE ELECTROMIGRATION RESISTANCE IN Al-Cu THIN FILMS
D. R. Frear and J. R. Michael 1993 9 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993
(Contract DE-AC04-76DP-00789)
(DE93-013770; SAND-93-1013C; CONF-930405-8) Avail: CASI HC A02/MF A01

Evolution of the microstructure of Al-2wt.%Cu thin films is examined with respect to how the presence of copper can influence electromigration behavior. After an anneal that simulates a thin film sintering step, the microstructure of the Al-Cu films consisted of 1 micron aluminum grains with theta-phase Al2Cu precipitates at grain boundaries and triple points. The grain size and precipitation distribution did not change with subsequent heat treatments. Upon cooling to room temperature the heat treatment of the films near the Al/Al+ theta solvus temperature results in depletion of copper at the aluminum grain boundaries. Heat treatments lower in the two phase region (200 to 300 C) result in enrichment of copper at the aluminum grain boundaries. Here, it is proposed that electromigration behavior of aluminum is improved by adding copper because the copper enrichment in the form of Al2Cu phase may hinder aluminum diffusion along the grain boundaries.

KINETICS OF PHOTODEPOSITION OF SUPERCONDUCTING FILMS
C. H. Chen, R. C. Phillips, and P. W. Morrison (Advanced Fuel Research, Inc., East Hartford, CT.) 1992 6 p Presented at the 16th Material Research Society International Symposium on the Scientific Basis for Nuclear Waste Management Fall Meeting, Boston, MA, 30 Nov. - 5 Dec. 1992
(Contract DE-AC05-84OR-21400)
(DE93-015511; CONF-921101-129) Avail: CASI HC A02/MF A01

It is critical to understand the kinetics of photodeposition of metal-oxide superconducting films. The monitoring of surface conditions of superconducting films on substrates was primarily obtained by FTIR. Desorbed ions and neutral atoms are the primary species producing the films during the laser ablation process, and mass spectroscopy is effective for determining the desorbed species. Although efforts have been made to learn the process, no complete models have been arrived at. In general, the production of superconducting films is primarily due to deposition of neutral atoms and metal oxide molecules.

EFFECTS OF DEPOSITON RATE ON Bi2Sr2CaCu2O(8+x) AND Bi2Sr(1.6)La(0.4)CuO(6+x) EPITAXIAL THIN FILM GROWTH BY PULSED-LASER ABLATION
S. Zhu (Tennessee Univ., Knoxville.), D. H. Lowndes, B. C. Chakoumakos, D. K. Christen, J. D. Budai, X. Y. Zheng, and R. J. Warmack 1993 7 p Presented at the 2nd International Conference on Laser Ablation, Knoxville, TN, 19-22 Apr. 1993
(Contract DE-AC05-84OR-21400)
(DE93-015797; CONF-9304144-4) Avail: CASI HC A02/MF A01

Bi2Sr2CaCu2O(8+x) and Bi2Sr(1.6)La(0.4)CuO(6+x) epitaxial films have been grown on (001) MgO and SrTiO3 substrates at different deposition rates by pulsed-laser ablation (PLA). Surface morphology, crystallinity and superconducting critical temperature of the films depend sensitively on deposition rate even though ablation target composition and substrate temperature were kept almost constant. Scanning election microscopy showed that density of particles generated by PLA is reduced by decreasing the deposition rate. Results show that the highest quality films of the highly anisotropic Bi-based materials are deposited by PLA at a low deposition rate, which results in film growth in a near-equilibrium state.

PLOUGHING ON GOLD USING A SCANNING TUNNELING MICROSCOPE
R. D. Day and P. E. Russell (North Carolina State Univ., Raleigh.) 1993 5 p Presented at the Principles of Cutting Mechanics Conference, Tuscon, AZ, 13-15 Apr. 1993
(Contract W-7405-eng-36)
(DE93-012632; LA-UR-93-1150; CONF-9304138-1) Avail: CASI HC A01/MF A01

The purpose of the experiments is to measure the nominal force on

the sample induced by the tip as a function of voltage and tunneling current and use the imaging capabilities of the Scanning Tunneling Microscope (STM) to determine if the sample material's surface can be deformed plastically in a controlled manner by the tip. In our investigations we use the tip as a ploughing tool which can be moved in a line to create a furrow, or can be scanned in a plane to displace a pocket of material. This document describes how we measure the tunneling force, presents some of the data acquired to date, and shows evidence of plastic deformation caused by the tip. DOE

ROOM TEMPERATURE DEGRADATION OF YBa2Cu3O(7-x) SUPERCONDUCTORS IN VARYING RELATIVE HUMIDITY ENVIRONMENTS

M. W. Hooker (Clemson Univ., SC.), S. A. Wise, I. A. Carlberg, R. M. Stephens, R. T. Simchick (Lockheed Engineering and Sciences Co., Hampton, VA.), and A. Farjami (Christopher Newport Coll., Newport News, VA.) Sep. 1993 14 p

(RTOP 142-20-14-02)

(NASA-TP-3368; L-17203; NAS 1.60:3368) Avail: CASI HC A03/MF A01

An aging study was performed to determine the stability of YBa2Cu3O(7-x) ceramics in humid environments at 20 C. In this study, fired ceramic specimens were exposed to humidity levels ranging from 30.5 to 100 percent for 2-, 4-, and 6-week time intervals. After storage under these conditions, the specimens were characterized by X-ray diffraction (XRD), scanning electron microscopy (SEM), and electrical resistance measurements. At every storage condition evaluated, the fired ceramics were found to interact with H2O present in the surrounding environment, resulting in the decomposition of the YBa2Cu3O(7-x) phase. XRD data showed that BaCO3, CuO, and Y2BaCuO5 were present after aging and that the peak intensities of these impurity phases increased both with increasing humidity level and with increasing time of exposure. Additionally, SEM analyses of the ceramic microstructures after aging revealed the development of needle-like crystallites along the surface of the test specimens after aging. Furthermore, the superconducting transition temperature T(sub c) was found to decrease both with increasing humidity level and with increasing time of exposure. All the specimens aged at 30.5, 66, and 81 percent relative humidity exhibited superconducting transitions above 80 K, although these values were reduced by the exposure to the test conditions. Conversely, the specimens stored in direct contact with water (100 percent relative humidity) exhibited no superconducting transitions. Author (revised)

STRUCTURE AND STABILITY OF MICROVOIDS IN A-Si:H

R. Biswas (Iowa State Univ. of Science and Technology, Ames.) and I. Kwon 1993 7 p Presented at the Spring Meeting of the Materials Research Society, San Francisco, CA, 12-16 Apr. 1993 Submitted for publication

(Contract W-7405-eng-36)

(DE93-016625; LA-UR-93-2091; CONF-930405-27) Avail: CASI HC A02/MF A01

Microvoids appear to be universally present in a-Si:H as demonstrated by small angle X-ray scattering including the presence of microvoids in device quality glow discharge a-Si:H. We have studied the structural properties of these microvoids with molecular dynamics simulations. Using molecular dynamics simulations with classical potentials, we have created microvoids by removing Si and H atoms from a computer generated a-Si:H network. The internal surfaces of the microvoids were passivated with additional H atoms and the microvoids were fully relaxed. Microvoids over a limited range of sizes (5 - 90 missing atoms) were examined. We obtained a relaxed microvoid structure with no dangling bonds for a microvoid with 17 missing atoms, whereas other sizes examined produced less relaxed models with short H-H distances at the microvoid surface. The strains near the microvoid surface are described. The microvoid model was stable to local excitations on weak bonds in the vicinity of the microvoid. DOE

COMPUTATIONAL DIAGNOSTICS FOR DETECTING PHASE TRANSITIONS DURING NANOINDENTATION

S. M. Lee, C. G. Hoover, J. S. Kallman, A. J. DeGroot, and W. G. Hoover Dec. 1992 8 p Presented at the 16th Material Research Society International Symposium on the Scientific Basis for Nuclear Waste Management, Boston, MA, 30 Nov. - 5 Dec. 1992

(Contract W-7405-eng-48)

(DE93-016536; UCRL-JC-110982; CONF-921101-136) Avail: CASI HC A02/MF A01

We studied nanoindentation of silicon using nonequilibrium molecular dynamics simulations with up to a million particles. Both crystalline and amorphous silicon samples are considered. We use computational diffraction patterns as a diagnostic tool for detecting phase transitions resulting from structural changes. Simulations of crystalline samples show a transition to the amorphous phase in a region a few atomic layers thick surrounding the lateral faces of the indenter, as has been suggested by experimental results. Our simulation results provide estimates for the yield strength (nanohardness) of silicon for a range of temperatures. DOE

METASTABILITY OF YTTRIUM-OXIDES

A. F. Jankowski, M. P. Stratman, E. M. Sedillo, J. P. Hayes, and G. F. Gallegos Apr. 1993 19 p Presented at the International Conference on Metallurgical Coatings and Thin Films, San Diego, CA, 19-23 Apr. 1993

(Contract W-7405-eng-48)

(DE93-016548; UCRL-JC-112829; CONF-930419-3) Avail: CASI HC A03/MF A01

Metastable yttrium-oxide films are synthesized using reactive sputter deposition. The yttrium concentration of the as-deposited film is found to vary as a function of the sputter deposition rate. In addition to the synthesis of the cubic equilibrium phase Y2O3, oxide compounds can be formed with 40-80 at.% yttrium. The crystalline state of the as-deposited film is dependent on the substrate temperature. A metastable, orthorhombic yttrium-rich oxide is formed on room temperature substrates. Substrates of Ta10W are coated with several microns of yttrium-oxide. The stability of these yttrium-oxide coatings are investigated as subjected to an atmospheric pressure of oxygen at an elevated temperature of 1773 K. The coatings and substrates are examined for stability of crystalline structure, composition, cracking, adhesion, and corrosion. A yttrium-rich oxide coating is found to offer the best corrosion protection to the Ta10W substrate. DOE

THE LINDEMANN CRITERION OF MELTING FOR PURE AND MIXED IONIC CRYSTALS M.S. Thesis
David Berrebi Nov. 1991 83 p
(ITN-93-85210) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Generalization of the Lindemann criterion of melting for disordered mixed crystals provides the possibility of predicting the diagram of state for different mixtures. In the present work, this criterion was adapted for pure ionic crystals and was generalized for mixed ionic crystals also. Use of the optical phonon mode instead of the acoustic phonon mode gave the same kind of Lindemann formula as for metals. However, the difference between an ionic crystal and a simple atomic one is that the mass which characterizes the lattice is the reduced mass of the two ions rather than their sum, i.e., M(sub r) = M(sub A)M(sub C)/(M(sub A) + M(sub C)) instead of M(sub s) = M(sub A) + M(sub C) in which M(sub C) and M(sub A) are the masses of the cation and anion, respectively. A melting criterion, equivalent to the Lindemann criterion, was formulated for mixed binary ionic crystals. For many binary and some ternary systems, the calculations gave azeotropic phase boundary lines or surfaces which were confirmed by the experimental data. The criterion for solubility derived from these calculations also agreed well with experimental results. There was a good correlation between the present results and other calculations based on thermochemical considerations. The Debye temperature and Lindemann parameters were calculated for more complex binary solids, having diamond, zinc blend and chalcopyrite structures. ISA

A low and activated electron mobility over a wide temperature range, measured in reduced single-crystal Y2Ti2O7, reflects the small polaron transport mechanism. Electrical conductivity and thermoelectric power measurements were employed in order to derive the temperature dependence of the mobility. Both conductivity and electron concentration (deduced from the thermoelectric power) are activated. The large difference in the activation energies (which is much larger than kT) implies significant activation of the mobility, indicative of small polarons. The formation of small polarons in this material is attributed to strong electron-phonon interaction and to a large oxygen vacancy concentration, which had been introduced into the material via a reduction process in hydrogen of high temperature. Experimental support for a strong electron-phonon interaction is found in the strong temperature dependence of the optical band-gap and in the large coupling constant estimated from our transport data. We assume that this interaction is due mainly to acoustical phonons. The large oxygen vacancy concentration - deduced from our measurements and from ionic conductivity measurements by others - stabilizes the small polaron and thus increases the likelihood for its formation. Also related to this large oxygen vacancy concentration is the ability of Y2Ti2O7 to incorporate large amounts of chromium (in contrast to other titanates that become unstable). A structural model which accounts for small polaron conduction in this material is proposed. Author (ISA)

This work will discuss the sum rule of the luminescence spectrum, h nu(sub 1) + h nu(sub 2) = E(sub g), observed for semiconductors doped with transition metal impurities. h nu(sub 1) and h nu(sub 2), respectively, denote the photon energy of the zero phonon line (ZPL) in the infrared band and in the blue band. The sum of these two photon energy lines gives the band gap energy, E(sub g). The origin of the ZPL photon energy in the infrared band h nu(sub 1) is known and well explained by the intra-center transition between the two levels which results from the splitting by the ligand field potential. The origin of the ZPL photon energy in the blue band is explained in this work. The ZPL photon energy in the blue band is due to a second order process, which involves transition interference between the radiative term, P and the nonadiabatic term, L. The intensity of this process is essentially enhanced owing to a peculiar resonance of a Fermi type between the photon, phonons and the impurity transition. The essential conditions allowing this ZPL to be measured are that there is strong displacement in the Jahn-Teller effect and that the energy levels of the impurity are deep levels. Author (ISA)

QUANTUM STATE RESOLVED DESORPTION OF CO FROM SOLID SURFACES
K. C. Janda 1992 14 p
(Contract DE-FG02-88ER-13933)
(DE93-016876; DOE/ER-13933/3) Avail: CASI HC A03/MF A01

The work consisted of two major efforts. First, we studied the recombinative desorption of hydrogen atoms from a Si(100) surface. The desorption kinetics turned out to scale with the first power of the hydrogen atom coverage on the surface instead of the second power. The interpretation of these results is rather controversial. The second series of studies focus on mixing of isotopic composition between CO molecules on a Ni(111) surface. The isotopic mixing reaction was found to proceed at modest surface temperatures, but not to go to completion even at high surface temperatures. DOE

SOLUTION CHEMISTRY OPTIMIZATION OF SOL-GEL PROCESSED PZT THIN FILMS
S. J. Lockwood, R. W. Scwartz, B. A. Tuttle, and E. V. Thomas 1992 7 p Presented at the 1993 Spring Meeting of the MRS, San Francisco, CA, 12-16 May 1993
(Contract DE-AC04-76DP-00789)
(DE93-013776; SAND-92-2490C; CONF-9305195-1) Avail: CASI HC A02/MF A01

We have optimized the ferroelectric properties and microstructural characteristics of sol-gel PZT thin films used in a CMOS-integrated, 256 bit ferroelectric non-volatile memory. The sol-gel process utilized in our work involved the reaction of Zr n-butoxide, Ti isopropoxide, and Pb (4) acetate in a methanol/acetic acid solvent system. A 10-factor screening experiment identified solution concentration, acetic acid addition, and water volume as the solution chemistry factors having the most significant effects on the remanent polarization, coercive field, ferroelectric loop quality, and microstructural quality. The optimal values for these factors were determined by running a 3-factor uniform shell design, modeling the responses, and testing the models at the predicted optimal conditions. The optimized solution chemistry generated 3-layer, 300-400 nm thick films on RuO2 coated silicon substrates with coercive fields of less than 25 kv/cm (a 40-50% improvement over the original solution chemistry), a remanent polarization of 25-30 micro-C/cm and a reduction in the pyrochlore phase content below observable levels. Scaling down under micron of MOS (Metal Oxide Semiconductor) silicon devices is accomplished by fabricating oxide layers whose thickness is not in excess of a few tens of Angstrom. At this thickness, an atomic scale model capable of accounting for the microstrip and localized information is needed. A simulator based on energy models involving two body and three body interactions was completed and the Metropolis test was carried out. Many validity tests performed bore out the simulator's ability to simulate silicon and silicon oxide crystals. To analyze the growth of the first oxide monolayers, the oxygen atoms were deposited on the surface of the silicon substrate and the structure was relaxed. By converting the oxygen rate into the growth time, this method could then be applied to the practical example of oxide growth at room temperature and under atmospheric pressure on a Si(001) surface. It was found that the formation of the first oxide layers resulted from a distortion-relaxation process occurring between the oxygen and the silicon ones. From the simulated results, a logarithmic-linear law was formulated, approximating to within the

experimental results of oxide growth in the thickness range less than ten Angstrom. In addition, the introduction of point defects in the substrate allowed the model to be refined. In particular two cases of defect mixture, namely 1.5% of interstitials (that is, 3 interstitials for 200 silicon atoms of the substrate) and 6% of vacancies; and 6% of interstitials and 6% of vacancies enable the deviation between the simulated and experimental results to be reduced by half. We have used a bolometric technique to obtain accurate low temperature loss data for epitaxial thin films of Ba(0.6)K(0.4)BiO3 from 30 to 700 cm(exp -1). These films were grown on MgO and SrTiO3 substrates by MBE, off-axis sputtering, and laser deposition techniques. All films show a strong absorption onset near the BCS tunneling gap of 3.5k(sub B)T(sub c). We have analyzed these data using a Kramers-Kronig transformation and have corrected for finite film thickness effects. Results indicate that the absorption onset is consistent with a superconducting energy gap. Comparison is made with predictions based on strong coupling Eliashberg theory using (alpha)(exp 2)F(omega) spectra obtained from the literature. While we are able to fit the overall measured absorptivity, we are unable to fit the structure observed in our data. DOE

DYNAMIC JAHN-TELLER EFFECT: CALCULATION OF FINE STRUCTURE SPECTRUM, ISOTOPE SHIFT AND ZEEMAN BEHAVIOR AT DEEP CENTER Ni2+ IN CdS Ph.D. Thesis [DYNAMISCHER JAHN-TELLER-EFFEKT: BERECHNUNG DES FEINSTRUKTURSPEKTRUMS, DER ISOTOPIEVERSCHIEBUNG UND DES ZEEMAN-VERHALTENS AM TIEFEN ZENTRUM NI2+ IN CDS]
Juergen Schoepp 1992 160 p In GERMAN
(ETN-93-94394) Avail: CASI HC A08/MF A02

The internal transition of the deep center Ni2+ in II to IV semiconductor cadmium sulfide is examined with reference to crystal field theory. An algorithm was developed for calculation, in a basis fitted to trigonal symmetry, of fine structure operator matrix which is made of the sum of operators from spin trajectory coupling, trigonal field and electron phonon coupling. The dependence of energy level on the mass was calculated in order to examine the isotropy effect at Ni2+ transition. The mass dependence of phonon energy was estimated in an atomic cluster by using a valence force model from Keating for elastic energy. The Zeeman behavior of Ni2+ transition was examined for magnetic fields; the Zeeman operator was added to the fine structure operator and the resulting matrix was diagonalized. It is noticed that calculations are quantitatively and qualitatively in agreement with experiments. ESA

RENORMALIZED BAND STRUCTURE OF CuO2 LAYERS IN SUPERCONDUCTING COMPOUNDS: A MEAN FIELD APPROACH
M. Grilli, C. Castellani, and C. DiCastro 30 Mar. 1990 16 p
(Preprint-730; ETN-93-94368) Avail: CASI HC A03/MF A01

The band structure of a CuO2 plane including two copper orbitals (d(sub(x squared - y squared))) and d(sub(3z squared - r squared)) and two oxygen orbitals (p(sub x), p (sub y)) in tight binding approximation was analyzed. A Hubbard interaction between copper d holes was considered using a slave boson technique, while oxygen and copper holes interact via a nearest neighbors coulombic repulsion treated in Hartree-Fock approximation. The resulting band structure opens the way to a comparison with the experiments (ARPES (Angle Resolved Photoemission), XAS (X-Ray Absorption), infrared reflectivity) and to some theoretical implications on the pairing mechanism of high critical temperature superconductors. We have measured solute trapping of Sn in Al over a wide enough range of velocities to make a quantitative test of theory. The Continuous Growth Model of Aziz is the only one-parameter model that fits the data. We have also measured the diffusive speed - the growth rate at which interfacial partitioning is in mid-transition between equilibrium partitioning and complete solute trapping - for several solutes in Al. We have found an inverse correlation between the equilibrium partition coefficient and the diffusive speed. Taken together, these results give us unprecedented predictive capability in modeling rapid solidification processing. We have also theoretically examined short-range diffusion-limited growth, characteristic of incomplete solute trapping, and interface-limited growth, characteristic of complete solute trapping, in alloy solidification and have shown that the two regimes fall naturally out of a single unified theory of solidification. (ITN-93-85217) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Fifteenth-order high-temperature series expansions were developed for studying the critical behavior of the Ising spin glass with nearest-neighbor exchange interactions, each of which randomly assumes the values +J or -J. Series for the Edwards-Anderson spin glass susceptibility and two of its derivatives with respect to the ordering field were evaluated for hypercubic lattices in general dimensions, d, which extend previous general dimension series by five terms. Some measurable universal amplitude ratios were estimated from the new series and were also calculated analytically by means of the renormalization group and epsilon-expansion techniques. The results provide a smooth interpolation between the mean field results above six dimensions and experiments and simulations in physical dimensions.

Calculated derivatives are related to measurements of derivatives of the magnetization with respect to a uniform magnetic field. The properties of the dilute spin glass were studied, both at zero temperature and at finite temperatures. In high-temperature superconductors, the effect of the antiferromagnetic background of the Cu spins in the CuO2 planes on the spectrum of the mobile quasiparticles was studied. Several possible quasiparticles were studied, which involve the spin of the hole and the spins of the two neighboring copper ions. Using tight binding methods, four energy bands for each quasiparticle were obtained and the favored charge carrier to be a spin-one-half quasiparticle was found. ISA

PHASES AND PHASE TRANSITIONS OF POLYMERIC LIQUID CRYSTALS: A HIGH RESOLUTION X RAY DIFFRACTION AND LIGHT SCATTERING STUDY Ph.D. Thesis
Ehud Nachaliel 25 Mar. 1991 130 p In HEBREW
(ITN-93-85218) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Liquid crystal polymers (LCP) were compared with monomeric liquid crystals (MLC) by means of high-resolution x-ray (HIREX) and light scattering (LIS). Both HIREX and LIS were used to study the nematic-smectic(sub a) phase transition of P4.1 polysiloxane; the following critical exponents were determined: nu(sub parallel) = 0.77 +/-0.05; nu(sub normal) = 0.57 +/-0.08; gamma = 1.3 +/-0.10. The bare correlation lengths were found to be: xi(sup 0)(sub parallel) = 3.27 +/-0.08; xi(sup 0)(sub normal)q(sub 0) = 1.09 +/-0.14 which are unusually large in comparison with MLC. LIS experiments confirmed these values and indicated 'cross over' of nu(sub parallel) from 0.77 to 0.53. These results are typical of a system near to a tricritical point. HIREX was used to study the nematic-smectic(sub c) phase transition in C6-polysiloxane; the results were a good fit to Chen and Lubensky's mean field theory but the correlation lengths saturated near the transition to the nematic phase. A study of the smectic(sub a) phase of PA6 polyacrylate, near the transition to the nematic phase, showed that, except very close to the transition, the first and second harmonics of the x-ray structure factor were found to be consistent with the harmonic theory of de Gennes and Caille. This is thought to indicate the importance of anharmonic corrections near the phase transition. Fits to the experimental data yielded the compressibility constant, B and the splay elastic constant, K(sub s). B was found to obey a power law: B varies as t(sup phi) in which phi = 0.82 +/-0.08. In good agreement with theoretical predictions using exponents from the literature, but in disagreement with previous experimental results on MLC's. The splay elastic constant K(sub s) has roughly the same magnitude as in MLC's but tends to decrease by approximately 50% upon approaching the transition from below. This temperature dependence might give further evidence for the importance of anharmonicity in the system. Finally, the smectic(sub c) phase of C6 polysiloxane was studied, using HIREX. The tilt angle was found to decrease continuously upon decreasing temperature. This behavior, opposite to that observed in MLC's is caused by the stiffening in the plymeric backbone and spacers. ISA

QUATERNIONS AND THE HEURISTIC ROLE OF MATHEMATICAL STRUCTURES IN PHYSICS
Ronald Anderson (Boston Coll., Chestnut Hill, MA.) and G. C. Joshi Jul. 1992 39 p
(DE93-622865; UM-P-92/61; OZ-92/20) Avail: CASI HC A03/MF A01 (US Sales Only)

One of the important ways development takes place in mathematics is via a process of generalization. On the basis of a recent characterization of the process the authors propose that generalizations of mathematical structures that are already part of successful physical theories serve as good guides for the development of new physical theories. The principle is a more formal presentation and extension of a position stated earlier this century by Dirac. Quaternions form an excellent example of such a generalization, and a number of the ways in which their use in physical theories illustrates this principle, are discussed. DOE

A Fermi-liquid approach based on generalization of self-consistent field method to superfluid systems with triplet pairing is developed. Theory of Fermi-liquid for normal and superfluid states is based on a general expression for energy as a functional of normal and abnormal quasi-particle distribution functions. Under condition of thermodynamic potential minimum for a system, equations of self-consistency in triplet case describing superfluid phases with different symmetry properties are obtained. A detailed analysis of these equations for unitary and non-unitary states of superfluid Fermi-liquid is made. DOE

DISCUSSION OF STRESS TENSOR NONUNIQUENESS WITH APPLICATION TO NONUNIFORM, PARTICULATE SYSTEMS
J. B. Aidun 1993 5 p Presented at the 14th International Conference on High Pressure Science and Technology and the 1993 Technical Meeting of the Topical Group on Shock Compression of Condensed Matter, Colorado Springs, CO, 28 Jun. - 3 Jul. 1993
(Contract W-7405-eng-36)
(DE93-014352; LA-UR-93-1968; CONF-9306167-1) Avail: CASI HC A01/MF A01

The indeterminacy of the mechanical stress tensor has been noted in several developments of expressions for stress in a system of particles. It is generally agreed that physical quantities related to the stress tensor must be insensitive to this nonuniqueness, but there is no definitive prescription for insuring it. Kroener's tensor decomposition theorem is applied to the mechanical stress tensor sigma(sub ij) to show that its complete determination requires specification of its 'incompatibility,' epsilon(sub ijk)

epsilon(sub lmn) delta(sub j) delta(sub m) sigma(sub kn), in addition to its divergence, which is obtained from the momentum conservation relation. For a particulate system, stress tensor incompatibility is shown to vanish to recover the correct expression for macroscopically observable traction. This result removes concern about nonuniqueness without requiring equilibrium or arbitrarily-defined force lines. DOE

THE GEOMETRIC PHASE IN QUANTUM PHYSICS
A. Bohm Mar. 1993 64 p Presented at the North Atlantic Treaty Organization-ASI Meeting on Recent Problems in Mathematical Physics, Salamanca, Spain, Jun. 1992
(Contract DE-FG03-93ER-40757)
(DE93-011121; DOE/ER-40757/004; CONF-9206360-1) Avail: CASI HC A04/MF A01

After an explanatory introduction, a quantum system in a classical time-dependent environment is discussed; an example is a magnetic moment in a classical magnetic field. At first, the general abelian case is discussed in the adiabatic approximation. Then the geometric phase for nonadiabatic change of the environment (Anandan-Aharonov phase) is introduced, and after that, general cyclic (nonadiabatic) evolution is discussed. The mathematics of fiber bundles is introduced, and some of its results are used to describe the relation between the adiabatic Berry phase and the geometric phase for general cyclic evolution of a pure state. The discussion is restricted to the abelian, U(1) phase. DOE

THERMODYNAMIC STATUS OF STATIC AND DYNAMIC CONTACT ANGLES Ph.D. Thesis
Chester John Budziak 1992 247 p
(ISBN-0-315-73844-8) Avail: Univ. Microfilms Order No. DANN73844

A controversy about the meaning of contact angles and their lack of reproducibility is spread throughout the past century's literature of physics, chemistry and engineering. The majority of contact angle data available today is attributed to Zisman from work performed in the late 1940's and 1950's. His data is still in wide use today. Since Zisman considerable progress has been made in measuring contact angles. New procedures have been developed for surface and liquid preparations, as well as techniques for contact angle measurements. Non-ideal surfaces have been modeled allowing for thermodynamic interpretation of phenomenological contact angles. Still there is a need to incorporate all of these developments into a suitable methodology for measuring contact angles that are thermodynamically significant. The capillary rise at a vertical plate technique is best suited to the study of phenomenological contact angles. The precision of the capillary rise technique exceeds that of other contact angle measuring techniques since it is based on the measurement of a length, not an angle. It is also suited to the study of dynamic advancing, receding and static contact angles. The capillary rise technique has been unwanted in this thesis using digital image analysis in conjunction with high precision motor driven translational stages. The overall precision of the capillary rise at a vertical plate, h, using the automated cathetometer is equal to +/- 0.00001 cm. The corresponding precision in the contact angle is +/- 0.003 degrees. Three high quality solid surfaces were produced for studying contact angle phenomena: a dip-coating process was developed or coating a fluorocarbon solution (FC-721 produced by 3M) onto mica sheets; Teflon FEP was heat pressed against mica at elevated temperatures and pressures and microscope glass slides were siliconized. These surfaces exhibited less than +/- 0.1 degree variation in the contact angle over a 14 mm length of the surface. Dynamic advancing contact angles, measured on the above surfaces were found to be reproducible, independent of the velocity of the three phase contact line (for velocities less than 0.5 mm/min) and equal to the static contact angle. Contact angles measured by the capillary rise at a vertical plate technique were compared with contact angles of sessile drops measured by the Axisymmetric Drop Shape Analysis (ADSA). Excellent agreement has been found between contact angles obtained from the shape of a sessile drop and those obtained from the capillary rise on a vertical plate. The experimental contact angles were used to test two competing theories of determining the surface tension of solids from contact angles--the Fowkes surface component theory and the Neumann equation of state approach. It was found that the latter approach can be used to calculate the surface tension of solids and that an equation for interfacial tensions involves only the solid and 778 liquid surface tension. STATISTICAL MECHANICAL THEORY OF LIQUID ENTROPY
D. C. Wallace 1993 15 p Presented at the 1st Congress of the International Society for Theoretical Chemistry and Physics, Gerona, Spain, 28 Jun. - 3 Jul. 1993
(Contract W-7405-eng-36)
(DE93-016524; LA-UR-93-2390; CONF-930680-1) Avail: CASI HC A03/MF A01

The multiparticle correlation expansion for the entropy of a classical monatomic liquid is presented. This entropy expresses the physical picture in which there is no free particle motion, but rather, each atom moves within a cage formed by its neighbors. The liquid expansion, including only pair correlations, gives an excellent account of the experimental entropy of most liquid metals, of liquid argon, and the hard sphere liquid. The pair correlation entropy is well approximated by a universal function of temperature. Higher order correlation entropy, due to n-particle irreducible correlations for n greater than or = 3, is significant in only a few liquid metals, and its occurrence suggests the presence of n-body forces. When the liquid theory is applied to the study of melting, the author discovers the important classification of normal and anomalous melting, according to whether there is not or is a significant change in the electronic structure upon melting, and he discovers the universal disordering entropy for melting of a monatomic crystal. Interesting directions for future research are: extension to include orientational correlations of molecules, theoretical calculation of the entropy of water, application to the entropy of the amorphous state, and correlational entropy of compressed argon. The author clarifies the relation among different entropy expansions in the recent literature. DOE

NONLINEAR ANALYSIS, SCIENTIFIC COMPUTATION, AND CONTINUUM MECHANICS APPLIED TO THE SCIENCE OF MATERIALS Final Report, 9 Mar. 1990 - 9 Mar. 1993
Morton E. Gurtin and William O. Williams 9 Mar. 1993 12 p
(Contract MIPR-ARO-148-91)
(AD-A266641; ARO-27557.1-MA) Avail: CASI HC A03/MF A01

This grant enabled the department to form the Research Group in Mathematical Materials Science in 1990, a group that formed the nucleus of the Center for Nonlinear Analysis, established in 1991, by the ARO. The Center has created a vigorous environment for collaboration among

mathematicians and allied scientists. Within the international mathematics community the Center has assumed a leadership role, especially for questions related to materials science. The major research effort has focused toward developing, analyzing, and unifying mathematical models that characterize material behavior at a phenomenological level. The main thrust is applied nonlinear analysis, nonlinear continuum physics, and scientific computation. The educational goals have been to train young scientists and to train and involve female and minority students in the sciences.

WORKSHOP FOR COORDINATING SOUTH CAROLINA'S PRE-COLLEGE SYSTEMIC INITIATIVES IN SCIENCE AND MATHEMATICS
1992 13 p Presented at the Mathematics and Sciences Education Summit, Fripp Island, SC, 28-30 Aug. 1992 Limited Reproducibility: More than 20% of this document may be affected by poor print
(Contract DE-FG05-92ER-75842)
(DE93-012263; DOE/ER-75842/1; CONF-9208223) Avail: Issuing Activity (Department of Energy (DOE))
On 19 Dec. 1991, South Carolina's Governor, established the Governor's Mathematics and Sciences Advisory Board (MSAB) to articulate a vision and develop a statewide plan for improving science and mathematics education in South Carolina. The MSAB recognized that systemic change must occur if the achievement levels of students in South Carolina are to improve in a dramatic way. The MSAB holds two fundamental beliefs about systemic change: (1) all of the elements of the science and mathematics education system must be working in harmony towards the same vision; and (2) each element of the system must be held against high standards and progress must be assessed regularly against these standards.

This work presents the concept of technology parks and discusses three cases that exemplify the development of these structures in Brazil. General information about the cities where these experiences took place is made available and the relative importance of each park is discussed. It reviews the creation and development of universities and research institutes in each case and analyzes the existing organizational structures that promote the approximation between industry and research centers. The factors and the ways that led to the specialization of each technology park, the kinds of financing and governmental support received by each one and the role of scientists and entrepreneurs are discussed. Finally, a comparative analysis among the three cases is presented and the mechanisms that allowed the emergence of new technology base firms are highlighted. Author

GENERIC RESULTS OF THE SPACE PHYSICS COMMUNITY SURVEY Final Report
Chris Thompson, ed., Rikhi R. Sharma, and Nathaniel B. Cohen Aug. 1993 133 p
(Contract NASw-4394)
(NASA-CR-194538; NAS 1.26:194538) Avail: CASI HC A07/MF A02
This report summarizes the results of a survey of the members of the space physics research community conducted in 1990-1991 to ascertain demographic information on the respondents and information on their views on a number of facets of their space physics research. The survey was conducted by questionnaire and the information received was compiled in a database and analyzed statistically. The statistical results are presented for the respondent population as a whole and by four different respondent cross sections: individual disciplines of space physics, type of employers, age groups, and research techniques employed. Data from a brief corresponding survey of the graduate students of respondents are also included. Author (revised)

RELEGATION FOR DECENTRALIZED CONTROL Final Report, 1 Mar. 1989 - 30 Sep. 1992
U. Ozguner Feb. 1993 145 p
(Contract F49620-89-C-0046)
(AD-A265720; AFOSR-93-0390TR) Avail: CASI HC A07/MF A02

In this report, we describe the total effort at Ohio State on the Project Relegation for Decentralized Control. The first part of this reflects on one of the primary research topics which was considered in the first year of research. The work performed in the first year concentrated on optimal relegation. In the second part of the report, we concentrate on circuit analogies for large flexible space structures. Many large-scale systems such as flexible spacecraft appendages are nonlinear in behavior. But their large scale makes centralized control difficult. Thus, we propose several methods for designing decentralized control laws that take system nonlinearities into account. Equally important is the task of modeling large-scale systems. This motivated research on applying well-known circuit theory techniques to the problem of modeling flexible structures. The third part of this report describes work performed on another primary research topic which was considered in the first year of research-the use of singular perturbations for multi-time scale analysis of two-link structures. This work was developed for use in embedding active materials into the links and relegating the control tasks. DTIC

JOHNSON SPACE CENTER PROCUREMENT: CONTROLS OVER PAYMENTS TO CONTRACTORS SHOULD BE STRENGTHENED
23 Oct. 1992 11 p
(AD-A265722; GAO/IMTEC-93-2) Avail: CASI HC A03/MF A01

The objective of this work was to determine if the JSC had adequate internal controls over the management of information processing contracts, grants, and purchase orders. We selected three cost-plus-award-fee contracts with significant information processing requirements for our review because they are, according to NASA procurement representatives, among the most complex to manage, and have products that are usually unique and sometimes difficult to objectively measure and evaluate. At JSC we select and review the management controls over these three contracts, currently valued at more than $425 million. Although JSC has various systems of internal controls in place, those used for paying contractors make JSC vulnerable to potential waste, abuse, and mismanagement. Specifically, JSC contracting officers and technical representatives do not link the receipt of products and services actually received against the cost vouchers contractors submit for payment. While JSC relies on a series of internal control mechanisms for assurances that contractors deliver high quality goods and services, none of these mechanisms is a sufficient substitute for periodic linking of contractors cost vouchers with products actually received. As a result, opportunities exist for JSC to be billed and pay for goods and services that were never received. DTIC

The sharing of 'corporate knowledge' and lessons learned in the NASA aerospace community has been identified by Johnson Space Center survey participants as a desirable tool. The concept of the program is based on creating a user friendly information system that will allow engineers, scientists, and managers at all working levels to share their information and experiences with other users irrespective of location or organization. The survey addresses potential end uses for such a system and offers some guidance on the development of subsequent processes to ensure the integrity of the information shared. This system concept will promote sharing of information between NASA centers, between NASA and its contractors, between NASA and other government agencies, and perhaps between NASA and institutions of higher learning. SELECTED DATA ON ACADEMIC SCIENCE AND ENGINEERING R AND D EXPENDITURES: FISCAL YEAR 1991
1991 30 p *Its* Surveys of Science Resources Series
(NSF-92-329) Avail: CASI HC A03/MF A01

The data presented in this summary are being released in advance of a more comprehensive detailed statistical tables publication and are compiled from the National Science Foundation's Survey of Scientific and Engineering Expenditures at Universities and Colleges Fiscal Year (FY) 1991. They refer to science and engineering (S&E) expenditures for separately budgeted research and development (R&D). The phrase 'separately budgeted research and development expenditures' refers to all funds that are expended for activities specifically organized to produce research outcomes and that are commissioned by an agency external to the institution or that are separately budgeted by an organizational unit within the institution. Data presented in these tables are assembled from the most recently completed survey and represent the latest totals available as of August 1992. Since both current-year and prior-year data are subject to revision in subsequent years, references to prior-years' data should be restricted to the latest data release. Derived from text

DECISION SUPPORT FOR MATERIAL PLANNERS Ph.D. Thesis [BESLISSINGSONDERSTEUNING VOOR MATERIAALPLANNERS]

Adrianus Albertus An denBoer 1992 128 p In DUTCH
(ISBN-9-03-860201-4; ETN-93-94056) Copyright Avail: CASI HC A07/MF A02

The information processing and decision making behavior of material planners was analyzed in order to improve their logistic performance and to make recommendations for the (re)design of decision support systems. Insight was gained into the information processing and decision making behavior by comparative studies in different factories. The problem of the material planner was described in terms of theoretical decision science and psychological concepts. Possible improvements are discussed from a point of view of information technology and ergonomics. The recommended design for decision support is only operational as a prototype. Future developments are pointed out and recommendations for improving the decision support in general and for the material planner in particular are given. ESA

SCIENTISTS, ENGINEERS, AND TECHNICIANS IN NONMANUFACTURING INDUSTRIES: 1990. DETAILED STATISTICAL TABLES
Joseph P. Gannon 1990 88 p *Its* Surveys of Science Resources Series
(NSF-92-334) Avail: CASI HC A05/MF A01; SOD HC

Estimates are presented on the total number of scientists, engineers, and technicians (SET's) who were employed in nonmanufacturing industries in 1990. The estimates were developed from the Labor Department's Occupational Employment Statistics (OES) Survey, a Federal/State program that produces national and State estimates of employment by industry for nonfarm wage and salary workers. The Bureau of Labor Statistics (BLS) has the primary responsibility for developing OES survey procedures and providing technical guidance and assistance with survey problems. State Employment Security Agencies implement the survey at State levels and prepare current and projected employment statistics for these labor markets. Some States also prepare sub-State estimates. The National Science Foundation (NSF) has enhanced the BLS effort since 1977 by financing the collection of full details on the types of scientific and technical jobs filled by industry. Analysis of this information provides insight into the dynamics of the labor market. Author (revised)

AN EXPERIMENTAL ANALYSIS OF BOTTLENECK-CENTERED OPPORTUNISTIC SCHEDULING
Nicola Muscettola Mar. 1993 18 p
(Contract F30602-91-F-0016)
(AD-A266643; CMU-RI-TR-93-06) Avail: CASI HC A03/MF A01

Bottleneck-centered, opportunistic scheduling is an effective problem solving paradigm based on a fundamental Analyze-Focus-Decide cycle. Opportunistic schedulers have shown better overall performance than other scheduling systems adopting different paradigms. However, in order to make more significant progress, we need to better understand how the different phases of the opportunistic cycle interact during problem solving. This paper reports an extensive analysis of a specific embodiment of the opportunistic scheduling paradigm, the Conflict Partition Scheduling procedure. By analyzing the role of each phase of CPS proposing variations and anticipating expected effects on the performance of the algorithm, we aim to develop a better understanding of the importance of the different phases and of their interactions. The hypotheses on the performance of CPS are then verified in an experimental analysis. The results of this study provide hard evidence that supports the fundamental assumptions made by opportunistic scheduling. DTIC

JTEC PANEL REPORT ON KNOWLEDGE-BASED SYSTEMS IN JAPAN Final Report
Michael J. DeHaemer, Geoffrey M. Holdridge, ed., Amy L. Bernstein, ed., and Robert S. Engelmore, ed. May 1993 218 p Sponsored in part by ARPA
(Grant NSF ENG-91-11333)
(PB93-170124; ISBN-1-883712-00-9) Avail: CASI HC A10/MF A03

This is the final report of the Japanese Technology Evaluation Center (JTEC) Panel on Knowledge-Based Systems in Japan, sponsored by the National Science Foundation and the Advanced Research Projects Agency. It examines Japanese expert systems applications and advanced knowledge-based (KB) systems R&D, and compares progress and trends with similar developments in the United States. The report includes an executive summary, an introductory chapter, and chapters on: applications; tools and infrastructure; advanced research; national projects; integration with conventional data processing systems; and business perspectives. Site reports on the visits made to Japanese corporate, government and university facilities are included as appendices. The panel observed some contrasts between U.S. and Japanese KB research and applications: Japanese computer manufacturers play a dominant role in the technology and business of expert systems. These large companies have mastered this technology as a core competence, and tend to use systems engineers rather than knowledge engineers to build systems. Consequently, integration with conventional information technology is handled routinely and smoothly. Japanese companies have more experience in applications of KB systems technology to heavy industry, particularly in steel and construction. Products based on the use of fuzzy control logic have had a big impact in Japanese consumer products. Japanese companies are continuing their substantial investments in KB systems technology and business. Compared to the U.S., the quantity of Japanese university research is considerably smaller, but the quality of the best work is as high. Author (revised)

MAKING THE CONNECTION BETWEEN INFORMATION MODELING AND IMPLEMENTATION
M. J. Eaton 1993 8 p Presented at the INGRES World 1993 Conference, Santa Clara, CA, 9-13 May 1993
(Contract DE-AC04-76DP-00789)
(DE93-011588; SAND-93-0869C; CONF-9305161-2) Avail: CASI HC A02/MF A01

Over the past several years, the Information Technology Department at Sandia Laboratories has developed information systems based on a solid foundation of information modeling and data administration. The output of the information modeling efforts is a fifth normal form relational table structure and associated data constraints. Developers would then implement the system by creating end-user application software. Traditionally, the development process combined the code necessary for maintaining data constraints with the code to provide the user interface (i.e. forms, windows, etc.). This approach has an adverse effect on the maintainability of the software as the system (i.e. the information model) changes over time. This paper will discuss the application of a direct connection between the information model and the implementation of a database with associated code to maintain required data constraints. The automated generation of this code allows the developers to concentrate on the user interface code development. The technique involves generating database procedure code automatically from the information modeling process. The database procedure code will enforce the data constraints defined in the information model. This has resulted in a fully functional database with complete rules enforcement within days of a completed information model. This work used the Knowledge Management Extensions of the Ingres database

software. Changes to the architecture of both Application By Forms (ABF) and Ingres Windows4GL client applications required by this process will also be discussed. DOE

VENDOR INFORMATION SYSTEM FOR INNOVATIVE TREATMENT TECHNOLOGIES. USER MANUAL (VISITT VERSION 2.0). NUMBER 2
Apr. 1993 71 p See also PB92-221647
(PB93-196640; EPA/542/R-93/001) Avail: CASI HC A04/MF A01

The Technology Innovation Office (TIO) of the U.S. Environmental Protection Agency (EPA) Office of Solid Waste and Emergency Response (OSWER) has developed the Vendor Information System for Innovative Treatment Technologies (VISITT) to provide current information on innovative treatment technology for the remediation of contaminated sites. VISITT contains technology information submitted by developers, manufacturers, and suppliers of innovative treatment technology equipment and services. The database provides a means for innovative technology vendors to make their products and capabilities known to state, Federal, and private sector professionals. The VISITT update, Version 2.0, contains approximately 230 technologies from more than 140 vendors. In addition to the increase in technologies and vendors, Version 2.0 also contains updated information on Version 1.0 vendors and enhanced printing capabilities that allow easier comparison of technologies and vendors. DEFENSE INFORMATION INFRASTRUCTURE: RATIONALE FOR DEFENSE MANAGEMENT REPORT DECISION 918 Final Report
Cynthia Kendall and Bill Beyer 26 May 1993 30 p
(AD-A266014) Avail: CASI HC A03/MF A01

On 15 Sep. 1993, the Deputy Secretary of Defense approved DMRD 918, 'Defense Information Infrastructure'. The objective of this DMRD is to establish an information infrastructure which provides a seamless, transparent, and protected end-to-end information transfer capability for DOD users. The paper Defense information Infrastructure: Rational for Defense Management Report Decision 918, Sep. 1992 provides the underlying assumption, principles, and strategy which provided the basis for the concept of the approved DRMD. The overall Defense Information Infrastructure (DII) and its role in support of joint operations is described. It defines those sub-elements of the Infrastructure for which the Defense information Systems Agency would have management responsibility (as envisioned in the development of the original DMRD), including a description of how the DISA could operate and finance theses functions. It outlines a potential sequence of actions to implement the information infrastructure that better support our joint and combined forces. The paper may be useful to anyone who has an interest in the genesis of the DMRD, especially as a baseline document from which informed discussion of the DMRD may proceed. DTIC

N94-12983# Superconducting Super Collider Lab., Dallas, TX.
BUILDING THE REPOSITORIES TO SERVE
D. Lersch Apr. 1993 5 p Presented at the International Particle Accelerator Conference, Washington, DC, 17-20 May 1993
(Contract DE-AC35-89ER-40486)
(DE93-014100; SSCL-Preprint-288; CONF-930511-90) Avail: CASI HC A01/MF A01

The project to design and build the Superconducting Super Collider (SSC) Laboratory also includes the exciting opportunity to implement client/server information systems. Lab technologists were eager to take advantage of the cost savings inherent in the open systems and a distributed, client server environment and, at the same time, conscious of the need to provide secure repositories for sensitive data as well as a schedule sensitive acquisition strategy for mission critical software. During the first year of project activity, micro-based project management and business support systems were acquired and implemented to support a small study project of less than 400 people allocating contracts of less than $1 million. The transition to modern business systems capable of supporting more than 10,000 participants (world wide) who would be researching and developing the new technologies that would support the world's largest scientific instrument, a 42 Tevatron, superconducting, super collider became a mission critical event. This paper will present the SSC Laboratory's strategy to balance our commitment to open systems, structured query language (SQL) standards and our success with acquiring commercial off the shelf software (COTS) to support our immediate goals. Included will be an outline of the vital roles played by other labs (Livermore, CERN, Brookhaven, Fermi and others) and a discussion of future collaboration potentials to leverage the information activities of all Department of Energy (DOE) funded labs. [DEVELOPMENT OF ISO CONNECTION-ORIENTED/CORRECTIONLESS GATEWAYS] Final Report
Lawrence H. Landweber 4 Apr. 1991 1 p
(Grant NAGw-1318)
(NASA-CR-193667; NAS 1.26:193667) Avail: CASI HC A01/MF A01

The project had two goals, establishment of a gateway between French and U.S. academic networks and studies of issues related to the development of ISO connection-oriented/connectionless (CO/CL) gateways. The first component involved installation of a 56K bps line between Princeton Univ. and INRIA in France. The end-points of these lines were connected by Vitalink link level bridges. The Princeton end was then connected to the NSFNET via the John Von Neumann Supercomputer Center. The French end was connected to Transpac, the French X.25 public data network and to the French IP research internet. U.S. users may communicate with users of the French internet by e-mail and may access computational and data resources in France by use of remote login and file transfer. The connection to Transpac enables U.S. users to access the SIMBAD astronomical database outside of Paris. Access to this database from the U.S. can be via TCP/IP or DECNET (via a DECNET to TCP/IP gateway) protocols utilizing a TCP/IP to X.25 gateway developed and operated by INRIA. The second component of the project involved experiments aimed at understanding the issues involved is ISO CO/CL gateways. An experimental gateway was developed at Wisconsin and a preliminary report was prepared. Because of the need to devote most resources to the first component of the project, work in this area did not go beyond development of a prototype gateway. Author (revised)

KNOWLEDGE-BASED OCEANOGRAPHIC IMAGE COMPRESSION Final Report
Ronald J. Holyer and Juanita R. Chase Mar. 1993 30 p
(AD-A265752; NRL/MR/7240-93-7026) Avail: CASI HC A03/MF A01

The Navy has a requirement for image compression on the order of 30:1 for transmission of satellite imagery to the Fleet. Many common image compression algorithms will not retain the desired image fidelity at this compression ratio. This study investigates the use of domain specific oceanographic knowledge in the compression process as one means of achieving the required performance. A transform-based compression algorithm, which draws upon a large, representative image archive for a statistical description of oceanographic knowledge, is proposed and demonstrated. Very high compression ratios seem to be achievable by this method (much greater than 30:1), but the exact evaluation of performance potential requires further study. Among the unique characteristics of this approach is the ability to fill in cloudy areas with estimated image features. While knowledge-based image compression shows much promise for very high compression ratios, it does have significant drawbacks. The most significant of these are the requirement for a large image archive and much computation in order to build the region specific, knowledge-based algorithm. For these reasons, the compression approach demonstrated here is not seen as the single solution to all of the Navy's satellite image compression problems. However, in many applications the proposed algorithm could be very beneficial. In concert with other more generic image compression algorithms, knowledge-based image compression should play an important role. DTIC

As part of Phase 4 of the NASA/DoD Aerospace Knowledge Diffusion Research Project, two studies were conducted that investigated the technical communications practices of India and U.S. aerospace engineers and scientists. Both studies have the same seven objectives: first, to solicit the opinions of aerospace engineers and scientists regarding the importance of technical communications to their profession; second, to determine the use and production of technical communications by aerospace engineers and scientists; third, to seek their views about the appropriate content of an undergraduate course in technical communications; fourth, to determine aerospace engineers' and scientists' use of libraries, technical information centers, and on-line data bases; fifth, to determine the use and importance of computer and information technology to them; sixth, to determine their use of electronic networks; and seventh, to determine their use of foreign and domestically produced technical reports. A self-administered questionnaire was distributed to aerospace engineers and scientists at the Indian Institute of Science and the NASA Langley Research Center. The completion rates for the India and U.S. surveys were 48 and 53 percent, respectively. Responses of the India and U.S. participants to selected questions are presented in this report. Author

[ARCHIVING OF HEAO-1 DATA PRODUCTS AND THE CREATION OF A GENERAL USER'S GUIDE TO THE ARCHIVE] Final Technical Report
John A. Nousek 26 Feb. 1993 15 p
(Grant NAG8-758)
(NASA-CR-193415; NAS 1.26:193415) Avail: CASI HC A03/MF A01

The activities at Penn State University are described. Initiated at Penn State in Jan. 1989, the goal of this program was to preserve the results of the HEAO-1 mission by transforming the obsolete and disorganized data products into modern and documented forms. The result of this effort was an archive of top level data products, totalling 70 Mbytes; a general User's Guide to the archive, which is attached; and a hardcopy archive containing standardized plots and output of fits made to all the pointing data taken by the HEAO-1 A-2 LED experiment. A more detailed description of these activities is found in the following sections. Accompanying this document is a copy of the User's Guide which may provide additional detail. Author (revised)

ACCESS TO JAPANESE AEROSPACE-RELATED SCIENTIFIC AND TECHNICAL INFORMATION: THE NASA AEROSPACE DATABASE
Glenn P. Hoetker and Thomas F. Lahr Oct. 1993 12 p
(NASA-TM-109413; NAS 1.15:109413) Avail: CASI HC A03/MF A01

With Japan's growing R&D strength in aerospace-related fields, it is increasingly important for U.S. researchers to be aware of Japanese advances. However, several factors make it difficult to do so. After reviewing the diffusion of aerospace STI in Japan, four factors which make it difficult for U.S. researchers to gather this information are discussed: language, the human network, information scatter, and document acquisition. NASA activities to alleviate these difficulties are described, beginning with a general overview of the NASA STI Program. The effects of the new National Level Agreement between NASA and NASDA are discussed. Author

VIEW GENERATED DATABASE Final Report
James G. Downward 1992 225 p
(Contract NAS7-1066; SBIR-05.01-8500)
(NASA-CR-191397; NAS 1.26:191397) Avail: CASI HC A10/MF A03

This document represents the final report for the View Generated Database (VGD) project, NAS7-1066. It documents the work done on the project up to the point at which all project work was terminated due to lack of project funds. The VGD was to provide the capability to accurately represent any real-world object or scene as a computer model. Such models include both an accurate spatial/geometric representation of surfaces of the object or scene, as well as any surface detail present on the object. Applications of such models are numerous, including acquisition and maintenance of work models for tele-autonomous systems, generation of accurate 3-D geometric/photometric models for various 3-D vision systems, and graphical models for realistic rendering of 3-D scenes via computer graphics. SCORE USER'S MANUAL
S. A. Brown and D. Braddy Jan. 1993 42 p Revised
(Contract W-7405-eng-48)
(DE93-015987; UCRL-MA-108976-Rev-1) Avail: CASI HC A03/MF A01

PACT is a set of tools to facilitate the development of portable scientific software and to visualize scientific data. As with most constructs, PACT has a foundation. In this case that foundation is SCORE. SCORE (System CORE) has two main functions. The first and perhaps most important is to smooth over the differences between different C implementations and define the parameters which drive most of the conditional compilations in the rest of PACT. Second, it contains several groups of functionality that are used extensively throughout PACT. Although C is highly standardized now, that has not always been the case. Roughly speaking C compilers fall into three categories: ANSI standard; derivative of the Portable C Compiler (Kernighan and Ritchie); and the rest. PACT has been successfully ported to many ANSI and PCC systems. It has never been successfully ported to a system in the last category. The reason is mainly that the 'standard' C library supplied with such implementations is so far from true ANSI or PCC standard that PACT would have to include its own version of the standard C library in order to work at all. SCORE's job is to include the requisite standard headers and ensure that certain key standard library functions exist and function correctly so that, to applications which include the SCORE header(s) and load with SCORE, all C implementations look the same. Once SCORE has been successfully compiled, only the areas of graphics, IPC, and binary data handling require special handling. DOE

The goal of the Universal Index System (UIS), is to provide an easy-to-use and reliable interface to many different kinds of database systems. The impetus for this system was to simplify database index management for users, thus encouraging the use of indexes. As the idea grew into an actual system design, the concept of increasing database performance by facilitating the use of time-saving techniques at the user level became a theme for the project. This Final Report describes the Design, the Implementation of UIS, and its Language Interfaces. It also includes the User's Guide and the Reference Manual. Author (revised)

DESIGN OF PARTIALLY SUPERVISED CLASSIFIERS FOR MULTISPECTRAL IMAGE DATA

Byeungwoo Jeon and David Landgrebe Mar. 1993 87 p
(Grant NAGw-925)
(NASA-CR-194299; NAS 1.26:194299; TR-EE-93-11) Avail: CASI HC A05/MF A01

A partially supervised classification problem is addressed, especially when the class definition and corresponding training samples are provided a priori only for just one particular class. In practical applications of pattern classification techniques, a frequently observed characteristic is the heavy, often nearly impossible requirements on representative prior statistical class characteristics of all classes in a given data set. Considering the effort in both time and man-power required to have a well-defined, exhaustive list of classes with a corresponding representative set of training samples, this 'partially' supervised capability would be very desirable, assuming adequate classifier performance can be obtained. Two different classification algorithms are developed to achieve simplicity in classifier design by reducing the requirement of prior statistical information without sacrificing significant classifying capability. The first one is based on optimal significance testing, where the optimal acceptance probability is estimated directly from the data set. In the second approach, the partially supervised classification is considered as a problem of unsupervised clustering with initially one known cluster or class. A weighted unsupervised clustering procedure is developed to automatically define other classes and estimate their class statistics. The operational simplicity thus realized should make these partially supervised classification schemes very viable tools in pattern classification. Author (revised)

NASA AEROSPACE DATABASE SUBJECT SCOPE: AN OVERVIEW

Sep. 1993 28 p
(NASA-SP-7107; NAS 1.21:7107) Avail: CASI HC A03/MF A01

Outlined here is the subject scope of the NASA Aerospace Database, a publicly available subset of the NASA Scientific and Technical (STI) Database. Topics of interest to NASA are outlined and placed within the framework of the following broad aerospace subject categories: aeronautics, astronautics, chemistry and materials, engineering, geosciences, life sciences, mathematical and computer sciences, physics, social sciences, space sciences, and general. A brief discussion of the subject scope is given for each broad area, followed by a similar explanation of each of the narrower subject fields that follow. The subject category code is listed for each entry. Author (revised)

DATAA: DATA ACQUISITION MADE EASY

R. L. Hodgin Oct. 1992 21 p
(Contract W-7405-eng-48)
(DE93-014683; UCRL-ID-113844) Avail: CASI HC A03/MF A01

DATAA was written to fill the need for a versatile, general purpose data acquisition program for digital scopes and data recorders. Unfortunately, a 'GPIB' software standard was only recently developed for such instruments. For operating the older, pre-standard digital scopes, different software for each instrument is usually required. The concept for this program is that the operator controls the instrument settings. The computer controls the data acquisition. 'Let the operators do what they do best, let the computer do what it does best.' In a research environment, the diagnostic setup requirements are constantly changing. Reliable, reproducible data is essential. DATAA accomplishes this task. Data is automatically stored, with setup information being included with each data file. A plotting routine allows for easy examination of all data. For hardcopies, data files are printed at 300DPI to a Laser Jet printer. This report contains a brief description of each main command. Included are figures showing the main display screens and sample waveform charts. DOE

SECURITY CLAUSES IN THE WRITING AND ANALYSIS OF STANDARDS

Bronia Szczygiel and Andrew Harry Feb. 1993 17 p Sponsored by Dept. of Trade and Industry, London, United Kingdon

(NPL-DITC-216-93; ETN-93-94463) Copyright Avail: National Physical Laboratory, Teddington, Middlesex TW11 0LW, United Kingdom HC

Limitations in the power of formal methodologies in expressing security aspects of software led to the suggestion of the need for security clauses, these being statements within standards addressing the security properties that an implementation of the standard must demonstrate. The value of security clauses is discussed, and their relationship to formal specifications of standards is examined. The possible structure of such clauses and how they might be integrated into current methodologies are discussed and examples for a mechanistic and a protocol based standard are given.

A DATA BASE FOR AGING OF STRUCTURAL MATERIALS

C. B. Oland, D. J. Naus, and S. Jerath (North Dakota Univ., Grand Forks.) 1993 6 p *Presented at the 12th Biennial Conference for the International Association for Structural Mechanics in Reactor Technology, Stuttgart, Germany, 16-20 Aug. 1993*

(Contract DE-AC05-84OR-21400)

(DE93-009714; CONF-930803-5) Avail: CASI HC A02/MF A01

USNRC initiated a Structural Aging (SAG) Program at ORNL. The objective of the program is to provide assistance in identifying potential structural safety issues and to establish acceptance criteria for use in nuclear power plant evaluations for continued service. One part focuses on the development of a Structural Materials Information Center where long-term and environment-dependent material properties are being collected and assembled into a data base. This data base is presented in two complementary formats. The Structural Materials Handbook is an expandable, hard-copy reference document that contains the complete data base for each material. The Structural Materials Electronic Data Base is accessible using an IBM-compatible personal computer. This paper presents an overview of the Structural Materials Information Center and briefly describes the features of the handbook and the electronic data base. In addition, a proposed method for using the data base to establish current property values for materials in existing concrete structures and to estimate the future performance of these materials is also presented. DOE

INFORMATION REQUIREMENTS OF SELF-MANAGING TEAMS

E. M. VanAken 1992 12 p Presented at the International Conference on Self-Managing Teams, Dallas, TX, Sep. - Oct. 1992

(Contract DE-FG02-91NP-00119)

(DE93-010319; CONF-9209334-1) Avail: CASI HC A03/MF A01

In response to the significant challenges organizations face today, many managers have put in place continuous improvement efforts to help the organization to enhance its competitive position. A key element of continuous improvement efforts is employee involvement, and one of the most complex, mature, and effective forms of employee involvement is self-managing teams. A self-managing team is a group of employees, usually eight to fifteen, which is responsible for planning, implementing, controlling, and improving work processes. There are many characteristics of self-managing teams which are discussed frequently in the literature and are common topics of seminars and workshops on SMT's, including the role of the first-line supervisor, the structure of teams, the training necessary, and the pay system for SMT's. However, one area which has not been as widely researched is the role of information--what types of information do self-managing teams need? This paper addresses this question. Results from a multiple case study research project focusing on the information requirements of SMT's are presented. Specifically, seven types of information SMT's need are identified, as well as general characteristics of the information system. By information system, I mean very broadly, the system (both formal and informal) which provides information of any kind to a self-managing team. The results of this research can be thought of as 'design features' for an information system to support SMT's. Practicing managers can use these design features in two ways: they can design them into beginning SMT efforts; or, for SMT's already established, managers can compare them to the existing information system and adjust accordingly. AN EXPERT SYSTEM CLASS LIBRARY FOR AUDITION [BIBLIOTHEQUE DU TYPE SYSTEME EXPERT POUR AUDITION]

David M. Morton and Andrew M. Drinnan Dec. 1992 13 p

(IME-MET-TR-008; CTN-93-60860) Avail: CASI HC A03/MF A01

An expert system class library for the object-oriented Audition environment has been created. The expert system is a forward chaining rule-based inference engine. It owns a set of static facts that are supplied by the user and a set of dynamic facts that the system has inferred. Dynamic facts are inferred from existing facts using a set of user-specified rules. User specified actions may also be executed based on the results of these inferences. To minimize inferencing time, rules are grouped into rulesets. Groups of rulesets that define complete sets of knowledge are organized into knowledge bases. An expert system may have multiple knowledge bases. A rule editor is provided for creating, editing and debugging. An overview is presented for the system applied for air traffic control. CISTI

AN EVALUATION OF ZIM AND ENTITY-RELATIONAL MODELS IN MANAGING DATABASES FOR DECISION SUPPORT SYSTEMS

D. B. Kotak and T. B. Wong Apr. 1991 31 p

(ERB-1034; NRC-31835; CTN-93-60823) Copyright Avail: CASI HC A03/MF A01

ZIM is a fourth generation database management system developed by Zanthe Information Management and designed using the newest theory in database design, the entity relationship set theory. ZIM was evaluated as a potential candidate for use as a tool in developing a computer based decision support system for solving capacity flow problems. An overview of ZIM is presented, including software installation and the application generation process. The evaluation was carried out by building, as a test case, a database to support the vessel berthing information for the British

Columbia Grain Shippers' Clearance Association. ZIM is shown to be an extremely powerful and flexible system for developing standalone databases, particularly for developing daily production applications. Its procedural language, coupled with its excellent screen definition system, provides full flexibility in setting up user-oriented menus and displays. However, this flexibility is achieved at the cost of having to learn a completely new language, and ZIM's poor external language interface and hidden data file structure do not lend themselves to integration with other software packages. The Comprehensive Epidemiologic Data Resource (CEDR) and Populations at Risk to Environmental Pollution (PAREP) projects, of the Information and Computing Sciences Division (ICSD) at Lawrence Berkeley Laboratory (LBL), are using public socio-economic and geographic data files which are available to CEDR and PAREP collaborators via LBL's computing network. At this time, 70 CD-ROM diskettes (approximately 36 gigabytes) are on line via the Unix file server cedrcd. lbl. gov. Most of the files are from the US Bureau of the Census, and most pertain to the 1990 Census of Population and Housing. All the CD-ROM diskettes contain documentation in the form of ASCII text files. Printed documentation for most files is available for inspection at University of California Data and Technical Assistance (UC DATA), or the UC Documents Library. Many of the CD-ROM diskettes distributed by the Census Bureau contain software for PC compatible computers, for easily accessing the data. Shared access to the data is maintained through a collaboration among the CEDR and PAREP projects at LBL, and UC DATA, and the UC Documents Library. Via the Sun Network File System (NFS), these data can be exported to Internet computers for direct access by the user's application program(s). DOE

NASA/DOD AEROSPACE KNOWLEDGE DIFFUSION RESEARCH PROJECT. PAPER 34: USERS AND USES OF DOD TECHNICAL REPORTS: A REPORT FROM THE FIELD
Thomas E. Pinelli, Rebecca O. Barclay (Rensselaer Polytechnic Inst., Troy, NY.), and John M. Kennedy (Indiana Univ., Bloomington.) 1993 23 p Presented at the 1993 Military Librarians Workshop, Albuquerque, NM, 15-19 Nov. 1993; sponsored by Phillips Lab. and Special Libraries Association
(NASA-TM-109327; NAS 1.15:109327) Avail: CASI HC A03/MF A01

The NASA/DoD Aerospace Knowledge Diffusion Research Project attempts to understand the information environment in which U.S. aerospace engineers and scientists work, the information-seeking behavior of U.S. aerospace engineers and scientists, and the factors that influence the use of scientific and technical information (STI) (Pinelli, Barclay, and Kennedy, 1991). Such an understanding could (1) lead to the development of practical theory, (2) contribute to the design and development of aerospace information systems, and (3) have practical implications for transferring the results of federally funded aerospace research and development (R&D) to the U.S. aerospace community. This paper presents data from two information-seeking behavior studies involving U.S. aerospace engineers and scientists that were undertaken as Phase 1 activities of the NASA/DoD Aerospace Knowledge Diffusion Research Project. Responses from three groups of respondents - DoD, other government, and industry - are presented for two sets of selected questions. One set focuses on DoD technical reports: their use and importance, reasons for non-use, the factors affecting their use, the sources used to find out about them and the sources used to physically obtain them, and the quality of DoD technical reports. The second set focuses on information sources used in problem solving: the use of U.S. government technical reports in problem solving and the information sources used to find out about U.S. government technical reports. Kennedy (Indiana Univ., Bloomington.), and Rebecca O. Barclay (Rensselaer Polytechnic Inst., Troy, NY.) 1994 10 p Proposed for presentation at the 32nd Aerospace Sciences Meeting and Exhibit of the American Institute of Aeronautics and Astronautics, Reno, NV, 11 Jan. 1994
(NASA-TM-109328; NAS 1.15:109328; AIAA Paper 94-0839) Avail: CASI HC A02/MF A01

This paper reports the results of an exploratory study that investigated the influence of technical uncertainty on the use of information and information sources by U.S. industry-affiliated aerospace engineers and scientists in completing or solving a project, task, or problem. Data were collected through a self-administered questionnaire. Survey participants were U.S. aerospace engineers and scientists whose names appeared on the Society of Automotive Engineers (SAE) mailing list. The results support the findings of previous research and the following study assumptions. Information and information-source use differ for projects, problems, and tasks with high and low technical uncertainty. As technical uncertainty increases, information-source use changes from internal to external and from informal to formal sources. As technical uncertainty increases, so too does the use of federally funded aerospace research and development (R&D). The use of formal information sources to learn about federally funded aerospace R&D differs for projects, problems, and tasks with high and low technical uncertainty. Author

NASA/DOD AEROSPACE KNOWLEDGE DIFFUSION RESEARCH PROJECT. PAPER 39: THE ROLE OF COMPUTER NETWORKS IN AEROSPACE ENGINEERING
Ann P. Bishop (Illinois Univ., Urbana-Champaign.) and Thomas E. Pinelli

1994 16 p Proposed for presentation at the 32nd Aerospace Sciences Meeting and Exhibit of the American Institute of Aeronautics and Astronautics, Reno, NV, 11 Jan. 1994
(NASA-TM-109331; NAS 1.15:109331; AIAA Paper 94-0841) Avail: CASI HC A03/MF A01

This paper presents selected results from an empirical investigation into the use of computer networks in aerospace engineering. Such networks allow aerospace engineers to communicate with people and access remote resources through electronic mail, file transfer, and remote log-in. The study drew its subjects from private sector, government and academic organizations in the U.S. aerospace industry. Data presented here were gathered in a mail survey, conducted in Spring 1993, that was distributed to aerospace engineers performing a wide variety of jobs. Results from the mail survey provide a snapshot of the current use of computer networks in the aerospace industry, suggest factors associated with the use of networks, and identify perceived impacts of networks on aerospace engineering work and communication. Until the recent dissolution of the Soviet Union, the Communist Party exerted a strict control of access to and dissemination of scientific and technical information (STI). This article presents models of the Soviet-style information society and the Western-style information society and discusses the effects of centralized governmental control of information on Russian technical communication practices. The effects of political control on technical communication are then used to interpret the results of a survey of Russian and U.S. aerospace engineers and scientists concerning the time devoted to technical communication, their collaborative writing practices and their attitudes toward collaboration, the kinds of technical documents they produce and use, and their use of computer technology, and their use of and the importance to them of libraries and technical information centers. The data are discussed in terms of tentative conclusions drawn from the literature. Finally, we conclude with four questions concerning government policy, collaboration, and the flow of STI between Russian and U.S. aerospace engineers and scientists. Author

NASA/DOD AEROSPACE KNOWLEDGE DIFFUSION RESEARCH PROJECT. PAPER 38: COMPUTER MEDIATED COMMUNICATION (CMC) AND THE COMMUNICATION OF TECHNICAL INFORMATION IN AEROSPACE
Daniel J. Murphy (State Univ. of New York, Utica.) and Thomas E. Pinelli 1994 13 p Proposed for presentation at the 32nd Aerospace Sciences Meeting and Exhibit of the American Institute of Aeronautics and Astronautics, Reno, NV, 11 Jan. 1994
(NASA-TM-109330; NAS 1.15:109330; AIAA Paper 94-0840) Avail: CASI HC A03/MF A01

This paper discusses the use of computers as a medium for communication (CMC) used by aerospace engineers and scientists to obtain and/or provide technical information related to research and development activities. The data were obtained from a questionnaire survey that yielded 1006 mail responses. In addition to communication media, the research also investigates degrees of task uncertainty, environmental complexity, and other relevant variables that can affect aerospace workers' information-seeking strategies. While findings indicate that many individuals report CMC is an important function in their communication patterns, the research indicates that CMC is used less often and deemed less valuable than other more conventional media, such as paper documents, group meetings, telephone and face-to-face conversations. Fewer than one third of the individuals in the survey account for nearly eighty percent of the reported CMC use, and another twenty percent indicate they do not use the medium at all, its availability notwithstanding. These preliminary findings suggest that CMC is not as pervasive a communication medium among aerospace workers as the researcher expect a priori. The reasons underlying the reported media use are not yet fully known, and this suggests that continuing research in this area may be valuable. Author

SUMMARY OF THE NOAA/NESDIS WORKSHOP ON DEVELOPMENT OF A GLOBAL SATELLITE/IN SITU ENVIRONMENTAL DATABASE
K. P. Gallo, ed. and D. A. Hastings, ed. (National Geophysical Data Center, Boulder, CO.) Aug. 1993 21 p Workshop held in Camp Springs, MD, 9-11 Sep. 1992
(NOAA-TR-NESDIS-72) Avail: CASI HC A03/MF A01

A Workshop was convened 9-11 Sep. 1992, at the NOAA Science Center, Camp Springs, Maryland, to discuss the development of a Global Satellite/In Situ Environmental Database (original workshop title 'Comprehensive Satellite/In Situ Climate Data Product') that would address the requirements of the climate modeling and diagnostics communities. The objectives of the workshop included review of the current products of the National Environmental Satellite, Data, and Information Service (NESDIS) and development of recommendations and requirements for a combined satellite and surface (in situ) global climatology data set. A group of approximately 35 individuals that represented the operational satellite measurements, climate modeling, and climate diagnostic communities participated in the workshop. The candidate data sets for inclusion in the Environmental Database included operational satellite products and, potentially, in situ data. Operational products discussed included Satellite Derived Atmospheric Soundings, Snow Cover, Sea Ice, Vegetation Index, Sea Surface Temperature, Ozone, Aerosols, and Planetary Radiation Budget Data Sets. Most information sampling processes add noise to the sampled signal, usually in the form of small oscillations from the function which describes the information. Standard filtering methods can remove the noise from discontinuous data, but at the cost of smearing the discontinuities. In the present work, two methods are presented for removing noise without blurring discontinuities. The first method is based on the least square approximation, which removes noise from the signal by replacing it with a smooth polynomial function which minimizes the sum of the squared residuals. To preserve discontinuities and avoid the creation of a Gibbs phenomenon near them, the method starts by detecting all discontinuity points. Then a fit is found for each noisy but smooth part of the signal, assuming there is no correlation between the elements of the noise. Thus, the fit minimizes the squared residuals and also produces uncorrelated residuals. The second approach uses the fact that any data-compression algorithm contains an element of noise reduction; white noise is among the non-significant information removed in the compression process. A multi-resolution type of noise compression algorithm is used, in which the information content of the signal is decomposed into a hierarchy of scales. Noise in the signal shows up in the very high scales as rapid oscillations, with no contribution to the information content, i.e., as uncorrelated deviations from a mean value. An essentially non-oscillatory (ENO) interpolation technique is presented, ISA

WHERE NO FLAG HAS GONE BEFORE: POLITICAL AND TECHNICAL ASPECTS OF PLACING A FLAG ON THE MOON
Anne M. Platoff Aug. 1993 16 p Presented at the 26th Meeting of the North American Vexillological Association, San Antonio, TX, 11 Oct. 1992
(Contract NAS9-18263)
(NASA-CR-188251; NAS 1.26:188251) Avail: CASI HC A03/MF A01
The flag on the Moon represents an important event in vexillological history. The political and technical aspects of placing a flag on the Moon, focusing on the first Moon landing, is examined. During their historic extravehicular activity, the Apollo 11 crew planted the flag of the United States on the lunar surface. This flag-raising was strictly a symbolic activity, as the United Nations Treaty on Outer Space precluded any territorial claim. Nevertheless, there were domestic and international debates over the appropriateness of the event. Congress amended the agency's appropriations bill to prevent the National Aeronautics and Space Administration (NASA) from placing flags of other nations, or those of international associations, on the Moon during missions funded solely by the United States. Like any activity in space exploration, the Apollo flag-raising also provided NASA engineers with an interesting technical challenge. They designed a flagpole with a horizontal bar allowing the flag to 'fly' without the benefit of wind to overcome the effects of the Moon's lack of an atmosphere. Other factors considered in the design were weight, heat resistance, and ease of assembly by astronauts whose space suits restricted their range of movement and ability to grasp items. As NASA plans a return to the Moon and an expedition to Mars, we will likely see flags continue to go 'where no flag has gone before'. Author (revised)

ADVANCED TURBINE TECHNOLOGY APPLICATIONS PROJECT (ATTAP) Annual Report No. 5, 1992

Mar. 1993 153 p

(Contract DEN3-335)

(NASA-CR-191088; NAS 1.26:191088; Rept-31-8071(05)) Avail: CASI HC A08/MF A02

This report is the fifth in a series of Annual Technical Summary Reports for the Advanced Turbine Technology Applications Project (ATTAP), sponsored by the U.S. Department of Energy (DOE). The report was prepared by Garrett Auxiliary Power Division (GAPD), a unit of Allied-Signal Aerospace Company, a unit of Allied Signal, Inc. The report includes information provided by Garrett Ceramic Components, and the Norton Advanced Ceramics Company, (formerly Norton/TRW Ceramics), subcontractors to GAPD on the ATTAP. This report covers plans and progress on ceramics development for commercial automotive applications over the period 1 Jan. through 31 Dec. 1992. Project effort conducted under this contract is part of the DOE Gas Turbine Highway Vehicle System program. This program is directed to provide the U.S. automotive industry the high-risk, long-range technology necessary to produce gas turbine engines for automobiles with reduced fuel consumption, reduced environmental impact, and a decreased reliance on scarce materials and resources. The program is oriented toward developing the high-risk technology of ceramic structural component design and fabrication, such that industry can carry this technology forward to production in the 1990's. The ATTAP test bed engine, carried over from the previous AGT101 project, is being used for verification testing of the durability of next generation ceramic components, and their suitability for service at Reference Powertrain Design conditions. This document reports the technical effort conducted by GAPD and the ATTAP subcontractors during the fifth year of the project. Topics covered include ceramic processing definition and refinement, design improvements to the ATTAP test bed engine and test rigs, and the methodology development of ceramic impact and fracture mechanisms. Appendices include reports by ATTAP subcontractors in the development of silicon nitride materials and processes. Author (revised)

TECHNOLOGY APPLICATIONS TEAM: APPLICATIONS OF AEROSPACE TECHNOLOGY Quarterly Report, Apr. - Jun. 1993

1993 75 p

(Contract NASw-4367)

(NASA-CR-194362; NAS 1.26:194362; RTI/4321/Q3-93) Avail: CASI HC A04/MF A01

Highlights of the Research Triangle Institute (RTI) Applications Team activities over the past quarter are presented in Section 1.0. The Team's progress in fulfilling the requirements of the contract is summarized in Section 2.0. In addition to our market-driven approach to applications project development, RTI has placed increased effort on activities to commercialize technologies developed at NASA Centers. These Technology Commercialization efforts are summarized in Section 3.0. New problem statements prepared by the Team in the reporting period are presented in Section 4.0. The Team's transfer activities for ongoing projects with the NASA Centers are presented in Section 5.0. Section 6.0 summarizes the status of four add-on tasks. Travel for the reporting period is described in Section 7.0. The RTI Team staff and consultants and their project responsibilities are listed in Appendix A. The authors gratefully acknowledge the contributions of many individuals to the RTI Technology Applications Team program. The time and effort contributed by managers, engineers, and scientists throughout NASA were essential to program success. Most important to the program has been a productive working relationship with the NASA Field Center Technology Utilization (TU) Offices. The RTI Team continues to strive for improved effectiveness as a resource to these offices. Industry managers, technical staff, medical researchers, and clinicians have been cooperative and open in their participation. The RTI Team looks forward to continuing expansion of its interaction with U.S. industry to facilitate the transfer of aerospace technology to the private sector. Derived from text

THE EVIDENCE FOR CLUMPY ACCRETION IN THE HERBIG Ae STAR HR 5999

M. R. Perez, C. A. Grady (Applied Research Corp., Landover, MD.), and P. S. The (Amsterdam Univ., Netherlands.) 1993 10 p

(Contracts NAS5-32059; NAS5-31841)

(NASA-TM-108257; NAS 1.15:108257) Avail: CASI HC A02/MF A01

Analysis of IUE high- and low-dispersion spectra of the young Herbig Ae star HR 5999 (HD 144668) covering 1978-1992 revealed dramatic changes in the Mg II h and k (2795.5, 2802.7 A) emission profiles, changes in the column density and distribution in radial velocity of accreting gas, and flux in the Ly(alpha), O I, and C IV emission lines, which are correlated with the UV excess luminosity. Variability in the spectral type inferred from the UV spectral energy distribution, ranging from A5 IV-III in high state to A7 III in the low state, was also observed. The trend of earlier inferred spectral type with decreasing wavelength and with increasing UV continuum flux has previously been noted as a signature of accretion disks in lower mass pre-main sequence stars (PMS) and in systems undergoing FU Orionis-type outbursts. Our data represent the first detection of similar phenomena in an intermediate mass (M greater than or equal to 2 solar mass) PMS star. Recent IUE spectra show gas accreting toward the star with velocities as high as plus 300 km/s, much as is seen toward beta Pic, and suggest that we also view this system through the debris disk. The absence of UV lines with the rotational broadening expected given the optical data (A7 IV, V sini=180 plus or minus 20 km/s for this system) also suggests that most of the UV light originates in the disk, even in the low continuum state. The dramatic variability in the column density of accreting gas, is consistent with clumpy accretion, such as has been observed toward beta Pic, is a hallmark of accretion onto young stars, and is not restricted to the clearing phase, since detectable amounts of accretion are present for stars with 0.5 Myr less than t(sub age) less than 2.8 Myr. The implications for models of beta Pic and similar systems are briefly discussed. Author (revised)

MHD SHOCKS IN CORONAL MASS EJECTIONS Final Report, 25 May 1990 - 25 Nov. 1991

R. S. Steinolfson 25 Nov. 1991 10 p

(Contract NAS5-30930; SwRI Proj. 15-3578)

(NASA-CR-193418; NAS 1.26:193418) Avail: CASI HC A02/MF A01

The primary objective of this research program is the study of the magnetohydrodynamic (MHD) shocks and nonlinear simple waves produced

as a result of the interaction of ejected lower coronal plasma with the ambient corona. The types of shocks and nonlinear simple waves produced for representative coronal conditions and disturbance velocities were determined. The wave system and the interactions between the ejecta and ambient corona were studied using both analytic theory and numerical solutions of the time-dependent, nonlinear MHD equations. Observations from the SMM coronagraph/polarimeter provided both guidance and motivation and are used extensively in evaluating the results. As a natural consequence of the comparisons with the data, the simulations assisted in better understanding the physical interactions in coronal mass ejections (CME's). Author (revised)

GRO: BLACK HOLE MODELS FOR GAMMA RAY BURSTS Annual Report, 15 Jul. 1992 - 14 Jul. 1993
Jacob Shaham Jul. 1993 4 p
(Grant NAG5-2017)
(NASA-CR-193244; NAS 1.26:193244; CAL-2120) Avail: CASI HC A01/MF A01

This grant deals with the production of gamma-ray bursts (GRB's) close to horizons of black holes (BH's), mainly via accretion of small chunks of matter onto extreme Kerr BH's. In the past year, we laid the ground work for actual calculations close to Kerr BH's. Because of technical reasons, actual work has only started very recently. Following the detailed list of research subprojects as per our original proposal, we have performed research in the following areas: spectrum calculation; burst dynamics; tidal capture and primordial cloud collapse; halo density profile; and capture of other objects. A PHOTOMETRIC STUDY OF MASSIVE X-RAY BINARIES Ph.D. Thesis
Haim Mendelson 1992 172 p
(ITN-93-85207) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Massive X-ray binaries comprise a neutron star or black hole and an early-type star; their X-radiation is generated by the accretion of matter from the early-type star onto its companion. The X-ray spectra of such systems is usually hard, with exponentially fitted kT values exceeding about 15 keV. In many cases, the X-ray emission is pulsed, owing to the funneling of accreted matter towards the magnetic poles of the neutron star, whose magnetic axis is not aligned with its rotation axis. The systems are divided into two groups according to the luminosity class of the massive star: supergiant X-ray binaries (SXRB), with a spectral type earlier than B2; and Be X-ray binaries. The optical radiation of the system is dominated by the early-type star. Seven systems which could be readily observed from the Wise Observatory were monitored photometrically in the U, B, V, R, and I bands and in the H(sub alpha) radiation. The aim was to seek correlations between the changes in the X-ray and in the optical radiation and to detect long-term changes in system luminosities and orbital periods. The main conclusion is that a permanent or transient accretion disk may exist in Be binaries; a permanent disk may be associated with a highly eccentric system in which Roche-lobe overflows recur around periastron, or in close systems in which the neutron star moves within the flattened envelope of the Be star; a transient disk may form in large systems during the active phases of the Be star, when a large amount of matter is ejected from it. THE DEVELOPMENT OF THE TIMAX PROJECT: A HARD X RAY IMAGING TELESCOPE Thesis [O DESENVOLVIMENTO DO PROJETO TIMAX: UM TELESCOPIO IMAGEADOR DE RAIOS X DUROS]
Flavio DAmico Aug. 1992 100 p In PORTUGESE
(INPE-5474-TDI/505) Avail: CASI HC A05/MF A02

The development of the TIMAX project, the first imaging telescope for hard x-rays built in the Southern Hemisphere, is described. A new and elegant manner of providing an antimask of the initial mask without the addition of extra weight to the experiment is shown and the advantages of this method are emphasized. The TIMAX experiment has an angular resolution of approximately 1 deg .7 in a 10 deg x 10 deg (FWHM) field of view with a sensitivity of 7 x 10(exp -5) photons cm(sup -2)s(sup -l)keV(sup -l) in the 30-100 keV range, for an integration time of 10(exp 4) s at a residual atmosphere of 3.5 g(cm(sup -2)). With this sensitivity images of the brightest sources in the Southern Hemisphere are able to be produced. We are particularly interested in the Galactic Center Region. New hard x-ray images of this poorly studied region of the sky are the main contributions of the experiment for the evolution of high energy astrophysics. Author (revised)

A PHOTOMETRIC AND MORPHOLOGICAL STUDY OF COMPACT GROUPS OF GALAXIES AND THEIR ENVIRONMENTS Ph.D. Thesis
Enrico Kindl Feb. 1990 181 p
(ISBN-0-315-59601-5; CTN-93-60847) Copyright Avail: Micromedia Ltd., Technical Information Centre, 165 Hotel de Ville, Place du Portage, Phase 2, Hull, Quebec J8X 3X2, Canada HC/MF

Astrometry, photometry, and morphological classifications were derived from camera images for all 463 galaxies in a sample of 100 compact groups in Hickson's 1982 catalog. Some minor revisions to the catalog are made. Morphological concordance occurs among galaxies within a group; more galaxies are the same type (spiral or nonspiral) than would be expected by chance. Galaxy morphological type correlates with group optical luminosity and, more strongly, with velocity dispersion, but not with galaxy space density. These results imply that the morphological types of galaxies in compact groups are strongly influenced by the environment, and that this influence occurs mostly at the time of galaxy formation. Fields surrounding 97 compact groups with known redshifts were examined, and coordinates, magnitudes, diameters, and Hubble types were derived for 3,389 galaxies in these fields. Results indicate that most groups are dense dynamical entities. Monte Carlo simulations show that 35 percent of galaxy quintets are predicted to contain a single discordant redshift due to the chance alignment of an unrelated field galaxy. This is in agreement with the observed number of four discordant quintets in 10, and these results are consistent with the cosmological interpretation of galaxy redshifts. CISTI

A SURVEY OF COMPACT PLANETARY NEBULAE AT RADIO WAVELENGTHS Ph.D. Thesis
Orla Boje Aaquist Aug. 1990 181 p
(ISBN-0-315-61950-3; CTN-93-60848) Copyright Avail: Micromedia Ltd., Technical Information Centre, 165 Hotel de Ville, Place du Portage, Phase 2, Hull, Quebec J8X 3X2, Canada HC/MF

A radio continuum survey of 174 objects previously classified as possible or true planetary nebulae (PN) is reported. Of these sources, 114 were detected with the very large array radio telescope, and intensity contour

plots, radio flux densities at 5 GHz, diameters, and accurate positions are given. The survey leads to identification of a large number of high surface brightness objects which are likely candidates for very young PN. Modelling of the 2-dimensional brightness distributions shows that most of the survey detections can be reasonably well reproduced by a thin, prolate, ellipsoidal shell seen in projection. Examinations of other distant independent characteristics reveals that all of the surface brightness quantities are strongly correlated to each other, while all other correlations are very low. Significant differences do exist between these objects and the general population in a number of distant independent parameters. In terms of these parameters, the characteristics of the survey detections seem to be typical of other high surface brightness PN. A subgroup of 20 of the brighter, poorly resolved objects was reobserved at 15 GHz. One of these objects, K3-35, has mixed characteristics of both compact H II regions and young PN. Author (CISTI)

LUTE TELESCOPE STRUCTURAL DESIGN Study Report
Gregory Ruthven May 1993 53 p Revised
(NASA Order H-19671-D)
(NASA-CR-192594; NAS 1.26:192594; PR-D15-0015) Avail: CASI HC A04/MF A01

The major objective of the Lunar Ultraviolet Transit Experiment (LUTE) Telescope Structural Design Study was to investigate the feasibility of designing an ultralightweight 1-m aperture system within optical performance requirements and mass budget constraints. This study uses the results from our previous studies on LUTE as a basis for further developing the LUTE structural architecture. After summarizing our results in Section 2, Section 3 begins with the overall logic we used to determine which telescope 'structural form' should be adopted for further analysis and weight estimates. Specific telescope component analysis showing calculated fundamental frequencies and how they compare with our derived requirements are included. 'First-order' component stress analyses to ensure telescope optical and structural component (i.e. mirrors & main bulkhead) weights are realistic are presented. Layouts of both the primary and tertiary mirrors showing dimensions that are consistent with both our weight and frequency calculations also form part of Section 3. Section 4 presents our calculated values for the predicted thermally induced primary-to-secondary mirror despace motion due to the large temperature range over which LUTE must operate. Two different telescope design approaches (one which utilizes fused quartz metering rods and one which assumes the entire telescope is fabricated from beryllium) are considered in this analysis. We bound the secondary mirror focus mechanism range (in despace) based on these two telescope configurations. In Section 5 we show our overall design of the UVTA (Ultraviolet Telescope Assembly) via an 'exploded view' of the sub-system. The 'exploded view' is annotated to help aid in the understanding of each sub-assembly. We also include a two view layout of the UVTA from which telescope and telescope component dimensions can be measured. We conclude our study with a set of recommendations not only with respect to the LUTE structural architecture but also on other topics related to the overall feasibility of the LUTE telescope sub-system. SOME FLOW PROPERTIES OF TELESCOPE ENCLOSURES ESTIMATED FROM WATER CHANNEL TESTS: APPLICATION OF THE FLOW VISUALIZATION TECHNIQUES
Shigemi Shindou, Kimio Sakata, Hiroyasu Andou (Tokyo Astronomical Observatory, Japan.), L. Barr (Tokyo Astronomical Observatory, Japan.), and Akihiko Miyashita (Tokyo Astronomical Observatory, Japan.) Sep. 1992 18 p Original contains color illustrations
(NAL-TR-1178T; JTN-93-80497) Avail: CASI HC A03/MF A01

Studies on the seeing conditions inside telescope domes indicate that substantial air ventilation is necessary to prevent image degradation due to thermal nonuniformity of the air within the dome, especially for a dome as large as the Japan National Large Telescope (JNLT). In traditional telescope enclosures, in which a cylinder is topped by a hemispherical dome, the air flow quality is influenced by factors such as temperature fluctuations and the distribution of dust contamination which affect the seeing conditions. To determine the best telescope shape from a perspective of achieving desirable air ventilation conditions, the National Aerospace Laboratory (NAL) and National Astronomical Observatory (NAO) jointly studied dome shapes. Flow visualization techniques were applied to the tests using a circulating water channel developed by the NAL Aeroengine Division in order to evaluate flow properties inside and outside models of a telescope enclosure. The hydrogen bubble method and dye injection technique with image processing were primarily utilized. Three types of enclosure models (one to 500 scale) were designed: (1) a traditional shape having a circular cylinder base topped by a hemisphere (HS); (2) a straight-sided trapezoidal shape (New Technology Telescope, NTT); and (3) a flat-roof cylinder with sidewall (Modified Enclosure, ME); subsequently tested in the circulating water channel. Flushing of the enclosure was also closely observed via dye-injection. Author (NASDA)

SEARCH FOR X RAY EMITTING YOUNG STARS OUTSIDE OF MASSIVE MOLECULAR CLOUDS Final Technical Report, 1 Aug. 1989 - 31 Dec. 1991
Eric D. Feigelson 31 Dec. 1991 3 p
(Grant NAG5-1212)
(NASA-CR-193609; NAS 1.26:193609) Avail: CASI HC A01/MF A01

This project is intended to determine whether X-ray surveys of the sky can uncover previously unrecognized populations of pre-main sequence stars outside of large well-known star forming regions. X-ray observations of large regions such as the Taurus-Auriga complex, Orion molecular cloud, Ophiuchi and Chamaeleon clouds had revealed that low mass pre-main sequence emit X-rays 10(exp 2)-10(exp 4) above main sequence levels, and that X-ray surveys select a large population of 'weak' T Tauri stars that are not easily found in traditional optical and infrared surveys. The present project sought to find 'weak' T Tauri stars around smaller and more distant molecular clouds. X-ray surveys potentially could elucidate the star forming capabilities of small clouds, which are not well understood. Derived from text

A NEAR-INFRARED FAINT GALAXY SURVEY: EVOLUTION AND THE COSMOLOGICAL GEOMETRY FROM K BAND PHOTOMETRY Ph.D. Thesis
Jonathan Perry Gardner 1992 161 p
Avail: Univ. Microfilms Order No. DA9312191

The results of four K band surveys of the extra galactic sky are presented. Each survey was designed to balance depth with area of coverage, and a sufficient number of galaxies was studied at each magnitude from K = 12 to K = 22 to provide good statistics. Each survey area was also observed in the B and I bands. Methods for making long exposures in the near-infrared and optical are described. The K band number counts are compiled. The excess seen in the B band number counts is not seen in the K band number counts, and a change in slope is seen in the K counts at K = 17. The number count data are shown to be consistent with the measured B-K color, as the K band selected sample becomes rapidly bluer after turning over at K = 17. The I-K colors are presented and it is argued that there is a deficiency of galaxies with the colors of unevolved ellipticals at z = 1. The B-K colors are shown to move away from the no-evolution model beginning at K = 17. The position of the galaxies on the B-I vs I-K plot are consistent with these arguments. The surface brightness of the galaxies is analyzed and it is argued that variation in surface brightness causes no systematic bias in the number count data. Various aspects of the data are compared with models of primeval galaxies and galaxy evolution. The K band number counts are compared with a model of pure luminosity evolution, a cosmological constant model and a merging model. It is argued that the merging model is the best explanation for all of the data, although the model needs to be modified before it will provide a good fit to the number counts. Dissert. Abstr.

TIME SERIES PHOTOMETRY OF FAINT CATACLYSMIC VARIABLES WITH A CCD Ph.D. Thesis
Timothy Mark Cameron Abbott 1992 217 p
Avail: Univ. Microfilms Order No. DA9309110

I describe a new hardware and software environment for the practice of time-series stellar photometry with the CCD systems available at McDonald Observatory. This instrument runs suitable CCD's in frame transfer mode and permits windowing on the CCD image to maximize the duty cycle of the photometer. Light curves may be extracted and analyzed in real time at the telescope and image data are stored for later, more thorough analysis. I describe a star tracking algorithm, which is optimized for a timeseries of images of the same stellar field. I explore the extraction of stellar brightness measures from these images using circular software apertures and develop a complete description of the noise properties of this technique. I show that scintillation and pixelization noise have a significant effect on high quality observations. I demonstrate that optimal sampling and profile fitting techniques are unnecessarily complex or detrimental methods of obtaining stellar brightness measures under conditions commonly encountered in timeseries CCD photometry. I compare CCD's and photomultiplier tubes as detectors for timeseries photometry using light curves of a variety of stars obtained simultaneously with both detectors and under equivalent conditions. A CCD can produce useful data under conditions when a photomultiplier tube cannot, and a CCD will often produce more reliable results even under photometric conditions. I prevent studies of the cataclysmic variables (CV's) AL Com, CP Eri, V Per, and DO Leo made using the time series CCD photometer. AL Com is a very faint CV at high Galactic latitude and a bona fide Population II CV. Some of the properties of AL Com are similar to the dwarf nova WZ Sge and others are similar to the intermediate polar EX Hya, but overall AL Com is unlike any other well-studied cataclysmic variable. CP Eri is shown to be the fifth known interacting binary white dwarf. V Per was the first CV found to have an orbital period near the middle of the gap in the orbital period distribution of CV's. DO Leo is an eclipsing CV which can reasonably be included in a sample of Population II CV candidates.

THE 1 TO 5 MICRON IMAGING OF DEEPLY EMBEDDED YOUNG STELLAR OBJECTS Ph.D. Thesis
Michael Elvin Ressler 1992 231 p
Avail: Univ. Microfilms Order No. DA9312215

Spectral energy distributions (SEDs) are one of the primary tools for analyzing the natures of young stellar objects. Theoretical models of SEDs have achieved some success over a wide frequency range; however, the models often underpredict the near-infrared (NW, 1-5 micrometers) fluxes observed with single-element photometers by more than an order of magnitude. This observed 'extra' flux is generally thought to be radiation which is scattered into the observer's beam from anisotropically distributed material surrounding the protostar. I explore a sample of well-known protostars with a seeing-matched InSb photodiode array camera; fourteen objects have been imaged in the J through M broadband filters, and many of these were imaged through a circular variable filter scanned through the 3.08 micrometer water ice band or through a linear polarizer with the K filter. These images are used to separate the scattered light from the line-of-sight radiation which together make up the published singlebeam SEDs. While resolved, an isotropic scattering accounts for the NIR excesses in some objects, the general scenario is somewhat more complex. For instance, scattering from circumstellar material is seldom significant at wavelengths greater than 3 micrometers and thus will not explain excesses in the 3-5 micrometer region. Some objects appear completely point-like, yet have significant NIR excesses, implying that either scattering is significant on very small scales or that other processes are involved. The implications of these findings concerning models of YSOs and their SEDs are discussed. In addition, we find that approximately 40 percent of these objects (and of a larger sample) appear to be multiple, in rough agreement with the apparent frequency for Main Sequence stars. Finally, five of the fourteen objects appear to have varied significantly in intensity over periods ranging from months to years. We suggest several possible mechanisms for variations on these time scales. Dissert. Abstr.

THE SPECTROSCOPIC EVOLUTION OF NOVAE IN THE BULGE OF M31 AND A SEARCH FOR THEIR POSSIBLE ORIGIN IN THE M31 GLOBULAR CLUSTER SYSTEM Ph.D. Thesis
Austin Bede Tomaney 1992 257 p
Avail: Univ. Microfilms Order No. DA9309300

Results are presented from a three year (1987 to 1989) spectroscopic and photometric survey of novae in M31's bulge, the first comprehensive study of novae outside the Galactic and Magellanic Cloud systems. Nine novae were detected and monitored and their spectra cover a range of outburst states from early decline to the early nebular phases. Broad agreement in spectral morphology and evolution is found with Galactic novae. Since Galactic novae are mainly disk objects, this indicates that novae outburst properties are not critically dependent on the metallicity of the progenitor population. However, in this sample, and in a sample of four M31 nova spectra taken in 1983, no fast, violent outbursts frequently associated with nova systems containing ONeMg white dwarfs were found, suggestive of a systematic difference between the observed proportion of such outbursts between Galactic and M31 bulge novae. Three novae in the sample were observed on succeeding nights during the transition phase of their evolution. Extraordinary variations in some nightly line strengths, particularly the N III lines, were discovered. It is argued that this variability reflects the deposition of drag energy by the secondary star during the common envelope phase of nova evolution and is indicative of a key phase in mass loss from nova systems. Observations include the spectroscopic coverage of an extremely slow nova from 1987 to l990, during the object's evolution in the nebula phase. This provided a unique opportunity to make the first detailed comparison of the evolution and properties of an extra galactic nova with those in our own Galaxy. The roughly solar abundances obtained are typical of similar slow Galactic novae. Further observations are also presented of a unique outburst in 1988 that was independently discovered and reported by Rich et al. These data confirm the inferences of other observers that the outburst differed markedly from that of a typical classical nova. Finally an extensive spectroscopic survey of the M31 globular cluster system was made in an effort to find evidence of a previously suggested enhanced nova rate in these objects. No outbursts were detected during an effective survey time of one year for the entire system. Dissert. Abstr.

ULTRAVIOLET OBSERVATIONS OF NGC 4395, THE LEAST LUMINOUS AND NEAREST KNOWN SEYFERT 1 NUCLEUS Final Technical Report, 15 Jul. 1989 - 14 Jul. 1990
Alexei V. Filippenko 1990 2 p
(Grant NAG5-1171)
(NASA-CR-194304; NAS 1.26:194304) Avail: CASI HC A01/MF A01

The purpose of the grant was to obtain and analyze International Ultraviolet Explorer (IUE) spectra of the spiral galaxy NGC 4395, which contains the nearest and least luminous known Seyfert nucleus. The ultraviolet (UV) spectra was to be used to test the intriguing hypothesis that the 'activity' could be explained by purely stellar phenomena, and to further explore the unprecedented properties of this nucleus. To test the feasibility of the project (the nucleus of NGC 4395 is very faint), one IUE shift was allocated, with the possibility of three additional shifts later on. Ultraviolet observations were attempted with IUE on 4 June 1989. Unfortunately, it was found that the only available guide star could no longer be detected sufficiently well with the FES, whose present sensitivity is lower than it was at the beginning of the IUE mission. Thus, it is no longer possible to observe NGC 4395 with IUE. Given these circumstances, as well as the faintness of the nucleus of NGC 4395, a Cycle 2 HST proposal for observations of this object was submitted. Author (revised)

SPECTRA OF LATE TYPE DWARF STARS OF KNOWN ABUNDANCE FOR STELLAR POPULATION MODELS Final Technical Report, 1 Feb. 1988 - 31 May 1990
R. W. OConnell 1990 2 p
(Grant NAG5-1035)
(NASA-CR-194301; NAS 1.26:194301) Avail: CASI HC A01/MF A01

The project consisted of two parts. The first was to obtain new low-dispersion, long-wavelength, high S/N IUE spectra of F-G-K dwarf stars with previously determined abundances, temperatures, and gravities. To

insure high quality, the spectra are either trailed, or multiple exposures are taken within the large aperture. Second, the spectra are assembled into a library which combines the new data with existing IUE Archive data to yield mean spectral energy distributions for each important type of star. My principal responsibility is the construction and maintenance of this UV spectral library. It covers the spectral range 1200-3200A and is maintained in two parts: a version including complete wavelength coverage at the full spectral resolution of the Low Resolution cameras; and a selected bandpass version, consisting of the mean flux in pre-selected 20A bands. These bands are centered on spectral features or continuum regions of special utility - e.g. the C IV lambda 1550 or Mg II lambda 2800 feature. In the middle-UV region, special emphasis is given to those features (including continuum 'breaks') which are most useful in the study of F-G-K star spectra in the integrated light of old stellar populations. HIGH TIME RESOLUTION STUDIES OF BINARY X RAY PULSARS Semiannual Technical Report, 1 Sep. 1992 - 1 Aug. 1993

Lynn R. Cominsky 1 Oct. 1992 1 p

(Grant NAG5-1260)

(NASA-CR-194395; NAS 1.26:194395) Avail: CASI HC A01/MF A01

This report covers the period September 1, 1992 through August 1, 1993 for NASA grant NAG 5-1260 through the Astrophysics Data Program (ADP), for the project 'High Time Resolution Studies of Binary X-ray Pulsars'. During the past 11 months, we have concentrated on scientific analysis of the data, and have had to reanalyze several data sets, due to a newly discovered error in the unpacking of the count rate data. This error has now been corrected, but may have caused us to miss some scientific results, so we have gone back and reanalyzed the affected data sets, as well as continuing our analysis of other objects. ROCKET AND LABORATORY STUDIES IN ASTRONOMY Status Report, 1 Sep. 1992 - 31 Aug. 1993

P. D. Feldman 30 Sep. 1993 6 p

(Grant NAG5-619)

(NASA-CR-194410; NAS 1.26:194410) Avail: CASI HC A02/MF A01

This report covers the period from September 1, 1992 to August 31, 1993. During the reporting period we launched the Faint Object Telescope to measure absolute fluxes of two hot dwarf stars in the spectral range below 1200 A. Although all systems worked normally, a higher than anticipated pressure in the detector led to ion-feedback that masked the useable data from the source. We have identified the source of the problem and are preparing for a reflight in the Fall of 1993. Our laboratory program for the evaluation of the ultraviolet performance of charge-coupled-detector (CCD) arrays continued with the aim of including a UV-sensitive CCD in a payload to be flown in 1994, and we have begun the assembly of this payload. Work has continued on the analysis of data from previous rocket experiments and from the UVX experiment which flew on STS-61C in January 1986. Derived from text

X RAY OBSERVATIONS OF LATE-TYPE STARS USING THE ROSAT ALL-SKY SURVEY Final Report

Jeffrey L. Linsky and Thomas A. Fleming 2 Mar. 1992 4 p

(Grant NAGw-1480)

(NASA-CR-193716; NAS 1.26:193716) Avail: CASI HC A01/MF A01

The ROSAT mission made the first x ray survey of the entire sky using an imaging detector. Although ROSAT is a joint NASA/German project and involves direct American participation during its second phase of pointed observations, the all-sky survey remains the sole property of the German investigators. NASA grant represented the first use of ROSAT data analysis funds to support direct American participation in the ROSAT all-sky survey. The project involved a collaborative agreement between the Joint Institute for Laboratory Astrophysics (JILA) and the Max-Planck-Institut fur Extraterrestrische Physik (MPE) where JILA supplied MPE with a post-doctoral research associate with experience in the field of stellar (coronal) x ray emission to work within their ROSAT group. In return, members of the cool star research group at JILA were given the opportunity to collaborate on projects involving ROSAT all-sky survey data. Both sides have benefitted (and still benefit) from this arrangement since MPE suffers from a shortage of researchers who are interested in x ray emission from 'normal' stars and white dwarfs. MPE has also drawn upon experience in optical identification of x ray sources from the Einstein Extended Medium Sensitivity Survey in planning their own identification strategies for the ROSAT all-sky survey. The JILA cool stars group has benefitted since access to all-sky survey data has expanded the scope of their already extensive research programs involving multiwavelength observations of late-type stars. ROSAT was successfully launched on 1 June 1990 and conducted the bulk of the survey from 30 July 1990 to 25 January 1991. Data gaps in the survey have subsequently been made up. At the time of this writing (February 1992), the survey data have been processed once with the Standard Analysis Software System (SASS). A second processing will soon begin with improvements made to the SASS to correct errors and bugs found while carrying out scientific projects with data from the first processing. We outline the major research activities of Dr. Fleming over the past year (detailed accounts of his activities during the first two years of this grant can be found in the first-year and second-year status reports on this grant). Regarding the three specific projects which were proposed in the original proposal, two of them (White Dwarfs and Late M Dwarfs) are near completion. The results are described in two conference proceedings which are appended. Author (revised)

AXAF FITS STANDARD FOR RAY TRACE INTERCHANGE Interim Report

Paul F. Hsieh 15 Jul. 1993 20 p

(Contract NAS8-36123)

(NASA-CR-194025; NAS 1.26:194025; SAO-AXAF-DR-93-039) Avail: CASI HC A03/MF A01

A standard data format for the archival and transport of x-ray events generated by ray trace models is described. Upon review and acceptance by the Advanced X-ray Astrophysics Facility (AXAF) Software Systems Working Group (SSWG), this standard shall become the official AXAF data format for ray trace events. The Flexible Image Transport System (FITS) is well suited for the purposes of the standard and was selected to be the basis of the standard. FITS is both flexible and efficient and is also widely used within the astronomical community for storage and transfer of data. In addition, software to read and write FITS format files are widely available. In selecting quantities to be included within the ray trace standard, the AXAF Mission Support team, Science Instruments team, and the other contractor teams were surveyed. From the results of this survey, the following requirements were established: (1) for the scientific needs, each photon should have associated with it: position, direction, energy, and statistical weight; the standard must also accommodate path length (relative phase), and polarization. (2) a unique photon identifier is necessary for bookkeeping purposes; (3) a log of individuals, organizations, and software packages that have modified the data must be maintained in order to create an audit trail; (4) a mechanism for extensions to the basic kernel should be provided; and (5) the ray trace standard should integrate with future AXAF data product standards. Author (revised)

ROSAT OBSERVATIONS OF THE BINARY Be-STAR/RADIO PULSAR PSR1259-63 Semiannual Technical Report, 15 Jan. - 1 Aug. 1993

Lynn R. Cominsky 1 Aug. 1993 1 p

(Grant NAG5-1684)

(NASA-CR-194394; NAS 1.26:194394) Avail: CASI HC A01/MF A01

This report covers the period January 15, 1993 through ROSAT Guest Investigator Program, for the August 1, 1993 for NASA grant NAG5-1684 project 'ROSAT Observations of the Binary received the standard output for both the initial Be-star/Radio Pulsar PSR1259-63'. We have now 10,713 second observation of PSR1259-63 (which occurred during 8/30/92 - 9/4/92) and the subsequent 36,108 second observation (during 2/7 - 16/93). The source was detected at the rate of 0.02 counts per second, or about 200 total photons in the first observation, and at about 0.03 counts per second for a total of 1200 additional photons during the second observation. In addition, significant variability, both temporal and spectral has occurred during the second data set. No pulsations at the radio period were found, with upper limits of 5-10 percent. This is in marked

contrast to the lack of detection in observations made by Bailes et al., during AO2 on 2/28/92. Derived from text

PHOTOMETRY AND SPECTROSCOPY IN THE OPEN CLUSTER ALPHA PERSEI, 2

Charles F. Prosser 1993 31 p

(Grant NAGw-2698)

(NASA-CR-193397; NAS 1.26:193397) Avail: CASI HC A03/MF A01

Results from a combination of new spectroscopic and photometric observations in the lower main-sequence and pre-main sequence of the open cluster alpha Persei are presented. New echelle spectroscopy has provided radial and rotational velocity information for thirteen candidate members, three of which are nonmembers based on radial velocity, absence of a Li 6707A feature, and absence of H-alpha emission. A set of revised rotational velocity estimates for several slowly rotating candidates identified earlier is given, yielding rotational velocities as low as 7 km/s for two apparent cluster members. VRI photometry for several pre-main sequence members is given; the new (V,V-I(sub K)) photometry yields a more clearly defined pre-main sequence. A list of approximately 43 new faint candidate members based on the (V,V-I(sub K)) CCD photometry is presented in an effort to identify additional cluster members at very low masses. Low-dispersion spectra obtained for several of these candidates provide in some cases supporting evidence for cluster membership. The single brown dwarf candidate in this cluster is for the first time placed in a color-magnitude diagram with other cluster members, providing a better means for establishing its true status. Stars from among the list of new photometric candidates may provide the means for establishing a sequence of cluster members down to very faint magnitudes (V approximately 21) and consequently very low masses. New coordinate determinations for previous candidate members and finding charts for the new photometric candidates are provided in appendices. Derived from text

A CAPACIFLECTOR-BASED ROBOTIC SYSTEM Semiannual Technical Report, 1 Feb. - 1 Aug. 1993

Charles C. Nguyen and Paulo F. Uribe Aug. 1993 35 p

(Grant NAG5-780)

(NASA-CR-193783; NAS 1.26:193783) Avail: CASI HC A03/MF A01

This report presents preliminary results obtained from a research grant entitled 'Capaciflector-based Control and Imaging,' with Grant Number NAG 5-780, for the period between February 1, 1993 and August 1, 1993. This report deals with the development of a robotic system which is used to evaluate the feasibility of servicing and repairing the Hubble Space Telescope (HST) using robots. In particular, the task of opening the HST's toolbox is considered in this report. First the main components of the robotic system will be introduced. Then each component will be described in detail from low-level to high-level. Finally tasks that have been accomplished during the reporting period for the development of the robotic system will be presented. Listings of source codes for the accomplished tasks are given at the end of the report. Derived from text

ROSAT OBSERVATIONS OF CLUSTERS WITH WIDE-ANGLE TAILED RADIO SOURCES Progress Report

Jack O. Burns 30 Apr. 1993 12 p

(Grants NAG5-1737; NAG5-1819)

(NASA-CR-193784; NAS 1.26:193784) Avail: CASI HC A03/MF A01

The goal of these ROSAT PSPC pointed observations was to understand the nature of X-ray emission associated clusters that contain luminous wide-angle tailed (WAT) radio sources identified with the centrally dominant cluster galaxies. These 500 kpc diameter radio sources are strongly affected by confinement and interaction with the intracluster medium. So, a complete picture of the origin and evolution of these radio sources is not possible without detailed X-ray observations which sample the distribution and temperature of the surrounding hot gas. Two WAT clusters have been observed with the ROSAT PSPC to date. The first is Abell 2634 which contains the WAT 3C 465 and was approved for observations in AO-1. Unfortunately, these observations were broken into two widely separated pieces in time. The first data set containing about 9000 sec of integration arrived in mid-March, 1992. The second data set containing about 10,500 sec arrived just recently in early April (after a first tape was destroyed in the mail). The second cluster is 1919+479 which was approved for observations in AO-2. These ROSAT data arrived in October 1992. Derived from text

THE SOFT X RAY TRANSIENT CEN X-4 IN QUIESCENCE Final Report, 15 Aug. 1991 - 14 Feb. 1993

Paul C. Schmidtke 14 Feb. 1993 2 p

(Grant NAG5-1744)

(NASA-CR-194033; NAS 1.26:194033) Avail: CASI HC A01/MF A01

The initial goal of this project was to examine the quiescent X-ray light curve of the recurrent X-ray/optical nova Cen X-4 throughout its 15.1-hr orbital period. Using these observations the pre-outburst conditions of the binary would be investigated and the relationship between soft X-ray transients and persistent low-mass X-ray binaries would be established. ROSAT-PSPC observations were scheduled for 1991 August 9-13. Unfortunately, failure of the satellite's attitude control system near the end of the all-sky survey severely curtailed science operations for much of 1991, and the requested observations of Cen X-4 were never taken. Since the stated goal could not be accomplished, the time and resources of this project were used in support of two other ROSAT programs for which I am co-investigator: 'Identification of LMC X-ray Sources Using ROSAT-HRI Images' and 'X-ray Light Curve for an Eclipsing Black-Hole Binary'. The results of these investigations are described. Derived from text

The six-band ultraviolet light curves of beta Lyrae obtained with the Orbiting Astronomical Observatory A-2 in 1970 exhibited a very unusual behavior. The secondary minimum deepened at shorter wavelength, indicating that one was not observing light variations caused primarily by the eclipses of two stars having a roughly Planckian energy distribution. It was then suggested that the light variations were caused by a viewing angle effect of an optically-thick, ellipsoidal circumbinary gas cloud. Since 1978 beta Lyrae has been observed with the International Ultraviolet Explorer (IUE) satellite. We have constructed ultraviolet light curves from the IUE archival data for comparison with the OAO-A2 results. We find that they are in substantial agreement with each other. The Voyager ultraviolet spectrometer was also used to observe this binary during a period covered by IUE observations. The Voyager results agree with those of the two other satellite observatories at wavelengths longer than about 1350 A. However, in the wavelength region shorter than the Lyman-alpha line at 1216 A, the light curves at 1085 A and 965 A show virtually no light variation except an apparent flaring near phase 0.7, which is also in evidence at longer wavelengths. We suggest that the optically-thick circumbinary gas cloud, which envelops the two stars completely, assumes a roughly spherical shape when observed at these shorter wavelengths. Author

A NEW LIMIT ON THE RATE-DENSITY OF EVAPORATING BLACK HOLES
1993 5 p Presented at the International Cosmic Ray Conference, Calgary, Alberta, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012716; LA-UR-93-1609; CONF-930779-9) Avail: CASI HC A01/MF A01

Data taken with the CYGNUS detector between 1989 and 1993 have been used to search for 1 second bursts of ultra-high energy (UHE) gamma rays from any point in the northern sky. There is no evidence for such bursts. Therefore the theory-dependent upper limit on the rate-density of evaporating black holes is 6.1 x 10(sup 5)pc(sup -3)yr(sup -1) at the 99% C.L. After renormalizing previous direct searches to the same theory, this limit is the most restrictive by more than 2 orders of magnitude. DOE

MOEBIUS INVERSE PROBLEM FOR DISTORTED BLACK HOLES
H. Rosu Jan. 1993 12 p
(DE93-622899; IC-93/27) Avail: CASI HC A03/MF A01 (US Sales Only)

Hawking 'thermal' radiation could be a means to detect black holes of micron sizes, which may be hovering through the universe. We consider these micro-black holes to be distorted by the presence of some distribution of matter representing a convolution factor for their Hawking radiation. One may hope to determine from their Hawking signals the temperature distribution of their material shells by the inverse black body problem. In 1990, Nan-xian Chen has used a so-called modified Moebius transform to solve the inverse black body problem. We discuss and apply this technique to Hawking radiation. Some comments on supersymmetric applications of Moebius function and transform are also added. DOE

FORCE-FREE MAGNETIC FIELDS, CURL EIGENFUNCTIONS, AND THE SPHERE IN TRANSFORM SPACE, WITH APPLICATIONS TO FLUID DYNAMICS AND ELECTROMAGNETIC THEORY Interim Report
Malcolm A. MacLeod 8 Jan. 1993 34 p
(AD-A265805; AD-E201473; PL-TR-93-2009; ERP-1117; XC-PL/HANSCOM) Avail: CASI HC A03/MF A01

The mathematical foundation of a new description of force free magnetic fields (FFMF's) is given, using Moses' curl eigenfunctions, in preparation for an investigation of solar magnetic clouds and their interaction with the Earth's magnetosphere and perturbation of the radiation belts. Constant-alpha FFMF's are defined completely on the unit hemisphere in Fourier transform space. This reduces the three-dimensional physical space problem to a two-dimensional transform space problem. A scheme for classifying these fields by the dimensionality, symmetry, and complexity of their supporting sets in transform space is sketched. The fields corresponding to the simplest 0-, 1-, and 2-dimensional transform sphere sets are exhibited. Four applications illustrate the technique: (1) the constant-alpha FFMF vector potential is shown to be unimodal; (2) alpha is identified with a normalized magnetic helicity; (3) the helicity hierarchy for Trkalian fluids is shown to depend only on alpha and the mean kinetic energy; and (4) the Maxwell equations are reduced to an FFMF problem, providing a new point of view for electromagnetic theory. Speculative applications to turbulence and the laboratory modeling of astrophysical FFMF's are mentioned. Future directions for development are indicated, and extensive connections to related work are documented. DTIC

REDSHIFT DISTORTIONS OF GALAXY CORRELATION FUNCTIONS
J. N. Fry and E. Gaztanaga 12 May 1993 30 p
(Contract DE-AC02-76CH-03000)
(DE93-014007; FNAL/Pub-93-097-A) Avail: CASI HC A03/MF A01

To examine how peculiar velocities can affect the 2-, 3-, and 4-point correlation functions, we evaluate volume-average correlations for configurations that emphasize and minimize distortions for four different volume-limited samples from each of the CfA, SSRS, and IRAS redshift catalogs. We present the results as the correlation length r(sub 0) and power index gamma of the 2-point correlation, bar-xi(sub 2) = (r(sub 0)/r) sup gamma), and as the hierarchical amplitudes of the 3- and 4-point functions, S(sub 3) = bar-xi(sub 3)/bar-xi(sub 2)(sup 2) and S(sub 4) = bar-xi/bar-xi)(sub 2)(sup 3). We find a characteristic distortion for bar-xi(sub 2): The slope gamma is flatter and the correlation length is larger in redshift space than in real space; that is, redshift distortions 'move' correlations from small to large scales. At the largest scales, extra power in the redshift distribution is compatible with Omega(sup 4/7)/b approx. 1; we find 0.53 plus/minus 0.15, 1.10 plus/minus 0.16 and 0.84 plus/minus 0.45 for the CfA, SSRS and IRAS catalogs. Higher order correlations bar-xi(sub 3) and bar-xi(sub 4) suffer similar redshift distortions, but in such a way that, within the accuracy of our analysis, the normalized amplitudes S(sub 3) and S(sub 4) are insensitive to this effect. The hierarchical amplitudes S(sub 3) and S(sub 4) are constant as a function of scale between 1-12 h(sup -1) Mpc and have similar values in all samples and catalogues, S(sub 3) approx. 2 and S(sub 4) approx. 6, despite the fact that bar-xi(sub 2), bar-xi(sub 3), and bar-xi(sub 4) differ from one sample to another by large factors. The agreement between the independent estimations of S(sub 3) and S(sub 4) is remarkable given the different criteria in the selection of galaxies and also the difference in the resulting range of densities, luminosities and locations between samples. ON INHOMOGENEOUS HALO COLLAPSE AND THE GLOBULAR CLUSTER METALLICITY GRADIENT
D. Hartmann, N. Miller, G. Mathews, and G. Malinie (Commissariat a l'Energie Atomique, Villeneuve-Saint-Georges, France.) Sep. 1992 7 p Presented at the Santa Cruz Workshop on the Galaxy-Globular Cluster Connection, Santa Cruz, CA, Jul. 1992
(Contract W-7405-eng-48)
(DE93-013090; UCRL-JC-111689; CONF-9207198-1) Avail: CASI HC A02/MF A01

Globular cluster systems hold vital information on the formation and early evolution of galaxies. In particular, any correlation between kinematics and composition might allow us to probe the most active periods of galactic chemo-dynamics (GCD). Using the detailed observations of the Galactic globular cluster system, we study GCD of the Galactic halo. Assuming that the sub-class of halo globulars traces the star formation history of the halo, we investigate the chemical evolution of a collapsing, centrally condensed proto-galaxy. The absence of a strong radial metallicity gradient is used to test inhomogeneous models. We find that violent relaxation and supernova heating wash out the metallicity gradient established during the collapse. Following cluster orbits during collapse, when the potential changes rapidly, and in a static potential thereafter, we find a very small present-day metallicity gradient, consistent with the observations. INFLATION AFTER COBE: LECTURES ON INFLATIONARY COSMOLOGY
M. S. Turner (Chicago Univ., IL.) 1992 70 p Presented at the TASI Summer School; Cargese Summer School on Quantitative Particle Physics; Varenna Summer School on Galaxy Formation, Boulder, CO; Corsica, France; Varenna, Italy, 11-29 Jun. 1992; Jul. 1992; Jul. 1992
(Contract DE-AC02-76CH-03000)
(DE93-014008; FNAL/C-92/313-A; CONF-9206314-2; CONF-9207199-1; CONF-9207200-1) Avail: CASI HC A04/MF A01

In these lectures I review the standard hot big-bang cosmology, emphasizing its successes, its shortcomings, and its major challenge-a detailed understanding of the formation of structure in the Universe. I then discuss the motivations for and the fundamentals of inflationary cosmology, particularly emphasizing the quantum origin of metric (density and gravity-wave) perturbations. Inflation addresses the shortcomings of the standard cosmology and provides the 'initial data' for structure formation. I conclude by addressing the implications of inflation for structure formation, evaluating the various cold dark matter models in the light of the recent detection of temperature anisotropies in the cosmic background radiation by COBE. In the near term, the study of structure formation offers a powerful probe of inflation, as well as specific inflationary models. DOE

ROSAT GUEST INVESTIGATOR PROGRAM (AO-1). ON A SEARCH FOR CORONAL X RAY EMISSIONS FROM WHITE DWARFS Final Technical Report, period ending Jun. 1992
Z. E. Musielak Mar. 1992 2 p
(Grant NAG5-1651)
(NASA-CR-193654; NAS 1.26:193654) Avail: CASI HC A01/MF A01

We have suggested that cool magnetic white dwarfs may be sources of X-ray coronal emission and proposed several prominent candidates for this emission. One of these candidates (EG 250) was approved for the C-category observation by the National and International Committee and was observed by ROSAT on April 17, 1991. Unfortunately, the granted exposure time (1071 s) was much shorter than that which was required by theoretical predictions to observe coronal X-ray emission from this object. The tape containing the data was send to us in November 1991. Since then we have analyzed the data visiting the ROSAT Science Center at NASA Goddard Space Flight Center. The analysis of the data taken during this short observation show, as expected, no X-rays. It is our hope that EG 250 will be observed again during the AO-2 phase of pointed observations, as 10,000 s of observing time was granted to V. Trimble for the C-category observation of this star. We have a close contact with Dr. Trimble regarding this matter. Because our all targets (GD 90, KUV 2316-123 and GD 356) proposed for the observation during the AO-2 phase of pointed observations have been approved by the National and International Committee, we have installed the required software at NASA/MSFC to be able to carry out the data analysis in Huntsville. Two of our targets have already been observed (KUV 2316-123 was observed on Dec. 3, 1991 with 10,000 s of the exposure time, and GD 356 was observed on Jan 4, 1992 with 5,000 s of the exposure time). We just received the data and will begin the analysis soon. The results of our analysis will be reported to the scientific community by publishing papers in the Astrophysical Journal Letters. Our intention is to submit a paper when the analysis of the data taken during AO2 is completed. The data taken during the observation of EG 250 will be a part of this paper. Derived from text

THE INTERPLANETARY ORIGINS AND THE MAIN-PHASE DEVELOPMENT OF MODERATE GEOMAGNETIC STORMS (1978 - 1979) Ph.D. Thesis [A ORIGEM INTERPLANETARIA E O DESENVOLVIMENTO DA FASE PRINCIPAL DAS TEMPESTADES GEOMAGNETICAS MODERADAS (1978 - 1979)]
Odim Mendes, Jr. Aug. 1992 296 p In PORTUGESE
(INPE-5445-TDI/491) Avail: CASI HC A13/MF A03

Geomagnetic storms are related to the ring current, which is driven by energy injection primarily during energetic solar wind-magnetosphere coupling due to reconnection at the magnetopause. This work identified the interplanetary origins of moderate geomagnetic storms (-100 nT less than or equal to Dst(MIN) less than -50 nT) and analyzed the coupling processes during the storm main phase. For this purpose the interplanetary magnetic field, solar-wind temperature, density and velocity data, obtained by the ISEE-3 satellite, were used together with the equatorial-Dst and auroral-AE geomagnetic indices, provided by the World Data Center, for the interval August/1978 - December/1979. 78 moderate storms were identified, in which 40 storm events (Dst beginning at approximately 0 nT) were selected. Related to these well defined events the following interplanetary origins were found: coronal mass ejections phenomena - CME (40 percent related to interplanetary shocks; 22.5 percent to single streams; 17.5 percent to streams interactions; 10 percent to non-compressive density enhancement) and non-CME phenomena (7.5 percent related to Alfven-like waves and 2.5 percent to no-identified feature). 47 percent of CME-phenomena occurred near the heliospheric current sheet. Regarding the main-phase development all energy coupling functions showed a similar behavior, that is, the south component of the interplanetary magnetic field (in the magnetospheric coordinate frame) controls basically this coupling. The best linear fits were given by Ey electric field-like and epsilon electric power-like functions. However the complexities in these coupling relations point to other simultaneous energy transfer processes such as non-proportional transference, viscous transference, and 'unloading' process.

METEOROID ENVIRONMENT NEAR THE EARTH-MOON SYSTEM Final Technical Report, May 1987 - May 1991
Yosio Nakamura 10 Mar. 1992 8 p
(Grant NAGw-1064)
(NASA-CR-193670; NAS 1.26:193670) Avail: CASI HC A02/MF A01

We undertook a research program to investigate the properties of small objects crossing the orbit of the Earth-Moon system using a unique set of data obtained during the Apollo lunar landing missions with a network of seismic stations on the surface of the Moon. The primary objectives of the study were to find out the nature of these objects, whether they were of cometary or asteroidal origin based on their orbital distributions and seismic effects upon impacts, and then to infer the role these small objects play in the evolution of the solar system. In this final technical report, we briefly summarize the results of this study. Detailed results of the study have been published in a series of papers and a dissertation, which are listed in the PUBLICATIONS section. Abstracts of the published papers and the dissertation are attached as an appendix. Derived from text

PLANNING OF A COMET SIMULATOR M.S. Thesis
Meir Reingewirtz Aug. 1991 70 p In HEBREW
(ITN-93-85206) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

Cometary nuclei consist of mineral and organic dust, ice, and trapped gases. The low temperature at which comets were formed suggests that the ice was formed in the amorphous state. When a comet is heated as it approaches the sun, thermal processes in which the amorphous ice plays a dominant role affect the comet's behavior. Therefore, the gas-laden, amorphous ice appears to be worth extensive study. In previous studies, the microscopic properties of thin, isothermal layers of amorphous ice were investigated. The size of these samples was usually smaller than 1 gram, which is suitable for studying the processes of trapping and release of gases from the amorphous ice, but is too small for investigating properties such as thermal conductivity, specific heat, porosity, permeability to gases, and mechanical strength. In the KOSI experiments, thick samples were studied, but they were of crystalline, not amorphous ice. Therefore, the results cannot be directly applied to comets. Thus, it became necessary to build a device for producing large samples of amorphous ice. This work describes a simulator which can produce a sample of about 1 kg of gas-laden amorphous ice. The simulator, which is under construction at the University of Tel-Aviv, will enable properties of amorphous ice to be measured which cannot be measured with small samples. The apparatus will also be used for the study of crust building and for examining possible mechanisms for the sporadically observed outbursts in comets.

UV EXTINCTION PROPERTIES OF CARINA NEBULAR DUST Final Report, 9 Jan. 1991 - 8 Feb. 1993
Derck Massa 4 Feb. 1993 18 p
(Contract NAS5-31832)
(NASA-CR-193424; NAS 1.26:193424; R93-205) Avail: CASI HC A03/MF A01

I have performed an analysis of the UV extinction by dust along the line of sight to the young open cluster Tr 16. The observed curves are parameterized in order to extract quantitative information about the structure of the curves. Furthermore, by constructing differential extinction curves, obtained by differencing curves for stars which lie within a few arc seconds of each other on the sky, I was able to obtain a curve which is free of the effects of foreground extinction, and represents the extinction by the dust in the Tr 16 molecular cloud. I then show that this curve is nearly identical to one due to dust in the Orion molecular cloud. This result shows that dust in the Carina arm exhibits the same behavior as that in the local arm. Remote observations of magnetic field topologies in the solar corona and in situ observations of the solar wind and interplanetary magnetic field (IMF) in interplanetary space are used to examine the temporal evolution of the spatial distribution of open and closed field regions emanating from the Sun. The simple 'open' configuration of inward and outward pointing sectors in the IMF is periodically disrupted by magnetically distinct coronal mass ejections (CME's) which erupt from previously closed magnetic field regions in the corona into interplanetary space. At 1 AU, CME's contain counterstreaming halo electrons which indicate their distinct magnetic topologies. This topology is generally thought to be one of the following: plasmoids that are completely disconnected from the Sun; magnetic 'bottles,' still tied to the corona at both ends; or flux ropes which are only partially disconnected. Fully disconnected plasmoids would have no long term effect on the amount of open flux; however, both in situ observations of details of the halo electron distributions and remote coronagraph observations of radial fields following CME's indicate that CME's generally do retain at least partial attached to the Sun. Both the magnetic-bottle and flux rope geometries require some mitigating process to close off previously open fields in order to avoid a flux catastrophe. In addition, the average amount of magnetic flux observed in interplanetary space varies over the solar cycle, also indicating that there must be ways in which new flux is opened and previously open flux is closed off. The most likely scenario for closing off open magnetic fields is for reconnection to occur above helmet streamers, where oppositely directed field regions are juxtaposed in the corona. These events would serve to return closed field arches to the Sun and release open, U-shaped structures into the solar wind. DOE

ANALYSIS OF INTERSTELLAR CLOUD STRUCTURE BASED ON IRAS IMAGES Final Report, 15 Sep. 1989 - 14 Mar. 1992
John M. Scalo 1992 4 p
(Grant NAG5-1263)
(NASA-CR-194341; NAS 1.26:194341) Avail: CASI HC A01/MF A01

The goal of this project was to develop new tools for the analysis of the structure of densely sampled maps of interstellar star-forming regions. A particular emphasis was on the recognition and characterization of nested hierarchical structure and fractal irregularity, and their relation to the level of star formation activity. The panoramic IRAS images provided data with the required range in spatial scale, greater than a factor of 100, and in column density, greater than a factor of 50. In order to construct densely sampled column density maps of star-forming clouds, column density images of four nearby cloud complexes were constructed from IRAS data. The regions have various degrees of star formation activity, and most of them have probably not been affected much by the disruptive effects of young massive stars. The largest region, the Scorpius-Ophiuchus cloud complex, covers about 1000 square degrees (it was subdivided into a few smaller regions for analysis). Much of the work during the early part of the project focused on an 80 square degree region in the core of the Taurus complex, a well-studied region of low-mass star formation. Derived from text

DILATON QUANTUM COSMOLOGY IN TWO DIMENSIONS
F. D. Mazzitelli and J. G. Russo (Texas Univ., Austin.) Nov. 1992 22 p
Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-621377; IC-92/409; UTTG-28-92) Avail: CASI HC A03 (US Sales Only)

We consider a renormalizable two-dimensional model of dilaton gravity coupled to a set of conformal fields as a toy model for quantum cosmology. We discuss the cosmological solutions of the model and study the effect of including the back reaction due to quantum corrections. As a result, when the matter density is below some threshold new singularities form in a weak coupling region, which suggests that they will not be removed in full quantum theory. We also solve the Wheeler-DeWitt equation. Depending on the quantum state of the Universe, the singularities may appear in a quantum region where the wave function is not oscillatory, i.e., when there is not a well defined notion of classical spacetime. Large scale spectro photometric measurements were obtained for 130 and 160 H II regions from the spiral galaxies NGC628 (M74) and NGC6946 at the 1.6-m Mount Megantic Observatory telescope. The method of monochromatic imaging, carried out with the aid of narrow bandpass interference filters, has allowed integrating the flux in the spectral lines H-alpha, H-beta, O(III)(500.7 nm), and N(II)(658.4 nm). The O/H abundances and the abundance gradients were determined using the semi-empirical calibration of Edmunds and Pagel and O(III)/H-beta measurements in the H II regions observed. The high statistical reliability of the abundance gradients gives by extrapolation estimates of average abundance of 9.36 for NGC6946 and 9.20 for NGC628. The slopes of the two abundance gradients remain constant for all the radial domain covered in each galaxy. By comparing with the O/H abundance measurements of many other galaxies, it is shown that the gradient slopes, with a few exceptions, stay identical. The absence of correlation between the various gradients of the galaxies exists for all the physical parameters considered, in spite of the relatively wide domains of O/H abundance (8.4 and 9.4) and luminosity (9.5 to 10.5). THE ONSET OF GALACTIC WINDS IN EARLY-TYPE GALAXIES Final Report, 1 Aug. 1989 - 31 Jul. 1991 .
Christine Jones Jul. 1992 2 p
(Grant NAG5-1205)
(NASA-CR-193640; NAS 1.26:193640) Avail: CASI HC A01/MF A01

We completed the spectral analysis of 31 early-type galaxies to investigate whether their x-ray emission was predominantly due to thermal bremsstrahlung from a hot gaseous corona or emission from discrete, galactic sources such as x-ray binaries. If a corona dominates the x-ray emission, its spectra is expected to be relatively cool (0.5 - 1 keV) compared to the harder emission associated with x-ray binaries in our galaxy, the Magellanic Clouds and M31. While it is generally accepted that the x-ray emission in luminous E and S0 galaxies arises from hot coronae, the status of hot gas in lower luminosity (and hence lower mass) galaxies is less clear. Calculations show that, for a given supernova rate, a critical galaxy luminosity (mass) exists below which the gas cannot be gravitationally

confined and a galactic wind is predicted to be effective in expelling gas from the galaxy. Since significant mass (a dark halo) is required to hold a hot, gaseous corona around a galaxy, we expect that the faintest, smallest galaxies will not have a hot corona, but their x-ray emission will be dominated by galactic sources or by an active galactic nuclei. In the sample we tested which spanned the absolute magnitude range from -21.5 to -19.5, we found that except for two galaxies whose x-ray emission was dominated by an active nucleus, that the others were consistent with emission from hot gas. We also found that there is a correlation between gas temperature and galaxy magnitude (mass), such that the brighter, more luminous galaxies have hotter gas temperatures. Thus even at relatively faint magnitudes, the dominant emission from early-type galaxies appears to be hot gas. We also carried out an investigation of the x-ray surface brightness distribution of the x-ray emission for about 100 early type galaxies to determine whether the x-ray emission from galaxies are extended. Extended x-ray emission is expected if the emission is due to a hot gaseous corona. We determined the ratio of the source counts in two annuli (0-80 arc seconds and 80-160 arc seconds) for each galaxy and analyzed these ratios using a maximum likelihood estimator to determine the errors on the ratios. Even for weak sources, this ratio provides a sensitive test for source extent. We then compared these ratios to a sample of quasars (all unresolved sources) and have determined which galaxies are extended and which are consistent with point sources. A first paper including the Einstein x-ray fluxes for 147 early-type galaxies has been published in the Astrophysical Journal Supplement Series (with Roberts, Hogg, Bregman, Forman entitled 'Interstellar Matter in Early-Type Galaxies'). A second paper will describe the spectral and extent analysis carried out for this galaxy sample. These results also have been presented at scientific conferences and in colloquia. Derived from text

An up-to-date sample of 134 globular clusters with an error in magnitude of 0(sub m).40 was used to test a new model of estimation for the distance to the Galactic Center. The model is based upon a diagnosis of the selection effects in the local azimuthal distribution of clusters in order to redistribute them systematically around candidates to the center of symmetry of the system. The procedure tests subsamples of clusters of different spatial extent and uses the mean, the medium, and an average value weighted by binomial coefficients to estimate separately the displacement of the centroid in the altered systems. For each subsample the candidate with the smallest modulation of its mean joint displacement with the associated scatter is selected, and it is concluded from an analysis of weighted means that the most consistent result favors an estimate of R(sub o) = 6.90 +/- 0.33 kpc. TIDAL INTERACTIONS IN THE EARTH MOON SYSTEM

P. Melchior 1992 41 p Presented at the Internation Union of Geodesy and Geophysics General Assembly Union Lecture, Vienna, Austria, Aug. 1991 Submitted for publication
(Communications-Ser-B-160; ETN-93-94377) Avail: CASI HC A03/MF A01

Three epochs in the development of man's knowledge of tidal interactions are discussed: the epoch of pioneers to the International Geophysical Year 'IGY1957'; a transition period from IGY1957 up to 1980 when there were not the powerful tools of today, but improved quartz clinometers, recording gravimeters, and the first 'electronic computer' (the glorious IBM650) existed; the present days with powerful computers, Very Long Base Interferometry (VLBI) superconducting gravimeters (1982), excellent models of the Earth's internal structure, and quite good models of the oceanic tides (1979). VARIATIONS COMMON TO THE INTERPLANETARY MAGNETIC FIELD, THE ZONAL ATMOSPHERIC CIRCULATION AND THE EARTH'S ROTATION

D. Djurovic (Belgrade Univ., Yugoslavia.) and P. Paquet 1991 16 p Repr. from Q.J.R. Meteorol. Soc., v. 117, 1991 p 571-586 See also A91-48941
(Communications-Ser-B-157; ETN-93-94378) Avail: CASI HC A03/MF A01

A study of the cyclic fluctuations in the Earth's rotation, the geomagnetic field, the global atmospheric circulation and solar activity which revealed the existence of 50 day and 120 day oscillations common to all is presented. The results, as well as the results obtained by radiometric measurements from the satellites Nimbus 7 and the Solar Maximum Mission, suggest that their origin lies in the physical processes in the Sun. The mechanism remains unexplained but from this work it follows that the role of the interplanetary magnetic field could very well be important. ESA

POLARIZATION AND VARIABILITY OF ACTIVE GALAXIES AND QUASARS Ph.D. Thesis

Wayne Buell Webb 1992 261 p
Avail: Univ. Microfilms Order No. DA9310955

We measured UBVRI polarizations of 0.5-2.5 percent in more than a dozen 'normal' quasars and Seyfert 1 galaxies. In many cases the percentage of polarization increased with frequency. The position angle was wavelength-independent, suggesting the polarization in a given object originated in a single physical process. In nine of the quasars, the polarization was best understood as scattering off dust grains. The second most successful fit to the data was polarization proportional to the flux of the blue thermal component. The low level of polarization associated with the thermal ultraviolet component may be due to electron scattering in an accretion disk or torus. Using a Monte Carlo simulation, we calculated which accretion models are consistent with the observed low levels of polarization. We found that accretion flows shaped like flat disks and wedges produced too much polarization. Toroids and wedge-shaped disks (with half-angles of 30 degrees or more) produced lower levels of polarization, more consistent with the observations of normal quasars. We monitored 23 quasars and Seyfert 1 galaxies on short time scales: minutes, hours, days, weeks, and months. We found no evidence for intranight optical variations. However, we did find variability on a time scale of one to several days in II percent of the galaxies in both the blue and green, and in 26 percent of the AGNs observed in the red. We found optical variability common on a 60 day time scale, detectable in 60 percent of the AGNs in the blue filter and 40 percent in the red filter. Our sample suggests a weak anti-correlation of luminosity and FeII/H(sub beta) ratio with variability. Variability on the time scales of one day and 60 days are consistent with the dynamical and thermal time scales, respectively, of accretion flows about supermassive black holes. Author

THE EXTENT AND CONTENT OF LOW-IONIZATION GAS IN GALAXIES Ph.D. Thesis

Donna Suzanne Womble 1992 321 p
Avail: Univ. Microfilms Order No. DA9312135

This dissertation reports combined observations of QSO absorption and H I emission from galaxies which comprise proximate pairs of background and foreground objects. The fortuitous juxtaposition of these QSO-galaxy 'pairs' provides unique opportunities to probe the extent and content of gas in foreground galaxies through evaluation of the incidence and strength of absorption lines in the spectra of the background QSOs. When combined with direct observations of the neutral hydrogen emission from galaxies, the high quality QSO absorption spectra help to quantify the relative distributions of hydrogen and metal-enriched gas in galaxies. We present optical, spectroscopic observations of a new sample of nine close QSO-galaxy pairs. Based on the results from previous studies, these objects were selected with strict limitations on the QSO-galaxy impact parameters. For a select subset of these galaxies, we present synthesis images of the H I emission distributions. These observations are combined with deep optical images and far-infrared fluxes of the galaxies to assess and interpret morphological and environmental conditions which may influence the absorption status. These observations are combined with the existing measurements for all pairs with similar impact parameters to form a 'complete' sample. Using the database from this sample of 22 close pairs, we provide a compilation of results for the individual sources and we draw a number of global conclusions. Naive assumptions regarding a direct

correspondence between the incidence and strength of Ca II absorption and the impact parameters are invalid for these data. There does not appear to be a sharp impact parameter limit beyond which Ca II absorption is never detected, nor is there a minimum separation below which absorption is always detected. Limits on the relative abundance of Ca II and H I indicate that the QSO-galaxy pair absorption systems have gas-phase abundances of calcium which are larger than in the majority of Galactic halo sightlines. We tentatively find that the absorbing galaxies may be more luminous in the optical and far-infrared than the non-absorbers. Combined with a qualitative assessment of the galaxy morphologies and environments, we find that these results are consistent with the absorbers being characteristically more active than the non-absorbed. Tidal interactions and active star-formation play important and perhaps crucial roles in the origin of the absorbing gas. We interpret these results in the context of calcium depletion, and we briefly compare the inferred properties with those seen in higher red shift QSO absorption systems. Author

MILLIMETER AND INFRARED STUDIES OF YOUNG STELLAR OBJECTS IN DARK CLOUD L1641 Ph.D. Thesis
Hua Chen 1992 237 p
Avail: Univ. Microfilms Order No. DA9312183

To understand the physical process of star formation, we address three questions: (1) what are the critical indicators of evolutionary states of young stellar objects?; (2) when and how are dense cores dissipated?; and (3) how are young stars distributed in a single molecular cloud? We selected 224 IRAS sources from the IRAS coadded images in dark cloud L1641. The IRAS data analysis suggested that the 122 sources inside L1641 are probably young stellar objects, while the sources outside L1641 are probably infrared cirrus. In (13)CO and HCO(+) millimeter observations, we found that most of the IRAS sources with CO outflows are associated with molecular dense cores, while most nonoutflow sources are not. This can be explained if dense cores are dissipated by the outflows before the driving sources become pre-main-sequence stars. Using near-IR array detectors, we imaged 59 IRAS sources in H and K', some of them also were imaged in narrow-band L and M. The most important result from the imaging is the detection of small groupings of 10-40 near-IR sources near 14 IRAS sources. These groupings, defined as stellar density enhancements (SDEs), are statistically significant compared to background stars. Most of the near-IR sources within the SDEs are low-mass pre-main-sequence stars physically associated with the IRAS sources. The SDEs probably result from pile-up of young stars due to continuous star formation within the dense cores, a phenomenon seen in the early stage of star formation. Our images showed that the young stars in L1641 can be characterized by a range of stellar densities, from a large cluster (the Trapezium Cluster) to the SDEs and to individual stars. The previously proposed cluster and isolated star formation modes are probably the high and low ends of the continuous distribution. With the near-IR imaging, we were able to identify the probable near-IR counterparts for 55 of the 59 IRAS sources. Forty-five of them are class I sources, and the other 10 sources are class II sources. Dissert. Abstr.

COLD DARK MATTER HALOS Ph.D. Thesis
John Joseph Dubinski 1991 135 p
Avail: Univ. Microfilms Order No. DANN73881

The dark halos arising in the Cold Dark Matter (CDM) cosmology are simulated to investigate the relationship between the structure and kinematics of dark halos and galaxies. Realistic cosmological initial conditions and tidal field boundary conditions are used in N-body simulations of the collapse of density peaks to form dark halos. The core radii of dark halos are no greater than the softening radius, r(sub s) = 1.4 kpc. The density profiles can be fit with an analytical Hernquist (1990) profile with an effective power law which varies between -1 in the center to -4 at large radii. The rotation curves of dark halos resemble the flat rotation curves of spiral galaxies in the observed range, 1.5 approximately less than r approximately less than 30 kpc. The halos are strongly triaxial and very flat with (c/a) = 0.50 and (b/a) = 0.71. The distribution of ellipticities for dark halos reaches a maximum at epsilon = 0.5 in contrast to the distribution for elliptical galaxies which peaks at epsilon = 0.2 suggesting that ellipticals are much rounder than dark halos. Dark halos are generally flatter than their progenitor density peaks. The final shape and orientation of a dark halo are largely determined by tidal torquing and are sensitive to changes in the strength and orientation of a tidal field. Dark halos are pressure supported objects with negligible rotational support as indicated by the mean dimensionless spin, lamda = 0.042 +/- 0.024. The angular momentum vector tends to align with the true minor axis of dark halos. Elliptical galaxies have a similar behavior implied by the observation of the tendency for alignment of the rotation vector and the apparent minor axis. The origin of this behavior may be traced to the tendency for tidal torques to misalign with the major axis of a density peak. Tidal torques are found to isotropize the velocity ellipsoids of dark halos at large radii, contrary to the expectation of radially anisotropic velocity ellipsoids in cold collapse simulations. Overall, the properties of CDM halos are broadly consistent with the properties of dark halos derived from the observations of galaxies. Dissert. Abstr.

N94-13651 Texas Univ., Austin.
THE REIONIZATION OF THE INTERGALACTIC MEDIUM Ph.D. Thesis
Mark Laird Giroux 1992 384 p
Avail: Univ. Microfilms Order No. DA9309174

We have calculated in detail the thermal and ionization evolution of a uniform intergalactic medium (IGM) composed of H and He, undergoing 'reionization' in a post-recombination Friedmann universe, including the mean effect of gas clumps embedded in a smoothly distributed ambient gas. We have solved nonequilibrium rate equations for ionization and recombination, together with the equations of energy conservation, including the effects of cosmological expansion, radiative and Compton cooling, and the diffuse flux emitted by the gas, and radiative transfer. We have included the contribution to the continuum opacity of the universe due to the observed quasar absorption line clouds (QALC's). We have considered a variety of generic sources of photoionization, including quasars and primeval galaxies, as well as the possibility that hydrodynamical processes deposit thermal energy in the IGM. Our purpose is to elucidate the minimum requirements for reionizing the IGM by z approx. = 5 to the extent required by the Gunn-Peterson limit, by the energy release associated with cosmological structure formation. These minimum requirements are a significant constraint on theories of the origin of structure in the universe. We have calculated the time varying density of the IGM by coupling our detailed, numerical calculations of an evolving uniform IGM to the linearized equations for the growth of density fluctuations in both the gaseous and dark components in a Cold Dark Matter (CDM) universe, identifying the IGM density with the uncollapsed baryon fraction. The collapsed fraction is postulated to be a source of energy injection into the IGM by radiation or bulk hydrodynamical heating (e.g. via shocks) or both, at a rate which is marginally enough to satisfy the Gunn-Peterson constraint at z less than 5. We find that the IGM must have contained a substantial fraction of the total baryon density of the universe in a CDM model both during and after its reionization epoch. Self-consistent reionization of the IGM by the collapsed baryon fraction has a strong effect on the rate of collapse. Dissert. Abstr.

THE DISTANCE TO THE HIGH VELOCITY CLOUDS OF NEUTRAL HYDROGEN Final Report, 1 Oct. 1989 - 30 Sep. 1991
Joel N. Bregman 1992 14 p
(Grant NAG5-1268)
(NASA-CR-194343; NAS 1.26:194343; UM-026952) Avail: CASI HC A03/MF A01

The goal of this project was to determine the distance to high velocity gas clouds. These clouds are believed to lie in the halo of the galaxy, but this is a matter of controversy. The technique was used to look for the effect of absorption by these clouds against the light of stars at various distances along the line of sight to these clouds. This was done in the ultraviolet using the International Ultraviolet Explorer. Absorption at the velocity of the clouds was not found in any of the stars, which have kilcparsec distances. It was concluded that the vertical distance to these clouds is at least 1.5 kpc, putting them firmly in the halo of the galaxy. Author (revised)

THEORETICAL MOLECULAR STUDIES OF ASTROPHYSICAL INTEREST Final Technical Report, 1 Dec. 1974 - 30 Sep. 1991
George Flynn 30 Sep. 1991 13 p
(Grant NsG-7105)
(NASA-CR-193300; NAS 1.26:193300) Avail: CASI HC A03/MF A01

When work under this grant began in 1974 there was a great need for state-to-state collisional excitation rates for interstellar molecules observed by radio astronomers. These were required to interpret observed line intensities in terms of local temperatures and densities, but, owing to lack of experimental or theoretical values, estimates then being used for this purpose ranged over several orders of magnitude. A problem of particular interest was collisional excitation of formaldehyde; Townes and Cheung had suggested that the relative size of different state-to-state rates (propensity rules) was responsible for the anomalous absorption observed for this species. We believed that numerical molecular scattering techniques (in particular the close coupling or coupled channel method) could be used to obtain accurate results, and that these would be computationally feasible since only a few molecular rotational levels are populated at the low temperatures thought to prevail in the observed regions. Such calculations also require detailed knowledge of the intermolecular forces, but we thought that those could also be obtained with sufficient accuracy by theoretical (quantum chemical) techniques. Others, notably Roy Gordon at Harvard, had made progress in solving the molecular scattering equations, generally using semi-empirical intermolecular potentials. Work done under this grant generalized Gordon's scattering code, and introduced the use of theoretical interaction potentials obtained by solving the molecular Schroedinger equation. Earlier work had considered only the excitation of a diatomic molecule by collisions with an atom, and we extended the formalism to include excitation of more general molecular rotors (e.g., H2CO, NH2, and H2O) and also collisions of two rotors (e.g., H2-H2).

SITES OF FINE-SCALE ELECTRON DENSITY TURBULENCE IN THE INTERSTELLAR MEDIUM Final Technical Report, 1 Oct. 1989 - 18 May 1992

John H. Simonetti 1992 8 p

(Grant NAG5-1275)

(NASA-CR-193708; NAS 1.26:193708) Avail: CASI HC A02/MF A01

Observations of radio-wave scattering effects probe interstellar electron-density turbulence. But with limited use of complementary data sets only broad conclusions have been obtained. The locations of this turbulence are unknown (phases, objects, etc.), as is the mechanism for its production, although it could play a role in various galactic processes. The IRAS data set was used to search for correlations between scattering and structures traced by infrared emitting dust. The existent HI (21-cm line emission), and 408-MHz radio-continuum all-sky surveys were used to search for correlations between scattering and structures traced by these emissions. Only lines of sight outside the galactic plane were considered (to better delimit the structures which might be causing scattering). No correlation is apparent between 21-cm line emission, or infrared continuum emission and interstellar scattering. However, a correlation exists between the scattering toward extragalactic radio sources and 408-MHz continuum emission.

DUST PRODUCTION IN THE ENVELOPES OF CARBON STARS: R CORONAE BOREALIS Ph.D. Thesis [STAUBBILDUNG IN DEN HUELLEN VON KOHLENSTOFFSTERNEN: R CORONAE BOREALIS]

Achim Goeres 1992 197 p In GERMAN

(ETN-93-94389) Avail: CASI HC A09/MF A03

A quantitative, analytic model of darkening events of R Coronae Borealis, based on phenomenological models of light decline by soot formation, with focus on causal relation between the pulsating atmosphere and episodic condensation processes, is presented. The most important properties of R Coronae Borealis, such as anisotropy of soot distribution, episodic occurrence of condensation processes and expansion motion of soot clouds, were recognized as a sequence of a chain of sensitive regulation mechanisms. It is ascertained, that small carbon clusters can absorb star thermal ultraviolet radiation and are so accelerated by radiation pressure, and that supersonic drift velocities are reached. The DRACON (Drift Regulated Anisotropic Condensation) model was used to establish that drift velocity is reduced by stellar pulsation in interaction between shock waves and validation field variations until effective condensation occurs. It is concluded that soot formation anisotropy is a consequence of the deterioration of spherical symmetry due to semiregular multiphase pulsations of R Coronae Borealis, and of the extreme sensitive conditions of condensation dependence on drift velocity.

A CLASSICAL INSTABILITY FOR BLACK STRINGS AND p-BRANES

R. Gregory (Chicago Univ., IL.) and R. Laflamme 1993 5 p Presented at the Gravity and Relativistic Astrophysics, Waterloo, Ontario, 13-15 May 1993

(Contract W-7405-eng-36)

(DE93-014577; LA-UR-93-1732; CONF-9305199-1) Avail: CASI HC A01/MF A01

We investigate the evolution of small perturbations around black strings and branes which are low energy solutions of string theory. For simplicity, we focussed our attention on the zero charge case and showed that there are unstable modes for a range of time frequency and wavelength in the extra 10-D dimensions. These perturbations can be stabilized if the extra dimensions are compactified to a scale smaller than the minimum wavelength for which instability occurs and thus will not affect large astrophysical black holes in four dimensions. We comment on the implications of this result for the Cosmic Censorship Hypothesis.

A LONG-TERM SPACE ASTROPHYSICS RESEARCH PROGRAM: THE EVOLUTION OF THE QUASAR CONTINUUM Semiannual Report No. 6, 1 Jan. - 30 Jun. 1993

M. Elvis Jul. 1993 74 p

(Grant NAGw-2201)

(NASA-CR-193714; NAS 1.26:193714) Avail: CASI HC A04/MF A01

The research program supported by this grant now has great momentum. Numerous papers are in progress, and a strong multi-wavelength observing program is rapidly accumulating data on samples of high redshift quasars across the spectrum. ROSAT spectra of quasars continue to yield surprises. Of four z = 3 quasars with X-ray spectra, three show strong absorption. This contrasts strongly with the situation for luminous AGN at low redshifts where fewer than 1 in 20 show X-ray absorption. A new site for this absorption is probably needed, either around the quasar (e.g. in a cluster cooling flow) or along the line of sight (e.g. in a Damped Lyman-alpha system). The unabsorbed quasar allows limits on the physical conditions in a damped Lyman-alpha cloud to be calculated, and will allow a X-ray Gunn-Peterson test to be applied that will limit the fraction of the closure mass in an intergalactic medium. The X-ray spectral indices of these z = 3 quasars show no change from those of similar objects at low z, suggesting

that 'short-lifetime' models apply. Eight other z = 3-4 quasars have been detected and their energy distributions from X-rays to Infrared (using new infrared spectrographs) have been compiled. These are now being compared with the low z continua from the 'Atlas of Quasar Energy Distributions' to search for evolutionary changes. The discovery of a likely warm absorber in 3C351 made recognition of another example simple. Also, modeling of the conditions in the absorber in 3C351 using the OVI absorption line from HST and the high ionization emission lines, suggests that the broad line region is indeed the origin of the warm absorber in this quasar, and by extension, others. Warm absorbers can now be used as a new diagnostic of this region. The X-ray spectrum of a 'Red Quasar', 3C212, has a cut-off spectrum, which could be fitted by an absorbed power-law, or more remarkably, by an unabsorbed black body. Using our quasi-simultaneous optical data and photoionization modeling we are able to rule out this latter possibility. The long-sought key to understanding red quasars has now been found. (Reddening was earlier ruled out because no 2175A absorption feature was seen. This is now seen to have been misleading.)

(Contract W-7405-eng-48)

(DE93-014423; UCRL-JC-113606; CONF-921266-2) Avail: CASI HC A02/MF A01

Massive Compact Halo Objects such as brown dwarfs, Jupiters, and black holes are prime candidates to comprise the dark halo of our galaxy. Paczynski noted that objects (dubbed MACHOS) with masses in the range 10(exp -6) solar mass less than M approximately less than 100 solar mass can be detected via gravitational microlensing of stars in the Magellanic Clouds with the caveat that only about one in 10(exp 6) stars will be lensed at any given time. Our group has recently begun a search for microlensing using a refurbished 1.27 meter telescope at the Mount Stromlo Observatory in Australia. Since the summer of 1992, we have been imaging up to 10(exp 7) stars a night in the Large Magellanic Cloud using our large format two-color 3.4 x 10(exp 7) pixel CCD camera. First results based on an analysis of approximately 10(exp 6) of these stars are reported. Although this is not enough data to make definitive statements about the nature of the dark matter, we are able to conclude that the rate of variable star background events is not larger than the expected MACHO signal.

VISUALIZATION TECHNIQUES TO AID IN THE ANALYSIS OF MULTI-SPECTRAL ASTROPHYSICAL DATA SETS Final Report

Edward W. Brugel, Gitta O. Domik (Paderborn Univ., Germany.), and Thomas R. Ayres Sep. 1993 105 p

(Grants NAGw-1902; NSF ASC-90-01115)

(NASA-CR-194489; NAS 1.26:194489) Avail: CASI HC A06/MF A02

The goal of this project was to support the scientific analysis of multi-spectral astrophysical data by means of scientific visualization. Scientific visualization offers its greatest value if it is not used as a method separate or alternative to other data analysis methods but rather in addition to these methods. Together with quantitative analysis of data, such as offered by statistical analysis, image or signal processing, visualization attempts to explore all information inherent in astrophysical data in the most effective way. Data visualization is one aspect of data analysis. Our taxonomy as developed in Section 2 includes identification and access to existing information, preprocessing and quantitative analysis of data, visual representation and the user interface as major components to the software environment of astrophysical data analysis. In pursuing our goal to provide methods and tools for scientific visualization of multi-spectral astrophysical data, we therefore looked at scientific data analysis as one whole process, adding visualization tools to an already existing environment and integrating the various components that define a scientific data analysis environment. As long as the software development process of each component is separate from all other components, users of data analysis software are constantly interrupted in their scientific work in order to convert from one data format to another, or to move from one storage medium to another, or to switch from one user interface to another. We also took an in-depth look at scientific visualization and its underlying concepts, current visualization systems, their contributions, and their shortcomings. The role of data visualization is to stimulate mental processes different from quantitative data analysis, such as the perception of spatial relationships or the discovery of patterns or anomalies while browsing through large data sets. Visualization often leads to an intuitive understanding of the meaning of data values and their relationships by sacrificing accuracy in interpreting the data values. In order to be accurate in the interpretation, data values need to be measured, computed on, and compared to theoretical or empirical models (quantitative analysis). If visualization software hampers quantitative analysis (which happens with some commercial visualization products), its use is greatly diminished for astrophysical data analysis. The software system STAR (Scientific Toolkit for Astrophysical Research) was developed as a prototype during the course of the project to better understand the pragmatic concerns raised in the project. STAR led to a better understanding on the importance of collaboration between astrophysicists and computer scientists.

MULTIPLICATIVE NOISE: APPLICATIONS IN COSMOLOGY AND FIELD THEORY

S. Habib 1993 21 p Presented at the 8th Annual Workshop in Nonlinear Astronomy, Gainesville, FL, 4-6 Feb. 1993

(Contract W-7405-eng-36)

(DE93-016624; LA-UR-93-2105; CONF-9302132-1) Avail: CASI HC A03/MF A01

Physical situations involving multiplicative noise arise generically in cosmology and field theory. In this paper, the focus is first on exact nonlinear Langevin equations, appropriate in a cosmological setting, for a system with one degree of freedom. The Langevin equations are derived using an appropriate time-dependent generalization of a model due to Zwanzig. These models are then extended to field theories and the generation of multiplicative noise in such a context is discussed. Important issues in both the cosmological and field theoretic cases are the fluctuation-dissipation relations and the relaxation time scale. Of some importance in cosmology is the fact that multiplicative noise can substantially reduce the relaxation time. In the field theoretic context, such a noise can lead to a significant enhancement in the nucleation rate of topological defects.

WAS 49: MIRROR FOR A HIDDEN SEYFERT 1 GALAXY Final Technical Report, 15 Sep. 1992 - 14 Sep. 1993

Jules Halpern, E. Moran, L. Kay, and R. Antonucci Oct. 1993 12 p

(Grant NAG5-2092)

(NASA-CR-194537; NAS 1.26:194537; CAL-2139) Avail: CASI HC A03/MF A01

Was 49 is an interacting pair of Seyfert galaxies at z = 0.063, one of which contains a hidden Seyfert 1 nucleus as evidenced by the highly polarized broad wings on its Balmer lines. The disk of the main galaxy, Was 49a, appears to be globally photoionized by a powerful continuum source, undoubtedly the hidden Seyfert 1 companion, Was 49b. The intrinsic luminosity of Was 49b is at least 100 times larger than the observed (scattered) luminosity. A single SWP spectrum of the pair, which can be spatially resolved in the large aperture was obtained. A narrow Ly-alpha line was detected from Was 49b, the hidden Seyfert 1, at a flux level consistent with that of an unreddened Seyfert 2 galaxy. The lack of detection of a continuum is consistent with a power-law of v(sup -1) or steeper extrapolated from the optical, again consistent with the spectrum of other Seyfert 2 and hidden Seyfert 1 galaxies.

MULTIWAVELENGTH OBSERVATIONS OF UNIDENTIFIED HIGH ENERGY GAMMA RAY SOURCES Annual Status and Final Technical Report, 15 Aug. 1992 - 14 Oct. 1993

Jules P. Halpern Oct. 1993 29 p

(Grant NAG5-2051)
(NASA-CR-194536; NAS 1.26:194536; CAL-2140) Avail: CASI HC A03/MF A01

As was the case for COS B, the majority of high-energy (greater than 100 MeV) gamma-ray sources detected by the EGRET instrument on GRO are not immediately identifiable with cataloged objects at other wavelengths. These persistent gamma-ray sources are, next to the gamma-ray bursts, the least understood objects in the universe. Even a rudimentary understanding of their nature awaits identifications and follow-up work at other wavelengths to tell us what they are. The as yet unidentified sources are potentially the most interesting, since they may represent unrecognized new classes of astronomical objects, such as radio-quiet pulsars or new types of active galactic nuclei (AGN's). This two-year investigation is intended to support the analysis, correlation, and theoretical interpretation of data that we are obtaining at x ray, optical, and radio wavelengths in order to render the gamma-ray data interpretable. According to plan, in the first year concentration was on the identification and study of Geminga. The second year will be devoted to studies of similar unidentified gamma-ray sources which will become available in the first EGRET catalogs. The results obtained so far are presented in the two papers which are reproduced in the Appendix. In these papers, we discuss the pulse profiles of Geminga, the geometry and efficiency of the magnetospheric accelerator, the distance to Geminga, the implications for theories of polar cap heating, the effect of the magnetic field on the surface emission and environment of the neutron star, and possible interpretations of a radio-quiet Geminga. The implications of the other gamma-ray pulsars which were discovered to have high gamma-ray efficiency are also discussed, and the remaining unidentified COS B sources are attributed to a population of efficient gamma-ray sources, some of which may be radio quiet. The anomalous gravity field of Venus shows high correlation with surface features revealed by radar. We extract gravity models from the Doppler tracking data from the Pioneer Venus Orbiter (PVO) by means of a two-step process. In the first step, we solve the nonlinear spacecraft state estimation problem using a Kalman filter-smoother. The Kalman filter was evaluated through simulations. This evaluation and some unusual features of the filter are discussed. In the second step, we perform a geophysical inversion using a linear Bayesian estimator. To allow an unbiased comparison between gravity and topography, we use a simulation technique to smooth and distort the radar topographic data so as to yield maps having the same characteristics as our gravity maps. The maps presented cover 2/3 of the surface of Venus and display the strong topography-gravity correlation previously reported. The topography-gravity scatter plots show two distinct trends. Radio occultation experiments, and radio astronomical observations have suggested that significant variations (both spatial and temporal) in the abundances of sulfur-bearing gases are occurring below the Venus cloud layers. In addition, recent Near Infra-Red images of the nightside of Venus revealed large-scale features which sustain their shape over multiple rotations (the rotation periods of the features are 6.0 +/- 0.5 days). Presumably, the contrast variations in the NIR images are caused by variations in the abundance of large particles in the cloud deck. If these particles are composed of liquid sulfuric acid, one would expect a strong anticorrelation between regions with a high abundance of sulfuric acid vapor, and regions where there are large particles. One technique for monitoring the abundance and distribution of sulfuric acid vapor (H2SO4) at and below the main Venus cloud layer (altitudes below 50 km) is to measure the 13-cm wavelength opacity using Pioneer Venus Orbiter Radio Occultation Studies (PV-ORO). We are working to characterize variations in the abundance and distribution of subcloud H2SO4(g) in the Venus atmosphere by using a number of 13-cm radio occultation measurements conducted with the Pioneer Venus Orbiter near the inferior conjunction of 1991. When retrieved, the vertical profiles of the abundance of H2SO4(g) will be compared and correlated with NIR images of the night side of Venus made during the same period of time. Hopefully, the combination of these two different types of data will make it possible to constrain or identify the composition of the large particles causing the features observed in the NIR images. Considered on their own, however, the parameters retrieved from the radio occultation experiments are valuable science products. Author (revised)

The Mars Mission Research Center (M2RC) is one of nine University Space Engineering Research Centers established by NASA in June 1988. It is a cooperative effort between NCSU and A&T in Greensboro. The goal of the Center is to focus on research and educational technologies for planetary exploration with particular emphasis on Mars. The research combines Mission Analysis and Design, Hypersonic Aerodynamics and Propulsion, Structures and Controls, Composite Materials, and Fabrication Methods in a cross-disciplined program directed towards the development of space transportation systems for lunar and planetary travel. The activities of the students and faculty in the M2RC for the period 1 Jul. 1990 to 30 Jun. 1991 are described. Derived from text

PLANETARY PROTECTION IMPLEMENTATION ON FUTURE MARS LANDER MISSIONS
Robert Howell (Biotrack Corp., Mountain View, CA.) and Donald L. DeVincenzi Jun. 1993 30 p Workshop held in Palo Alto, CA, 13-15 Jul. 1992
(RTOP 199-59-12-05)
(NASA-CP-3216; A-93085; NAS 1.55:3216) Avail: CASI HC A03/MF A01

A workshop was convened to discuss the subject of planetary protection implementation for Mars lander missions. It was sponsored and organized by the Exobiology Implementation Team of the U.S./Russian Joint Working Group on Space Biomedical and Life Support Systems. The objective of the workshop was to discuss planetary protection issues for the Russian Mars '94 mission, which is currently under development, as well as for additional future Mars lander missions including the planned Mars '96 and U.S. MESUR Pathfinder and Network missions. A series of invited presentations was made to ensure that workshop participants had access to information relevant to the planned discussions. The topics summarized in this report include exobiology science objectives for Mars exploration, current international policy on planetary protection, planetary protection requirements developed for earlier missions, mission plans and designs for future U.S. and Russian Mars landers, biological contamination of spacecraft components, and techniques for spacecraft bioload reduction. In addition, the recent recommendations of the U.S. Space Studies Board (SSB) on this subject were also summarized. Much of the discussion focused on the recommendations of the SSB. The SSB proposed relaxing the planetary protection requirements for those Mars lander missions that do not contain life detection experiments, but maintaining Viking-like requirements for those missions that do contain life detection experiments. The SSB

recommendations were found to be acceptable as a guide for future missions, although many questions and concerns about interpretation were raised and are summarized. Significant among the concerns was the need for more quantitative guidelines to prevent misinterpretation by project offices and better access to and use of the Viking data base of bioassays to specify microbial burden targets. Among the questions raised were how will the SSB recommendations be integrated with existing Committee on Space Research (COSPAR) policy and how will they apply to and affect Mars '94, Mars '96, MESUR Pathfinder, and MESUR Network missions? One additional topic briefly considered at the workshop was the identification of some issues related to planetary protection considerations for Mars sample return missions. These issues will form the basis for a follow-on joint U.S./Russian workshop on that subject. Author (revised)

THE NATURE AND ORIGIN OF PERIODICALLY SPACED TECTONIC FEATURES ON MARS Final Report

Thomas R. Watters 29 Oct. 1991 4 p

(Grant NAGw-1106)

(NASA-CR-193821; NAS 1.26:193821) Avail: CASI HC A01/MF A01

The final report on the nature and origin of periodically spaced tectonic features on Mars is presented. The focus of this investigation was to characterize and model the periodically spaced wrinkle ridges observed in ridged plains material on Mars. The investigation centered on the wrinkle ridges in ridged plains material on the Tharsis Plateau. Wrinkle ridges are interpreted to be structural in origin, resulting from buckling followed by reverse or thrust faulting of the ridged plains material. The study extended beyond Tharsis to other ridged plains units, particularly those in Hesperia Planum. As a corollary, an analysis of the spacing of the anticlinal ridges of the Yakima Fold Belt of the Columbia Plateau in the NW United States was undertaken. Author (revised)

REGIONAL TECTONIC ANALYSIS OF VENUS AS PART OF THE PIONEER VENUS GUEST INVESTIGATOR PROJECT Final Report

David R. Williams 9 Sep. 1991 4 p

(Grant NAG2-690)

(NASA-CR-194079; NAS 1.26:194079) Avail: CASI HC A01/MF A01

Over the past year, much of the tectonic analysis of Venus we have done has centered on global properties of the planet, in order to understand fundamental aspects of the dynamics of the mantle and lithosphere of Venus. We have developed convection models of the Earth and Venus. These models assume whole mantle internally-heated convection. The viscosity is temperature, volatile-content, and stress dependent. An initial temperature and volatile content is assumed, and the thermal evolution is tracked for 4.6 billion years. During this time, heating occurs by decay of radiogenic elements in the mantle, and degassing and regassing of volatiles takes place at the surface. For a model assuming plate tectonics as the primary heat loss mechanism, representing the Earth through most of it's history and perhaps Venus' earlier history, degassing of the mantle was found to occur rapidly (approximately 200 My) over a large range of parameters. Even for parameters chosen to represent extreme cases of an initially cool planet, low radiogenic heating, and large initial volatile complement, the mantle water content was degassed to an equilibrium value in about 2 By. These values may be applicable to the early Venus, if a large, Moon-forming impact on Earth resulted in efficient heating and loss of water, leaving Venus with a comparably greater volatile budget and less vigorous early convection. It may therefore be impossible to retain large amounts of water in the interior of Venus until the planet cools down enough for the 'cold-trap' effect to take place. This effect traps crust forming melts within the mantle due to a cusp in the solidus, causing these melts to refreeze at depth into a dense eclogite phase, which will inhibit ascent of this material to the surface. This effect, however, requires a hydrous mantle, so early loss of water might prevent it from taking place. Since without plate tectonics there is no mechanism for regassing volatiles into the mantle, as occurs on Earth at subduction zones, this means the interior of Venus would at present be almost completely dry. We have also calculated argon degassing, and mantle flow velocities. viscosities, and cooling rates in these models, and these values can provide constraints on present day mantle dynamics. THE STUDIES ON LUNAR AND PLANETARY EXPLORATION AND UTILIZATION: THE STUDY ON LUNAR RESOURCES UTILIZATION [TSUKI WAKUSEI NO KAIHATSU RIYOU NO KENKYUU: TSUIKISHIGEN NO KAIHATSU RIYOU NO KENKYUU]

National Space Development Agency 31 Mar. 1993 24 p In JAPANESE

(NASDA-CNT-930014; JTN-93-80468) Avail: CASI HC A03/MF A01

The results of the gathering of various knowledge about the lunar resources (including the outline of lunar resource development and utilization, lunar topography and lunar surface environments, and physical properties and chemical compositions of the lunar surface soil) are described. The outline of processes for lunar resource utilization (including pre-processing of regolith (sorting and concentration)), separation of components (reduction, extraction and refinement), and case studies on lunar surface resource utilization systems (including scenarios of lunar base and lunar surface activities, and strategy for lunar resource utilization) is given. Major lunar dark mantle deposits, correlation between intensity of the ferromagnetic resonance for FeO amount and other maturity indices, drawing the Apollo 12 double drive-tube core, scanning electron micrograph of a composite volcanic glass droplet from Apollo 17 core, and lunar resource utilization processes, etc. are shown. MARTIAN SEDIMENTARY DEPOSITS Final Technical Report

Rene DeHon 25 Mar. 1992 6 p

(Grant NsG-7534)

(NASA-CR-193266; NAS 1.26:193266) Avail: CASI HC A02/MF A01

The objectives are characterization of flow through outflow channels, sedimentation associated with Martian outflow systems, and documentation of Martian lakes. Over the period of the grant much, but not all, of the study centered on the Maja Valles outflow. Maja served as an example in which the effects of multiple channel routing and ponding could be studied. Maja Valles also served as the test case for calculating flow through an outflow system. Applying the lessons learned in Maja Valles and comparisons and contrast required a scrutiny of other channels. Author (revised)

WORKSHOP ON THE SPACE ENVIRONMENT: THE EFFECTS ON THE OPTICAL PROPERTIES OF AIRLESS BODIES

B. Hapke, ed. (Pittsburgh Univ., PA.), B. Clark, ed., G. Benedix, ed., D. Domingue, ed., and M. Cintala, ed. (National Aeronautics and Space Administration. Lyndon B. Johnson Space Center, Houston, TX.) 1993 18 p Workshop held in Houston, TX, 9-10 Nov. 1992

(Contract NASw-4574)

(NASA-CR-194417; NAS 1.26:194417; LPI/TR-93-01) Avail: CASI HC A03/MF A01

Reflectance spectrophotometry and polarimetry are major tools in remote sensing studies of surfaces of solar system bodies. The interpretations of such measurements are often based on laboratory studies of meteoritic, lunar, and terrestrial materials. However, the optical properties of regoliths

are known to be affected by the space environment. Thus, some of the major questions addressed in the workshop include identity of the soil component responsible for alteration of the optical properties, the process that produced this component, and how reliably the effects of these processes could be extrapolated to other bodies of the solar system. For individual titles, see N94-14299 through N94-14303.

IMPACT MELTING AND VAPORIZATION IN PLANETARY REGOLITHS

Mark J. Cintala *In* Lunar and Planetary Inst., Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies 1993 p 5-7 (For primary document see N94-14298 02-91)

Avail: CASI HC A01/MF A01

The thermal phenomena attending high-velocity impact have profound effects on virtually every aspect of the physical, chemical, and optical evolution of planetary regoliths. Not only do impacts pulverize, redistribute, and mix the various components of a regolith, but they also fuse and vaporize them - changing crystalline material to glass, releasing trapped or implanted gases, and spreading vaporized products across the planet's surface, among many other things. Those wishing to understand the details of regolith evolution must incorporate the effects of impact into their approach to the problem. Derived from a more extensive contribution, a short summary of the thermal processes accompanying impact into planetary regoliths, with the immediate acknowledgment that it is neither exhaustive in its consideration of the existing literature nor exact in any of its treatments, is presented. The reader desiring more information is directed to the relevant papers cited at the end; should they fail to provide satisfaction, he or she is then heartily encouraged to attack the problem immediately.

EXTRAPOLATION OF SPACE WEATHERING PROCESSES TO OTHER SMALL SOLAR SYSTEM BODIES

M. J. Gaffey *In* Lunar and Planetary Inst., Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies 1993 p 7-8 (For primary document see N94-14298 02-91)

Avail: CASI HC A01/MF A01

A diverse range of processes were invoked as the dominant factor or as important contributory factors in the modification of the optical surface and regolith of the moon. These include impact vitrification by large and small projectiles, solar wind implantation and the reduction of oxidized iron during energetic events, sputtering and crystal lattice damage by energetic cosmic rays, shock metamorphism of minerals, mixing of diverse lithologies by impacts, and contamination by external materials. These processes are also potentially important on the rocky surfaces of other small solar system bodies. For icy bodies, several additional processes are also possible, including formation of complex organic compounds from methane and ammonia-bearing ices by ultraviolet irradiation and the condensation of vapor species to form frost layers in the polar or cooler regions of objects at appropriate heliocentric distances. The lunar case, even when completely understood, will not extend in a simple linear fashion to other small rocky objects, nor will the optical surfaces of those objects all be affected to the same degree by each process. The major factors that will control the relative efficacy of a possible mechanism include the efficiency of ejecta retention and the degree to which the regolith materials experience multiple events (primarily a function of body size, escape velocity, and impactor velocities); the mean duration of typical regolith particle exposure at the optical surface and within reach of the micrometeorite, cosmic ray, solar wind, or UV fluxes (a function of the rate and scale of regolith mixing, production, and removal processes); the incident flux of solar (low energy) cosmic rays, solar wind, or UV radiation (inverse square of heliocentric distance) or of galactic (high energy) cosmic rays (slowly increasing flux with heliocentric distance); and the compositional and mineralogical nature of the surface being affected. In general, those processes that depend upon either the retention of impact ejecta or on the presence of multigenerational regoliths should be substantially less effective on smaller bodies with lower escape velocities. However, there are important exceptions to this generalization. For example, a process that involves the hypervelocity impact of small particles into a fine-grained regolith may be able to effectively retain highly shocked or melted material due to the nature of shock wave propagation in such a heterogeneous material.

LABORATORY SIMULATIONS OF LUNAR DARKENING PROCESSES

B. Hapke *In* Lunar and Planetary Inst., Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies 1993 p 8-9 (For primary document see N94-14298 02-91)

Avail: CASI HC A01/MF A01

It was clear long before the Apollo missions that a darkening process occurs on the moon. However, its nature remains controversial and elusive. Current evidence implies that the darkening is associated with, and is probably caused by, submicroscopic metallic iron in the regolith. Questions discussed at the workshop include: (1) under what conditions will impact vitrification produce a dark glass; (2) what is the role of the submicroscopic metallic Fe (SMFe) in the lunar darkening process; (3) how is the SMFe produced; (4) is there a significant component of the regolith that has been deposited from a vapor, if so, what form is it in, and how can it be recognized, what are its effects on the chemistry of the regolith; (5) how do the processes of impact vitrification, vaporization, sputtering, and SMFe production vary as a function of distance from the sun and location in planetary magnetospheres; and (6) what other processes might affect optical properties. Ices have lower melting and boiling temperatures and sputtering yields several orders of magnitude larger than silicates. Hence, analogous processes will occur to an even greater extent on satellites of the outer planets, and these questions are relevant to those bodies as well.

DEPOSITION OF IMPACT-GENERATED VAPORS IN THE LUNAR REGOLITH

Lindsay P. Keller and David S. McKay *In* Lunar and Planetary Inst., Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies 1993 p 9-10 (For primary document see N94-14298 02-91)

Avail: CASI HC A01/MF A01

The composition and structure of the finest grain sizes in lunar soils are strongly influenced by impact-associated processes such as comminution, melting, and vaporization. These factors in turn exert a strong influence on the optical properties of the materials. The literature regarding the fractionations that accompany the evaporation of silicate materials during impacts is reviewed, the evidence for vapor deposits in the lunar samples is considered, our own efforts to characterize vapor deposits in lunar soils using electron microscopy is described, and the implications of vapor deposits on the optical properties of the lunar fines are discussed.

THE STATE OF Fe IN THE LUNAR REGOLITH AND ITS RELATIONSHIP TO THE SPECTRAL REFLECTANCE PROPERTIES OF THE MOON

Lawrence A. Taylor *In* Lunar and Planetary Inst., Workshop on the Space Environment: The Effects on the Optical Propertis of Airless Bodies 1993 p 10-11 (For primary document see N94-14298 02-91)

Avail: CASI HC A01/MF A01

Space weathering may have altered the surfaces of airless bodies such as asteroids and the moon, and effectively shock-darkened their surfaces, resulting in much lower reflectance and shallower absorption bands compared to those of simple, comminuted, and powdered rocks produced in the laboratory. Studies of lunar samples from the Apollo missions have led to the suggestion that these reflection properties are inherent to the fine-grained regolith which has recorded a wide variety of shock-metamorphic effects. In particular, the lunar soil (i.e., that part of the regolith with grain sizes below 1 mm) contains native Fe in quantities above those present in the rocks from which the soil was formed. The origin and nature of the native Fe in the soil is addressed, and speculations concerning its effects upon the soil's optical properties are presented. Portions of this discussion draw heavily from earlier papers by our research group. Author (revised)

(NASA-CR-193632; NAS 1.26:193632) Avail: CASI HC A02/MF A01

This grant, dating back more than 20 years has supported a variety of investigations of the chromospheres and coronae of the Sun and related cool stars by the Principal Investigator, his postdocs and graduate students, and colleagues at other institutions. This work involved studies of radiative transfer and spectral line formation theory, and the application of these techniques to the analysis of spectra obtained from space and ground-based observatories in the optical, ultraviolet, x-ray and radio portions of the spectrum. Space observations have included the analysis of spectra from OSO-7, Skylab, SMM, and the HRTS rocket experiments. Recent work has concentrated on the interaction of magnetic fields, plasma and radiation in the outer atmospheres of the Sun and other magnetically active stars with different fundamental parameters. Our study of phenomena common to the Sun and stars, the 'solar-stellar connection', can elucidate the fundamental physics, because spatially-resolved observations of the Sun provide us with the 'groundtruth,' while interpretation of stellar data permit us to isolate those parameters critical to stellar activity. Recently, we have studied the differences in physical properties between solar regions of high magnetic flux density and the surrounding plasma. High-resolution CN and CO spectroheliograms have been used to model the thermal inhomogeneities driven by unstable CO cooling, and we have analyzed spatially resolved UV spectra from HRTS to model the thermal structure and energy balance of small-scale structures. The study of nonlinear relations between atmospheric radiative losses and the photospheric magnetic flux density has been continued. We have also proposed a new model for the decay of plages by random walk diffusion of magnetic flux. Our analysis of phenomena common to the Sun and stars included the application of available spectroscopic diagnostics, establishing evidence that the atmospheres of the least active stars are heated at a 'basal' rate that is also found in the centers of solar supergranules, and using the Doppler-imaging technique to measure the position, size, and brightness of stellar active regions. We are computing multi-component models for solar and stellar atmospheres, and models for coronal loops and for the transition-region down flows. The study of solar and stellar flares permits us to assess the role of turbulent energy transport, to pinpoint the mechanism behind Type I radio bursts, to determine whether plasma radiation or cyclotron maser is responsible for microwave flares on M dwarfs, and to extend our knowledge of the basic physics pertinent to cyclotron-maser processes operating on the Sun. THE INFRARED SOLAR SPECTRUM
N. Grevesse (Liege Univ., Belgium.) and A. J. Sauval 1991 20 p
Repr. from The Infrared Spectral Region of Stars, Proceedings of the Montpellier Colloquium, Oct. 1990 (Cambridge, England, University Press), 1991 p 215-233 Proceedings of the Montpellier Colloquium held in Cambridge, England, 1991
(Communications-Ser-B-159; ETN-93-94376) Avail: CASI HC A03/MF A01

The spectrum of the quiet Sun at wavelengths larger than about 1 micrometer (or wavenumbers shorter than 10,000/cm) are described. The main characteristics of studying the solar spectrum in the infrared region are summarized. The new high resolution low noise solar spectra obtained by the Atmospheric Trace Molecule Spectroscopy (ATMOS) Fourier transform spectrometer experiment on board the Space Shuttle are considered. Atomic and molecular spectroscopy/line identification are discussed. Solar observations in the infrared are summarized. Recent analyses have led to a better understanding of the heterogeneous structure of the solar outer layers: thermal bifurcation between the cool photosphere and the hot flux tube chromosphere, convective motions in the photosphere, oscillations in the photosphere and chromosphere, magnetic fields and shapes of the flux tubes, etc. ESA

DETERMINING THE SOLAR-FLARE PHOTOSPHERIC SCALE HEIGHT FROM SMM GAMMA-RAY MEASUREMENTS Final Technical Report, 1 Mar. 1990 - 28 Feb. 1991
Richard E. Lingenfelter 28 Feb. 1991 2 p
(Grant NAG5-1324)
(NASA-CR-194084; NAS 1.26:194084) Avail: CASI HC A01/MF A01

A connected series of Monte Carlo programs was developed to make systematic calculations of the energy, temporal and angular dependences of the gamma-ray line and neutron emission resulting from such accelerated ion interactions. Comparing the results of these calculations with the Solar Maximum Mission/Gamma Ray Spectrometer (SMM/GRS) measurements of gamma-ray line and neutron fluxes, the total number and energy spectrum of the flare-accelerated ions trapped on magnetic loops at the Sun were determined and the angular distribution, pitch angle scattering, and mirroring of the ions on loop fields were constrained. Comparing the calculations with measurements of the time dependence of the neutron capture line emission, a determination of the He-3/H ratio in the photosphere was also made. The diagnostic capabilities of the SMM/GRS measurements were extended by developing a new technique to directly determine the effective photospheric scale height in solar flares from the neutron capture gamma-ray line measurements, and critically test current atmospheric models in the flare region. HARD X RAY/MICROWAVE SPECTROSCOPY OF SOLAR FLARES Final Report, 1 Mar. 1990 - 29 Feb. 1992
Dale E. Gary May 1992 4 p
(Grant NAG5-1323)
(NASA-CR-194399; NAS 1.26:194399) Avail: CASI HC A01/MF A01

The joint study of hard x ray and microwave observations of solar flares is extremely important because the two complementary ways of viewing the accelerated electrons yield information that cannot be obtained using hard x rays or microwaves alone. The microwaves can provide spatial information lacking in the hard x rays, and the x ray data can give information on the energy distribution of electrons that remove ambiguities in the radio data. A prerequisite for combining the two data-sets, however, is to first understand which range of microwave frequencies correlate best with the hard x rays. This SMM Guest Investigator grant enabled us to combine multi-frequency OVRO data with calibrated hard x ray data to shed light on the relationship between the two emissions. In particular, the questions of which microwave frequencies correspond to which hard x ray energies, and what is the corresponding energy of the electrons that produce both types of emission are investigated. NIMBUS-7 EARTH RADIATION BUDGET CALIBRATION HISTORY. PART 1: THE SOLAR CHANNELS
H. Lee Kyle, Douglas V. Hoyt (Research and Data Systems, Inc., Greenbelt, MD.), John R. Hickey (Eppley Lab., Inc., Newport, RI.), Robert H. Maschhoff (Gulton Industries, Inc., Albuquerque, NM.), and Brenda J. Vallette (Research

and Data Systems, Inc., Greenbelt, MD.) Sep. 1993 74 p
(Contract NAS5-31331; RTOP 665-10-70)
(NASA-RP-1316; Rept-93B00110; NAS 1.61:1316) Avail: CASI HC A04/MF A01

The Earth Radiation Budget (ERB) experiment on the Nimbus-7 satellite measured the total solar irradiance plus broadband spectral components on a nearly daily basis from 16 Nov. 1978, until 16 June 1992. Months of additional observations were taken in late 1992 and in 1993. The emphasis is on the electrically self calibrating cavity radiometer, channel 10c, which recorded accurate total solar irradiance measurements over the whole period. The spectral channels did not have inflight calibration adjustment capabilities. These channels can, with some additional corrections, be used for short-term studies (one or two solar rotations - 27 to 60 days), but not for long-term trend analysis. For channel 10c, changing radiometer pointing, the zero offsets, the stability of the gain, the temperature sensitivity, and the influences of other platform instruments are all examined and their effects on the measurements considered. Only the question of relative accuracy (not absolute) is examined. The final channel 10c product is also compared with solar measurements made by independent experiments on other satellites. The Nimbus experiment showed that the mean solar energy was about 0.1 percent (1.4 W/sqm) higher in the excited Sun years of 1979 and 1991 than in the quiet Sun years of 1985 and 1986. The error analysis indicated that the measured long-term trends may be as accurate as +/- 0.005 percent. The worse-case error estimate is +/- 0.03 percent. Author (revised)

INTERACTIONS AMONG CONVECTION, MAGNETIC FIELDS AND p-MODE OSCILLATIONS IN THE SUN Annual Performance Report, 1 Jan. - 31 Dec. 1993
Peter Goldreich 31 Dec. 1993 4 p
(Grant NAGw-3018)
(NASA-CR-194477; NAS 1.26:194477) Avail: CASI HC A01/MF A01

Two papers on different aspects of the excitation and damping of solar oscillations were accepted for publication in the Astrophysical Journal. The first paper evaluates the rate at which turbulent convection feeds energy into individual p-modes. It is shown that stochastic excitation by turbulent convection provides a satisfactory fit to the product of the mode energies and linewidths. A somewhat surprising conclusion is that entropy fluctuations are about an order of magnitude more significant than are fluctuations of the Reynolds stress in exciting p-modes. However, entropy fluctuations cannot excite f-modes. This may account for the relatively low energies of the f-modes compared to those of the p-modes. The second paper explores the role of scattering of acoustic modes by turbulent velocity fluctuations. Scattering of a mode is concentrated near the top of its acoustic cavity. Because the turbulence has low Mach number, scattering couples modes having similar frequencies. Its net effects are to increase the linewidths of all modes and to transfer energy from p-modes to f-modes. Scattering is likely to be the dominant source for the linewidths of p-modes. In particular, it may account for the unexpectedly large linewidths measured for low frequency modes. Copies of preprints of the two papers referred to above are attached. The remainder of the report is devoted to a description of unpublished results. Author

MEASUREMENTS OF THE SPATIAL STRUCTURE AND DIRECTIVITY OF 100 KeV PHOTON SOURCES IN SOLAR FLARES USING PVO AND ISEE-3 SPACECRAFT Final Report, 1 Apr. 1986 - 31 Mar. 1990
Kinsey A. Anderson 20 Feb. 1991 3 p
(Grant NAG2-393)
(NASA-CR-194080; NAS 1.26:194080) Avail: CASI HC A01/MF A01

The objective of this grant was to measure the spatial structure and directivity of the hard X-ray and low energy gamma-ray (100 keV-2 MeV) continuum sources in solar flares using stereoscopic observations made with spectrometers aboard the Pioneer Venus Orbiter (PVO) and Third International Sun Earth Explorer (ISEE-3) spacecraft. Since the hard X-ray emission is produced by energetic electrons through the bremsstrahlung process, the observed directivity can be directly related to the 'beaming' of electrons accelerated during the flare as they propagate from the acceleration region in the corona to the chromosphere/transition region. Some models (e.g., the thick-target model) predict that most of the impulsive hard X-ray/low energy gamma-ray source is located in the chromosphere, the effective height of the X-ray source above the photosphere increasing with the decrease in the photon energy. This can be verified by determining the height-dependence of the photon source through stereoscopic observations of those flares which are partially occulted from the view of one of the two spacecraft. Thus predictions about beaming of electrons as well as their spatial distributions could be tested through the analysis proposed under this grant. Derived from text

COMPARATIVE STUDY OF X RAY AND MICROWAVE EMISSIONS DURING SOLAR FLARES Final Report, 1 Jan. 1992 - 30 Jun. 1993
Robert M. Winglee 1993 3 p
(Grant NAGw-2819)
(NASA-CR-194532; NAS 1.26:194532) Avail: CASI HC A01/MF A01

The work supported by the grant consisted of two projects. The first project involved making detailed case studies of two flares using SMM data in conjunction with ground based observations. The first flare occurred at 1454 UT on June 20, 1989 and involved the eruption of a prominence near the limb. In the study we used data from many wavelength regimes including the radio, H-alpha, hard X-rays, and soft X-rays. We used a full gyrosynchrotron code to model the apparent presence of a 1.4 GHz source early in the flare that was in the form of a large coronal loop. The model results lead us to conclude that the initial acceleration occurs in small, dense loops which also produced the flare's hard X-ray emission. We also found evidence that a source at 1.4 GHz later in the event was due to second harmonic plasma emission. This source was adjacent to a leg of the prominence and comes from a dense column of material in the magnetic structure supporting the prominence. Finally, we investigated a source of microwaves and soft X-rays, occurring approximately 10 min after the hard X-ray peak, and calculate a lower limit for the density of the source. The second flare that was studied occurred at 2156 UT on June 20, 1989 and was observed with the VLA and the Owens Valley Radio Observatory (OVRO) Frequency Agile Array. We have developed a gyrosynchrotron model of the sources at flare peak using a new gyrosynchrotron approximation which is valid at very low harmonics of the gyrofrequency. We found that the accelerated particle densities of the sources decreased much more with radius from the source center than had been supposed in previous work, while the magnetic field varied less. We also used the available data to analyze a highly polarized source which appeared late in the flare. The second project involved compiling a statistical base for the relative timing of the hard X-ray peak, the turbulent and blue-shift velocities inferred from soft X-ray line emissions observed by SMM and the microwave peak as determined from ground-based observations. This timing was then used to aid the testing of newly developed global models for flares that

incorporate the global magnetic topology as well as the electron dynamics that are responsible for the hard X-rays and microwaves.

SEARCH FOR ULTRA-HIGH ENERGY EMISSION FROM GEMINGA AND FIVE UNIDENTIFIED EGRET SOURCES
1993 5 p Presented at the International Cosmic Ray Conference, Calgary, Alberta, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012717; LA-UR-93-1608; CONF-930779-6) Avail: CASI HC A01/MF A01

Data from the CYGNUS extensive air shower array were searched for continuous ultra-high energy (UHE) gamma radiation from five unidentified EGRET sources and from the Geminga pulsar. No evidence for continuous emission from any of these objects was found. Data in the Geminga source bin were also searched for pulsed emission using the recent EGRET ephemeris (237 ms period). No evidence of a periodic signal was found. The 90% confidence level upper limit on the continuous gamma-ray flux above 80 TeV for Geminga is 7.9 x 10(sup -14) cm(sup -2) s(sup -1).

COSMIC PHYSICS DATA ANALYSIS PROGRAM Final Technical Report, 1 Mar. 1992 - 28 Feb. 1993
R. Jeffrey Wilkes 23 Sep. 1993 18 p
(Grant NAGw-3026)
(NASA-CR-194357; NAS 1.26:194357) Avail: CASI HC A03/MF A01

A data analysis program was carried out to investigate the intensity, propagation, and origin of primary Cosmic Ray Galactic electrons. Scanning was carried out on two new balloon flight experiments as well as the border area of previous experiments. The identification and evaluation of the energies of the primary electrons were carried out. A new analysis of these data were incorporated into an overall evaluation of the roll of electrons in the problem of the origin of cosmic rays. Recent measurements indicate that the earth may be within the expanding Geminga supernova shock wave which is expected to have a major effect upon the propagation and the energy spectrum of galactic electrons. Calculations with the Geminga model indicate that the cut-off energy may be very close to the observed highest energy electrons in our analysis. Author (revised)

EFFECTS OF RADIOBIOLOGICAL UNCERTAINTY ON VEHICLE AND HABITAT SHIELD DESIGN FOR MISSIONS TO THE MOON AND MARS
John W. Wilson, John E. Nealy, Walter Schimmerling, Francis A. Cucinotta, and James S. Wood Washington Aug. 1993 20 p
(RTOP 199-04-16-11)
(NASA-TP-3312; L-17188; NAS 1.60:3312) Avail: CASI HC A03/MF A01

Some consequences of uncertainties in radiobiological risk due to galactic cosmic ray (GCR) exposure are analyzed for their effect on engineering designs for the first lunar outpost and a mission to explore Mars. This report presents the plausible effect of biological uncertainties, the design changes necessary to reduce the uncertainties to acceptable levels for a safe mission, and an evaluation of the mission redesign cost. Estimates of the amount of shield mass required to compensate for radiobiological uncertainty are given for a simplified vehicle and habitat. The additional amount of shield mass required to provide a safety factor for uncertainty compensation is calculated from the expected response to GCR exposure. The amount of shield mass greatly increases in the estimated range of biological uncertainty, thus, escalating the estimated cost of the mission. The estimates are used as a quantitative example for the cost-effectiveness of research in radiation biophysics and radiation physics. Author (revised)

SEARCH FOR UHE POINT-SOURCE EMISSION OVER VARIOUS TIME SCALES
1993 4 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012718; LA-UR-93-1607; CONF-930779-3) Avail: CASI HC A01/MF A01

A method has been developed to search for pulsed and/or unpulsed ultra high energy (UHE) emission from point sources over a range of time scales. This method has been applied to data accumulated with the CYGNUS extensive air-shower array for events associated with the directions of Cyg X-3, Her X-1, the Crab nebula, and a collection of 48 secondary source candidates. An examination of time scales ranging from minutes to years has yielded results consistent with background fluctuations. DOE

SEARCH FOR EMISSION OF ULTRA HIGH ENERGY RADIATION FROM ACTIVE GALACTIC NUCLEI
1993 5 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012719; LA-UR-93-1606; CONF-930779-7) Avail: CASI HC A01/MF A01

A search for emission of ultra-high energy gamma radiation from 13 active galactic nuclei that were detected by EGRET, using the CYGNUS extensive air-shower array, is described. The data set has been searched for continuous emission, emission on the time scale of one week, and for emission on the time scale of one day. No evidence for emission from any of the AGN on any of the time scales examined was found. The 90% C.L. upper limit to the continuous flux from Mrk 421 above 50 TeV is 7.5(10)(exp -14) /sq cm-s. DOE

N94-12924# Los Alamos National Lab., NM.
SEARCH FOR UHE EMISSION FROM CYGNUS X-3
M. J. Stark 1993 4 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012720; LA-UR-93-1605; CONF-930779-5) Avail: CASI HC A01/MF A01

Data from the CYGNUS experiment has been searched for evidence of ultra high energy (UHE) emission from Cygnus X-3. An upper limit to continuous flux from the source is given. In addition, we find no evidence for episodic emission from Cygnus X-3 on any time scale from 3.3 minutes to 4 years. The results of searches for periodic emission from Cygnus X-3 will be presented at the conference. DOE

N94-12946# Los Alamos National Lab., NM.
ANGULAR RESOLUTION STUDIES OF THE CYGNUS ARRAY USING THE SHADOWS OF THE SUN AND MOON
A. L. Shoup 1993 5 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012723; LA-UR-93-1602; CONF-930779-2) Avail: CASI HC A01/MF A01

Using the cosmic ray shadows of the sun and moon, we have estimated the angular resolution of the CYGNUS extensive air shower array. With the event sample now available we estimate the angular resolution of the array to be 0.70(sub -0.06)(exp +0.07) degrees. The resolution depends on the total number of detected shower particles. A new parameterization of the measured shower-front timing structure and the use of counters with small pulse areas lead to a approximately 25% improvement in the resolution. The systematic pointing error of the array is less than 0.4 deg.

SEARCH FOR CONTINUOUS AND SINGLE DAY EMISSION FROM ULTRA-HIGH-ENERGY SOURCES
Mei-Li Chen 1993 5 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993
(Contract W-7405-eng-36)

(DE93-012724; LA-UR-93-1601; CONF-930779-11) Avail: CASI HC A01/MF A01

Data from the CYGNUS experiment has been used to search the northern sky for point sources of continuous ultra-high-energy gamma radiation and to examine 51 candidate sources on a daily basis to search for episodic emission. In this paper, we make use of our most recent data to update our previously published results from these searches. The data sample is approximately twice as large as the published data set for continuous emission, and contains an additional year for the daily search. The latest results, up to the time of the conference, will be presented at the meeting. DOE

N94-12964# Los Alamos National Lab., NM.
SEARCH FOR ULTRA-HIGH-ENERGY RADIATION FROM GAMMA-RAY BURSTS
R. W. Schnee 1993 5 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012721; LA-UR-93-1604; CONF-930779-10) Avail: CASI HC A01/MF A01

Using data from the CYGNUS extensive air shower array, we have searched for evidence of the emission of ultra-high-energy radiation coincident with gamma-ray bursts observed by the BATSE instrument on the Compton Gamma-Ray Observatory. No statistically significant excess was found for any point in the sky within 4(sigma) of BATSE's best location coordinates for any of the 56 bursts examined. Furthermore, no events were seen in the 2.2 deg radius circular bin surrounding gamma-ray burst GRB 920720, whose location was determined accurately by the Compton/Ulysses/PVO Interplanetary Network of satellites. Flux upper limits depend greatly on the actual zenith angle of the burst. Typical fluence upper limits above 100 TeV are approximately 10(exp -6) erg/sq cm. The fluence upper limits for GRB 920720 is 2(10)(exp -6) erg/sq cm. DOE

ANALYSIS OF DATA FROM THE ENERGETIC GAMMA-RAY EXPERIMENT ON THE GAMMA RAY OBSERVATORY Semiannual Status Report No. 4, 15 Feb. - 15 Aug. 1993
Donald A. Kniffen 15 Aug. 1993 9 p
(Grant NAG5-1742)
(NASA-CR-194178; NAS 1.26:194178) Avail: CASI HC A02/MF A01

The work under the Grant has involved continued participation with the Compton Gamma Ray Observatory Energetic Gamma-Ray Experiment Telescope (EGRET) Team in the analysis of data obtained during instrument operations and the preparation of scientific papers and proposals for future observations. The EGRET team was also successful on many proposals for the Phase 3 portion of the mission, including long high galactic latitude studies of the diffuse extragalactic radiation. These studies will be used in a effort to establish whether this radiation is truly diffuse or the sum of radiation from unresolved discrete sources such as radio-loud quasars. The effort involved working remotely by internet connection on the Goddard Space Flight Center Computers where the EGRET data are archived. Students have monitored instrument performance and analyzed data remotely and will continue to do so. The PI has completed the detailed analysis of five viewing periods to search for point sources and this work has been used in developing the first EGRET catalog of sources, soon to be released. RESEARCH IN COSMIC AND GAMMA RAY ASTROPHYSICS: COSMIC PHYSICS PORTION Status Report, 1 Oct. 1992 - 30 Sep. 1993
Edward C. Stone, Richard A. Mewaldt, and Stephen Schindler 27 Aug. 1993 20 p
(Grant NAGw-1919)
(NASA-CR-194127; NAS 1.26:194127) Avail: CASI HC A03/MF A01

Research in particle astrophysics at the Space Radiation Laboratory (SRL) of the California Institute of Technology is supported under NASA Grant NAGW-1919. A three-year proposal for continuation of support was submitted a year ago and put into effect 1 October 1992. This report is the combined progress report and continuation application called for under the Federal Demonstration Project. Gamma-ray Astrophysics at SRL is separately supported under NAGW-1919 and will be separately summarized and proposed. This report will document progress and plans for our particle spectroscopy activities and for related data analysis, calibration, and community service activities. A bibliography and a budget will be attached as appendices. The Caltech SRL research program includes a heavy emphasis on elemental and isotopic spectroscopy of energetic particles in the cosmic radiation; in solar, interplanetary, and anomalous 'cosmic' radiation; and in planetary magnetospheres as discussed.

THE CONTINUUM EMISSION OF ACTIVE GALACTIC NUCLEI Ph.D. Thesis
Ari Laor Apr. 1990 150 p
(ITN-93-85208) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

The structure and spectrum of massive, geometrically thin, bare accretion discs surrounding a massive black hole were calculated and the results were compared with observations of active galactic nuclei (AGN). The calculations apply to an alpha-disc and full relativistic corrections were applied. The radiative transfer equations were solved by the Eddington approximation for an atmosphere with a vertical temperature gradient. All disks considered were found to be radiation-pressure dominated throughout the self-gravity-dominated region. Owing to the vertical temperature gradient, the surface temperature was found to be close to the effective temperature, even where there were significant electron scattering effects, contrary to previous findings. Relativistic effects were found to modify the spectrum considerably at large viewing angles; the angular dependence may have important implications for the modeling of AGN emission lines. Theoretical calculations are presented for the continuum polarization. Classical calculations predict high polarization for thin accretion disk continua at large inclination angles, contrary to observations of most AGN. The polarization of such disks was calculated using an improved radiative transfer method, including a full general relativistic treatment of the radiation propagation and its effects on polarization. The overall polarization was found to be much less than previously suggested. ISA

SEMIEMPIRICAL FRAGMENTATION MODELS ON GALACTIC COSMIC RAY TRANSPORT CALCULATIONS WITH HYDROGEN TARGET
Judy L. Shinn, John W. Wilson, and Francis F. Badavi (Christopher Newport Coll., Newport News, VA.) Aug. 1993 18 p
(RTOP 199-45-16-11)
(NASA-TP-3350; L-17227; NAS 1.60:3350) Avail: CASI HC A03/MF A01

Nuclear fragmentation cross sections of Silberberg and Tsao that are more accurate for a hydrogen target were implemented in the data base to replace those of Rudstam for a galactic cosmic ray transport code (HZETRN). Sample calculations were made for the transported galactic cosmic ray flux through a liquid hydrogen shield at solar minimum condition to determine the effect of such a change. The transported flux based on the Silberberg-Tsao semiempirical formalism contains fewer high-LET (linear energy transfer) components but more low-LET components than the results based on Rudstam's formalism: and this disparity deepens as the shield thickness increases. A comparison of the results obtained from using both energy-dependent and energy-independent cross sections of Silberberg and Tsao indicates that the energy-independent assumption results in an underestimation of high-LET flux above 100 keV/micron by approximately 40 percent for a 15-g/cm(sup 2) thickness of liquid hydrogen. Similar results were obtained in a previous study when both energy-dependent and energy-independent cross sections of Rudstam were considered. Nonetheless, the present study found that an energy-independent calculation would be best accomplished by using Rudstam's cross sections as done in the past for various engineering applications. X RAY EMISSION FROM DYNAMICAL SHOCK MODELS IN HOT-STAR WINDS Final Report, 1 Nov. 1988 - 31 Oct. 1991
Stanley P. Owocki 31 Oct. 1991 6 p
(Grant NAGw-1487)
(NASA-CR-194093; NAS 1.26:194093) Avail: CASI HC A02/MF A01

The principal aim of this project was to determine whether x ray

emission from instability-generated shocks in dynamical models of highly unstable hot-star winds could explain the x ray flux spectrum observed from such hot stars by Einstein and other x ray satellites. Our initial efforts focused on extending the earlier isothermal simulations of wind instabilities to include an explicit treatment of the energy balance between shock heating and simplified radiative cooling. It was found, however, that direct resolution of cooling regions behind shocks is often impractical, and thus additional, indirect methods for determining this shock x ray emission were also developed. The results indicate that the reverse shocks that dominate simple 1-D instability models typically have too little material undergoing a strong shock to produce the observed x ray emission. Other models with more strongly driven variability from the wind base sometimes show high-speed collisions between relatively dense clumps, and in these instances the computed x ray flux spectrum matches the observed spectrum quite well. This suggests that collisions between relatively large scale wind streams of different speeds may be more suited to producing the observed x rays than the reverse shocks arising from small-scale instabilities.

NEPTUNE HIGH-LATITUDE EMISSION: DEPENDENCE OF ANGLE ON FREQUENCY Final Report, 4 Jun. 1992 - 9 Jul. 1993

Constance Sawyer 9 Jul. 1993 11 p

(Contract NASw-4700)

(NASA-CR-193280; NAS 1.26:193280) Avail: CASI HC A03/MF A01

Smooth broadband radio emission reached a maximum and then cut off as Voyager approached the north magnetic pole of Neptune. The time of each event depends on frequency, yielding information on radio source location, and emission angle. In a preliminary analysis L-shell and magnetic longitude define radio-source locations in a dipole field. The emission angle at each frequency is identified with the angle between the magnetic-field direction at the source and the line of sight to Voyager 2 at the time of emission maximum. At each value of L in the range 6 less than L less than 9, there is one source longitude for which emission angle varies smoothly from greater or equal to 90 deg at 40 kHz to as low as 20 deg at 462 kHz. A more complex magnetic-field model can give a qualitatively different result. Author

A POSITRON ANNIHILATION RADIATION TELESCOPE USING LAUE DIFFRACTION IN A CRYSTAL LENS

R. K. Smither and P. vonBallmoos Mar. 1993 20 p Presented at the International Gamma-Ray Astrophysics Laboratory Integral Workshop, Les Diablerets, Switzerland, 2-5 Feb. 1993

(Contract W-31-109-eng-38)

(DE93-012905; ANL/XFD/CP-79506; CONF-9302114-1) Avail: CASI HC A03/MF A01

We present a new type of gamma-ray telescope featuring a Laue diffraction lens, a detector module with a 3-by-3 germanium array, and a balloon gondola stabilized to 5 arc sec pointing accuracy. The instrument's lens is designed to collect 511 keV photons on its 150 sq cm effective area and focus them onto a small detector having only (approx) 14 cu cm of equivalent volume for background noise. As a result, this telescope overcomes the mass-sensitivity impasse of present detectors in which the collection areas are identical to the detection area. The sensitivity of our instrument is anticipated to be 3 (times) 10(exp -5) ph cm(exp -2) S(exp -1) at 511 keV with an angular resolution of 15 arc sec and an energy resolution of 2 keV. These features will allow the resolve of a possible energetically narrow 511 keV positron annihilation line both energy-wise and spatially within a Galactic Center 'microquasar' as 1EI740.7-2942 or GRS1758-258. In addition to the galactic 'microquasars', other prime objectives include Cyg X-1, X-ray binaries, pulsars, and AGNS. DOE

THE ORIGIN OF THE FAR-INFRARED EMISSION FROM GALACTIC MOLECULAR CLOUDS Ph.D. Thesis

Thomas Joseph Mooney 1992 187 p

Avail: Univ. Microfilms Order No. DA9310049

In order to study the star formation process, the total far-IR luminosity, CO luminosity, and virial mass were measured for 78 first Galactic quadrant molecular clouds using the Massachusetts-Stony Brook CO Survey and the IRAS Galactic plane images. Fifty-one of the clouds are distinct IR sources (IR-strong) associated with H II regions. The remaining 27 clouds have low-IR surface brightnesses (IR-quiet), most of which contain weak radio continuum sources that are not cataloged H II regions. Estimates of the far-IR flux due to external heating of the clouds enabled a determination of the radial distribution of the Galactic interstellar radiation field, which has an approximate exponential scale length of 1.5-2.0 kpc, and a separation of the external and internal contributions to the clouds total far-IR luminosity. The total and internal far-IR luminosities of both IR-types are nearly proportional to the CO luminosity. IR-strong clouds are dominantly heated internally by embedded high-mass, ionizing stars of spectral types earlier than approximately B2, and IR-quiet clouds are mostly heated externally with internal intermediate-mass stars of spectral types later than approximately B3. An average equivalent to 1/3 of the total far-IR luminosity of IR-strong clouds, but nearly 3/4 of that of IR-quiet clouds, is due to external heating. The ratio of the far-IR luminosity to cloud mass -- a measure of the high-mass star formation activity of the clouds -- ranges over several orders of magnitude with a moderate maximum of approximately 20 (solar luminosity/solar mass), and is independent of cloud mass for both IR-types. High-mass star formation occurring in IR-strong clouds is equally efficient or inefficient across a wide range of cloud mass. The independence of high-mass star formation activity on cloud mass, and the long gas depletion times (approximately greater than 10(exp 9) years) expected from the modest average activity of 2-3 (solar luminosity/solar mass), exclude efficient self-induced, or cloud-cloud collision initiated star formation mechanisms. The evolutionary state of molecular clouds can be inferred from their IR/CO morphologies, far-IR properties, and observed internal populations. Driven primarily by high-mass star formation, molecular clouds evolve from recently formed massive cold clouds, through a cloud-destructive high-mass star formation phase, to post-OB star formation cloud remnants. IR-quiet clouds are most likely a mixture of old and young molecular clouds, with IR-strong clouds as the transition between these two IR-quiet phases. Dissert. Abstr.

THE BETA(+) DECAY AND COSMIC-RAY HALF-LIFE OF Mn-54

M. T. F. daCruz, E. B. Norman, Y. D. Chan, A. Garcia, R. M. Larimer, K. T. Lesko, R. G. Stokstad, and F. E. Wietfeldt 29 Mar. 1993 4 p Presented at the International Cosmic-Ray Conference, Calgary, Ontario, 19-20 Jul. 1993

(Contracts DE-AC03-76SF-00098; DE-FG05-87ER-40314)

(DE93-013913; LBL-33903; CONF-930779-13) Avail: CASI HC A01/MF A01

We performed a search for the beta(+) branch of Mn-54 decay. As a cosmic ray, Mn-54, deprived of its atomic electrons, can decay only via beta(+) and beta(-) decay, with a half-life of the order of 10(exp 6) yr. This turns Mn-54 into a suitable cosmic chronometer for the study of cosmic-ray confinement times. We searched for coincident back-to-back 511-keV gamma-rays using two germanium detectors inside a NaI(Tl) annulus. An upper limit of 2 x 10(exp -8) was found for the beta(+) decay branch, corresponding to a lower limit of 13.7 for the log ft value. DOE

ADP STUDY OF GAMMA-RAY BURSTS Final Report

Don Q. Lamb (Chicago Univ., IL.), John C. L. Wang (Canadian Inst. for Theoretical Astrophysics, Toronto, Ontario.), Geoffry J. Heuter (California Univ., San Diego.), Carlo Graziani (Chicago Univ., IL.), Tom Loredo (Chicago Univ., IL.), and Peter Freeman (Chicago Univ., IL.) 1991 2 p

(Grant NAG5-1177)

(NASA-CR-194311; NAS 1.26:194311) Avail: CASI HC A01/MF A01

This grant supported study of cyclotron scattering lines in the spectra of gamma-ray bursts through analysis of Ginga and HEAO-1 archival data, and modeling of the results in terms of radiation transfer calculations of cyclotron scattering in a strong magnetic field. A Monte Carlo radiation transfer code with which we are able to calculate the expected properties of cyclotron scattering lines in the spectra of gamma-ray bursts was developed. The extensive software necessary in order to carry out fits of these model spectra to gamma-ray burst spectral data, including folding of the model spectra through the detector response functions was also developed. Fits to Ginga satellite data on burst GB880205 were completed and fits to Ginga satellite data on burst GB870303 are being carried out. These fits have allowed us to test our software, as well as to garner new

scientific results. This work has demonstrated that cyclotron resonant scattering successfully accounts for the locations, strengths, and widths of the observed line features in GB870303 and GB880205. The success of the model provides compelling evidence that these gamma-ray bursts come from strongly magnetic neutron stars and are galactic in origin, resolving longstanding controversies about the nature and distance of the burst sources. These results were reported in two papers which are in press in the proceedings of the Taos Workshop on Gamma-Ray Bursts, and in a paper submitted for publication. Derived from text

(Grant NAGw-2734)
(NASA-CR-193359; NAS 1.26:193359) Avail: CASI HC A01/MF A01

This report summarizes the results of the research supported by NASA grant NAGW-2734 and lists the papers and publications produced through the grant. The basic goal of the work was to complete analysis of data from exposure of a large NaI scintillation detector to fast neutrons and to disseminate the results of the analysis. A secondary goal was to compare the measured detector response to neutrons with Monte Carlo calculations of the response. In Section 2.0, we discuss the goals of the research. In Section 3.0, we summarize the results of the research. In Section 4.0, we list the papers and publications produced under the grant. Preprints or reprints of the publications are attached as appendices. Derived from text

RESULTS FROM A WATER-CERENKOV ARRAY
C. L. Dion (Maryland Univ., College Park.) 1993 5 p Presented at the International Cosmic-Ray Conference, Calgary, Alberta, 19-20 Jul. 1993
(Contract W-7405-eng-36)
(DE93-012715; LA-UR-93-1610; CONF-930779-4) Avail: CASI HC A01/MF A01

Five surface water-Cerenkov detectors (pools), running in coincidence with the CYGNUS extensive air shower array, are described. Preliminary results on the timing response and the estimated angular resolution of the pools are presented. Based on comparisons between the pools and the scintillator array, the angular resolution of the pools is estimated to be approximately 0.5 degrees which is consistent with Monte Carlo predictions. Pool trigger rates and photoelectron lateral distributions are also presented. DOE

EMISSION LINE VARIABILITY IN ACTIVE GALACTIC NUCLEI Ph.D. Thesis
Dan Maoz Apr. 1990 134 p
(ITN-93-85209) Copyright Avail: Issuing Activity (Tel-Aviv Univ., Exact Sciences Library, Ramat Aviv 69978, Israel)

This work investigates the size, structure and kinematics of the Broad Line Region (BLR) of Active Galactic Nuclei (AGN), as reflected through emission line variability. It includes an analysis of previous variability studies and new observational results, which are presented and analyzed. A numerical method is developed to evaluate the significance of the cross-correlation technique, as applied to the measurement of AGN emission line region sizes. It shows that such results and their significance are strongly dependent upon geometrical assumptions. When applied to published data for Akn 120 and NGC 4151, the method shows that estimates for the size of BLR do not significantly contradict the predictions of photoionization models, and that measurements with a much higher sampling frequency and lower measurement error are needed for this. An intensive monitoring project was carried out for 7 months at the Wise Observatory, in which a sample of 11 Seyfert 1 galaxies and three quasars was observed spectroscopically on an almost nightly basis. A novel calibration technique, in which each object was observed simultaneously with a field star, resulted in very accurate measurements. In terms of both the sampling rate and the measurement errors, this project constitutes a factor of 3-5 improvement over the best previous efforts. An accurate measurement of the size of the BLR in three objects which underwent large enough variations (Mrk 279, NGC 5548 and NGC 4151) confirms for the first time the small sizes suggested by the earlier studies. RADIATION PERTURBATION THEORY IN GRAVITY AND QUANTUM UNIVERSE AS A HYDROGEN ATOM
V. N. Pervushin 1992 7 p Limited Reproducibility: More than 20% of this document may be affected by microfiche quality
(DE93-626621; JINR-E-2-92-322) Avail: Issuing Activity (Department of Energy (DOE)) (US Sales Only)

In quantum theory of gravity of the (n+1)-dimensional space-time, the Faddeev-Popov functional integral is constructed for radiation perturbation theory. In this version, the Universe expansion looks as the collective superfluid motion of quantum space, and the vacuum energy density plays the role of the hidden mass. DOE

(DE93-013941; UCRL-52000-93-3) Avail: CASI HC A03/MF A01

The Lawrence Livermore National Laboratory was established in 1952 to research on nuclear weapons and magnetic fusion energy. Since then, we have added other major programs, including fusion and laser isotope separation, biomedical and environmental science, strategic defense, and applied energy technology. These programs, in turn, require research in basic scientific disciplines, including chemistry and materials science, computer science and technology, engineering, and physics. This review is published monthly to report on unclassified work in all of our programs. This issue describes three endeavors. We have developed a multiple-frame, laser-illuminated, electro-optic camera system that produces sequential photographs of fast phenomena, such as the formation of shaped-charge jets, with unprecedented high resolution. Another project concerns a new rocket propulsion system for small spacecraft. This liquid rocket propulsion system won a 1992 R&D 100 award and features miniature pumps that can turn on and off and can change speed within a millisecond to meet a wide range of thrust requirements. The last project reported on pertains to computational integrated photonics: using numerical simulation to optimize photonic devices. DOE

Hawker Siddeley Canada Inc. is a diversified industrial company with five divisions and seven subsidiaries in Canada, the United States, the United Kingdom, and Australia. These divisions and subsidiaries include

Orenda (Mississauga, Ontario), which repairs jet engine and industrial gas turbine components, provides engineering and laboratory testing services for the aerospace and other industries, and manufactures jet engine and gas turbine components; Windsor Aerospace (Windsor, Ontario), which manufactures precision gears and other components for the aerospace and other industries; and Middleton Aerospace Corp. (Middleton, MA), which manufactures engine components for the aerospace industry. Other divisions produce steel castings, lease and repair railcars, manufacture sawmill and mining equipment, and provide other products and services for mining and civil engineering. This report for the year ending December 31, 1992 highlights activities and presents financial statements. Total sales were $370 million, operating profit $43.4 million, and net earnings $15.4 million.

FINITE ELEMENT CALCULATION OF STRESS-INTENSITY FACTORS FOR THUMB-NAIL CRACKS IN DEN SPECIMENS

W. Beres and A. K. Koul Apr. 1993 50 p Sponsored by Dept. of National Defence

(LTR-ST-1929; CTN-93-60833) Avail: CASI HC A03/MF A01

The accepted techniques for stress intensity factor (SIF) extraction from three-dimensional finite element method (FEM) calculations are reviewed. Results are then summarized for thumbnail cracks emanating from a semicircular notch of double edge notch (DEN) specimens. Two different specimen geometries corresponding to AGARD and Institute of Aerospace Research dimensions were analyzed. In the AGARD specimen, the ratio of the notch radius to the specimen width (R/W) is 1/16 while in the other the R/W is 1/8. Three-dimensional models were run on NISA 2/DISPLAY 3 and ABAQUS FEM software packages to calculate SIFs. Results obtained for standard AGARD specimens are compared with the predictions of Newman's 1990 model and found to be very close. Graphs showing the absolute values of SIF for small thumbnail cracks emanating from semicircular notches of Institute DEN specimens and the dependence of SIFs on crack dimensions are also presented. The numerical results indicate that in the crack depth range of 0.3-0.4 mm, a semicircular crack will tend to grow into a semi-elliptical crack. An increase in R/W increases the SIF for a given crack depth and a/c ratio in the DEN specimens, where a is half of the surface crack length and c is the crack depth.

The mission of the NASA Langley Research Center is to increase the knowledge and capability of the United States in a full range of aeronautics disciplines and in selected space disciplines. This mission will be accomplished by performing innovative research relevant to national needs and Agency goals, transferring technology to users in a timely manner, and providing development support to other United States Government agencies, industry, and other NASA centers. Highlights of the major accomplishments and applications that have been made by Langley researchers and by our university and industry colleagues during the past year are presented. The highlights illustrate both the broad range of research and technology (R&T) activities supported by NASA Langley Research Center and the contributions of this work toward maintaining United States leadership in aeronautics and space research. Some of the Center's most important research and testing facilities are also described.

A HISTORY OF THE DEFENCE RESEARCH ESTABLISHMENT, OTTAWA

Jim Norman, ed. and Rita M. Crow, ed. Mar. 1992 175 p

(CTN-93-60737) Avail: CASI HC A08/MF A02

The Defence Research Establishment Ottawa (DREO) has its roots in Canada's chemical and biological defense programs of the 1930's and 1940's. The earliest activity relating to DREO originated from the Department of National Defence's Master General of Ordnance, when it was decided to establish a gas mask respirator assembly plant in the late 1930's. In 1941, the plant and a technical laboratory working on chemical warfare were amalgamated into the Chemical Warfare Laboratories (CWL), DREO's direct forerunner. In 1947, the Defence Research Board was formed to handle defense-related scientific research, and the CWL became a research establishment of the Board. The Board changed the establishment's name to DREO in 1967 when it gave all its establishments geographically related names. DREO is currently organized into four divisions: Protective Sciences, Electronics, Electronic Warfare, and Radar. Details are presented on research conducted in these divisions and their forerunners in the following areas: nuclear, chemical, and biological defense; earth satellites; the SEASAT project; airborne and surface radar; energy conversion; and earth sciences.

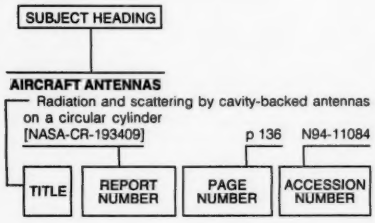
SUBJECT INDEX

Typical Subject Index Listing



The subject heading is a key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The page number helps you locate the citation in the abstract section. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus*.

[DE93-013904] p 815 N94-14699
Nonlinear relationships between particulate absorption and chlorophyll: Detritus or pigment packaging?
[AD-A266806] p 731 N94-14899

ABSTRACTS
ARTI Refrigerant Database
[DE93-014774] p 595 N94-13021
Fifteenth Combustion Research Conference
[DE93-015758] p 562 N94-13045
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
[NASA-SP-7085(05)] p 543 N94-14411

ACCELERATED LIFE TESTS
Lifetime prediction of materials exposed to the natural space environment
[NASA-CR-193833] p 561 N94-12830
Dry film lubricant evaluation
[DE93-013114] p 578 N94-13118
Formal functional test designs with a test representation language p 609 N94-14383

ACCELERATION (PHYSICS)
Microgravity acceleration measurement environment characterization p 590 N94-13755

ACCELEROMETERS
Isolation of a piezoresistive accelerometer used in high acceleration tests
[DE93-013764] p 649 N94-13395
Microgravity acceleration measurement environment characterization p 590 N94-13755

ACCESS CONTROL
Kerberos: A UNIX-TCP/IP network authentication system
[DE93-011677] p 760 N94-14011

ACCESS TIME
The KSR1: Experimentation and modeling of poststore
[DE93-012539] p 759 N94-13470

ACCIDENTS
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292

ACCRETION DISKS
The evidence for clumpy accretion in the Herbig Ae star HR 5999
[NASA-TM-108257] p 828 N94-12915
A photometric study of massive x-ray binaries
[ITN-93-85207] p 829 N94-13231
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232
Physical properties of gas disks around shell stars with and without dust
[NASA-CR-193655] p 835 N94-13239
The physical and chemical evolution of protostellar disks. The growth of protostellar disks: Progress to date
[NASA-CR-194111] p 836 N94-13423

ACCUMULATORS
Technology assessments of advanced energy storage systems for electric and hybrid vehicles
[DE93-014395] p 701 N94-12913

ACCURACY
Methods for evaluating the predictive accuracy of structural dynamic models
[NASA-CR-191337] p 671 N94-13124
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343

ACIDITY
Snow cover models in operational watershed forecasting
[DE93-778332] p 718 N94-12837
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375

ACOUSTIC EMISSION
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874
Study of deferred acoustic emission in carbon epoxy composites
[ISAL-91-0078] p 560 N94-14815

ACOUSTIC FREQUENCIES
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511

ACOUSTIC LEVITATION
Drop dynamics in space and interference with acoustic field (M-15) p 588 N94-13747
Preparation of optical materials used in non-visible region (M-17) p 589 N94-13749

ACOUSTIC MEASUREMENT
Study on the possibilities to apply spectrumindex
[VTT-PUBS-109] p 777 N94-14034
Activities report of the National Electrotechnical Institute Galileo Ferraris
[ETN-93-94224] p 627 N94-14812

ACOUSTIC PROPAGATION
Open boundary conditions for incompletely parabolic systems
[FFI/RAPPORT-92/7029] p 770 N94-13971

ACOUSTIC SCATTERING
Interactions among convection, magnetic fields and p-mode oscillations in the sun
[NASA-CR-194477] p 845 N94-14479

ACOUSTIC VELOCITY
Numerical simulation of velocity-coupled combustion response of solid rocket propellants p 585 N94-14490
Rapid distortion analysis and direct simulation of compressible homogeneous turbulence at finite Mach number p 645 N94-14757

ACOUSTICS
Ocean acoustic processing: A model-based approach
[DE93-011902] p 725 N94-12876
An 8-node axisymmetric acoustic finite element for non-axisymmetric fluid-structure interaction analysis
[FFA-TN-1993-03] p 673 N94-13689
Atmospheric acoustic modeling
[DE93-016727] p 718 N94-14518

ACOUSTO-OPTICS
Acousto-optical post-processor time-integrating correlator updates
[DSIS-93-00314] p 777 N94-13831
Integrated optics technology transfer
[DSIS-93-00179] p 792 N94-13868

ACRYLIC RESINS
Pore-size-distribution of cationic polyacrylamide hydrogels
[DE93-015218] p 581 N94-14400
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
[ITN-93-85218] p 816 N94-14826

ACTIVATED CARBON
Low pressure storage of natural gas on activated carbon
[DE93-014053] p 660 N94-12851
ACTIVATION ENERGY
A study of the role of homogeneous process in heterogeneous high explosives
[DE93-012733] p 585 N94-14180
ACTIVE CONTROL
Feasibility study of an orbiting laboratory for testing CSI technology
[NASA-CR-191524] p 540 N94-13016
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 1. Overview
[NASA-TM-102877] p 538 N94-13201
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Active control of acoustic pressure fields using smart material technologies
[NASA-CR-191480] p 768 N94-13354
Robust synthesis of discrete-time multivariable control systems with induced delays p 662 N94-13642
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 2. Results
[NASA-TM-102877] p 538 N94-13989
Active control of fan-generated plane wave noise
[NASA-TM-109008] p 777 N94-14481
Active density control in DIII-D H-mode plasmas
[DE93-015477] p 802 N94-14570
Animation of multi-flexible body systems and its use in control system design p 678 N94-14629
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630
ACTIVE GALACTIC NUCLEI
Search for emission of ultra high energy radiation from active galactic nuclei
[DE93-012719] p 846 N94-12923
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232
Emission line variability in active galactic nuclei
[ITN-93-85209] p 849 N94-14553
ACTIVITY (BIOLOGY)
The role of human activity and land use change in atmospheric chemistry and air quality
[DE93-011871] p 709 N94-14022
ACTS
Proceedings of the Seventeenth NASA Propagation Experimenters Meeting (NAPEX 17) and the Advanced Communications Technology Satellite (ACTS) Propagation Studies Miniworkshop
[NASA-CR-194096] p 612 N94-14654
Opening remarks: Current and future activities p 612 N94-14655
Radiometric observations of atmospheric attenuation at 20.6 and 31.65 GHz: The Wave Propagation Laboratory data base p 613 N94-14660
Advanced Communications Technology Satellite (ACTS) program: ACTS project update p 615 N94-14673
The ACTS propagation terminal delivery and support p 615 N94-14674
Data collection with the ACTS propagation terminal p 615 N94-14675
Preprocessing data collected with the ACTS propagation terminal p 616 N94-14676
ACTS data center p 616 N94-14677
ACTS propagation experiment discussion: Ka-band propagation measurements using the ACTS propagation terminal and the CSU-CHILL and Space Communications Technology Center Florida propagation program p 616 N94-14678
ACTUATORS
Advanced electric motor technology flux mapping
[NASA-CR-193824] p 621 N94-13186
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
[NASA-TM-4493] p 520 N94-13255
Electrical Actuation Technology Bridging
[NASA-CP-3213] p 551 N94-13417
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706
Design and application of electromechanical actuators for deep space missions
[NASA-CR-194145] p 663 N94-14134
Strategic avionics technology definition studies. Subtask 3-1A: Electrical Actuation (ELA) systems
[NASA-CR-194393] p 536 N94-14323
Superconductivity devices: Commercial use of space
[NASA-CR-194163] p 625 N94-14324
Cammatic: An approach to improve DSS 13 antenna gravity-loading performance p 608 N94-14374
Inverse dynamics: Simultaneous trajectory tracking and vibration reduction with distributed actuators p 678 N94-14624
PACE: A test bed for the dynamics and control of flexible multibody systems p 527 N94-14650
Smart materials/structures technical analysis
[AD-A266771] p 766 N94-14785
The further development and refinement of an expert-systems approach to the creative design of mechanisms and mechanical systems
[AD-A266812] p 665 N94-14901
ADA (PROGRAMMING LANGUAGE)
On-line upgrade of program modules using AdaPT
[NASA-CR-194331] p 754 N94-14472
ADAPTIVE CONTROL
Data fusion for adaptive control in manufacturing: Impact on engineering information models
[DE93-011555] p 743 N94-12999
Adaptive control of interface by temperature and interface profile feedback in transparent multi-zone crystal growth furnace
[NASA-CR-194140] p 762 N94-13253
Self tuning and adaptive control: Evaluations and improvements of algorithms
[ITN-93-85192] p 762 N94-13329
Tuning of Gaussian stochastic control systems
[CWI-BS-R9223] p 765 N94-14018
Eye-gaze and intent: Application in 3D interface control
[DE93-015210] p 738 N94-14335
Statistical results from the Virginia Tech propagation experiment using the Olympus 12, 20, and 30 GHz satellite beacons p 613 N94-14658
Early detection of insulation failure in electric motors
[PB93-198208] p 626 N94-14686
Smart materials/structures technical analysis
[AD-A266771] p 766 N94-14785
ADAPTIVE FILTERS
Spatially-varying IIR filter banks for image coding
[NASA-CR-193727] p 619 N94-12897
A combined analogue and digital pulse compression system using large time bandwidth product signals for use in synthetic aperture radar
[ISBN-0-315-54373-6] p 600 N94-13489
Adaptive Signal Processing Testbed
[DSIS-93-00258] p 604 N94-13869
Adaptive Signal Processing Testbed: Software design specification
[DSIS-93-00259] p 604 N94-13870
Adaptive Signal Processing Testbed signal excision software: User's manual
[DSIS-93-00260] p 606 N94-14037
ADAPTIVE OPTICS
Optical propagation through atmospheric turbulence. Model analysis of anisoplanatism and application to adaptive optics
[ONERA-P-1992-4] p 716 N94-14192
Experimental instrumentation system for the Phased Array Mirror Extendible Large Aperture (PAMELA) test program
[NASA-CR-194421] p 705 N94-14430
Small scale adaptive optics experiment systems engineering
[NASA-CR-194419] p 793 N94-14548
Wavefront sensing, control, and pointing p 546 N94-14833
Laser power beaming system analyses
[NASA-CR-193840] p 660 N94-14904
ADDITIVES
Surface analysis of bearings
[AD-A266800] p 661 N94-13122
Processing and testing of high toughness silicon nitride ceramics
[NASA-CR-191190] p 582 N94-14543
ADENOSINE TRIPHOSPHATE
The evolution of energy-transducing systems: Studies with archaebacteria
[NASA-CR-194130] p 728 N94-13562
ADHESION
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871
Correlations of the growth, structure, and stress with the adhesion of diamond films on tungsten
[DE93-012855] p 576 N94-12912
Study of novel conductive paints for solar cell electromagnetic fields
[DE93-015088] p 581 N94-14337
ADHESION TESTS
System integration and demonstration of adhesive bonded high temperature aluminum alloys for aerospace structure, phase 2
[NASA-CR-191459] p 575 N94-12792
ADHESIVE BONDING
System integration and demonstration of adhesive bonded high temperature aluminum alloys for aerospace structure, phase 2
[NASA-CR-191459] p 575 N94-12792
Miniature mechanism assembly
[DE93-015595] p 624 N94-13928
ADIABATIC CONDITIONS
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
[ITN-93-85224] p 659 N94-14547
ADIABATIC EQUATIONS
The geometric phase in quantum physics
[DE93-011121] p 817 N94-13479
ADIPRENE (TRADEMARK)
Compatibility testing of vacuum seal materials
[DE93-014366] p 663 N94-14113
ADJOINTS
Gauging the octonion algebra
[DE93-622864] p 775 N94-12843
Differential Sensitivity Theory applied to the MESA code for high pressure interactions
[DE93-016460] p 676 N94-14591
ADSORBENTS
Low pressure storage of natural gas on activated carbon
[DE93-014053] p 660 N94-12851
Linear and nonlinear spectroscopic probing of solute interactions with chemically modified silica surface
[DE93-014648] p 562 N94-13001
ADSORPTION
Computer simulations for the adsorption of polymers onto surfaces
[DE93-016667] p 577 N94-13070
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
ADVANCED SOLID ROCKET MOTOR (STS)
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot transonic wind tunnel, volume 2
[NASA-CR-185697] p 534 N94-12965
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot Transonic wind tunnel (IA613A), volume 1
[NASA-CR-185696] p 534 N94-13191
ADVANCED VERY HIGH RESOLUTION RADIOMETER
Degradation of the visible and near-infrared channels of the advanced very high resolution radiometer on the NOAA-9 spacecraft: Assessment and recommendations for corrections
[NOAA-TR-NESDIS-70] p 544 N94-13029
An algorithm for the remote sensing of fog using satellite-data and additional information
[DLR-FB-92-23] p 688 N94-14135
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
Accuracy validation test of estimated sea surface temperature by satellite data p 696 N94-14264
AERIAL PHOTOGRAPHY
Computer vision and sensor fusion for detecting buried objects
[DE93-012605] p 700 N94-14566
Obtaining digital regional planning information from aerial pictures
[REPT-228] p 700 N94-14810
AERIAL RECONNAISSANCE
Application of transient airborne electromagnetic and ground resistivity methods to geological mapping in tropical terrains
[ISBN-0-315-57172-1] p 685 N94-13542
Computer vision and sensor fusion for detecting buried objects
[DE93-012605] p 700 N94-14566
AEROACOUSTICS
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot transonic wind tunnel, volume 2
[NASA-CR-185697] p 534 N94-12965
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot Transonic wind tunnel (IA613A), volume 1
[NASA-CR-185696] p 534 N94-13191
On the use of the method of matched asymptotic expansions in propeller aerodynamics and acoustics
[NLR-TP-91307-U] p 503 N94-13528

Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
[NASA-TM-106364] p 508 N94-14208

AEROASSIST
The MRIS feasibility study
[NASA-TM-107763] p 597 N94-12804
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538

AERODYNAMIC CHARACTERISTICS
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations
[NASA-TM-109009] p 514 N94-12850
Identifying the NAL spaceplane aerodynamic model using dynamic wind tunnel tests
[NAL-TR-1171] p 500 N94-12951
Aerodynamics of a sphere and an oblate spheroid for Mach numbers from 0.6 to 10.5 including some effects of test conditions
[NASA-TM-109016] p 500 N94-13172
SRISTI: The NAL method for the design and analysis of Natural Laminar Flow (NLF) airfoils p 516 N94-14615
VSAERO analysis of a Piper Cub aircraft p 516 N94-14616
Panel codes for aerodynamic analysis at NAL p 510 N94-14617

AERODYNAMIC COEFFICIENTS
Estimation of aircraft aerodynamic derivatives with the Total Least Squares Method
[NAL-TR-1150] p 502 N94-13392
Development of an automated film-reading system for ballistic ranges
[NASA-CR-194398] p 650 N94-13815
Techniques for estimating Space Station aerodynamic characteristics
[NASA-CR-193394] p 541 N94-13955
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322

AERODYNAMIC CONFIGURATIONS
Extrapolation of ground test data to flight p 507 N94-14170

AERODYNAMIC FORCES
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations
[NASA-TM-109009] p 514 N94-12850
Investigation of an aeroelastic oscillator: Analysis of one-degree-of-freedom galloping with combined translational and torsional effects
[LR-707] p 527 N94-13906
Techniques for estimating Space Station aerodynamic characteristics
[NASA-CR-193394] p 541 N94-13955

AERODYNAMIC HEATING
Improved aeroprediction code. Part 1: Summary of new methods and comparison with experiment
[AD-A266015] p 500 N94-12989
Test and evaluation methods p 506 N94-14163
Shock/boundary-layer/shock interactions p 507 N94-14172

AERODYNAMIC INTERFERENCE
A wall interference assessment/correction system
[NASA-CR-194174] p 500 N94-13076
Flow-field interference produced by an asymmetrical support strut
[IAR-AN-75] p 504 N94-14031
Wall interference studies: Revisited p 640 N94-14604

AERODYNAMIC LOADS
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 1
[NASA-CR-167690] p 534 N94-12810
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot transonic wind tunnel, volume 2
[NASA-CR-185697] p 534 N94-12965
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot Transonic wind tunnel (IA613A), volume 1
[NASA-CR-185696] p 534 N94-13191
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (Model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 2
[NASA-CR-167691] p 536 N94-14047
Inflow characteristics associated with high-blade-loading events in a wind farm
[DE93-010042] p 704 N94-14423

AERODYNAMIC NOISE
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
[NASA-TM-106364] p 508 N94-14208

AERODYNAMIC STABILITY
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
[NASA-TM-4493] p 520 N94-13255
Development of a high-speed mechanical drive system for oscillating an annular blade row in the bending mode
[NAL-TR-1170] p 502 N94-13342
Experimental studies of vortex flaps and vortex plates. Part 2: 1.15m span 60 deg delta wing
[NAL-TR-1180T-PT-2] p 502 N94-13454
Hypersonic aerodynamic characteristics of SSTO-type aerospace planes. Part 1: The NAL 0-th configuration
[NAL-TR-1186] p 514 N94-13459
Qualitative investigation of a generic fighter model in radio controlled gliding flight
[LM-AA-003] p 516 N94-13898
Turbulent diffusion in homogeneous shear flow with stable density stratification
[DLR-FB-92-26] p 639 N94-14443
A new treatment of periodic systems with applications to helicopter rotor blade dynamics
[AD-A266770] p 510 N94-14784

AERODYNAMIC STALLING
Numerical simulation of dynamic stall of NACA0012 airfoil oscillating near static stall angle using the Navier-Stokes equations
[DE93-767970] p 505 N94-14061

AERODYNAMICS
Proceedings of the Fluid Dynamics Symposium in honour of Professor R. Narasimha on his 60th birthday
[NAL-SP-9315] p 639 N94-14598

AEROELASTICITY
Investigation of an aeroelastic oscillator: Analysis of one-degree-of-freedom galloping with combined translational and torsional effects
[LR-707] p 527 N94-13906

AEROMAGNETISM
Aeromagnetic work in the Lincoln Sea: 1991 survey
[DSIS-93-00308] p 715 N94-13830

AERONAUTICAL ENGINEERING
Center of excellence in rotary wing technology
[AD-A266655] p 510 N94-14799

AEROSERVOELASTICITY
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
[NASA-TM-4493] p 520 N94-13255

AEROSOLS
A parameterization of cloud droplet nucleation
[DE93-007998] p 718 N94-12903
Development of a global backscatter model for NASA's laser atmospheric wind sounder
[NASA-CR-192581] p 718 N94-12957
Linkage of anthropogenic aerosol to clouds and climate
[DE93-016434] p 719 N94-13080
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
[DE93-007884] p 709 N94-13911
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Bridging the gap between the Rayleigh and Thomson limits for various convex bodies
[DSIS-93-00613] p 607 N94-14204
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
Earth radiation budget, cloud, and aerosol parameters derived from AVHRR and TOVS measurements p 691 N94-14233
Summary of conclusions and recommendations from a visibility science workshop
[DE93-012770] p 710 N94-14523
Importance of sprays for long range transport of harmful substances in the troposphere
[MITT-81] p 711 N94-14723

AEROSPACE ENGINEERING
Approaches to high aspect ratio triangulations
[NASA-TM-107684] p 739 N94-12886
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 18: A comparison of the technical communication practices of aerospace engineers and scientists in India and the United States
[NASA-TM-109006] p 821 N94-13057
A survey and analysis of experimental hydrogen sensors
[NASA-TM-106300] p 648 N94-13135
JPRS report: Science and technology. Central Eurasia: Space
[JPRS-USP-93-003] p 828 N94-13182
Highlights, 1981
[NASA-TM-109305] p 850 N94-13612
Artificial intelligence in Canada: A description by the members of the ACAI
[CNR-31790] p 764 N94-13820
Research and technologhy highlights, 1992
[NASA-TM-4452] p 850 N94-13962
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 34: Users and uses of DOD technical reports: A report from the field
[NASA-TM-109327] p 825 N94-14485
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 36: Technical uncertainty as a correlate of information use by US industry-affiliated aerospace engineers and scientists
[NASA-TM-109328] p 825 N94-14486
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 39: The role of computer networks in aerospace engineering
[NASA-TM-109331] p 825 N94-14487
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 37: The impact of political control on technical communications: A comparative study of Russian and US aerospace engineers and scientists
[NASA-TM-109329] p 826 N94-14488
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 38: Computer Mediated Communication (CMC) and the communication of technical information in aerospace
[NASA-TM-109330] p 826 N94-14489
The 1991 research and technology report, Goddard Space Flight Center
[NASA-TM-108738] p 851 N94-14791

AEROSPACE ENVIRONMENTS
Lifetime prediction of materials exposed to the natural space environment
[NASA-CR-193833] p 561 N94-12830
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270
Research on radiation resistance properties of structural materials for space use p 529 N94-13271
Development of modular cable mesh deployable antenna p 530 N94-13274
Study on superconducting basic technology for space application, part 1
[NASDA-CNT-930015-PT-1] p 622 N94-13425
Gravity, chromosomes, and organized development in aseptically cultured plant cells p 592 N94-13764
Interactions between spacecraft and their environments
[NASA-TM-106115] p 541 N94-13917
Test report for single event effects of the 80386DX microprocessor
[NASA-CR-194509] p 741 N94-13943
Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies
[NASA-CR-194417] p 842 N94-14298
Ethology in space, a unique opportunity for behavioural science
[ESA-STM-246] p 731 N94-14862

AEROSPACE INDUSTRY
Technology Applications Team: Applications of aerospace technology
[NASA-CR-194362] p 828 N94-13104
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
The power of cross-functional teams in driving total quality p 666 N94-13159
User observations on information sharing (corporate knowledge and lessons learned)
[NASA-TM-104781] p 819 N94-13400
Activities of Hawker Siddeley Canada Inc.
[CTN-93-60865] p 849 N94-13505
Artificial intelligence in Canada: A description by the members of the ACAI
[NRC-31789] p 763 N94-13517
Activities of Bombardier, Inc.
[ISBN-2-921393-11-5] p 499 N94-13520
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
[JPRS-UEQ-93-006] p 776 N94-14431

AEROSPACE MEDICINE
Medical evaluations on the KC-135 1991 flight report summary
[NASA-TM-104755] p 731 N94-12832
Health monitoring of Japanese payload specialist: Autonomic nervous and cardiovascular responses under reduced gravity condition (L-0) p 591 N94-13757
Neurophysiological study on visuo-vestibular control of posture and movement in fish during adaptation to weightlessness p 591 N94-13759
Comparative measurement of visual stability in Earth and cosmic space (L-4) p 592 N94-13761

Autogenic feedback training experiment: A preventative method for space motion sickness p 595 N94-13774
In-flight demonstration of the Space Station Freedom Health Maintenance Facility fluid therapy system (E300/E05) p 595 N94-13775
DCIEM: The first fifty years, 1939-1989 [CTN-93-60767] p 733 N94-14141
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379) [NASA-SP-7011(379)] p 733 N94-14412

AEROSPACE PLANES
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations [NASA-TM-109009] p 514 N94-12850
Numerical simulation of hypersonic flow for the design of the H-2 orbiting plane (HOPE), part 3 [NAL-TR-1168-PT-3] p 499 N94-12948
Identifying the NAL spaceplane aerodynamic model using dynamic wind tunnel tests [NAL-TR-1171] p 500 N94-12951
Perspective on the National Aero-Space Plane Program instrumentation development [NASA-TM-4505] p 516 N94-13256
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments [NAL-TR-1175] p 513 N94-13344
Hypersonic aerodynamic characteristics of SSTO-type aerospace planes. Part 1: The NAL 0-th configuration [NAL-TR-1186] p 514 N94-13459
HOPE real time flight operations analyses for return to earth phase, part B [NASDA-CNT-930011] p 535 N94-13599
HOPE conceptual design in FY 1991 [NASDA-CNT-930017] p 535 N94-13600
HOPE real time flight operations analyses for return to earth phase, part A [NASDA-CNT-930010-PT-A] p 535 N94-13645
Conceptual design on H-2 Orbiting Plane (HOPE) [NASDA-CNT-930018] p 535 N94-13656
The concept study of the space transportation system HOPE in FY 1991 [NASDA-CNT-930016] p 536 N94-14100
Trajectory optimization for the national aerospace plane [NASA-CR-194146] p 516 N94-14104
Research and development of space transportation systems in ISAS p 537 N94-14277
Contributions of winged re-entry vehicle to space activities p 537 N94-14278
Mission scenario of HOPE p 537 N94-14279
The status of the HOPE concept study p 537 N94-14280
Spaceplane program at NAL: System concept and related technology issues p 537 N94-14281

AEROSPACE SAFETY
STS-29 post-insertion/deorbit prep and crew bailout [NASA-TM-109299] p 535 N94-13641

AEROSPACE SCIENCES
JPRS report: Science and technology. Central Eurasia: Space [JPRS-USP-93-003] p 828 N94-13182
NASA aerospace database subject scope: An overview [NASA-SP-7107] p 823 N94-13401
Activities of Institute for Aerospace Research, Flight Research Laboratory [CTN-93-60832] p 850 N94-13519
Research and technologhy highlights, 1992 [NASA-TM-4452] p 850 N94-13962
Generic results of the space physics community survey [NASA-CR-194538] p 818 N94-13984
China's devotion to space science and applications p 532 N94-14273
The 1991 research and technology report, Goddard Space Flight Center [NASA-TM-108738] p 851 N94-14791

AEROSPACE SYSTEMS
Spacecraft COst REduction Team (SCORE): TQM/CI on a massive scale p 667 N94-13160
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 1. Overview [NASA-TM-102877] p 538 N94-13201
Electrical Actuation Technology Bridging [NASA-CP-3213] p 551 N94-13417
Mongoose ASIC microcontroller programming guide [NASA-RP-1319] p 623 N94-13871
An ultra-compact processor module based on the R3000 [DE93-012549] p 625 N94-14427
A program for the investigation of the Multibody Modeling, Verification, and Control Laboratory p 682 N94-14652

AEROSPACE TECHNOLOGY TRANSFER
Technology Applications Team: Applications of aerospace technology [NASA-CR-194362] p 828 N94-13104
Access to Japanese aerospace-related scientific and technical information: The NASA Aerospace Database [NASA-TM-109413] p 822 N94-13105

AEROSPACE VEHICLES
Multidisciplinary design techniques applied to conceptual aerospace vehicle design [NASA-CR-194409] p 515 N94-13618
Terrestrial environment (climatic) criteria guidelines for use in aerospace vehicle development, 1993 revision [NASA-TM-4511] p 533 N94-14824

AEROTHERMODYNAMICS
Methodology of Hypersonic Testing [VKI-LS-1993-03] p 505 N94-14153
Aerodynamic and aerothermal facilities 2. Part 1: Short-duration, high-enthalpy facilities p 506 N94-14159
Aerodynamic and aerothermal facilities 2: Continuous flow high enthalpy facilities p 506 N94-14160
Test and evaluation methods p 506 N94-14163
Materials/structures testing p 506 N94-14164
Hypersonic flight testing. Part 2: Aerothermal flight testing p 507 N94-14169

AGGREGATES
Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black [DE93-012707] p 559 N94-14690

AGING (MATERIALS)
Lifetime prediction of materials exposed to the natural space environment [NASA-CR-193833] p 561 N94-12830
A data base for aging of structural materials [DE93-009714] p 824 N94-13915

AGRICULTURE
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Land evaluation for agricultural productivity in North-East Thailand using LANDSAT TM data and geographic information p 693 N94-14242
Educational module for the Higher Agricultural Education. Part 2: Eutrophication observed by remote sensing: An educational approach to water quality monitoring [BCRS-92-11B] p 818 N94-14462
Educational module for the higher agricultural education. Part 1: Land use classification using satellite pictures [BCRS-92-11A] p 819 N94-14809

AIR BREATHING ENGINES
Analysis of gas turbine engines using water and oxygen injection to achieve high Mach numbers and high thrust [NASA-TM-106270] p 518 N94-13143
An experimental investigation of mixing enhancement in a simulated scramjet combustor by use of swirling jets [NASA-TM-109246] p 518 N94-13190
Aeropropulsion facilities p 506 N94-14161

AIR CONDITIONING
ARTI Refrigerant Database [DE93-014774] p 595 N94-13021

AIR COOLING
Some flow properties of telescope enclosures estimated from water channel tests: Application of the flow visualization techniques [NAL-TR-1178T] p 830 N94-13452

AIR DEFENSE
HELSCAM V2.0: Development and application guide [DSIS-93-00137] p 515 N94-13867

AIR FLOW
Project AIRSTREAM: Trace gas [DE93-008849] p 706 N94-12904

AIR LAND INTERACTIONS
Effects of surface thermal forcing on stratified flow past an isolated obstacle p 633 N94-13553
Integration of space and in-situ observations to study atmosphere, ocean and land processes [NASA-CR-194495] p 683 N94-14500

AIR LAW
The international regulation of air transport: Changing regimes and price effects [ISBN-0-315-55958-6] p 511 N94-13543

AIR NAVIGATION
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments [NAL-TR-1175] p 513 N94-13344
Determination of Loran-C/GPS human factors issues [PB93-199693] p 514 N94-14563

AIR POLLUTION
Bibliography of urban climate in tropical/subtropical areas, 1981-1991 [WCASP-25] p 718 N94-12918
The North Atlantic Regional Experiment (NARE) [DE93-010126] p 706 N94-13054
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions [NASA-CR-193672] p 706 N94-13170
AQUIS: A PC-based source information manager [DE93-012893] p 707 N94-13383
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area [DE93-012852] p 708 N94-13495
Destruction of problematic airborne contaminants by hydrogen reduction using a Catalytically Active, Regenerable Sorbent (CARS) [NASA-CR-194354] p 709 N94-14103
Program operations plan [DE93-012765] p 710 N94-14182
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
Long-range global warming impact of gaseous diffusion plant operation [DE93-011686] p 710 N94-14459
Summary of conclusions and recommendations from a visibility science workshop [DE93-012770] p 710 N94-14523
The mobile lidar system ARGOS for spatial resolution remote measuring of gaseous air pollutants [GKSS/92/E/26] p 617 N94-14820

AIR PURIFICATION
Survey and study on Environmental Control and Life Support (ECLS) technologies, part 2 [NASDA-CNT-930012-PT-2] p 737 N94-13472

AIR QUALITY
Molten carbonate fuel cell product development test environmental assessment/protection plan [DE93-000288] p 702 N94-13380
AQUIS: A PC-based source information manager [DE93-012893] p 707 N94-13383
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area [DE93-012852] p 708 N94-13495
Description of the EURAD chemistry-transport model. Version 2 (CTM2) [REPT-83] p 720 N94-13589
The role of human activity and land use change in atmospheric chemistry and air quality [DE93-011871] p 709 N94-14022
Status and future opportunities for conversion of synthesis gas to liquid energy fuels [DE93-010025] p 584 N94-14089
Atmospheric turbulence and diffusion research [DE93-011842] p 718 N94-14425
Summary of conclusions and recommendations from a visibility science workshop [DE93-012770] p 710 N94-14523

AIR SAMPLING
Project AIRSTREAM: Trace gas [DE93-008849] p 706 N94-12904
The footprint area influencing a high-volume air sampler [DE93-013947] p 706 N94-13095
Biomass production chamber air analysis of wheat study (BWT931) [NASA-CR-194092] p 737 N94-13712

AIR SEA ICE INTERACTIONS
Integration of space and in-situ observations to study atmosphere, ocean and land processes [NASA-CR-194495] p 683 N94-14500

AIR TO AIR REFUELING
Spare parts analysis of the MK.32B-751 AAR pod [DSIS-93-00737] p 774 N94-13549

AIR TRAFFIC CONTROL
Activities report of the Federal Administration for Flight Safety (Germany) [ETN-93-94208] p 511 N94-14008
The influence of ATC message length and timing on pilot communication [NASA-CR-177621] p 512 N94-14744

AIR TRANSPORTATION
The international regulation of air transport: Changing regimes and price effects [ISBN-0-315-55958-6] p 511 N94-13543

AIR WATER INTERACTIONS
Ocean uptake of carbon dioxide [DE93-012967] p 707 N94-13384
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity [DE93-007884] p 709 N94-13911
Synthesis inversion of atmospheric CO2 using the GISS tracer transport model [CSIRO-TP-29] p 709 N94-14095
Sea surface temperature forcing and phase locking of Nordeste precipitation [DE93-011873] p 723 N94-14426

AIRBORNE EQUIPMENT
EOS workstation [NASA-CR-191326] p 736 N94-13132

Development of an on-board aircraft optical fiber data bus system
[NAL-TR-1163] p 514 N94-13338
Performance evaluation tests of the GPS/DGPS navigation system installed in the NAL Dornier 228: Preliminary ground test results
[NAL-TM-649] p 513 N94-13346
Operational test of the airborne data acquisition system: SADA, the Bara Bonita experiment
[INPE-5451-NTC/305] p 685 N94-13610
NASA airborne satellite instrumentation calibrator (NASIC) technical reference
[NASA-RP-1315] p 545 N94-13713
Modis-N airborne simulator
[NASA-CR-194364] p 792 N94-13719

AIRBORNE SURVEILLANCE RADAR
Multiparameter airborne rain radar development for TRMM validation and TRMM-follow-on study
p 690 N94-14226

AIRBORNE/SPACEBORNE COMPUTERS
Functional categories for future flight deck designs
[NASA-TM-109005] p 517 N94-13710
Phase aligner for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
[NASA-TM-4518] p 623 N94-13878
Test report for single event effects of the 80386DX microprocessor
[NASA-CR-194509] p 741 N94-13943

AIRCRAFT ACCIDENT INVESTIGATION
PC based A320 quick access recorder readout facility
[PD-AL-9109] p 744 N94-13077

AIRCRAFT ACCIDENTS
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972

AIRCRAFT COMMUNICATION
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744

AIRCRAFT COMPARTMENTS
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972
Widebody cabin water spray optimization tests
[DOT/FAA/CT-TN93/29] p 511 N94-14186

AIRCRAFT CONFIGURATIONS
Hypersonic aerodynamic characteristics of SSTO-type aerospace planes. Part 1: The NAL 0-th configuration
[NAL-TR-1186] p 514 N94-13459
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463

AIRCRAFT CONSTRUCTION MATERIALS
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A266350] p 571 N94-13697
Testing and analysis of curved frame specimens made from a Long Discontinuous Fiber (LDF) material
[NASA-TM-109014] p 557 N94-13711

AIRCRAFT CONTROL
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
Handling qualities effects of display latency p 517 N94-13316
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318
Piloting considerations for terminal area operations of civil tiltwing and tiltrotor aircraft p 525 N94-13320
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323
Control system design of a cable-mounted model used for dynamic wind tunnel testing
[NAL-TR-1161] p 528 N94-13337
Development of a high-speed mechanical drive system for oscillating an annular blade row in the bending mode
[NAL-TR-1170] p 502 N94-13342
Rolling moment control in the NAL 10 cm x 10 cm magnetic suspension and balance system
[NAL-TR-1164] p 526 N94-13347
Flight path control for the approach and landing of the quiet STOL experimental aircraft ASKA
[NAL-TR-1183] p 513 N94-13457
Knowledge-based processing for aircraft flight control
[NASA-CR-194074] p 526 N94-13469
Optimal lateral escape maneuvers for microburst encounters during final approach
[LR-691] p 511 N94-13534
Simulator study of uncoupled control functions. Use of manual pointing modes when aiming at ground targets and oncoming airborne target
[FFA-TN-1992-18] p 528 N94-13588

AIRCRAFT DESIGN
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
A future view of computational science in aircraft
[NASA-TM-109284] p 504 N94-13621
Development and application of a comprehensive, design-sensitive weight prediction method for wing structures of transport category aircraft
[LR-693] p 515 N94-13687
Mathematical optimization: A tool for aircraft design
[MBB-LME-251-S-PUB-0492] p 751 N94-14006
Development of PC-based Aeronautical Software (AEROWARE) p 641 N94-14611
SRISTI: The NAL method for the design and analysis of Natural Laminar Flow (NLF) airfoils p 516 N94-14615
Panel codes for aerodynamic analysis at NAL p 510 N94-14617

AIRCRAFT ENGINES
Aircraft engine type certification handbook: Advisory circular
[AC-33-2B] p 518 N94-13252
Futurepath 2
[NASA-TM-109285] p 518 N94-13623
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126

AIRCRAFT EQUIPMENT
Modis-N airborne simulator
[NASA-CR-194364] p 792 N94-13719

AIRCRAFT FUEL SYSTEMS
Techniques for improving the performance of a simplified electronic fuel controller with incremental actuation for small gas turbine engines
[ISBN-0-315-56062-2] p 661 N94-13521

AIRCRAFT GUIDANCE
Knowledge-based processing for aircraft flight control
[NASA-CR-194074] p 526 N94-13469
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703

AIRCRAFT HAZARDS
Smart skin technology development for measuring ice accretion, stall, and high AOA aircraft performance. Part 1: Capacitive ice detector development
[NASA-CR-194252] p 511 N94-13424

AIRCRAFT INDUSTRY
Activities of Bombardier, Inc.
[ISBN-2-921393-11-5] p 499 N94-13520

AIRCRAFT INSTRUMENTS
Position error determination for the speedometer and altimeter of the NAL QSTOL experimental aircraft ASKA
[NAL-TR-1144] p 517 N94-13451
Photogrammetric methods for trajectory measurements
[NLR-TP-91166-U] p 650 N94-13527

AIRCRAFT LANDING
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Visual cueing aids for rotorcraft landings p 524 N94-13313
Flight path control for the approach and landing of the quiet STOL experimental aircraft ASKA
[NAL-TR-1183] p 513 N94-13457
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703

AIRCRAFT MAINTENANCE
Flight service evaluation of composite components on the Bell helicopter model 206L
[NASA-CR-191499] p 555 N94-13267
The development of inspection and repair methods for the C-17 aft cargo door
[LR-704] p 499 N94-13904
MSD in fuselage lap joints: Requirements for inspection intervals for typical fuselage lap joint panels with Multiple Site Damage
[LR-697] p 675 N94-13986
Human factors in aviation maintenance: Phase 3, volume 1
[DOT/FAA/AM-93/15] p 738 N94-14023

AIRCRAFT MANEUVERS
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
The development and potential of inverse simulation for the quantitative assessment of helicopter handling qualities p 523 N94-13311

AIRCRAFT MODELS
Identifying the NAL spaceplane aerodynamic model using dynamic wind tunnel tests
[NAL-TR-1171] p 500 N94-12951
Control system design of a cable-mounted model used for dynamic wind tunnel testing
[NAL-TR-1161] p 528 N94-13337
Rolling moment control in the NAL 10 cm x 10 cm magnetic suspension and balance system
[NAL-TR-1164] p 526 N94-13347
Experimental studies of vortex flaps and vortex plates. Part 2: 1.15m span 60 deg delta wing
[NAL-TR-1180T-PT-2] p 502 N94-13454
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
Qualitative investigation of a generic fighter model in radio controlled gliding flight
[LM-AA-003] p 516 N94-13898

AIRCRAFT PARTS
Computational methods for reliable fatigue and damage tolerance dimensioning of aircraft structures
[FFA-TN-1993-05] p 515 N94-13690

AIRCRAFT PERFORMANCE
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
Handling qualities effects of display latency p 517 N94-13316
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318
Piloting considerations for terminal area operations of civil tiltwing and tiltrotor aircraft p 525 N94-13320
Performance seeking control: Program overview and future directions
[NASA-TM-4531] p 519 N94-14855

AIRCRAFT PILOTS
Work/rest schedules and performance of S-3 aviators during fleet exercise
[AD-A265807] p 734 N94-12975
Work/rest schedules and performance of F/A-18 aviators during Fleet Exercise 1992
[AD-A265826] p 735 N94-12982
The identification of ability requirements and selection instruments for fighter pilot training
[AD-A266340] p 735 N94-13582
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744

AIRCRAFT RELIABILITY
MSD in fuselage lap joints: Requirements for inspection intervals for typical fuselage lap joint panels with Multiple Site Damage
[LR-697] p 675 N94-13986

AIRCRAFT SAFETY
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Activities report of the Federal Administration for Flight Safety (Germany)
[ETN-93-94208] p 511 N94-14008
Widebody cabin water spray optimization tests
[DOT/FAA/CT-TN93/29] p 511 N94-14186

AIRCRAFT SPECIFICATIONS
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator p 521 N94-13295
MIL-H-8501B: Application to shipboard terminal operations p 521 N94-13296
Some lessons learned in three years with ADS-33C --- rotorcraft handling qualities specification p 521 N94-13299

AIRCRAFT STABILITY
MIL-H-8501B: Application to shipboard terminal operations p 521 N94-13296

AIRCRAFT STRUCTURES
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A266350] p 571 N94-13697
Review of Canadian aeronautical fatigue work, 1991-1993
[LTR-ST-1932] p 674 N94-13861

AIRFOIL OSCILLATIONS
Development of a high-speed mechanical drive system for oscillating an annular blade row in the bending mode
[NAL-TR-1170] p 502 N94-13342
A survey of crack path stability criteria and their application to crack flapping phenomena in stiffened structures
[LR-681] p 675 N94-13929

Numerical simulation of dynamic stall of NACA0012 airfoil oscillating near static stall angle using the Navier-Stokes equations
[DE93-767970] p 505 N94-14061

AIRFOIL PROFILES
Fundamental study of shock wave/turbulent boundary layer interactions with passive control in transonic flows
[ESA-TT-1278] p 630 N94-13117

AIRFOILS
Clebsch variable model for unsteady, transonic flow; application to 2D airfoils
[NLR-TP-91387-U] p 503 N94-13530
Development of PC-based Aeronautical Software (AEROWARE) p 641 N94-14611

AIRFRAME MATERIALS
An experimental investigation into the damage resistance and compression-after-impact strength of T800H/3900-2
[LTR-ST-1909] p 675 N94-13945

AIRFRAMES
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
[NASA-TM-4493] p 520 N94-13255
Smart skin technology development for measuring ice accretion, stall, and high AOA aircraft performance. Part 1: Capacitive ice detector development
[NASA-CR-194252] p 511 N94-13424

AIRGLOW
Vacuum ultraviolet instrumentation for solar irradiance and thermospheric airglow
[NASA-CR-194525] p 652 N94-14684

AIRLINE OPERATIONS
The international regulation of air transport: Changing regimes and price effects
[ISBN-0-315-55958-6] p 511 N94-13543
Gate assignment using linear programming
[LR-698] p 775 N94-13987

AIRPORTS
Airport terminals: Optimum configurations and gate position requirement
[ISBN-0-315-61722-5] p 528 N94-13544
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703
Gate assignment using linear programming
[LR-698] p 775 N94-13987

AIRSPEED
Recent flight-test results of optical airdata techniques
[NASA-TM-4504] p 517 N94-13791

ALBEDO
A parameterization of cloud droplet nucleation
[DE93-007998] p 718 N94-12903

ALGAE
Biodiesel/aquatic species project report, FY 1992
[DE93-010024] p 709 N94-14087
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338

ALGEBRA
Gauging the octonion algebra
[DE93-622864] p 775 N94-12843
Simplification-driven automated partial evaluation
[DE93-012890] p 768 N94-13391
The silent step in time
[CWI-CS-R9221] p 768 N94-13496
On the foundations of final semantics: Non-standard sets, metric spaces, partial orders
[CWI-CS-R9241] p 768 N94-13526
On the symmetry algebra of the discrete states in d less than 2 closed string theory
[DE93-622903] p 769 N94-13536
Application of symbolic and algebraic manipulation software in solving applied mechanics problems
[NASA-CR-4544] p 596 N94-13798
Applications of computer algebra to distributed parameter systems p 677 N94-14623
Spatial operator algebra for flexible multibody dynamics p 679 N94-14631

ALGORITHMS
Adaptively resizing populations: Algorithm, analysis, and first results
[NASA-CR-194277] p 742 N94-12808
Smooth transitions between bump rendering algorithms
[DE93-012504] p 742 N94-12883
A general contact detection algorithm for finite element analysis
[DE93-012846] p 742 N94-12956
Optimization and eigenvalue computation with application to meteorology and oceanography
[DE93-015310] p 744 N94-13024
Knowledge-based oceanographic image compression
[AD-A265752] p 821 N94-13041
Control algorithm implementation for a redundant degree of freedom manipulator
[NASA-CR-191339] p 762 N94-13131
Estimation of aircraft aerodynamic derivatives with the Total Least Squares Method
[NAL-TR-1150] p 502 N94-13392
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
Three dimensional tracking of four point planar patterns using corners
[ISBN-0-315-52149-X] p 791 N94-13490
On the occur-check free PROLOG programs
[CWI-CS-R9238] p 748 N94-13524
Hashing and rehashing in emulated shared memory
[CWI-CS-R9240] p 740 N94-13525
Maximum likelihood estimation for constrained or missing data models
[AD-A266563] p 773 N94-13585
Study on TRMM data utilization for meteorology
[NASDA-CNT-930007] p 721 N94-13643
Mathematical algorithms for multidimensional inverse scattering problems in inhomogeneous medium
[AD-A266440] p 749 N94-13702
ANNS: An X Window based version of the AFIT neural network simulator
[AD-A266540] p 764 N94-13704
A data distributed parallel algorithm for ray-traced volume rendering
[NASA-CR-191520] p 749 N94-13721
Simulated annealing for the problem of multiresource location on graph
[REPT-93-033] p 770 N94-13809
Adaptive Signal Processing Testbed
[DSIS-93-00258] p 604 N94-13869
Fast parallel string prefix-matching
[AD-A267758] p 760 N94-13924
Adaptive Signal Processing Testbed signal excision software: User's manual
[DSIS-93-00260] p 606 N94-14037
An algorithm for the remote sensing of fog using satellite-data and additional information
[DLR-FB-92-23] p 688 N94-14135
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
An exact processing algorithm for wide beam spaceborne SAR data p 689 N94-14213
TRMM precipitation radar algorithm p 690 N94-14224
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
The development and implementation of an interactive retrieval/analysis/forecast algorithm p 692 N94-14234
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Center of trace algorithms for extracting digitized waveforms from two-dimensional images
[DE93-015082] p 753 N94-14295
Domain connectivity among systems of overset grids
[NASA-CR-193390] p 508 N94-14326
Implementation and experimentation with a motion planning system
[ITN-93-85213] p 755 N94-14505
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540
Large spatial, temporal, and algorithmic adaptivity for implicit nonlinear finite element analysis
[DE93-016438] p 771 N94-14589
A vertex-based finite-volume algorithm for the Navier-Stokes equations p 639 N94-14599
Computational Controls Workstation: Algorithms and hardware p 678 N94-14626
Caesy: A software tool for computer-aided engineering p 678 N94-14627
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630
Non-recursive augmented Lagrangian algorithms for the forward and inverse dynamics of constrained flexible multibodies p 679 N94-14633
Parallel O(log n) algorithms for open- and closed-chain rigid multibody systems based on a new mass matrix factorization technique p 679 N94-14636
Parallel methods for dynamic simulation of multiple manipulator systems p 680 N94-14637
On l(1): Optimal decentralized performance p 681 N94-14643
Control system design for flexible structures using data models p 527 N94-14646
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
[NASA-TM-106351] p 771 N94-14731
Mathematic methods and algorithms for real-time applications
[AD-A266776] p 771 N94-14789
An experimental analysis of bottleneck-centered opportunistic scheduling
[AD-A266643] p 820 N94-14796
Robust non convex optimization algorithms: Codes and numerical simulation of large scale
[ETN-93-94354] p 756 N94-14813

ALIGNMENT
Determination of channeling perspectives for complex crystal structures
[DE93-012872] p 805 N94-13009
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
A continuum theory for liquid crystals describing different degrees of orientational order
[ETN-93-94392] p 807 N94-13590

ALKALI HALIDES
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
[ITN-93-85222] p 566 N94-14558

ALKALIES
Study of multicomponent diffusion and transport phenomena
[DE93-015095] p 804 N94-13005
Thermal history effects on electrical relaxation and conductivity for potassium silicate glass with low alkali concentrations
[NASA-TM-106324] p 583 N94-14845

ALKALINE EARTH METALS
Canonical correlation of waste glass compositions and durability, including pH
[DE93-012754] p 578 N94-13493
Fine-powder Al2O3 and SiO2 for preparation of multielement standards for rare-earth elements analysis
[DE93-625118] p 567 N94-14884

ALKANES
Theoretical treatment of the bulk and surface properties of fluids containing long, flexible molecules
[DE93-015560] p 575 N94-12861
Comparative ignition of hexane and octane isomers in a shock tube
[DE93-016535] p 566 N94-14869

ALKENES
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794

ALLOYING
Preparation and characterization of rapidly solidified Al-Li alloys
[ISBN-0-315-58948-5] p 569 N94-13367
Study on solidification of immisible alloys (M-10) p 588 N94-13742

ALLOYS
Containerless processing of undercooled melts
[NASA-CR-194350] p 572 N94-14123

ALPHA PARTICLES
Direct determination of alpha particle transport coefficients
[DE93-013488] p 787 N94-14691

ALTERNATING CURRENT
Investigation of an alternating current plasma as an element selective atomic emission detector for high-resolution capillary gas chromatography and as a source for atomic absorption and atomic emission spectrometry p 798 N94-13678

ALTERNATING DIRECTION IMPLICIT METHODS
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204

ALTIMETERS
Position error determination for the speedometer and altimeter of the NAL QSTOL experimental aircraft ASKA
[NAL-TR-1144] p 517 N94-13451

ALUMINIDES
Insoluble coatings for Stirling engine heat pipe condenser surfaces
[NASA-CR-191188] p 554 N94-14771

ALUMINUM
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
[AD-A266547] p 556 N94-13583
Development of test techniques to simulate high-frequency mechanical shock on weapon components
[KCP-613-4998] p 675 N94-13907
Measurements of crystal growth kinetics at extreme deviations from equilibrium
[DE93-014526] p 815 N94-14798

ALUMINUM ALLOYS
Effect of pressure on order and stability in alloys: The case of Al-Ge
[DE93-013842] p 567 N94-12899
A benchmark bending test of a thick specimen, Part 1: Experiments
[ARL-RR-6-PT-1] p 670 N94-12927

A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
[ARL-RR-6-PT-2] p 670 N94-12928
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Effect of microstructure on passive film formation and breakdown on Al alloys
[AD-A265339] p 569 N94-13050
The corrosion behavior of 8001 Al under heat-transfer conditions in an aqueous loop system
[DE93-013450] p 569 N94-13242
Preparation and characterization of rapidly solidified Al-Li alloys
[ISBN-0-315-58948-5] p 569 N94-13367
Modern aluminium sheet alloys for aerospace applications
[NLR-TP-92057-U] p 570 N94-13497
The ASCOR test: A simple automated method for stress corrosion testing of aluminium alloys
[NLR-TP-91438-U] p 570 N94-13532
UK interlaboratory tensile tests on Al alloy/SiC particulate metal matrix composites
[NPL-DMM(A)-77] p 570 N94-13666
Fatigue crack initiation and propagation in aluminum alloys 8090 and 2124 in hydrogenous atmospheres
p 570 N94-13670
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A266350] p 571 N94-13697
The microstructural response of near gamma-TiAl+W to heat treatment
[DSIS-93-00237] p 571 N94-13840
The influence of a microgravity environment on the dendritic morphology during directional solidification of hypoeutectic Al-Si alloys
[NASA-CR-194139] p 571 N94-13891
Fatigue design curves for 6061-T6 aluminum
[DE93-011849] p 571 N94-14021
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
[DE93-013770] p 812 N94-14345
The growth of short fatigue cracks in an aluminium alloy
[RAE-TR-92063] p 574 N94-14828
Multicrystalline silicon solar cells: Gettering optimization and characterization
[DE93-015001] p 705 N94-14861

ALUMINUM ARSENIDES
Anomalous low-temperature free-exciton transport in GaAs structures
[DE93-009845] p 809 N94-14108

ALUMINUM COMPOUNDS
Muon spin relaxation studies of heavy fermion superconductors
[DE93-014576] p 815 N94-14773

ALUMINUM GALLIUM ARSENIDES
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
[ETN-93-94387] p 703 N94-13997

ALUMINUM OXIDES
Processing and mechanical properties of silicon carbide platelet reinforced alumina composites
p 556 N94-13557
Microwave hybrid heating of alumina filaments
[DE93-012642] p 581 N94-14327
Microwave sintering of large alumina bodies
[DE93-012752] p 581 N94-14340
Fine-powder Al2O3 and SiO2 for preparation of multielement standards for rare-earth elements analysis
[DE93-625118] p 567 N94-14884

ALUMINUM-LITHIUM ALLOYS
The feasibility of producing aluminum-lithium structures for cryogenic tankage applications by laser beam welding
[NASA-CR-191527] p 595 N94-14026
Microstructural origins and modeling of intergranular crack initiation in an Al-Li-Cu-Mg-(Zr) alloy
[ISAL-91-0012] p 574 N94-14814
Effect of thermal processing practices on the properties of superplastic Al-Li alloys
[NASA-CR-4548] p 574 N94-14850

AMAZON REGION (SOUTH AMERICA)
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
[INPE-5454-TDI/496] p 707 N94-13330
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
[INPE-5444-TDI/490] p 720 N94-13614

AMBIENT TEMPERATURE
A verification of the Euroguidance: A guidance forecast for transportation and tourism
[KNMI-TR-145] p 722 N94-13993

AMBIPOLAR DIFFUSION
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085

AMINES
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375

AMINO ACIDS
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
[AD-A265827] p 577 N94-12985

AMMETERS
A high-precision direct current measuring device over a kiloampere range
[DE93-626409] p 627 N94-14885

AMORPHOUS MATERIALS
Amorphous sol-gel insulating films
[DE93-012859] p 576 N94-12866
Procedures for analysis of debris relative to Space Shuttle systems
[NASA-TM-109190] p 534 N94-12900
Planning of a comet simulator
[ITN-93-85206] p 835 N94-13230
Barium fluoride research and development at Lawrence Livermore National Laboratory
[DE93-014682] p 807 N94-13405
The 1.00 MeV proton radiation resistance studies of amorphous silicon-based alloy solar cells
p 703 N94-13639
Fabrication of Si-As-Te ternary amorphous semiconductor in the microgravity environment (M-13)
p 588 N94-13745
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085
Activities of the Basic Sciences Branch
[DE93-010012] p 851 N94-14455

AMORPHOUS SEMICONDUCTORS
Fabrication of Si-As-Te ternary amorphous semiconductor in the microgravity environment (M-13)
p 588 N94-13745

AMORPHOUS SILICON
Photovoltaic Subcontract Program
[DE93-000092] p 700 N94-12868
The 1.00 MeV proton radiation resistance studies of amorphous silicon-based alloy solar cells
p 703 N94-13639
Continuous roll-to-roll a-Si photovoltaic manufacturing technology
[DE93-010006] p 704 N94-14109
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells
[DE93-010009] p 704 N94-14110
Theory of the electronic and structural properties of solid state oxides
[DE93-016051] p 811 N94-14296
Structure and stability of microvoids in A-Si:H
[DE93-016625] p 813 N94-14413
Computational diagnostics for detecting phase transitions during nanoindentation
[DE93-016536] p 813 N94-14439

AMPLIFICATION
Evolution of catalytic RNA in the laboratory
[NASA-CR-194124] p 727 N94-13210
Independent adjustment of the higher order frequency dependent phase in chirped pulse amplification systems
[DE93-017106] p 625 N94-14522

AMPLIFIERS
Numerical simulations of Nd:YAG laser amplifiers
[FFI/RAPPORT-92/7028] p 657 N94-13970

AMPLITUDE MODULATION
Envelope and instantaneous frequency estimation of narrowband modulated signals
[DREO-TN-92-3] p 605 N94-14033

AMPOULES
Adaptive control of interface by temperature and interface profile feedback in transparent multi-zone crystal growth furnace
[NASA-CR-194140] p 762 N94-13253

ANALOG CIRCUITS
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969

ANALOG TO DIGITAL CONVERTERS
HYMOSS signal processing for pushbroom spectral imaging
[NASA-CR-191341] p 620 N94-13125
Center of trace algorithms for extracting digitized waveforms from two-dimensional images
[DE93-015082] p 753 N94-14295

ANALYSIS OF VARIANCE
Exploratory data analysis: Past, present and future
[AD-A266775] p 774 N94-14788

ANALYTICAL CHEMISTRY
Quality assurance for environmental chemistry, 1991, volume 1
[DE93-011791] p 709 N94-14020

ANDROMEDA GALAXY
The spectroscopic evolution of novae in the bulge of M31 and a search for their possible origin in the M31 globular cluster system p 831 N94-13668

ANELASTICITY
Shock compression and quasielastic release in tantalum
[DE93-014566] p 811 N94-14329

ANGLE OF ATTACK
Improved aeroprediction code. Part 1: Summary of new methods and comparison with experiment
[AD-A266015] p 500 N94-12989
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot Transonic wind tunnel (IA613A), volume 1
[NASA-CR-185696] p 534 N94-13191

ANGLES (GEOMETRY)
Thermodynamic status of static and dynamic contact angles
[ISBN-0-315-73844-8] p 817 N94-13554

ANGULAR CORRELATION
Angular correlations in neutron beta decay
[DE93-014349] p 785 N94-14486

ANGULAR DISTRIBUTION
Resonant x ray Raman scattering from atoms and molecules
[DE93-015158] p 784 N94-13896

ANGULAR MOMENTUM
Coherent excitation of autoionizing resonances by electron impact
[DE93-018169] p 785 N94-14419
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456
The fractional quantum Hall effect and the spherical shell model
[DE93-014553] p 818 N94-14740
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
[DE93-624179] p 617 N94-14883

ANGULAR RESOLUTION
Angular resolution studies of the CYGNUS array using the shadows of the Sun and Moon
[DE93-012723] p 846 N94-12946
Advances in low energy neutral atom imaging techniques
[DE93-012745] p 782 N94-13492
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461

ANIMALS
Ethology in space, a unique opportunity for behavioural science
[ESA-STM-246] p 731 N94-14862

ANISOTROPIC MEDIA
Prism-film coupling in anisotropic planar waveguides of epitaxial (101) rutile thin films
[DE93-012912] p 811 N94-14304
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
[DE93-624179] p 617 N94-14883

ANISOTROPIC PLATES
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory
p 556 N94-13558
Shear buckling of fiber metal laminates: Comparison between orthotropic and anisotropic plate models using finite element method
[LTR-ST-1934] p 671 N94-13565

ANISOTROPY
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776
Some aspects of sheet forming simulation using explicit finite element techniques
[DE93-012479] p 663 N94-13975
Prism-film coupling in anisotropic planar waveguides of epitaxial (101) rutile thin films
[DE93-012912] p 811 N94-14304
Anomalous ion transport and feedback control
[DE93-018324] p 803 N94-14874

ANNEALING
Annealing study of main electron irradiation-induced defects (H4 and H5) in P-InP using DLTS technique
[DE93-623204] p 806 N94-13213
Surfaces and interfaces of ceramics and metals
[DE93-014959] p 578 N94-13408
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
[DE93-013770] p 812 N94-14345

Influence of heat treatment on microstructure of Ti-35wt Al prepared by elemental powder metallurgy
[GKSS/92/E/27] p 574 N94-14821
Quenching and annealing effects on the specific heat of YBa2Cu3O(7-delta)
[DE93-016483] p 816 N94-14868
Yield properties of tungsten and tungsten heavy alloys
[AD-A266833] p 575 N94-14878

ANNIHILATION REACTIONS
High energy hadron-hadron collisions
[DE93-015584] p 784 N94-13927

ANNUAL VARIATIONS
On the vertical structure of seasonal, interannual and intraseasonal flows
[AD-A265346] p 719 N94-12992
Cyclogenesis and cyclone over South America
[INPE-5400-TDI/479] p 719 N94-13175
Circulation and rainfall climatology of a 10-year (1979 - 1988) integration with the Goddard Laboratory for atmospheres general circulation model
[NASA-TM-104591] p 723 N94-14074
Seasonal change of the land-surface temperature over Asian Continent derived from GAC data on NOAA-11 AVHRR p 691 N94-14232
Sea surface temperature forcing and phase locking of Nordeste precipitation
[DE93-011873] p 723 N94-14426
Solar radiation on Mars: Stationary photovoltaic array
[NASA-TM-106321] p 626 N94-14730

ANNULAR FLOW
Studies of momentum and energy transfer across wavy gas-liquid interfaces
[AD-A266432] p 635 N94-13699

ANNULAR PLATES
Development of a high-speed mechanical drive system for oscillating an annular blade row in the bending mode
[NAL-TR-1170] p 502 N94-13342
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory p 556 N94-13558

ANODES
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776

ANTARCTIC REGIONS
Theoretical support for the Airborne Antarctic Ozone Experiment
[NASA-CR-193669] p 713 N94-13465

ANTENNA ARRAYS
A hybrid finite element-boundary integral for the analysis of cavity-backed antennas of arbitrary shape
[NASA-CR-193719] p 599 N94-13236
Using a focal-plane array to estimate antenna pointing errors
[NASA-CR-194502] p 602 N94-13810
Phase aligner for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
[NASA-TM-4518] p 623 N94-13878
A cryogenic seven-element HEMT front end for DSS 13 p 608 N94-14375
Layout and cabling considerations for a large communications antenna array p 611 N94-14395

ANTENNA COMPONENTS
Layout and cabling considerations for a large communications antenna array p 611 N94-14395
An initial study of using the 34-m antenna for lunar mission support p 611 N94-14396

ANTENNA DESIGN
The 24 GHz measurements of 2.2 lambda conical horn antennas illuminating a conducting sheet
[NASA-TM-109002] p 598 N94-12811
Ion cyclotron heating experiments and plans for the Advanced Toroidal Facility (ATF)
[DE93-012965] p 795 N94-13033
Effect on antenna structure of high power RF during plasma operation
[DE93-013278] p 797 N94-13144
A hybrid finite element-boundary integral for the analysis of cavity-backed antennas of arbitrary shape
[NASA-CR-193719] p 599 N94-13236
The Second Workshop on Deployment and Assembly Experiment of Large Space Structure on Orbit
[NASDA-CON-930003] p 529 N94-13268
Structural design of hexa-link truss deployable antenna p 529 N94-13269
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270
Development of modular cable mesh deployable antenna p 530 N94-13274
Trial manufacture model and in-space verification method of deployable antenna p 530 N94-13278
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T.
[DE93-012964] p 607 N94-14291
Cammatic: An approach to improve DSS 13 antenna gravity-loading performance p 608 N94-14374
Layout and cabling considerations for a large communications antenna array p 611 N94-14395
An initial study of using the 34-m antenna for lunar mission support p 611 N94-14396
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-194491] p 612 N94-14501
Design of the ion cyclotron system for TPX
[DE93-012961] p 803 N94-14770

ANTENNA FEEDS
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
[NASA-CR-194491] p 612 N94-14501

ANTENNA RADIATION PATTERNS
A hybrid finite element-boundary integral for the analysis of cavity-backed antennas of arbitrary shape
[NASA-CR-193719] p 599 N94-13236
Antenna pattern control using impedance surfaces
[NASA-CR-194517] p 602 N94-13799
Analysis of microstrip patch antennas with nonzero surface resistance
[NASA-TP-3362] p 604 N94-13916
Radio metric errors due to mismatch and offset between a DSN antenna beam and the beam of a troposphere calibration instrument p 607 N94-14370

ANTENNAS
Design of the ion cyclotron system for TPX
[DE93-012961] p 803 N94-14770

ANTIBODIES
Monoclonal antibodies directed against surface molecules of multicell spheroids
[NASA-CR-193560] p 727 N94-12795

ANTIGENS
Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129

ANTINUCLEONS
Isospin flip as a relativistic effect: NN interactions
[CEBAF-PR-89-023] p 786 N94-14552

ANTIPROTONS
Observation of the coalescing of beam into an asymmetric RF bucket by stochastic cooling
[DE93-015133] p 783 N94-13895

ANTIREFLECTION COATINGS
Project proposal for partial computational physics support for Survivability of Coatings program
[DE93-013788] p 576 N94-12939
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
[DE93-013853] p 655 N94-13243
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling
[DE93-014655] p 580 N94-14124
Materials and structures p 546 N94-14835
Multicrystalline silicon solar cells: Gettering optimization and characterization
[DE93-015001] p 705 N94-14861

APERTURES
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
[DE93-013958] p 601 N94-13696
Fabrication p 546 N94-14834

APPLICATION SPECIFIC INTEGRATED CIRCUITS
HYMOSS signal processing for pushbroom spectral imaging
[NASA-CR-191341] p 620 N94-13125
Mongoose ASIC microcontroller programming guide
[NASA-RP-1319] p 623 N94-13871

APPLICATIONS PROGRAMS (COMPUTERS)
Making the connection between information modeling and implementation
[DE93-011588] p 820 N94-12907
GRO: Black hole models for gamma ray bursts
[NASA-CR-193244] p 829 N94-13178
Selection of behavioral tasks and development of software for evaluation of rhesus monkey behavior during spaceflight
[NASA-CR-194176] p 728 N94-13865
HELSCAM V2.0: Development and application guide
[DSIS-93-00137] p 515 N94-13867
Demonstration and acceptance test plan for real-time excision software on the Adaptive Signal Processing Testbed
[DSIS-93-00275] p 751 N94-13990
Adaptive Signal Processing Testbed application software: User's manual
[DSIS-93-00261] p 606 N94-14038
Development of software for composite materials analysis, phase 1, part 1
[DSIS-93-00857-PT-1-PHASE-1] p 558 N94-14105
Ground Attack Profile Selector Program, version 3.0
[DSIS-93-00702] p 753 N94-14207
A description of the computer program CALDK38 which controls instrumentation set-up and data acquisition during deadweight calibration using an HBM DK 38 S6 digital measuring unit
[LTR-ST-1935] p 754 N94-14496
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540
Development of PC-based Aeronautical Software (AEROWARE) p 641 N94-14611
Development of parallel processing at NAL: A retrospect p 641 N94-14614
SRISTI: The NAL method for the design and analysis of Natural Laminar Flow (NLF) airfoils p 516 N94-14615
Modelling robotic systems with DADS p 678 N94-14625
Animation of multi-flexible body systems and its use in control system design p 678 N94-14629
Switchover software reliability estimate for Paducah freezer/sublimer computer systems
[DE93-013844] p 756 N94-14696
Splines, contours and SVD subroutines
[DE93-016088] p 757 N94-14866

APPROACH AND LANDING TESTS (STS)
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
[NAL-TR-1175] p 513 N94-13344

APPROACH CONTROL
Compatibility of information and mode of control: The case for natural control systems p 523 N94-13307
Visual cueing aids for rotorcraft landings p 524 N94-13313
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323
Flight path control for the approach and landing of the quiet STOL experimental aircraft ASKA
[NAL-TR-1183] p 513 N94-13457
Optimal lateral escape maneuvers for microburst encounters during final approach
[LR-691] p 511 N94-13534
Helicopter precision approach capability using the Global Positioning System
[NASA-CR-194037] p 513 N94-13957

APPROXIMATION
Spherical anharmonic oscillator in self-similar approximation
[DE93-626622] p 772 N94-14890

AQUEOUS SOLUTIONS
The importance of hard core repulsion in models of activity coefficients in aqueous electrolyte solutions: Illustration in the case of hydration theory
[DE93-012476] p 561 N94-12881
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184

AQUIFERS
BOAST 2 for the IBM 3090 and RISC 6000
[DE93-000138] p 638 N94-14351

ARC HEATING
Arc-heating tests of thermal protection system materials for the H-2 rocket fairing
[NAL-TR-1181] p 551 N94-13455
Aerodynamic and aerothermal facilities 2: Continuous flow high enthalpy facilities p 506 N94-14160

ARC JET ENGINES
Recent testing of 30 kW hydrogen arcjet thrusters
[NASA-TM-106214] p 551 N94-13430

ARC MELTING
A conduction model for the vacuum arc remelting process
[NPL-DMM(A)-98] p 639 N94-14464

ARC WELDING
Welding technologies as applied to nuclear manufacturing
[DE93-010924] p 664 N94-14565

ARCHAEBACTERIA
The evolution of energy-transducing systems: Studies with archaebacteria
[NASA-CR-194130] p 728 N94-13562

ARCHITECTURE
Airport terminals: Optimum configurations and gate position requirement
[ISBN-0-315-61722-5] p 528 N94-13544
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method
[DE93-015177] p 704 N94-14333

ARCHITECTURE (COMPUTERS)
PACT user's guide
[DE93-013093] p 742 N94-12840
Mobile host internetworking using IP loose source routing
[AD-A265713] p 759 N94-13052

High speed packet switching
[NASA-CR-191334] p 759 N94-13177
Architecture-driven reuse of code in KASE
[NASA-CR-194200] p 745 N94-13356
The KSR1: Experimentation and modeling of poststore
[DE93-012539] p 759 N94-13470
High speed all-optical networks
[NASA-CR-194384] p 791 N94-13682
Guide to the software architectural design phase
[ESA-PSS-05-04-ISSUE-1] p 753 N94-14190
The BIRIS server: Integration of a three-dimensional range sensor into a harmony-based realtime architecture
[ERB-1036] p 765 N94-14201
NASA Space Engineering Research Center for VLSI systems design
[NASA-CR-194035] p 625 N94-14325
Implementation and experimentation with a motion planning system
[ITN-93-85213] p 755 N94-14505
Determining neural network connectivity using evolutionary programming
[AD-A266853] p 766 N94-14882

ARCTIC REGIONS
Arctic ozone expedition
[NASA-TM-109301] p 708 N94-13602
Airborne Arctic stratospheric expedition: Ozone
[NASA-TM-109312] p 515 N94-13606
Weather forecasting support for AASE-2
[NASA-CR-194342] p 721 N94-13675
Aeromagnetic work in the Lincoln Sea: 1991 survey
[DSIS-93-00308] p 715 N94-13830
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338
Nonlinear relationships between particulate absorption and chlorophyll: Detritus or pigment packaging?
[AD-A266806] p 731 N94-14899

ARGON
Statistical mechanical theory of liquid entropy
[DE93-016524] p 817 N94-14593

ARGON PLASMA
Measuring opacity of shock generated argon plasmas
[DE93-013038] p 801 N94-14312

ARID LANDS
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-194029] p 715 N94-13956

ARMOR
The 3-D massively parallel impact simulations using PCTH
[DE93-011593] p 670 N94-12908
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503

ARPA COMPUTER NETWORK
Diskless supercomputers: Scalable, reliable I/O for the Tera-Op technology base
[NASA-CR-194089] p 740 N94-13363

ARSENIC
A review of the global emissions, transport, and effects of heavy metals in the environment
[DE93-013507] p 706 N94-12937

ARTIFICIAL INTELLIGENCE
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-104024] p 739 N94-12838
Completing fault models for abductive diagnosis
[DE93-003832] p 761 N94-12859
Artificial intelligence support for scientific model-building
[NASA-TM-109252] p 761 N94-12890
VISART: Artificial vision for industrial use. A comprehensive system
[INPE-5379-TDI/474] p 665 N94-12941
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969
A path-oriented matrix-based knowledge representation system
[NASA-CR-4539] p 744 N94-13065
Knowledge-based processing for aircraft flight control
[NASA-CR-194074] p 526 N94-13469
Artificial intelligence in Canada: A description by the members of the ACAI
[NRC-31789] p 763 N94-13517
Reasoning with uncertain and incomplete information in aerospace applications
[NLR-TP-91366-U] p 763 N94-13529
An expert system for integrated structural analysis and design optimization for aerospace structures
[NASA-CR-194225] p 673 N94-13673
Artificial intelligence in Canada: A description by the members of the ACAI
[CNR-31790] p 764 N94-13820
SCAILET: An intelligent assistant for satellite ground terminal operations
[NASA-TM-105879] p 538 N94-13918
Intelligent environment for interpretation tasks of remotely sensed images
[INPE-5466-PRE/1774] p 687 N94-14082
Knowledge based systems: From process control to policy analysis
[DE93-014582] p 765 N94-14117
Self organized criticality
[DE93-013182] p 773 N94-14320

ARTIFICIAL SATELLITES
The remarkable achievement of China satellite application p 692 N94-14235

ASCENT TRAJECTORIES
Trajectory optimization for the national aerospace plane
[NASA-CR-194146] p 516 N94-14104

ASPECT RATIO
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024

ASSEMBLING
Miniature mechanism assembly
[DE93-015595] p 624 N94-13928

ASSEMBLY LANGUAGE
Robot programming, natural computation and conceptual graphs
[ITN-93-85193] p 748 N94-13539

ASSOCIATIVE PROCESSING (COMPUTERS)
Retrieval properties of neural networks with infinitely many marked patterns
[PREPRINT-729] p 766 N94-14718

ASTEROIDS
Meteoroid environment near the Earth-Moon system
[NASA-CR-193670] p 835 N94-13203

ASTRO MISSIONS (STS)
STS-35 EVA payload training in WETF
[NASA-TM-109492] p 739 N94-14790

ASTRONAUT TRAINING
STS-35 EVA payload training in WETF
[NASA-TM-109492] p 739 N94-14790

ASTRONOMICAL CATALOGS
Ultraviolet Spectrometer and Polarimeter (UVSP) catalog of observations. Volume 3: Experiments 63058-99771 (February 1988 - November 1989)
[NASA-CR-4529] p 844 N94-13146
Royal Belgium observatory calendar: 156th year
[ETN-93-94221] p 833 N94-14811

ASTRONOMICAL INTERFEROMETRY
Planetary system detection by POINTS
[NASA-CR-194361] p 545 N94-13067

ASTRONOMICAL MODELS
GRO: Black hole models for gamma ray bursts
[NASA-CR-193244] p 829 N94-13178

ASTRONOMICAL OBSERVATORIES
The four great observatories
[NASA-TM-109311] p 830 N94-13605
Executive summary p 545 N94-14831

ASTRONOMICAL PHOTOMETRY
A photometric study of massive x-ray binaries
[ITN-93-85207] p 829 N94-13231
A photometric and morphological study of compact groups of galaxies and their environments
[ISBN-0-315-59601-5] p 829 N94-13370
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591
Photometry and spectroscopy in the open cluster Alpha Persei, 2
[NASA-CR-193397] p 833 N94-14358

ASTRONOMICAL SATELLITES
ALFIS: Astronomical Low Frequency Interferometry Satellites. A feasibility study
[LR-699] p 542 N94-13988

ASTRONOMICAL SPECTROSCOPY
ROSAT guest investigator program (AO-1). On a search for coronal x ray emissions from white dwarfs
[NASA-CR-193654] p 835 N94-13171
UV extinction properties of carina nebular dust
[NASA-CR-193424] p 835 N94-13233
Basic research in solar physics
[NASA-CR-193632] p 844 N94-13234
Rocket and laboratory studies in astronomy
[NASA-CR-194410] p 832 N94-13966
Photometry and spectroscopy in the open cluster Alpha Persei, 2
[NASA-CR-193397] p 833 N94-14358
Emission line variability in active galactic nuclei
[ITN-93-85209] p 849 N94-14553

ASTROPHYSICS
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
[AD-A265805] p 834 N94-12971
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
The development of the TIMAX project: A hard x ray imaging telescope
[INPE-5474-TDI/505] p 829 N94-13245
The International Colloquium on Atomic Spectra and Oscillator Strengths for Astrophysical and Laboratory Plasmas
[NASA-TM-109255] p 849 N94-13376
Generic results of the space physics community survey
[NASA-CR-194538] p 818 N94-13984
Visualization techniques to aid in the analysis of multi-spectral astrophysical data sets
[NASA-CR-194489] p 840 N94-14482
Workshop Proceedings: Optical Systems Technology for Space Astrophysics in the 21st Century, volume 3
[NASA-CR-194102] p 545 N94-14830
The next century astrophysics program p 546 N94-14832
Wavefront sensing, control, and pointing p 546 N94-14833
Fabrication p 546 N94-14834
Optical systems integrated modeling p 547 N94-14837
Advanced optical instruments technology p 547 N94-14838

ASYMMETRY
Observation of the coalescing of beam into an asymmetric RF bucket by stochastic cooling
[DE93-015133] p 783 N94-13895

ASYMPTOTIC GIANT BRANCH STARS
Radiative transfer in the dynamic atmospheres of Mira-type variables
[NASA-CR-193324] p 829 N94-13287

ASYMPTOTIC METHODS
Hydrodynamic asymptotics of Green functions in magnetics with spontaneously broken symmetry
[DE93-621349] p 767 N94-13223

ASYMPTOTIC SERIES
On the use of the method of matched asymptotic expansions in propeller aerodynamics and acoustics
[NLR-TP-91307-U] p 503 N94-13528
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538
A small-scale turbulence model p 643 N94-14746

ATLANTIC OCEAN
Preliminary meteorological results for 1992 West Coast Scotland Experiment
[DE93-014677] p 720 N94-13404

ATMOSPHERIC ATTENUATION
Spectroscopic method and data reduction algorithm for laser long-path absorption measurements using RIS p 689 N94-14218
A method for estimation of partial cloud cover within a pixel and its effect p 697 N94-14269
Atmospheric correction for sea surface temperature by application of microwave dual-channel technique to VTIR data p 697 N94-14271
Hardware design for the Autonomous Visibility Monitoring (AVM) observatory p 533 N94-14394
Radiometric observations of atmospheric attenuation at 20.6 and 31.65 GHz: The Wave Propagation Laboratory data base p 613 N94-14660
Rain-rate data base development and rain-rate climate analysis p 614 N94-14664

ATMOSPHERIC BOUNDARY LAYER
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
[DE93-007884] p 709 N94-13911
Fluxes of heat and water vapour in a convective mixed layer during EFEDA
[DLR-FB-92-21] p 716 N94-14132
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424
Meteorological data, new series A monographs. Volume 6, no. 4: Modelization of heat fluxes at Earth ground with consideration of vegetation
[ETN-93-94169] p 723 N94-14546

ATMOSPHERIC CHEMISTRY
Gathering and exchange information on atmospheric chemistry and polluted atmospheres
[DE93-009940] p 705 N94-12869
Determination of spectroscopic properties of atmospheric molecules from high resolution vacuum ultraviolet cross section and wavelength measurements
[NASA-CR-194024] p 712 N94-13092
Description of the EURAD chemistry-transport model. Version 2 (CTM2)
[REPT-83] p 720 N94-13589
Modeling of the partitioning of reactive odd nitrogen in the lower stratosphere using aircraft measurements of NOy, NO, and other trace species
[NASA-CR-194305] p 714 N94-13707
Develop research plan for use of atlas data
[NASA-CR-194338] p 714 N94-13709

Submillimeter, millimeter, and microwave spectral line catalogue, revision 3
[NASA-CR-194501] p 602 N94-13813
Atomic hydrogen and nitrogen distributions from atmosphere explorer measurements
[NASA-CR-194336] p 714 N94-13825
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969
The role of human activity and land use change in atmospheric chemistry and air quality
[DE93-011871] p 709 N94-14022
Synthesis inversion of atmospheric CO2 using the GISS tracer transport model
[CSIRO-TP-29] p 709 N94-14095
Program operations plan
[DE93-012765] p 710 N94-14182
Importance of sprays for long range transport of harmful substances in the troposphere
[MITT-81] p 711 N94-14723
Terrestrial environment (climatic) criteria guidelines for use in aerospace vehicle development, 1993 revision
[NASA-TM-4511] p 533 N94-14824

ATMOSPHERIC CIRCULATION
Development of a global backscatter model for NASA's laser atmospheric wind sounder
[NASA-CR-192581] p 718 N94-12957
On the vertical structure of seasonal, interannual and intraseasonal flows
[AD-A265346] p 719 N94-12992
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119
Atmospheric soundings during the Washita 1992 campaign
[NASA-CR-194383] p 712 N94-13212
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
[INPE-5454-TDI/496] p 707 N94-13330
Preliminary meteorological results for 1992 West Coast Scotland Experiment
[DE93-014677] p 720 N94-13404
Variations common to the interplanetary magnetic field, the zonal atmospheric circulation and the Earth's rotation
[COMMUNICATIONS-SER-B-157] p 837 N94-13504
Effects of surface thermal forcing on stratified flow past an isolated obstacle p 633 N94-13553
Numerical simulation and parameterization of orographic gravity waves p 713 N94-13647
Coherent Doppler lidar signal covariance including wind shear and wind turbulence
[NASA-CR-194492] p 721 N94-13723
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912
AMIP: Diagnostic subproject on the variability in the tropics: Synoptic to intraseasonal time scales
[DE93-009287] p 721 N94-13914
Atmospheric turbulence and diffusion research
[DE93-011842] p 718 N94-14425
Meteorological data, new series A monographs. Volume 6, no. 4: Modelization of heat fluxes at Earth ground with consideration of vegetation
[ETN-93-94169] p 723 N94-14546
Simulation of the present-day climate with the ECHAM model: Impact of model physics and resolution
[REPT-93] p 724 N94-14709

ATMOSPHERIC COMPOSITION
Project AIRSTREAM: Trace gas
[DE93-008849] p 706 N94-12904
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions
[NASA-CR-193672] p 706 N94-13170
Modeling of the partitioning of reactive odd nitrogen in the lower stratosphere using aircraft measurements of NOy, NO, and other trace species
[NASA-CR-194305] p 714 N94-13707
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816
Atomic hydrogen and nitrogen distributions from atmosphere explorer measurements
[NASA-CR-194336] p 714 N94-13825
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969
Synthesis inversion of atmospheric CO2 using the GISS tracer transport model
[CSIRO-TP-29] p 709 N94-14095
The role of the dynamics for the deviation of the total ozone from the long-term mean at the edge of the polar vortex p 694 N94-14250

ATMOSPHERIC CORRECTION
Ionospheric calibration for single frequency altimeter measurements
[NASA-CR-194282] p 716 N94-14049
A method for estimation of partial cloud cover within a pixel and its effect p 697 N94-14269
Atmospheric correction for sea surface temperature by application of microwave dual-channel technique to VTIR data p 697 N94-14271

ATMOSPHERIC DENSITY
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
A rocket-borne lidar for studies of the middle atmosphere
[FFI/RAPPORT-92/7034] p 715 N94-13949

ATMOSPHERIC DIFFUSION
Atmospheric turbulence and diffusion research
[DE93-011842] p 718 N94-14425

ATMOSPHERIC EFFECTS
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area
[DE93-012852] p 708 N94-13495
Image processing and analysis of airborne POLDER data p 689 N94-14219
Solar radiation on Mars: Stationary photovoltaic array
[NASA-TM-106321] p 626 N94-14730

ATMOSPHERIC ELECTRICITY
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
[INPE-5445-TDI/491] p 835 N94-13174

ATMOSPHERIC GENERAL CIRCULATION MODELS
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119
Minimal modeling of the bimodality of extratropical atmospheric planetary waves p 713 N94-13622
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912
AMIP: Diagnostic subproject on the variability in the tropics: Synoptic to intraseasonal time scales
[DE93-009287] p 721 N94-13914
Regional climatology sensitivity studies
[DE93-010712] p 722 N94-14057
Circulation and rainfall climatology of a 10-year (1979 - 1988) integration with the Goddard Laboratory for atmospheres general circulation model
[NASA-TM-104591] p 723 N94-14074
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424
Simulation of the present-day climate with the ECHAM model: Impact of model physics and resolution
[REPT-93] p 724 N94-14709

ATMOSPHERIC HEATING
The role of clouds and oceans in global greenhouse warming
[DE93-016206] p 706 N94-13079

ATMOSPHERIC MODELS
Soil erosion rates caused by wind and saltating sand stresses in a wind tunnel
[DE93-009154] p 706 N94-12905
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions
[NASA-CR-193672] p 706 N94-13170
Cyclogenesis and cyclone over South America
[INPE-5400-TDI/479] p 719 N94-13175
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
[INPE-5454-TDI/496] p 707 N94-13330
Description of the EURAD chemistry-transport model. Version 2 (CTM2)
[REPT-83] p 720 N94-13589
Climatic change due to land surface alterations
[INPE-5495-PRE/1786] p 721 N94-13672
Develop research plan for use of atlas data
[NASA-CR-194338] p 714 N94-13709
The role of human activity and land use change in atmospheric chemistry and air quality
[DE93-011871] p 709 N94-14022
Ionospheric calibration for single frequency altimeter measurements
[NASA-CR-194282] p 716 N94-14049
New evidences supported the Wei hypothesis about the formation of the Antarctic ozone hole p 694 N94-14253
Atmospheric acoustic modeling
[DE93-016727] p 718 N94-14518
Meteorological data, new series A monographs. Volume 6, no. 4: Modelization of heat fluxes at Earth ground with consideration of vegetation
[ETN-93-94169] p 723 N94-14546
Rain-rate data base development and rain-rate climate analysis p 614 N94-14664
Terrestrial environment (climatic) criteria guidelines for use in aerospace vehicle development, 1993 revision
[NASA-TM-4511] p 533 N94-14824

ATMOSPHERIC MOISTURE
Adaptation of humidity-cloud cover relations in the LAM
[KNMI-TR-144] p 722 N94-13992
Water-vapour, total water and rainrate from passive microwave satellite data over ocean
[DLR-FB-92-37] p 723 N94-14189
Remote sensing of low level cloud optical characteristics p 691 N94-14229
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
The development and implementation of an interactive retrieval/analysis/forecast algorithm p 692 N94-14234
Atmospheric correction for sea surface temperature by application of microwave dual-channel technique to VTIR data p 697 N94-14271

ATMOSPHERIC PHYSICS
Activities of Institute for Aerospace Research, Flight Research Laboratory
[CTN-93-60832] p 850 N94-13519
Description of the EURAD chemistry-transport model. Version 2 (CTM2)
[REPT-83] p 720 N94-13589
Generic results of the space physics community survey
[NASA-CR-194538] p 818 N94-13984

ATMOSPHERIC PRESSURE
On the vertical structure of seasonal, interannual and intraseasonal flows
[AD-A265346] p 719 N94-12992

ATMOSPHERIC RADIATION
Are there atmospheric neutrino oscillations?
[DE93-015550] p 783 N94-13890
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424

ATMOSPHERIC SCATTERING
Development of a global backscatter model for NASA's laser atmospheric wind sounder
[NASA-CR-192581] p 718 N94-12957

ATMOSPHERIC SOUNDING
The application of VAS satellite imagery to thunderstorm forecasting at Cape Canaveral
[NASA-CR-193563] p 718 N94-12839
DMSP F11 SSM/T-2 calibration and validation
[AD-A265817] p 719 N94-12978
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
Atmospheric soundings during the Washita 1992 campaign
[NASA-CR-194383] p 712 N94-13212
Electrodynamics of the middle atmosphere: Superpressure balloon program
[NASA-CR-193671] p 712 N94-13293
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816
A rocket-borne lidar for studies of the middle atmosphere
[FFI/RAPPORT-92/7034] p 715 N94-13949
Asia-Pacific ISY Conference, volume 2
[NASDA-CM-199-VOL-2] p 688 N94-14209
Remote sensing of low level cloud optical characteristics p 691 N94-14229
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
Climate products from NOAA operational satellites p 691 N94-14231
Earth radiation budget, cloud, and aerosol parameters derived from AVHRR and TOVS measurements p 691 N94-14233
The role of the dynamics for the deviation of the total ozone from the long-term mean at the edge of the polar vortex p 694 N94-14250
The European Arctic ozone experiment: An investigation of Northern Hemisphere ozone depletion p 694 N94-14251
Space-based activities: SAM 2 and SAGE 2 p 694 N94-14252
New evidences supported the Wei hypothesis about the formation of the Antarctic ozone hole p 694 N94-14253

ATMOSPHERIC TEMPERATURE
The role of clouds and oceans in global greenhouse warming
[DE93-016206] p 706 N94-13079
Atmospheric soundings during the Washita 1992 campaign
[NASA-CR-194383] p 712 N94-13212

Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
| INPE-5444-TDI/490 | p 720 N94-13614
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
| DE93-007884 | p 709 N94-13911
Boundary layer structure over areas of heterogeneous heat fluxes
| DE93-007887 | p 715 N94-13912
Seasonal change of the land-surface temperature over Asian Continent derived from GAC data on NOAA-11 AVHRR p 691 N94-14232
The development and implementation of an interactive retrieval/analysis/forecast algorithm p 692 N94-14234

ATMOSPHERIC TURBULENCE
Coherent Doppler lidar signal covariance including wind shear and wind turbulence
| NASA-CR-194492 | p 721 N94-13723
Fluxes of heat and water vapour in a convective mixed layer during EFEDA
| DLR-FB-92-21 | p 716 N94-14132
Optical propagation through atmospheric turbulence. Model analysis of anisoplanatism and application to adaptive optics
| ONERA-P-1992-4 | p 716 N94-14192
Atmospheric turbulence and diffusion research
| DE93-011842 | p 718 N94-14425
Interactions among convection, magnetic fields and p-mode oscillations in the sun
| NASA-CR-194477 | p 845 N94-14479
Results from a study of scintillation behavior at 12, 20, and 30 GHz using the results from the Virginia Tech Olympus receivers p 613 N94-14659

ATMOSPHERICS
Integration of space and in-situ observations to study atmosphere, ocean and land processes
| NASA-CR-194495 | p 683 N94-14500

ATOMIC BEAMS
Novel oxygen atom source for material degradation studies
| NASA-CR-191323 | p 562 N94-13115

ATOMIC COLLISIONS
Calculation of electron-lithium scattering using the coupled-channel optical method
| DE93-623049 | p 806 N94-13226
Energetic neutral atoms: Imaging the magnetospheric ring current
| NASA-CR-194339 | p 715 N94-13826
Lawrence Berkeley Laboratory Chemical Sciences Division
| DE93-015260 | p 851 N94-14401

ATOMIC ENERGY LEVELS
To the theory of triplet pairing in Fermi-liquid model
| DE93-621770 | p 816 N94-12855

ATOMIC EXCITATIONS
Measurements of scattering processes in negative ion-atom collisions
| DE93-013863 | p 779 N94-12940
Measurement of H zero excited states produced by foil stripping of 800-MeV H(-) ions
| DE93-014391 | p 788 N94-13103
EBIT Trapping Program
| DE93-014422 | p 788 N94-13208
Free-exciton recombination in GaAs
| DE93-009843 | p 809 N94-14079
Anomalous low-temperature free-exciton transport in GaAs structures
| DE93-009845 | p 809 N94-14108
Coherent excitation of autoionizing resonances by electron impact
| DE93-018169 | p 785 N94-14419
Selective excitation, relaxation, and energy channeling in molecular systems
| DE93-018819 | p 785 N94-14420
High-order harmonic generation with short-pulse lasers
| DE93-016532 | p 659 N94-14594

ATOMIC INTERACTIONS
Low energy neutral atom imaging techniques
| DE93-012744 | p 779 N94-12950

ATOMIC PHYSICS
Highly charged ions in hot, dense plasmas
| DE93-013348 | p 795 N94-12995
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
| DE93-014129 | p 784 N94-14140
Atomic research
| NASA-CR-193843 | p 788 N94-14905

ATOMIC SPECTRA
The International Colloquium on Atomic Spectra and Oscillator Strengths for Astrophysical and Laboratory Plasmas
| NASA-TM-109255 | p 849 N94-13376
Investigation of an alternating current plasma as an element selective atomic emission detector for high-resolution capillary gas chromatography and as a source for atomic absorption and atomic emission spectrometry p 798 N94-13678

ATOMIC STRUCTURE
Structure stability and spectroscopy of metal clusters
| DE93-016142 | p 567 N94-12836
Determination of channeling perspectives for complex crystal structures
| DE93-012872 | p 805 N94-13009
Grain-boundary electronic states by multiple-scattering theory
| DE93-013198 | p 805 N94-13010
Automated crack identification for cement paste
| AD-A265753 | p 665 N94-13042
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
| DE93-013421 | p 806 N94-13136
Electronic structure and phase stability properties in ternary substitutional alloys
| DE93-013848 | p 569 N94-13137
EBIT Trapping Program
| DE93-014422 | p 788 N94-13208
First-principles studies of phase stability and the structural and dynamical properties of hydrogen-metal systems
| DE93-016129 | p 570 N94-13374
Empirical tight-binding parameters for solid C(sub 60)
| DE93-623061 | p 807 N94-13510
Resonant x ray Raman scattering from atoms and molecules
| DE93-015158 | p 784 N94-13896
Spin polarized photoemission studies of interfacial and thin film magnetism
| DE93-014326 | p 580 N94-14142
Theory of the electronic and structural properties of solid state oxides
| DE93-016051 | p 811 N94-14296
Effects of growth conditions and substrate orientation on the properties of InSb
| DE93-013766 | p 812 N94-14344
Theory, modeling, and simulation
| DE93-015607 | p 755 N94-14571
Renormalized band structure of CuO2 layers in superconducting compounds: A mean field approach
| PREPRINT-730 | p 815 N94-14720

ATOMIZERS
A computer model for liquid jet atomization in rocket thrust chambers
| NASA-CR-194194 | p 627 N94-12803
Gas atomized Er3Ni powder for cryocooler applications
| DE93-011564 | p 568 N94-13000
Simulation of preburner sprays, volume 1
| NASA-CR-193844 | p 647 N94-14906

ATTENUATION COEFFICIENTS
The optical constants and spectral specular reflectivity of Highly Oriented Pyrolytic Graphite (HOPG)
| DE93-011894 | p 790 N94-12865
Quantitative mapping of pore fraction variations in silicon nitride using an ultrasonic contact scan technique
| NASA-TP-3377 | p 665 N94-13056

ATTITUDE (INCLINATION)
Attitude determination of stratospheric balloons using Kalman filters
| INPE-5498-TDI/513 | p 649 N94-13366
The effect of crystal tilt on high resolution micrographs of small metal particles
| DE93-013915 | p 574 N94-14795

ATTITUDE CONTROL
A superconducting large-angle magnetic suspension
| NASA-CR-189735 | p 596 N94-13141
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities p 522 N94-13300
Handling qualities effects of display latency p 517 N94-13316
Dynamic Forms. Part 1: Functions
| NASA-TP-3397 | p 596 N94-13790
Self-tuning control techniques for multivariable systems
| INPE-5449-TDI/495 | p 765 N94-14084
Wavefront sensing, control, and pointing p 546 N94-14833

ATTITUDE STABILITY
Attitude determination of stratospheric balloons using Kalman filters
| INPE-5498-TDI/513 | p 649 N94-13366

AUDIO FREQUENCIES
Analysis of fundamental frequency pattern in speech p 618 N94-13440

AUDIO SIGNALS
Digital sound: The selection of critical programme material and preparation of recordings for CCIR tests on low bit-rate codecs
| BBC-RD-1993/1 | p 598 N94-12925
Digital sound: Subjective tests on commentary-quality codecs
| BBC-RD-1993/2 | p 598 N94-12926

AUGER SPECTROSCOPY
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
| NASA-CR-193647 | p 575 N94-12789
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
| DE93-015068 | p 563 N94-13413

AURORAL ZONES
The role of ionospheric plasma in the magnetosphere
| NASA-CR-194404 | p 716 N94-13967

AUSTENITIC STAINLESS STEELS
Materials compatibility of hydride storage materials with austenitic stainless steels
| DE93-013688 | p 703 N94-13691

AUTOIONIZATION
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
| DE93-014129 | p 784 N94-14140

AUTOMATA THEORY
Self organized criticality
| DE93-013182 | p 773 N94-14320

AUTOMATIC CONTROL
Cognitive engineering in aerospace application: Pilot interaction with cockpit automation
| NASA-CR-177617 | p 510 N94-13247
Robot programming, natural computation and conceptual graphs
| ITN-93-85193 | p 748 N94-13539
Communications and control for electric power systems
| NASA-CR-194503 | p 622 N94-13811
Development of an automated film-reading system for ballistic ranges
| NASA-CR-194398 | p 650 N94-13815
Activities of Institute for Information Technology
| CNR-35024 | p 824 N94-14069
A high-precision direct current measuring device over a kiloampere range
| DE93-626409 | p 627 N94-14885

AUTOMATIC FLIGHT CONTROL
Design and pilot evaluation of the RAH-66 Comanche Core AFCS p 525 N94-13321

AUTOMATIC PILOTS
Knowledge-based processing for aircraft flight control
| NASA-CR-194074 | p 526 N94-13469

AUTOMATIC TEST EQUIPMENT
Design automation tools for testable VLSI circuits
| ISBN-0-315-61461-7 | p 621 N94-13333

AUTOMOBILE FUELS
Biofuels for transportation: The road from research to the marketplace
| DE93-000091 | p 585 N94-14454

AUTOMOBILES
Dynamics and design of nonholonomic robotic mechanical systems
| ISBN-0-315-72009-3 | p 662 N94-13597

AUTONOMOUS NAVIGATION
Evaluation of infrared sensors for autonomous landing guidance
| AD-A266450 | p 513 N94-13703

AUTONOMY
Reconsideration of the autonomous view of language p 618 N94-13441
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 2. Results
| NASA-TM-102877 | p 538 N94-13989

AUTORADIOGRAPHY
The evolution of energy-transducing systems: Studies with archaebacteria
| NASA-CR-194130 | p 728 N94-13562

AUTOREGRESSIVE PROCESSES
Signal design for data communication through rapidly varying linear channels
| ITN-93-85195 | p 601 N94-13567

AUXILIARY PROPULSION
Electric propulsion system technology
| NASA-CR-194099 | p 549 N94-13068

AVALANCHE DIODES
Design and optimization of high voltage lateral DMOS devices using RESURF technology
| LAAS-92511 | p 626 N94-14711

AVALANCHES
High counting rate resistive-plate chamber
| DE93-014928 | p 651 N94-14452

AVIATION METEOROLOGY
Flight crew interface aspects of forward-looking airborne windshear detection systems
[NASA-CR-191437] p 516 N94-12829
AVIATION PSYCHOLOGY
Work/rest schedules and performance of F/A-18 aviators during Fleet Exercise 1992
[AD-A265826] p 735 N94-12982
AVIONICS
Future developments of the NLR research flight simulator
[NLR-TP-92143-U] p 528 N94-13498
High flux heat exchanger
[AD-A266341] p 636 N94-13730
AWARDS
Measuring quality progress p 666 N94-13154
AXES OF ROTATION
Cold dark matter halos p 838 N94-13649
AXIAL FLOW TURBINES
Numerical simulation of steady three-dimensional flows in axial turbomachinery bladerows p 634 N94-13630
AXISYMMETRIC BODIES
An 8-node axisymmetric acoustic finite element for non-axisymmetric fluid-structure interaction analysis
[FFA-TN-1993-03] p 673 N94-13689
AXISYMMETRIC FLOW
A small-scale turbulence model p 643 N94-14746

B

BACKSCATTERING
Crystallographic phase identification in the scanning electron microscope: Backscattered electron Kikuchi patterns
[DE93-011574] p 804 N94-12813
Development of a global backscatter model for NASA's laser atmospheric wind sounder
[NASA-CR-192581] p 718 N94-12957
Determination of channeling perspectives for complex crystal structures
[DE93-012872] p 805 N94-13009
Automated crack identification for cement paste
[AD-A265753] p 665 N94-13042
Measurement of the spin of a particle using undulator radiation
[DE93-014334] p 780 N94-13149
Radar imaging of sub-mesoscale ocean phenomena
[AD-A266339] p 725 N94-13581
Brillouin scattering from fluctuations produced by stimulated Raman scattering
[DE93-016531] p 792 N94-14438
BACKWARD FACING STEPS
Development of a recursion RNG-based turbulence model
[NASA-CR-191511] p 636 N94-13718
Least-squares finite element solutions for three-dimensional backward-facing step flow
[NASA-TM-106353] p 770 N94-14407
BACTERIA
Dynamics of adaptive structures: Design through simulations
[NASA-CR-193724] p 540 N94-13112
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097
The surface-located YopN protein is involved in calcium signal transduction in Yersinia pseudotuberculosis
[FOA-B-40416-4.4] p 729 N94-14128
Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509
Chaos and microbial systems
[DE93-016814] p 730 N94-14596
BACTERIOLOGY
Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129
BAILOUT
STS-29 post-insertion/deorbit prep and crew bailout
[NASA-TM-109299] p 535 N94-13641
BAKING
Study of novel conductive paints for solar cell electromagnetic fields
[DE93-015088] p 581 N94-14337
BALANCE
Rolling moment control in the NAL 10 cm x 10 cm magnetic suspension and balance system
[NAL-TR-1164] p 526 N94-13347
BALL BEARINGS
Dry film lubricant evaluation
[DE93-013114] p 578 N94-13118
Surface analysis of bearings
[AD-A266800] p 661 N94-13122
BALLISTIC RANGES
Development of an automated film-reading system for ballistic ranges
[NASA-CR-194398] p 650 N94-13815
Advanced ballistic range technology
[NASA-CR-194396] p 532 N94-14068
Aerodynamic and aerothermal facilities 2. Part 1: Short-duration, high-enthalpy facilities p 506 N94-14159
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540
BALLISTICS
Electronic states in systems of reduced dimensionality
[DE93-014440] p 815 N94-14739
BALLOON FLIGHT
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816
BALLOON SOUNDING
Electrodynamics of the middle atmosphere: Superpressure balloon program
[NASA-CR-193671] p 712 N94-13293
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816
BALLOONING MODES
On MHD mode equations in toroidal plasmas
[PPL-139] p 800 N94-13877
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024
BALMER SERIES
Was 49: Mirror for a hidden Seyfert 1 galaxy
[NASA-CR-194537] p 840 N94-14685
BANACH SPACE
Contributions to numerical solution of Navier-Stokes equations in two and three dimensional flows
[ETN-93-94395] p 647 N94-14816
On a convergence of iterative Newton's scheme
[DE93-626604] p 772 N94-14886
BAND STRUCTURE OF SOLIDS
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085
A sum-rule of luminescence spectrum
[ITN-93-85223] p 814 N94-14559
Renormalized band structure of CuO2 layers in superconducting compounds: A mean field approach
[PREPRINT-730] p 815 N94-14720
BANDPASS FILTERS
Insertion loss and noise-temperature contribution of high-temperature superconducting bandpass filters centered at 2.3 and 8.45 GHz p 608 N94-14376
BANDWIDTH
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities p 522 N94-13300
Measurements of edge fluctuations by phase contrast imaging on DIII-D
[DE93-014018] p 802 N94-14579
H2S data reduction
[NASA-CR-193389] p 617 N94-14743
BANGLADESH
Application of satellite remote sensing technology in disaster mitigation: A case study of Bangladesh p 692 N94-14238
BARIUM FLUORIDES
Barium fluoride research and development at Lawrence Livermore National Laboratory
[DE93-014682] p 807 N94-13405
BARIUM OXIDES
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments
[NASA-TP-3368] p 813 N94-14409
BARRELS (CONTAINERS)
Development and application of the automated Monte Carlo biasing procedure in SAS4
[DE93-015205] p 774 N94-14334
BARRIER LAYERS
Soil erosion rates caused by wind and saltating sand stresses in a wind tunnel
[DE93-009154] p 706 N94-12905
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954
BARYON RESONANCE
Dynamics of pion-nucleus systems
[DE93-014449] p 785 N94-14468
BARYONS
Early baryon and meson spectroscopy culminating in the discovery of the Omega minus SU(3) and quarks
[DE93-014321] p 787 N94-14580
BASE FLOW
A computational study of the base region flow field for the M865 projectile
[ARL-TR-109] p 504 N94-13795
BAYES THEOREM
Bayesian estimation of motion fields from image sequences
[ISBN-0-315-57212-4] p 772 N94-13540
Synthesis inversion of atmospheric CO2 using the GISS tracer transport model
[CSIRO-TP-29] p 709 N94-14095
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
BCS THEORY
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339
BEAM CURRENTS
Low-current traveling wave tube for use in the microwave power module
[NASA-TP-3344] p 620 N94-13110
BEAM INJECTION
Wake-field and space charge effects on high brightness beams calculations and measured results for the laser driven photoelectrons at BNL-ATF
[DE93-015787] p 659 N94-14572
BEAM NEUTRALIZATION
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349
BEAM WAVEGUIDES
Predicted performance of a dc beam driven FEM oscillator designed for fusion applications at 200-250 GHz
[DE93-013414] p 655 N94-13145
HRMS sky survey wideband feed system design for DSS 24 beam waveguide antenna p 611 N94-14397
BEAMS (RADIATION)
A new formulation of longitudinal coherent instabilities
[DE93-014288] p 789 N94-13220
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
BEAMS (SUPPORTS)
Helical truss beam development for large space structure p 530 N94-13276
Some frequency and damping measurements of laminated beryllium beams
[DE93-015909] p 676 N94-14530
BEARINGS
Canadian Target Assembly (CTA) to Airborne Support Equipment (ASE) vibration test report
[IME-AMT-TR-001] p 663 N94-14195
BED REST
Gender differences in endocrine responses to posture and 7 days of 6 deg head down bed rest
[NASA-TM-103991] p 731 N94-12972
Clinical physiology of bed rest
[NASA-TM-104010] p 727 N94-13447
Countermeasure for reducing post-flight orthostatic intolerance: Lower Body Negative Pressure (LBNP) experiment E140 p 594 N94-13772
BEDS (PROCESS ENGINEERING)
Materials compatibility of hydride storage materials with austenitic stainless steels
[DE93-013688] p 703 N94-13691
BEHAVIOR
Selection of behavioral tasks and development of software for evaluation of rhesus monkey behavior during spaceflight
[NASA-CR-194176] p 728 N94-13865
Ethology in space, a unique opportunity for behavioural science
[ESA-STM-246] p 731 N94-14862
BELGIUM
Potential evapotranspiration in Belgium: Spatial and temporal variability
[PUBL-SER-A-130] p 686 N94-13994
BELL AIRCRAFT
Flight service evaluation of composite components on the Bell helicopter model 206L
[NASA-CR-191499] p 555 N94-13267
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator p 521 N94-13295

BEND TESTS
A benchmark bending test of a thick specimen, Part 1: Experiments
[ARL-RR-6-PT-1] p 670 N94-12927
A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
[ARL-RR-6-PT-2] p 670 N94-12928
Measuring methods for CFRP laminates' bending and torsion rigidities characteristics p 529 N94-13272
Testing and analysis of curved frame specimens made from a Long Discontinuous Fiber (LDF) material
[NASA-TM-109014] p 557 N94-13711
BENDING FATIGUE
Thermal gradient-induced deflection of a thick-walled cylinder with bending residual stresses
[AD-A266347] p 673 N94-13777
BENDING THEORY
Elastic-plastic mixed-iterative finite element analysis: Implementation and performance assessment
[NASA-TM-106164] p 675 N94-13919
BERYLLIUM
Double semi-leptonic charm decay in HELIOS-I 450 GeV/c p-Be data
[DE93-013493] p 781 N94-13348
Some frequency and damping measurements of laminated beryllium beams
[DE93-015909] p 676 N94-14530
BERYLLIUM COMPOUNDS
Muon spin relaxation studies of heavy fermion superconductors
[DE93-014576] p 815 N94-14773
BETA FACTOR
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024
BETA PARTICLES
Beta/gamma test problems for ITS
[DE93-013522] p 781 N94-13349
The beta(+) decay and cosmic-ray half-life of Mn-54
[DE93-013913] p 848 N94-13695
Charge-exchange reactions and weak interaction rates for Type 2 supernovae
[DE93-015104] p 783 N94-13893
Angular correlations in neutron beta decay
[DE93-014349] p 785 N94-14466
BETAINES
Experimental and theoretical study of inhomogeneous electron transfer in betaine: Comparisons of measured and predicted spectral dynamics
[AD-A265703] p 780 N94-13051
BETHE-SALPETER EQUATION
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550
BIAS
Performance evaluation of the honeywell GG1308 miniature ring laser gyroscope
[AD-A266694] p 653 N94-14782
BIBLIOGRAPHIES
Bibliography of urban climate in tropical/subtropical areas, 1981-1991
[WCASP-25] p 718 N94-12918
ARTI Refrigerant Database
[DE93-014774] p 595 N94-13021
Publications of the Jet Propulsion Laboratory: 1990 and 1991
[NASA-CR-193287] p 823 N94-13461
Flammability of clothing, volume 2
[DSIS-93-00036-VOL-2] p 564 N94-13819
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
[NASA-SP-7085(05)] p 543 N94-14411
CarbBank: A structural and bibliographic database for complex carbohydrates
[DE93-015582] p 827 N94-14803
BIDIRECTIONAL REFLECTANCE
Smooth transitions between bump rendering algorithms
[DE93-012504] p 742 N94-12883
Spectral reflectance of soils from Sao Paulo State
[INPE-5424-PRP/172] p 684 N94-13377
Operational test of the airborne data acquisition system: SADA, the Bara Bonita experiment
[INPE-5451-NTC/305] p 685 N94-13610
BIG BANG COSMOLOGY
Inflation after COBE: Lectures on inflationary cosmology
[DE93-014008] p 834 N94-13096
BIMETALS
Anchoring strategies for bimetallic species in zeolites
[DE93-015622] p 567 N94-12834
Theory of the negative magnetoresistance in magnetic metallic multilayers
[DE93-013912] p 776 N94-14584
BINARY ALLOYS
Electronic structure and phase stability properties in ternary substitutional alloys
[DE93-013848] p 569 N94-13137
BINARY DATA
SCORE user's manual
[DE93-015987] p 822 N94-13121
Parametric binary dissection
[NASA-CR-191496] p 762 N94-13184
Obstacle detection by recognizing binary expansion patterns
[NASA-CR-194415] p 514 N94-14495
How to read a phase equilibrium diagram for high-temperature ceramics material as main object
[DE93-512333] p 582 N94-14513
Is K3C60 a line phase?
[DE93-016700] p 813 N94-14517
Determining neural network connectivity using evolutionary programming
[AD-A266853] p 766 N94-14882
BINARY STARS
High time resolution studies of binary x ray pulsars
[NASA-CR-194395] p 832 N94-13894
BINARY SYSTEMS (MATERIALS)
Study of multicomponent diffusion and transport phenomena
[DE93-015095] p 804 N94-13005
Crystal growth of ZnSe and related ternary compound semiconductors by physical vapor transport
[NASA-CR-193834] p 807 N94-13444
Diffusion in liquid state and solidification of binary system (M-7) p 587 N94-13739
Is K3C60 a line phase?
[DE93-016700] p 813 N94-14517
The Lindemann criterion of melting for pure and mixed ionic crystals
[ITN-93-85210] p 814 N94-14554
BINOMIALS
Computational problems with the binomial failure rate model and incomplete common cause failure reliability data
[DE93-014346] p 669 N94-14143
BIOCHEMISTRY
Role of Ca(++)/calmodulin in the regulation of microtubules in higher plants
[DE93-015885] p 727 N94-12835
BIOCONVERSION
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097
Biofuels for transportation: The road from research to the marketplace
[DE93-000091] p 585 N94-14454
BIODYNAMICS
Flow limitation and flutter in membrane walled collapsible tubes: A model for expiratory wheezing
[ISBN-0-315-73875-8] p 635 N94-13662
BIOFEEDBACK
Autogenic feedback training experiment: A preventative method for space motion sickness p 595 N94-13774
Psychophysiological investigations of the biomedical problems of manned spaceflight
[NASA-CR-194107] p 732 N94-13782
BIOGEOCHEMISTRY
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338
BIOLOGICAL EFFECTS
Cellular track model for study of heavy ion beams
[NASA-TP-3351] p 732 N94-13714
Study on the biological effect of cosmic radiation and the development of radiation protection technology (L-11) p 593 N94-13768
Amphibian fertilization and development in microgravity p 594 N94-13770
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379)
[NASA-SP-7011(379)] p 733 N94-14412
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
[DE93-014032] p 711 N94-14859
BIOLOGICAL EVOLUTION
Evolution of catalytic RNA in the laboratory
[NASA-CR-194124] p 727 N94-13210
BIOLOGICAL MODELS (MATHEMATICS)
Flow limitation and flutter in membrane walled collapsible tubes: A model for expiratory wheezing
[ISBN-0-315-73875-8] p 635 N94-13662
BIOMASS
Biomass production chamber air analysis of wheat study (BWT931)
[NASA-CR-194092] p 737 N94-13712
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
[NASA-TM-109272] p 738 N94-13979
Biodiesel/aquatic species project report, FY 1992
[DE93-010024] p 709 N94-14087
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
[DE93-010025] p 584 N94-14089
Biofuels for transportation: The road from research to the marketplace
[DE93-000091] p 585 N94-14454
BIOMASS ENERGY PRODUCTION
The 1992 JSEE/JWEA Joint Conference
[DE93-793955] p 700 N94-12822
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097
BIOMEDICAL DATA
Circadian rhythms during simulation of the D2-spaceflight
[DLR-FB-92-27] p 733 N94-14043
BIOPHYSICS
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars
[NASA-TP-3312] p 646 N94-12875
BIOSPHERE
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
[INPE-5454-TDI/496] p 707 N94-13330
Meteorological data, new series A monographs. Volume 6, no. 4: Modelization of heat fluxes at Earth ground with consideration of vegetation
[ETN-93-94169] p 723 N94-14546
BIOSYNTHESIS
Evolution of catalytic RNA in the laboratory
[NASA-CR-194124] p 727 N94-13210
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
BIOTECHNOLOGY
Catalysis and biocatalysis program
[NASA-CR-194105] p 727 N94-12793
Monoclonal antibodies directed against surface molecules of multicell spheroids
[NASA-CR-193560] p 727 N94-12795
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
BIPOLAR TRANSISTORS
Electrical noise in microwave field effect and bipolar transistors
[LAAS-93042] p 616 N94-14717
BIRDS
Birds of Wallops Island, Virginia, 1970 - 1992
[NASA-TM-104589] p 850 N94-13923
BIREFRINGENCE
Poling of thin polymer films in electro optic applications
[AD-A266562] p 579 N94-13584
BISPHENOLS
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
[AD-A265832] p 577 N94-12986
BLACK BODY RADIATION
Coupled thermal response of objects and participating media in fires and large combustion systems
[DE93-012848] p 561 N94-12819
Moebius inverse problem for distorted black holes
[DE93-622899] p 834 N94-12880
A calibration procedure for radiation budget radiometers and its influence on interpretation of measured values
[MITT-82] p 651 N94-14149
BLACK HOLES (ASTRONOMY)
A new limit on the rate-density of evaporating black holes
[DE93-012716] p 834 N94-12815
Moebius inverse problem for distorted black holes
[DE93-622899] p 834 N94-12880
GRO: Black hole models for gamma ray bursts
[NASA-CR-193244] p 829 N94-13178
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232
The soft x ray transient Cen X-4 in quiescence
[NASA-CR-194033] p 833 N94-14406
The first data from the MACHO experiment
[DE93-014423] p 840 N94-14467
BLADE TIPS
Numerical simulation of steady three-dimensional flows in axial turbomachinery bladerows p 634 N94-13630
BLADES
On curve veering and flutter of rotating blades
[NASA-TM-106282] p 670 N94-12872
BLASIUS FLOW
The transient behavior of a boundary layer exposed to uniform suction
[ITN-93-85205] p 630 N94-13197

BLINDS
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method
[DE93-015177] p 704 N94-14333
BLOCKING
The effects of evaluation and production blocking on the performance of brainstorming groups
[AD-A265495] p 734 N94-12929
BLOOD PLASMA
Phase-shifting effect of light and exercise on the human circadian clock
[AD-A265732] p 732 N94-13038
BLOWING
Experimental investigation of the effects of blowing ratio parameter on heat transfer to a film-cooled flat plate
[AD-A266599] p 636 N94-13780
An experimental study on the effect of die geometry on swell and sag in the parison extrusion stage
[IMI-93RT-42400-1476-G] p 597 N94-14070
BLUE GREEN ALGAE
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097
BLUNT BODIES
Aerodynamics of a sphere and an oblate spheroid for Mach numbers from 0.6 to 10.5 including some effects of test conditions
[NASA-TM-109016] p 500 N94-13172
BLURRING
Depths from focusing and defocusing
[AD-A266644] p 735 N94-14797
BODIES OF REVOLUTION
Computer code for scattering from impedance bodies of revolution. Part 3: Surface impedance with s and phi variation. Analytical and numerical results
[NASA-CR-193396] p 599 N94-13264
BODY CENTERED CUBIC LATTICES
Monte Carlo simulation of the OCP freezing transition
[DE93-013039] p 811 N94-14313
Shock compression and quasielastic release in tantalum
[DE93-014566] p 811 N94-14329
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
[DE93-016666] p 812 N94-14354
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
BODY KINEMATICS
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
[NASA-CR-194515] p 677 N94-14618
Geometric stiffening in multibody dynamics formulations p 677 N94-14619
Stress stiffening and approximate equations in flexible multibody dynamics p 677 N94-14620
A component modes projection and assembly model reduction methodology for articulated, multi-flexible body structures p 677 N94-14622
Nonrecursive formulations of multibody dynamics and concurrent multiprocessing p 679 N94-14632
Parallel O(log n) algorithms for open- and closed-chain rigid multibody systems based on a new mass matrix factorization technique p 679 N94-14636
Parallel methods for dynamic simulation of multiple manipulator systems p 680 N94-14637
Space Station Common Berthing Mechanism, a multi-body simulation application p 544 N94-14640
Computational Control Workstation: Users' perspectives p 681 N94-14648
BODY TEMPERATURE
Phase-shifting effect of light and exercise on the human circadian clock
[AD-A265732] p 732 N94-13038
BODY-WING AND TAIL CONFIGURATIONS
VSAERO analysis of a Piper Cub aircraft p 516 N94-14616
BODY-WING CONFIGURATIONS
Improved aeroprediction code. Part 1: Summary of new methods and comparison with experiment
[AD-A266015] p 500 N94-12989
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations
[NLR-TP-91397-U] p 503 N94-13531
BOILERS
Fatigue design curves for 6061-T6 aluminum
[DE93-011849] p 571 N94-14021
BOLOMETERS
Direct submillimeter absorptivity measurements on epitaxial Ba(1-x)K(x)BiO3 films at 2K
[DE93-013904] p 815 N94-14699
BOLTZMANN TRANSPORT EQUATION
Theory of the negative magnetoresistance in magnetic metallic multilayers
[DE93-013912] p 776 N94-14584
BOMBER AIRCRAFT
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292
BONDING
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794
BONE DEMINERALIZATION
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Effect of low gravity on calcium metabolism and bone formation (L-7) p 593 N94-13765
Bone culture research p 595 N94-13773
BONE MARROW
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
BONES
Bone culture research p 595 N94-13773
BOOSTER ROCKET ENGINES
The conceptual study on future space transportation systems. Part A: Conceptual study of flyback booster
[NASDA-CNT-930013] p 536 N94-14099
BOREHOLES
INGDB-90. The International Neutron Nuclear Data Base for geophysics applications
[DE93-624095] p 827 N94-14880
BORESIGHT ERROR
Electromagnetic wave test p 508 N94-14173
BORON
Deposition of crystalline boron thick layers from gas phase
[DE93-620499] p 576 N94-12867
BORON ISOTOPES
Nuclear fusion of protons with ions of boron
[DE93-014284] p 781 N94-13219
BOROSILICATE GLASS
Canonical correlation of waste glass compositions and durability, including pH
[DE93-012754] p 578 N94-13493
Relationship between borosilicate glass composition, structure, and durability test response (SRS)
[DE93-013578] p 581 N94-14343
Modeling surface area to volume effects on borosilicate glass dissolution
[DE93-011891] p 581 N94-14432
BOSONS
Medium energy hadron-nucleus scattering in the 1/N expansion formalism
[DE93-622957] p 778 N94-12848
Radiative corrections in the strongly interacting limit of the standard electroweak model
[DE93-013906] p 780 N94-13018
Effects of additional isoscalar vector bosons in e(sup +)e)(sup -)(yields)ff-bar processes at the TRISTAN and LEP energies
[DE93-621451] p 783 N94-13506
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
[DE93-017154] p 790 N94-14893
BOUNDARIES
Spatial and temporal variability of precipitation and chemistry: Case studies from the frontal boundary study
[DE93-007883] p 708 N94-13910
How to read a phase equilibrium diagram for high-temperature ceramics material as main object
[DE93-512333] p 582 N94-14513
BOUNDARY CONDITIONS
On the motion through a viscous fluid of a spherical particle touching a plane wall: Slip boundary conditions
[DE93-012540] p 628 N94-12961
Open boundary conditions for incompletely parabolic systems
[FFI/RAPPORT-92/7029] p 770 N94-13971
Boundary stability under nonequilibrium conditions
[DE93-016259] p 809 N94-13980
Domain connectivity among systems of overset grids
[NASA-CR-193390] p 508 N94-14326
Multigrid solution of internal flows using unstructured solution adaptive meshes
[NASA-CR-194233] p 638 N94-14356
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424
Multi-dimensional high order essentially non-oscillatory finite difference methods in generalized coordinates
[NASA-CR-194031] p 770 N94-14429
Wall interference studies: Revisited p 640 N94-14604
BOUNDARY ELEMENT METHOD
Micromechanical modeling of laminated composites with interfaces and woven composites using the boundary element method
[NASA-TM-106280] p 670 N94-13053
Boundary formulations for nonlinear design sensitivity analysis p 672 N94-13669
Torsion problem of elastostatics: An application of boundary element method and relation with conformal mapping
[DSIS-92-03794] p 674 N94-13833
Utilization of boundary element method for extraction of frequency dependent conductivity parameters of lossy intra-chip transmission lines
[ETN-93-94385] p 771 N94-14807
BOUNDARY INTEGRAL METHOD
A hybrid finite element-boundary integral for the analysis of cavity-backed antennas of arbitrary shape
[NASA-CR-193719] p 599 N94-13236
Boundary formulations for nonlinear design sensitivity analysis p 672 N94-13669
Scattering by a groove in an impedance plane
[NASA-CR-193362] p 602 N94-13720
BOUNDARY LAYER COMBUSTION
Homogeneous-hetergeneous combustion: Thermal and chemical coupling
[DE93-016050] p 565 N94-14403
Numerical simulation of velocity-coupled combustion response of solid rocket propellants p 585 N94-14490
BOUNDARY LAYER CONTROL
Transition prediction and control in subsonic flow over a hump
[NASA-CR-4543] p 629 N94-13066
Boundary-layer transition p 507 N94-14171
BOUNDARY LAYER EQUATIONS
Transition prediction and control in subsonic flow over a hump
[NASA-CR-4543] p 629 N94-13066
Research on chemical vapor deposition processes for advanced ceramic coatings
[NASA-CR-193613] p 577 N94-13089
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations
[NLR-TP-91397-U] p 503 N94-13531
BOUNDARY LAYER FLOW
Integration of viscous effects into inviscid computational methods
[NASA-CR-193677] p 629 N94-13007
Large-eddy simulation of laminar-turbulent breakdown at high speeds with dynamic subgrid-scale modeling
[NASA-CR-4533] p 629 N94-13064
Numerical study of the effects of icing on viscous flow over wings
[NASA-CR-193306] p 500 N94-13180
Numerical simulations of unsteady flows in turbomachines p 633 N94-13569
On the secondary instability of the most dangerous Goertler vortex
[NASA-CR-191504] p 636 N94-13785
Shock/boundary-layer/shock interactions p 507 N94-14172
Stability of spatially developing boundary layers p 640 N94-14605
BOUNDARY LAYER SEPARATION
Fundamental study of shock wave/turbulent boundary layer interactions with passive control in transonic flows
[ESA-TT-1278] p 630 N94-13117
Interaction of two glancing, crossing shock waves with a turbulent boundary-layer at various Mach numbers
[NASA-TM-103740] p 509 N94-14780
BOUNDARY LAYER STABILITY
Transition prediction and control in subsonic flow over a hump
[NASA-CR-4543] p 629 N94-13066
Three-Dimensional Boundary-Layer program (BL3D) for swept subsonic or supersonic wings with application to laminar flow control
[NASA-CR-4531] p 629 N94-13073
The effect of crossflow on Taylor vortices: A model problem
[NASA-CR-191487] p 630 N94-13128
High speed transition prediction
[NASA-CR-194125] p 502 N94-13422
Stability of spatially developing boundary layers p 640 N94-14605
BOUNDARY LAYER TRANSITION
Large-eddy simulation of laminar-turbulent breakdown at high speeds with dynamic subgrid-scale modeling
[NASA-CR-4533] p 629 N94-13064
Transition prediction and control in subsonic flow over a hump
[NASA-CR-4543] p 629 N94-13066

The effect of crossflow on Taylor vortices: A model problem
[NASA-CR-191487] p 630 N94-13128
High speed transition prediction
[NASA-CR-194125] p 502 N94-13422
High freestream turbulence effects on the transport of heat and momentum p 633 N94-13559
Boundary-layer transition p 507 N94-14171
Stability of spatially developing boundary layers p 640 N94-14605

BOUNDARY LAYERS
Experimental investigation of the effects of blowing ratio parameter on heat transfer to a film-cooled flat plate
[AD-A266599] p 636 N94-13780
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912

BOUNDARY VALUE PROBLEMS
Computation and graphics in mathematical research
[DE93-016512] p 740 N94-13069
A hybrid Pade-Galerkin technique for differential equations
[NASA-CR-191494] p 767 N94-13289
Evolution of disturbances in stagnation point flow
[NASA-CR-191516] p 636 N94-13724
On the orthotropicity assumption and discontinuity conditions of conical shells
[LR-703] p 673 N94-13787
Theory for iterative solution of large dynamical systems using parallel computation
[TKK-MAT-A304] p 760 N94-14187
Nonrecursive formulations of multibody dynamics and concurrent multiprocessing p 679 N94-14632

BRAIDED COMPOSITES
Graphite fiber textile preform/copper matrix composites
[NASA-CR-193797] p 558 N94-14050

BRAIN
Current distribution tomography for determination of internal current density distributions
[DE93-015463] p 604 N94-13899

BRAKING
Technology assessments of advanced energy storage systems for electric and hybrid vehicles
[DE93-014395] p 701 N94-12913

BRAYTON CYCLE
A modular gas-cooled cermet reactor system for planetary base power
[DE93-013672] p 550 N94-13351

BRAZIL
Sea surface temperature forcing and phase locking of Nordeste precipitation
[DE93-011873] p 723 N94-14426

BREADBOARD MODELS
Breadboard activities for advanced protein crystal growth
[NASA-CR-193559] p 803 N94-12796
Solid state laser systems for space application
[NASA-CR-194133] p 656 N94-13420
Trellis coding with Continuous Phase Modulation (CPM) for satellite-based land-mobile communications
[NASA-CR-191325] p 604 N94-13909
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
[NASA-TM-109272] p 738 N94-13979
Plasma contactor technology for Space Station Freedom
[NASA-TM-106291] p 553 N94-14725

BREMSSTRAHLUNG
The space-time and energy parameters of deuterium braking by the central collision with atoms
[DE93-624144] p 788 N94-14881

BRIDGMAN METHOD
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
[DE93-014335] p 806 N94-13150

BRIGHTNESS
Fundamentals and techniques of nonimaging optics
[DE93-013145] p 791 N94-13015

BRIGHTNESS TEMPERATURE
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
[INPE-5444-TDI/490] p 720 N94-13614
Radiometric observations of atmospheric attenuation at 20.6 and 31.65 GHz: The Wave Propagation Laboratory data base p 613 N94-14660

BRILLOUIN EFFECT
Brillouin scattering from fluctuations produced by stimulated Raman scattering
[DE93-016531] p 792 N94-14438

BRITTLE MATERIALS
Micromechanical damage theories for brittle solids with interacting microcracks
[AD-A266348] p 673 N94-13778

BRITTLENESS
Wear-mechanism modelling
[DE93-012311] p 579 N94-13974
Machining and grinding: High rate deformation in practice
[DE93-010718] p 664 N94-14457

BROADBAND
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
[DE93-015084] p 612 N94-14512

BROADCASTING
Digital sound: The selection of critical programme material and preparation of recordings for CCIR tests on low bit-rate codecs
[BBC-RD-1993/1] p 598 N94-12925
Digital sound: Subjective tests on commentary-quality codecs
[BBC-RD-1993/2] p 598 N94-12926
Technological development for broadcasting satellites in NHK Laboratories p 618 N94-14288
Coverage aspects of a single frequency network designed for digital audio broadcasting
[BBC-RD-1993/3] p 616 N94-14742

BROKEN SYMMETRY
Hydrodynamic asymptotics of Green functions in magnetics with spontaneously broken symmetry
[DE93-621349] p 767 N94-13223
On a nonminimal gauge interaction of a scalar field in D=2+1 Chern-Simons-Maxwell theory
[DE93-621380] p 621 N94-13224
The effects of internal fluctuations on a class of nonequilibrium statistical field theories
[DE93-016620] p 774 N94-14441
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
The off shell (rho)-(omega) mixing in the QCD sum rules
[DE93-014845] p 786 N94-14527

BROWN DWARF STARS
The first data from the MACHO experiment
[DE93-014423] p 840 N94-14467

BROWNIAN MOVEMENTS
Transport properties of disordered porous media from the microstructure
[DE93-016065] p 806 N94-13152
The resonance broadening theory revisited
[PPL-134] p 798 N94-13563

BRUSH SEALS
Rotordynamic and leakage characteristics of a 4-stage brush seal
[AD-A266012] p 660 N94-12988

BSCCO SUPERCONDUCTORS
Optimization of the processing parameters of high temperature superconducting glass-ceramics: Center Director's discretionary fund final report
[NASA-TM-108421] p 808 N94-13938
Superconductivity devices: Commercial use of space
[NASA-CR-194163] p 625 N94-14324
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339

BUBBLE CHAMBERS
EGS (underscore) windows 2: An enhanced graphical interface to EGS
[DE93-010447] p 746 N94-13382

BUBBLES
Study of bubble behavior in weightlessness (effects of thermal gradient and acoustic stationary wave) (M-16) p 589 N94-13748

BUCKLING
A probabilistic method for the buckling assessment of stiffened composite shells
[NASA-TM-106286] p 671 N94-13379
Shear buckling of fiber metal laminates: Comparison between orthotropic and anisotropic plate models using finite element method
[LTR-ST-1934] p 671 N94-13565
On the orthotropicity assumption and discontinuity conditions of conical shells
[LR-703] p 673 N94-13787
Compressive buckling of curved, anisotropic panels stiffened in two directions. Part 1: Derivation of the governing equations
[LR-694] p 675 N94-13931
Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531
The effect of initial imperfections on shell stability: An updated review
[LR-695] p 682 N94-14692
Buckling analysis of laminated thin shells in a hot environment
[NASA-TM-106302] p 683 N94-14776

BUDGETING
Selected data on academic science and engineering R and D expenditures: Fiscal Year 1991
[NSF-92-329] p 819 N94-13982

BUFFETING
Measurements of wing and fin buffeting on the standard dynamics model
[IAR-AN-76] p 526 N94-13859

BUILDINGS
Study on the possibilities to apply spectrumindex
[VTT-PUBS-109] p 777 N94-14034
Transition of building energy consumption using multi-input, single-output dynamic model
[VTT-PUBS-116] p 597 N94-14055
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method
[DE93-015177] p 704 N94-14333

BUMPERS
Comparison of analytic Whipple bumper shield ballistic limits with CTH simulations
[DE93-015126] p 539 N94-13006
Simulation of orbital debris impacts on bumper shields
[DE93-013773] p 540 N94-13398
BALLIST: A computer program to empirically predict the bumper thickness required to prevent perforation of the Space Station by orbital debris
[NASA-CR-193825] p 543 N94-14120

BUNCHING
Observation of the coalescing of beam into an asymmetric RF bucket by stochastic cooling
[DE93-015133] p 783 N94-13895

BUOYS
Buoy experiments to obtain the sea-truth data for OCTS/NSCAT, part 1
[NASDA-CNT-930005-PT-1] p 725 N94-13653

BURNING RATE
Closed-chamber analysis of M5 propellant lot RAD-64597
[AD-A266321] p 585 N94-14145

BURNS (INJURIES)
Review of test methods for material flammability
[DSIS-93-00480] p 564 N94-13942

C

C (PROGRAMMING LANGUAGE)
SCORE user's manual
[DE93-015987] p 822 N94-13121

C BAND
Search for extraterrestrial intelligence/high resolution microwave survey team member
[NASA-CR-194177] p 739 N94-13086

CABLES (ROPES)
Identifying the NAL spaceplane aerodynamic model using dynamic wind tunnel tests
[NAL-TR-1171] p 500 N94-12951
Control system design of a cable-mounted model used for dynamic wind tunnel testing
[NAL-TR-1161] p 528 N94-13337

CADASTRAL MAPPING
Integration of remotely sensed data and cadastral ownership boundaries for land inventory purposes
[BCRS-92-16] p 687 N94-14127

CADMIUM
A review of the global emissions, transport, and effects of heavy metals in the environment
[DE93-013507] p 706 N94-12937

CADMIUM SULFIDES
Dynamic Jahn-Teller effect: Calculation of fine structure spectrum, isotope shift and Zeeman behavior at deep center Ni2+ in CdS
[ETN-93-94394] p 815 N94-14705

CADMIUM TELLURIDES
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
[DE93-014335] p 806 N94-13150

CALCIUM
Role of Ca(++)/calmodulin in the regulation of microtubules in higher plants
[DE93-015885] p 727 N94-12835
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
The surface-located YopN protein is involved in calcium signal transduction in Yersinia pseudotuberculosis
[FOA-B-40416-4.4] p 729 N94-14128

CALCIUM METABOLISM
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Effect of low gravity on calcium metabolism and bone formation (L-7) p 593 N94-13765

CALCIUM PHOSPHATES
Laser and spectroscopic properties of Yb-doped apatite crystals
[DE93-014656] p 810 N94-14125
CALENDARS
Royal Belgium observatory calendar: 156th year
[ETN-93-94221] p 833 N94-14811
CALIBRATING
DMSP F11 SSM/T-2 calibration and validation
[AD-A265817] p 719 N94-12978
Degradation of the visible and near-infrared channels of the advanced very high resolution radiometer on the NOAA-9 spacecraft: Assessment and recommendations for corrections
[NOAA-TR-NESDIS-70] p 544 N94-13029
Phobos/Harp post launch support
[NASA-CR-193676] p 540 N94-13109
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land
[BCRS-92-13] p 684 N94-13123
HYMOSS signal processing for pushbroom spectral imaging
[NASA-CR-191341] p 620 N94-13125
Proceedings of the 11th Space Surveillance Workshop, volume 1
[AD-A265120] p 531 N94-13358
Isolation of a piezoresistive accelerometer used in high acceleration tests
[DE93-013764] p 649 N94-13395
NASA airborne satellite instrumentation calibrator (NASIC) technical reference
[NASA-RP-1315] p 545 N94-13713
Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
Camera calibration in a hazardous environment performed in situ with automated analysis and verification
[DE93-010274] p 651 N94-14046
Volume 14: The first SeaWiFS intercalibration round-robin experiment, SIRREX-1, July 1992
[NASA-TM-104566] p 725 N94-14090
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
[EOC-92-01-0007] p 687 N94-14091
Calibration and in-house validation results of JERS-1 data p 687 N94-14092
A calibration procedure for radiation budget radiometers and its influence on interpretation of measured values
[MITT-82] p 651 N94-14149
Results from ERS-1 and JERS-1 SAR calibration experiments and data analysis p 688 N94-14210
Methods for calibration/validation of AVNIR p 689 N94-14216
Radio metric errors due to mismatch and offset between a DSN antenna beam and the beam of a troposphere calibration instrument p 607 N94-14370
Calibration of the receiver channel for the GOPEX precursor experiments p 610 N94-14387
A description of the computer program CALDK38 which controls instrumentation set-up and data acquisition during deadweight calibration using an HBM DK 38 S6 digital measuring unit
[LTR-ST-1935] p 754 N94-14496
Calibration of a magnetic induction system for measurement of hypervelocities
[DE93-013949] p 652 N94-14578
The 3D pneumatic and 2D dynamic probes: Their development and subsequent use in a transonic fan
[RAE-TM-AERO/PROP-22] p 653 N94-14827
CALMODULIN
Role of Ca(++)/calmodulin in the regulation of microtubules in higher plants
[DE93-015885] p 727 N94-12835
CALORIMETERS
Low energy response of the DO calorimeter and jet energy measurement
[DE93-013569] p 781 N94-13350
Measurements of optical properties of waveshifting optical fiber for liquid scintillator hadron calorimetry
[DE93-012606] p 791 N94-13482
Cesium iodide (CsI) crystal manufacture
[DE93-012146] p 808 N94-13973
Optical fibre Fabry-Perot interferometers for calorimetric heat transfer gauges
[RAE-TM-AERO/PROP-20] p 653 N94-14701
CAMERAS
Photogrammetric methods for trajectory measurements
[NLR-TP-91166-U] p 650 N94-13527
Suppression of bright objects using a spatial light modulator when imaging with CCD- and image intensified cameras
[FFI-93/7008] p 650 N94-13665
A widget based operations simulator for a planetary camera: A model for the high resolution stereo camera on Mars 94
[DLR-FB-92-30] p 651 N94-14044
Camera calibration in a hazardous environment performed in situ with automated analysis and verification
[DE93-010274] p 651 N94-14046
A fast frame rate 512 x 512 CCD digital camera system
[DE93-013048] p 653 N94-14792
Image motion photography
[DE93-013962] p 653 N94-14858
CANADA
A history of the Defence Research Establishment, Ottawa
[CTN-93-60737] p 850 N94-14060
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338
CANONICAL FORMS
Simplification-driven automated partial evaluation
[DE93-012890] p 768 N94-13391
Canonical forms of multidimensional steady inviscid flows
[NASA-CR-191488] p 769 N94-13722
CANOPIES (VEGETATION)
Analytical framework for modeling scale-related variabilities in remote sensing p 685 N94-13592
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
[INPE-5444-TDI/490] p 720 N94-13614
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-194029] p 715 N94-13956
CANTILEVER BEAMS
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706
CAPACITANCE
Development of UHF spark-switched L-C Oscillators
[DE93-015019] p 623 N94-13892
A capaciflector-based robotic system
[NASA-CR-193783] p 833 N94-14359
NASA metrology and calibration, 1993
[NASA-TM-109280] p 597 N94-14410
Moisture meter evaluation
[DE93-016581] p 652 N94-14534
CAPACITORS
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
[DE93-012713] p 580 N94-14179
CAPILLARY FLOW
Capillary surfaces in a wedge: Differing contact angles
[DE93-013903] p 631 N94-13244
Thermodynamic status of static and dynamic contact angles
[ISBN-0-315-73844-8] p 817 N94-13554
CAPILLARY WAVES
Drop dynamics in space and interference with acoustic field (M-15) p 588 N94-13747
Structures and shear response of lipid monolayers
[DE93-015076] p 730 N94-14802
CAPTURE EFFECT
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
CARBIDES
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
[DE93-014962] p 583 N94-13002
CARBOHYDRATE METABOLISM
Improving physical performance by chemical stimulation
[DSIS-92-03763] p 728 N94-13823
CARBOHYDRATES
CarbBank: A structural and bibliographic database for complex carbohydrates
[DE93-015582] p 827 N94-14803
CARBON
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486
Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black
[DE93-012707] p 559 N94-14690
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794
CARBON CYCLE
Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486
CARBON DIOXIDE
Propulsion simulator for magnetically-suspended wind tunnel models
[NASA-CR-189560] p 527 N94-13127
Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384
Electrocatalysis issues in polymer electrolyte fuel cells
[DE93-014450] p 702 N94-13402
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
Optical properties of CO2 ice and CO2 snow in the ultraviolet, visible, and infrared
[NASA-CR-194110] p 686 N94-14081
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
Sequestering carbon dioxide in industrial polymers: Building materials for the 21st century
[DE93-016087] p 580 N94-14297
Promotion of geothermal energy development in 1991
[DE93-799061] p 705 N94-14679
CARBON DIOXIDE CONCENTRATION
Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384
Synthesis inversion of atmospheric CO2 using the GISS tracer transport model
[CSIRO-TP-29] p 709 N94-14095
CARBON DIOXIDE LASERS
Laser CO2 beam transmission through hollow metallic waveguide coated by a thin internal dielectric layer
[ITN-93-85201] p 656 N94-13571
Study of speckle reduction when using a CO2 waveguide laser close to its threshold state
[DSIS-93-00250] p 657 N94-14067
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-005] p 559 N94-14575
CARBON FIBER REINFORCED PLASTICS
Measuring methods for CFRP laminates' bending and torsion rigidities characteristics p 529 N94-13272
Development of time-dependent orthotropic constitutive law of a thermoplastic composite material p 556 N94-13595
Testing and analysis of curved frame specimens made from a Long Discontinuous Fiber (LDF) material
[NASA-TM-109014] p 557 N94-13711
Polymer infiltration studies
[NASA-CR-194521] p 582 N94-14539
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574
CARBON FIBERS
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871
Modified carbon for improved corrosion resistance
[AD-D015741] p 556 N94-13663
Fabrication of very-low-density, high-stiffness carbon fiber/aluminum hybridized composite with ultra-low density and high stiffness (M-11) p 588 N94-13743
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-006] p 558 N94-14573
CARBON MONOXIDE
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
[DE93-014962] p 583 N94-13002
Electrocatalysis issues in polymer electrolyte fuel cells
[DE93-014450] p 702 N94-13402
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area
[DE93-012852] p 708 N94-13495
The origin of the far-infrared emission from galactic molecular clouds p 848 N94-13654
Quantum state resolved desorption of CO from solid surfaces
[DE93-016876] p 814 N94-14597
CARBON STARS
Dust production in the envelopes of carbon stars: R Coronae Borealis
[ETN-93-94389] p 839 N94-14075
CARBON STEELS
A study of hydrogen effects on fracture behavior of radioactive waste storage tanks
[DE93-018171] p 574 N94-14873
CARBON-CARBON COMPOSITES
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812

CARBONATES
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
[DE93-013800] p 701 N94-13093
Molten carbonate fuel cell product development test environmental assessment/protection plan
[DE93-000288] p 702 N94-13380
Performance effects of coal-derived contaminants on the carbonate fuel cell
[DE93-013801] p 703 N94-13693
CARBONYL COMPOUNDS
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
[AD-A265827] p 577 N94-12985
CARBOXYLIC ACIDS
A characterization of carboxylesterases in rat and guinea pig: Their heterogeneity and role in detoxication of organophosphorus compounds
[NDRE-PUBL-93-1001] p 730 N94-14852
CARDIOVASCULAR SYSTEM
Countermeasure for reducing post-flight orthostatic intolerance: Lower Body Negative Pressure (LBNP) experiment E140 p 594 N94-13772
CARRIER DENSITY (SOLID STATE)
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
[ETN-93-94387] p 703 N94-13997
CARRIER MOBILITY
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344
CARRIER TRANSPORT (SOLID STATE)
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
[ETN-93-94387] p 703 N94-13997
CASCADE FLOW
On the local nature of the energy cascade
p 643 N94-14748
CASCADE WIND TUNNELS
An experimental investigation of the redistribution of gas stream total temperature in a high turning angle transonic planar cascade
[ISBN-0-315-60791-2] p 502 N94-13369
CASE HISTORIES
Storm prediction through barometric field analysis
[PUBL-SER-A-129] p 720 N94-13587
CASSINI MISSION
Real-time dynamics simulation of the Cassini spacecraft using DARTS. Part 1: Functional capabilities and the spatial algebra algorithm p 680 N94-14638
Real-time dynamic simulation of the Cassini spacecraft using DARTS. Part 2: Parallel/vectorized real-time implementation p 680 N94-14639
CASTING
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
[AD-A265827] p 577 N94-12985
Casting of superconducting composite materials (M-4)
p 586 N94-13736
CATACLYSMIC VARIABLES
Time series photometry of faint cataclysmic variables with a CCD p 831 N94-13646
CATALOGS (PUBLICATIONS)
Submillimeter, millimeter, and microwave spectral line catalogue, revision 3
[NASA-CR-194501] p 602 N94-13813
CATALYSIS
Catalysis and biocatalysis program
[NASA-CR-194105] p 727 N94-12793
Photocatalysis for the treatment of waste water: Applications involving the removal of metals
[DE93-011669] p 561 N94-12841
Electrocatalysis issues in polymer electrolyte fuel cells
[DE93-014450] p 702 N94-13402
Hydrogen peroxide safety issues
[DE93-013895] p 565 N94-14346
Catalytic arene hydrogenation using early transition metal hydride compounds
[DE93-015500] p 573 N94-14402
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
Reactor studies of metal ions associated with chromatographic silica
[AD-A266675] p 573 N94-14779
CATALYSTS
Anchoring strategies for bimetallic species in zeolites
[DE93-015622] p 567 N94-12834
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
[AD-A265832] p 577 N94-12986
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
[DE93-010025] p 584 N94-14089
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184
Hydrogen peroxide safety issues
[DE93-013895] p 565 N94-14346
Catalytic arene hydrogenation using early transition metal hydride compounds
[DE93-015500] p 573 N94-14402
Homogeneous-hetergeneous combustion: Thermal and chemical coupling
[DE93-016050] p 565 N94-14403
CATALYTIC ACTIVITY
Catalysis and biocatalysis program
[NASA-CR-194105] p 727 N94-12793
A survey and analysis of experimental hydrogen sensors
[NASA-TM-106300] p 648 N94-13135
Evolution of catalytic RNA in the laboratory
[NASA-CR-194124] p 727 N94-13210
Destruction of problematic airborne contaminants by hydrogen reduction using a Catalytically Active, Regenerable Sorbent (CARS)
[NASA-CR-194354] p 709 N94-14103
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184
Lawrence Berkeley Laboratory Chemical Sciences Division
[DE93-015260] p 851 N94-14401
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
CATASTROPHE THEORY
On curve veering and flutter of rotating blades
[NASA-TM-106282] p 670 N94-12872
CATENARIES
A photovoltaic catenary-tent array for the Martian surface
[NASA-TM-106306] p 621 N94-13194
CATHODES
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776
CATHODIC COATINGS
Physical and structural properties of a sputtered zirconia-yttria layer used as a thermal resistance
[ONERA-NT-1992-10] p 810 N94-14193
CATIONS
Infrared spectroscopy of organic free radicals related to combustion processes
[DE93-017086] p 562 N94-13222
CAUCHY PROBLEM
Full Riemann solution of the one- and two-dimensional Euler equations
[DLR-FB-92-34] p 638 N94-14188
A new Lagrangian method for three-dimensional steady supersonic flows
[NASA-TM-106068] p 510 N94-14847
CAVITIES
Long-pulse operation of a gyrotron with beam/RF separation
[DE93-015007] p 649 N94-13410
CD-ROM
Public census data on CD-ROM at Lawrence Berkeley Laboratory
[DE93-015273] p 825 N94-14433
CELL DIVISION
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418
Cellular responses to low-gravity: Pilot studies on suborbital rockets and orbiting spacecraft
[NASA-CR-194402] p 729 N94-14494
CELLS (BIOLOGY)
Monoclonal antibodies directed against surface molecules of multicell spheroids
[NASA-CR-193560] p 727 N94-12795
Studies on the effects of microgravity on the ultrastructure and functions of cultured mammalian cells (L-6) p 592 N94-13763
Gravity, chromosomes, and organized development in aseptically cultured plant cells p 592 N94-13764
CELLULOSE NITRATE
Closed-chamber analysis of M5 propellant lot RAD-64597
[AD-A266321] p 585 N94-14145
CEMENTS
Automated crack identification for cement paste
[AD-A265753] p 665 N94-13042
CENSUS
Public census data on CD-ROM at Lawrence Berkeley Laboratory
[DE93-015273] p 825 N94-14433
CENTRAL PROCESSING UNITS
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Some tools of the trade we've developed for our cross-section calculations
[DE93-013835] p 786 N94-14569
Switchover software reliability estimate for Paducah freezer/sublimer computer systems
[DE93-013844] p 756 N94-14696
CEPSTRAL ANALYSIS
Speaker independent recognition of isolated words using vector quantization and neural networks
[ETN-93-94390] p 616 N94-14724
CERAMIC BONDING
Problems and opportunities in microwave joining of ceramics
[DE93-014998] p 579 N94-13888
CERAMIC COATINGS
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812
Research on chemical vapor deposition processes for advanced ceramic coatings
[NASA-CR-193613] p 577 N94-13089
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574
CERAMIC MATRIX COMPOSITES
Ceramic matrix composites by microwave assisted CVI
[DE93-012640] p 576 N94-12916
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
[DE93-012942] p 577 N94-13032
Measurement of residual strain in composites by means of time-of-flight neutron diffraction
[DE93-012939] p 555 N94-13248
Thermal shock resistance of ceramic matrix composites
[NASA-CR-189136] p 557 N94-13920
CERAMICS
Ceramic matrix composites by microwave assisted CVI
[DE93-012640] p 576 N94-12916
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-191088] p 828 N94-12931
Modeling the impact behavior of AD85 ceramic under multi-axial loading
[AD-A265877] p 576 N94-12932
MMIC packaging technology development
[NASA-CR-194183] p 621 N94-13336
Surfaces and interfaces of ceramics and metals
[DE93-014959] p 578 N94-13408
Problems and opportunities in microwave joining of ceramics
[DE93-014998] p 579 N94-13888
Applications of surface science to solid lubricants
[SMC-TR-93-24] p 579 N94-13903
Optimization of the processing parameters of high temperature superconducting glass-ceramics: Center Director's discretionary fund final report
[NASA-TM-108421] p 808 N94-13938
Wear-mechanism modelling
[DE93-012311] p 579 N94-13974
Combustion synthesis and engineering of nanoparticles for electronic, structural, and superconductor applications
[DE93-016286] p 809 N94-13981
Superconductivity devices: Commercial use of space
[NASA-CR-194163] p 625 N94-14324
Microwave hybrid heating of alumina filaments
[DE93-012642] p 581 N94-14327
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
How to read a phase equilibrium diagram for high-temperature ceramics material as main object
[DE93-512333] p 582 N94-14513
Processing and testing of high toughness silicon nitride ceramics
[NASA-CR-191190] p 582 N94-14543
CEREBELLUM
A neural-network approach to robotic control
p 679 N94-14634
CERENKOV COUNTERS
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
Gamma-insensitive optical focal plane array
[DE93-013100] p 792 N94-14317
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461
CERENKOV RADIATION
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
CERMETS
A modular gas-cooled cermet reactor system for planetary base power
[DE93-013672] p 550 N94-13351

Preparation of particle-dispersion alloys (M-6)
p 587 N94-13738
Fabrication of very-low-density, high-stiffness carbon fiber/aluminum hybridized composite with ultra-low density and high stiffness (M-11) p 588 N94-13743

CERTIFICATION
Aircraft engine type certification handbook: Advisory circular
|AC-33-2B| p 518 N94-13252

CESIUM IODIDES
Cesium iodide (CsI) crystal manufacture
|DE93-012146| p 808 N94-13973

CHAINS
The design of chain links and slings
|NPL-DMM(A)-94| p 662 N94-13808

CHANGE DETECTION
Asia-Pacific ISY Conference, volume 2
|NASDA-CM-199-VOL-2| p 688 N94-14209
Climate products from NOAA operational satellites
p 691 N94-14231
Detecting land cover changes in Chiang-Mai area in Thailand p 693 N94-14241
Development of a remote sensing geographic information system for land cover changes and assessment of risk due to natural and man made hazards covering the area of the inner delta of the Yellow River
p 694 N94-14249
The Swedish ISY contribution p 695 N94-14256
Vegetation mapping of Indo-China Peninsula using MOS-1 MESSR and NOAA AVHRR p 695 N94-14257
Estimation of vegetation damage due to ash fall in Mt. Pinatubo area using MOS-1 data p 695 N94-14259

CHANNEL FLOW
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749
Isotropy of small scale turbulence
p 644 N94-14752
Estimation of the vortex length scale and intensity from two-dimensional samples p 645 N94-14756
A transport equation for eddy viscosity
p 646 N94-14762

CHANNEL NOISE
The E2 N(yields)(Delta) transition from polarized Compton scattering
|DE93-012522| p 785 N94-14363

CHANNELS (DATA TRANSMISSION)
Application of new electro-optic technology to Space Station Freedom data management system
|NASA-CR-177622| p 538 N94-13257
Development of an on-board aircraft optical fiber data bus system
|NAL-TR-1163| p 514 N94-13338
Signal design for data communication through rapidly varying linear channels
|ITN-93-85195| p 601 N94-13567
Characterisation of the LMS propagation channel at L- and S-bands: Narrowband experimental data and channel modelling p 615 N94-14669

CHAOS
Modulational stability of periodic solutions of the Kuramoto-Sivaskinsky equation
|NASA-CR-191502| p 628 N94-12888
Chaos and microbial systems
|DE93-016814| p 730 N94-14596
Investigations of transitions from order to chaos in dynamical systems
|DE93-014438| p 818 N94-14738

CHARACTERIZATION
Battery testing at Argonne National Laboratory
|DE93-011761| p 624 N94-14012

CHARGE CARRIERS
Intrinsic and interfacial recombination in OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As heterostructures
|DE93-009844| p 809 N94-14083
Anomalous low-temperature free-exciton transport in GaAs structures
|DE93-009845| p 809 N94-14108
Magnetic interactions and disorder - phase transitions in dilute spin-glasses and high temperature superconductors
|ITN-93-85217| p 815 N94-14825

CHARGE COUPLED DEVICES
Crystallographic phase identification in the scanning electron microscope: Backscattered electron Kikuchi patterns
|DE93-011574| p 804 N94-12813
Time series photometry of faint cataclysmic variables with a CCD p 831 N94-13646
Suppression of bright objects using a spatial light modulator when imaging with CCD- and image intensified cameras
|FFI-93/7008| p 650 N94-13665
Rocket and laboratory studies in astronomy
|NASA-CR-194410| p 832 N94-13966
A widget based operations simulator for a planetary camera: A model for the high resolution stereo camera on Mars 94
|DLR-FB-92-30| p 651 N94-14044
A fast frame rate 512 x 512 CCD digital camera system
|DE93-013048| p 653 N94-14792

CHARGE EXCHANGE
Terrestrial magnetospheric imaging: Numerical modeling of low energy neutral atoms
|DE93-014561| p 717 N94-14328

CHARGE TRANSFER
Further study of the X(1910) meson
|DE93-621443| p 782 N94-13362
Metastable enhancement of C(+) and O(+) capture reactions
|DE93-015075| p 807 N94-13373
Charge-exchange reactions and weak interaction rates for Type 2 supernovae
|DE93-015104| p 783 N94-13893

CHARGE TRANSFER DEVICES
An acoustic charge transport imager for high definition television applications
|NASA-CR-194518| p 650 N94-14029

CHARGED PARTICLES
Excitation of coupled waves in plasma periodic structures by relativistic electron beam and acceleration of charged particles
|DE93-621657| p 794 N94-12853
Electromagnetic deflection of spinning particles
|DE93-622866| p 778 N94-12858
Charged scalar particles and (tau) leptonic decay
|DE93-622969| p 779 N94-12882
Stripping efficiencies for 277 MeV/amu gold beam on copper foils
|DE93-014306| p 569 N94-13221
Charged-particle evaluation methodology at Lawrence Livermore National Laboratory
|DE93-013429| p 781 N94-13251
Variance reduction unique to coupled electron/photon Monte Carlo transport
|DE93-014999| p 782 N94-13409
ROSAT observations of the binary Be-star/radio pulsar PSR1259-63
|NASA-CR-194394| p 832 N94-14357
Investigations of transitions from order to chaos in dynamical systems
|DE93-014438| p 818 N94-14738
Anomalous ion transport and feedback control
|DE93-018324| p 803 N94-14874

CHARM (PARTICLE PHYSICS)
Double semi-leptonic charm decay in HELIOS-I 450 GeV/c p-Be data
|DE93-013493| p 781 N94-13348
E789 and P865: High-rate fixed-target studies of charm and beauty
|DE93-017223| p 788 N94-14898

CHEBYSHEV APPROXIMATION
The Chebyshev-Legendre method: Implementing Legendre methods on Chebyshev points
|NASA-CR-191497| p 769 N94-13725
A new treatment of periodic systems with applications to helicopter rotor blade dynamics
|AD-A266770| p 510 N94-14784

CHELATES
Synthesis of organic ligands for f-element separations
|DE93-012915| p 554 N94-14290

CHELATION
Determination of trace elements in triglycine sulfate solutions
|NASA-CR-193481| p 562 N94-13048

CHEMICAL ANALYSIS
Gas atomized Er3Ni powder for cryocooler applications
|DE93-011564| p 568 N94-13000
Spectral reflectance of soils from Sao Paulo State
|INPE-5424-PRP/172| p 684 N94-13377
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
|DE93-015068| p 563 N94-13413
Investigation of an alternating current plasma as an element selective atomic emission detector for high-resolution capillary gas chromatography and as a source for atomic absorption and atomic emission spectrometry p 798 N94-13678
Quality assurance for environmental chemistry, 1991, volume 1
|DE93-011791| p 709 N94-14020
Ultra-soft x ray absorption spectroscopy: A bulk and surface probe of materials
|DE93-014325| p 566 N94-14582
Procurement and execution of PCB analyses: Customer-analyst interactions
|DE93-009964| p 566 N94-14694

CHEMICAL BONDS
Infrared absorption spectroscopy and chemical kinetics of free radicals
|DE93-015078| p 562 N94-13004
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
|AD-A265509| p 560 N94-14794

CHEMICAL COMPOSITION
ARTI Refrigerant Database
|DE93-014774| p 595 N94-13021
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
|NASA-CR-194127| p 847 N94-13211
Formation of deoxidization products in iron ingot by the addition of Al, Si, and/or Mn (M-5) p 587 N94-13737
Spatial and temporal variability of precipitation and chemistry: Case studies from the frontal boundary study
|DE93-007883| p 708 N94-13910
Synthetic lubricants and high-performance functional fluids: Phosphazenes
|ARL-TR-45| p 580 N94-14126
Relationship between borosilicate glass composition, structure, and durability test response (SRS)
|DE93-013578| p 581 N94-14343

CHEMICAL COMPOUNDS
Toxic Substances Control Act (TSCA) chemical substances inventory: Revised inventory synonym and preferred name file, Jan. 1993 documentation
|PB93-155166| p 710 N94-14508

CHEMICAL ENERGY
Lawrence Berkeley Laboratory Chemical Sciences Division
|DE93-015260| p 851 N94-14401

CHEMICAL EQUILIBRIUM
Computer program for thermal and transport properties of parahydrogen from 20 to 10,000 K
|NASA-TP-3378| p 552 N94-14102

CHEMICAL EVOLUTION
The physical and chemical evolution of protostellar disks. The growth of protostellar disks: Progress to date
|NASA-CR-194111| p 836 N94-13423

CHEMICAL EXPLOSIONS
Modeling ignition chemistry
|DE93-012340| p 561 N94-12910
Equation of state for detonation products
|DE93-012671| p 583 N94-12921
A study of the role of homogeneous process in heterogeneous high explosives
|DE93-012733| p 585 N94-14180
Atmospheric acoustic modeling
|DE93-016727| p 718 N94-14518
The 4th International Symposium on Analysis and Detection of Explosives
|DE93-620280| p 585 N94-14829

CHEMICAL PROPERTIES
Toxic Substances Control Act (TSCA) chemical substances inventory: Revised inventory synonym and preferred name file, Jan. 1993 documentation
|PB93-155166| p 710 N94-14508

CHEMICAL PROPULSION
Low thrust space propulsion
|NASA-TM-109286| p 552 N94-13625
Closed-chamber analysis of M5 propellant lot RAD-64597
|AD-A266321| p 585 N94-14145

CHEMICAL REACTIONS
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
|AD-A265832| p 577 N94-12986
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
|DE93-014962| p 583 N94-13002
Fifteenth Combustion Research Conference
|DE93-015758| p 562 N94-13045
Research on chemical vapor deposition processes for advanced ceramic coatings
|NASA-CR-193613| p 577 N94-13089
Reduction of Pu(6) with hydrogen peroxide: Effects of plutonium, peroxide, and iron concentrations and of reaction time
|DE93-013598| p 564 N94-13487
Destruction of waste energetic materials using base hydrolysis
|DE93-012738| p 584 N94-13491
High order hybrid numerical simulations of two dimensional detonation waves
|NASA-CR-191506| p 769 N94-13792
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
|DE93-007884| p 709 N94-13911
Interactions between spacecraft and their environments
|NASA-TM-106115| p 541 N94-13917
Hydrogen peroxide safety issues
|DE93-013895| p 565 N94-14346

Modeling surface area to volume effects on borosilicate glass dissolution
| DE93-011891 | p 581 N94-14432
Microchannel cooled heatsinks for high average power laser diode arrays
| DE93-016533 | p 658 N94-14442
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
Numerical study of shock-induced combustion in methane-air mixtures
| NASA-TM-106354 | p 642 N94-14722
Numerical simulations of turbulent premixed H2/O2/N2 flames with complex chemistry p 567 N94-14765
Effect of finite-rate chemistry and unequal Schmidt numbers on turbulent non-premixed flames modeled with single-step chemistry p 567 N94-14766
Structure of turbulent non-premixed flames modeled with two-step chemistry p 567 N94-14767
Stochastic modeling of turbulent reacting flows p 647 N94-14768
Study of chemical reactions under the influence of ultrasound
| DE93-016458 | p 778 N94-14867

CHEMICAL REACTORS
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
| DE93-014962 | p 583 N94-13002
Reactor studies of metal ions associated with chromatographic silica
| AD-A266675 | p 573 N94-14779

CHEMICAL VAPOR INFILTRATION
Ceramic matrix composites by microwave assisted CVI
| DE93-012640 | p 576 N94-12916

CHEMICAL WARFARE
A history of the Defence Research Establishment, Ottawa
| CTN-93-60737 | p 850 N94-14060

CHEMILUMINESCENCE
Quantitative luminescence imaging system
| DE93-015691 | p 793 N94-14702

CHINA
China's devotion to space science and applications p 532 N94-14273

CHINESE SPACE PROGRAM
The remarkable achievement of China satellite application p 692 N94-14235
China's devotion to space science and applications p 532 N94-14273

CHIPS (ELECTRONICS)
Chip-level testability requirements guidelines
| AD-A262583 | p 619 N94-12967
High flux heat exchanger
| AD-A266341 | p 636 N94-13730
Alternate cleaning methods for LCCAs
| KCP-613-5045 | p 624 N94-13937
NASA Space Engineering Research Center for VLSI systems design
| NASA-CR-194035 | p 625 N94-14325
Utilization of boundary element method for extraction of frequency dependent conductivity parameters of lossy intra-chip transmission lines
| ETN-93-94385 | p 771 N94-14807

CHIRAL DYNAMICS
No-lost theorem for parity violating nucleon-nucleon scattering experiments
| DE93-012737 | p 779 N94-12949

CHIRP
Independent adjustment of the higher order frequency dependent phase in chirped pulse amplification systems
| DE93-017106 | p 625 N94-14522

CHIRP SIGNALS
Independent adjustment of the higher order frequency dependent phase in chirped pulse amplification systems
| DE93-017106 | p 625 N94-14522

CHLORINE
Theoretical support for the Airborne Antarctic Ozone Experiment
| NASA-CR-193669 | p 713 N94-13465

CHLOROFLUOROCARBONS
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
Long-range global warming impact of gaseous diffusion plant operation
| DE93-011686 | p 710 N94-14459

CHLOROPHYLLS
The first steps of chlorophyll synthesis: RNA involvement and regulation
| DE93-014398 | p 730 N94-14509
Nonlinear relationships between particulate absorption and chlorophyll: Detritus or pigment packaging?
| AD-A266806 | p 731 N94-14899

CHROMATOGRAPHY
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
| AD-A265509 | p 560 N94-14794

CHROMIUM
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels
| DE93-011602 | p 572 N94-14058
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
| NASA-CR-194527 | p 659 N94-14576

CHROMIUM ALLOYS
Statics and kinetics of phase transformations in bcc Fe-Cr
| DE93-013839 | p 574 N94-14793

CHROMOSOMES
Gravity, chromosomes, and organized development in aseptically cultured plant cells p 592 N94-13764

CHROMOSPHERE
Basic research in solar physics
| NASA-CR-193632 | p 844 N94-13234

CIRCADIAN RHYTHMS
Calcitonin control of calcium metabolism during weightlessness
| NASA-CR-193622 | p 731 N94-12960
Work/rest schedules and performance of S-3 aviators during fleet exercise
| AD-A265807 | p 734 N94-12975
Work/rest schedules and performance of F/A-18 aviators during Fleet Exercise 1992
| AD-A265826 | p 735 N94-12982
Phase-shifting effect of light and exercise on the human circadian clock
| AD-A265732 | p 732 N94-13038
A circadian rhythm of conidiation in Neurospora crassa (L-12) p 593 N94-13769
Circadian rhythms during simulation of the D2-spaceflight
| DLR-FB-92-27 | p 733 N94-14043

CIRCUIT BOARDS
Solderability of surface mount devices
| AD-A265751 | p 620 N94-13040

CIRCUITS
Student's works and power supplies in electronic circuit laboratory p 627 N94-13434
Electronic schematics for the Donner 600 Crystal Tomograph
| DE93-015277 | p 625 N94-14336
A high voltage dielectrically isolated smart power technology based on silicon direct bonding
| LAAS-92492 | p 626 N94-14698
A high-precision direct current measuring device over a kiloampere range
| DE93-626409 | p 627 N94-14885

CIRCULAR CYLINDERS
The three-dimensional flow past a rapidly rotating circular cylinder
| NASA-CR-191512 | p 630 N94-13075

CIRCULAR POLARIZATION
The x ray dichroism experiments using circular polarization
| DE93-013195 | p 568 N94-13036
Polarization effects in optical fiber current sensors based on Sagnac interferometers with 3 by 3 couplers
| DE93-012665 | p 792 N94-14367

CIRCULAR WAVEGUIDES
Laser CO2 beam transmission through hollow metallic waveguide coated by a thin internal dielectric layer
| ITN-93-85201 | p 656 N94-13571

CIRCULATION CONTROL AIRFOILS
An experimental study of a turbulent boundary layer in the trailing edge region of a curculation-control airfoil
| NASA-CR-194522 | p 508 N94-14541

CIRCULATION DISTRIBUTION
An experimental investigation of shock wave/vortex interaction p 634 N94-13574

CITIES
Bibliography of urban climate in tropical/subtropical areas, 1981-1991
| WCASP-25 | p 718 N94-12918

CIVIL AVIATION
Piloting considerations for terminal area operations of civil tiltwing and tiltrotor aircraft p 525 N94-13320
The international regulation of air transport: Changing regimes and price effects
| ISBN-0-315-55958-6 | p 511 N94-13543

CLASSICAL MECHANICS
Stochastic dynamics: Crossover from 1/f(sup 3) to flicker noise
| DE93-622862 | p 772 N94-12896
Application of symbolic and algebraic manipulation software in solving applied mechanics problems
| NASA-CR-4544 | p 596 N94-13798

CLASSIFICATIONS
Satellite imagery and exogenous data integration by neural network in automation land-cover classification
| INPE-5480-PRE/1778 | p 686 N94-13729
Communications and control for electric power systems: Power flow classification for static security assessment
| NASA-CR-194512 | p 624 N94-13948
Integration of remotely sensed data and cadastral ownership boundaries for land inventory purposes
| BCRS-92-16 | p 687 N94-14127
Detecting land cover changes in Chiang-Mai area in Thailand p 693 N94-14241
Effects of typhoon on TOMS data p 693 N94-14243
Remote sensing for monitoring tropical moist forests in the Indo-Chinese region p 695 N94-14258
Mangrove afforestation monitoring using remote sensing p 695 N94-14260
Supervised classification of remotely sensed images
| DLR-FB-92-07 | p 700 N94-14428
Educational module for the higher agricultural education. Part 1: Land use classification using satellite pictures
| BCRS-92-11A | p 819 N94-14809

CLASSIFIERS
Feature discovery on segmented objects in SAR imagery using self-organizing neural networks
| DE93-010685 | p 686 N94-14056
Obstacle detection by recognizing binary expansion patterns
| NASA-CR-194415 | p 514 N94-14495
Computer vision and sensor fusion for detecting buried objects
| DE93-012605 | p 700 N94-14566

CLEANERS
Alternate cleaning methods for LCCAs
| KCP-613-5045 | p 624 N94-13937
Performance of gas turbine compressor cleaners
| NLR-TP-91291-U | p 519 N94-14450

CLEANING
Alternate cleaning methods for LCCAs
| KCP-613-5045 | p 624 N94-13937

CLEANLINESS
Determination of the surface cleanliness of metals by FT-IR spectroscopy
| DE93-013252 | p 565 N94-14525

CLEAVAGE
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
| DE93-016666 | p 812 N94-14354
JPRS report: Science and technology. Central Eurasia: Materials science
| JPRS-UMS-93-005 | p 559 N94-14575

CLEBSCH-GORDAN COEFFICIENTS
Clebsch variable model for unsteady, transonic flow; application to 2D airfoils
| NLR-TP-91387-U | p 503 N94-13530

CLIMATE
Bibliography of urban climate in tropical/subtropical areas, 1981-1991
| WCASP-25 | p 718 N94-12918
Linkage of anthropogenic aerosol to clouds and climate
| DE93-016434 | p 719 N94-13080
An experimental regional scale climate simulation laboratory
| DE93-015935 | p 719 N94-13119
AMIP: Diagnostic subproject on the variability in the tropics: Synoptic to intraseasonal time scales
| DE93-009287 | p 721 N94-13914
The role of human activity and land use change in atmospheric chemistry and air quality
| DE93-011871 | p 709 N94-14022
CCl working group on climate data and its rapporteurs
| WCDMP-21 | p 723 N94-14118
Climate products from NOAA operational satellites p 691 N94-14231
Global assessment of human activities p 695 N94-14255
Rain-rate data base development and rain-rate climate analysis p 614 N94-14664

CLIMATE CHANGE
The role of clouds and oceans in global greenhouse warming
| DE93-016206 | p 706 N94-13079
Forest management for fixing and sequestering carbon
| DE93-013520 | p 707 N94-13486
Climatic change due to land surface alterations
| INPE-5495-PRE/1786 | p 721 N94-13672
The role of human activity and land use change in atmospheric chemistry and air quality
| DE93-011871 | p 709 N94-14022
Regional climatology sensitivity studies
| DE93-010712 | p 722 N94-14057
Climate products from NOAA operational satellites p 691 N94-14231
Global assessment of human activities p 695 N94-14255

Integration of space and in-situ observations to study atmosphere, ocean and land processes
|NASA-CR-194495| p 683 N94-14500
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
|DE93-014032| p 711 N94-14859

CLIMATOLOGY
Soil erosion rates caused by wind and saltating sand stresses in a wind tunnel
|DE93-009154| p 706 N94-12905
Bibliography of urban climate in tropical/subtropical areas, 1981-1991
|WCASP-25| p 718 N94-12918
The role of clouds and oceans in global greenhouse warming
|DE93-016206| p 706 N94-13079
Forest management for fixing and sequestering carbon
|DE93-013520| p 707 N94-13486
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
|INPE-5444-TDI/490| p 720 N94-13614
Regional climatology sensitivity studies
|DE93-010712| p 722 N94-14057
Activities report of the Netherlands Remote Sensing Board
|ETN-93-93880| p 686 N94-14073
Circulation and rainfall climatology of a 10-year (1979 - 1988) integration with the Goddard Laboratory for atmospheres general circulation model
|NASA-TM-104591| p 723 N94-14074
CCI working group on climate data and its rapporteurs
|WCDMP-21| p 723 N94-14118
Meteorological data, new series A monographs. Volume 6, no. 3: Estimation of influence of high clouds in the radiation field and the climat by analysis of NOAA AVHRR data
|ETN-93-94170| p 723 N94-14707
Simulation of the present-day climate with the ECHAM model: Impact of model physics and resolution
|REPT-93| p 724 N94-14709

CLOCKS
A hardware implementation of a provably correct design of a fault-tolerant clock synchronization circuit
|NASA-TM-109001| p 759 N94-13450

CLOSED ECOLOGICAL SYSTEMS
Evaluation for membrane components of water recycling system
|NAL-TM-646| p 737 N94-13388
Survey and study on Environmental Control and Life Support (ECLS) technologies, part 2
|NASDA-CNT-930012-PT-2| p 737 N94-13472
Recycling in space
|NASA-TM-109307| p 737 N94-13615
Biomass production chamber air analysis of wheat study (BWT931)
|NASA-CR-194092| p 737 N94-13712
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
|NASA-TM-109272| p 738 N94-13979

CLOTHING
Flammability of clothing, volume 2
|DSIS-93-00036-VOL-2| p 564 N94-13819

CLOUD COVER
The role of clouds and oceans in global greenhouse warming
|DE93-016206| p 706 N94-13079
Adaptation of humidity-cloud cover relations in the LAM
|KNMI-TR-144| p 722 N94-13992
A method for estimation of partial cloud cover within a pixel and its effect p 697 N94-14269

CLOUD PHYSICS
Gathering and exchange information on atmospheric chemistry and polluted atmospheres
|DE93-009940| p 705 N94-12869
A parameterization of cloud droplet nucleation
|DE93-007998| p 718 N94-12903
Remote sensing of low level cloud optical characteristics p 691 N94-14229

CLOUDS (METEOROLOGY)
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions
|NASA-CR-193672| p 706 N94-13170
An algorithm for the remote sensing of fog using satellite-data and additional information
|DLR-FB-92-23| p 688 N94-14135
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
Earth radiation budget, cloud, and aerosol parameters derived from AVHRR and TOVS measurements p 691 N94-14233
A method for estimation of partial cloud cover within a pixel and its effect p 697 N94-14269
Meteorological data, new series A monographs. Volume 6, no. 3: Estimation of influence of high clouds in the radiation field and the climat by analysis of NOAA AVHRR data
|ETN-93-94170| p 723 N94-14707

CLUSTER ANALYSIS
Design of partially supervised classifiers for multispectral image data
|NASA-CR-194299| p 823 N94-13192

CLUSTERS
Structure stability and spectroscopy of metal clusters
|DE93-016142| p 567 N94-12836
Synthesis and properties of novel cluster phases
|DE93-017056| p 577 N94-13072
Thermochemistry of transition metal clusters
|DE93-016201| p 571 N94-13977

CLUTTER
Constant False Alarm Rate (CFAR) detection in Weibull clutter
|ITN-93-85190| p 600 N94-13537

COAL
Reverse micelle synthesis of nanoscale metal containing catalysts
|DE93-012869| p 572 N94-14184

COAL DERIVED GASES
Performance effects of coal-derived contaminants on the carbonate fuel cell
|DE93-013801| p 703 N94-13693
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
|DE93-010025| p 584 N94-14089

COAL DERIVED LIQUIDS
Surfactant studies for bench-scale operation
|NASA-CR-194097| p 701 N94-13187

COAL GASIFICATION
Performance effects of coal-derived contaminants on the carbonate fuel cell
|DE93-013801| p 703 N94-13693

COAL LIQUEFACTION
Surfactant studies for bench-scale operation
|NASA-CR-194097| p 701 N94-13187
Surfactant studies for bench-scale operation
|NASA-CR-194511| p 564 N94-13947

COAL UTILIZATION
Surfactant studies for bench-scale operation
|NASA-CR-194097| p 701 N94-13187

COALESCING
Observation of the coalescing of beam into an asymmetric RF bucket by stochastic cooling
|DE93-015133| p 783 N94-13895

COASTS
Preliminary meteorological results for 1992 West Coast Scotland Experiment
|DE93-014677| p 720 N94-13404
Coastal scour problems and methods for prediction of maximum scour
|AD-A266658| p 726 N94-14775

COATING
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
|AD-A265141| p 575 N94-12812
Amorphous sol-gel insulating films
|DE93-012859| p 576 N94-12866
Polymer infiltration studies
|NASA-CR-194521| p 582 N94-14539
Impedance-power effects on plasma polymer surface finish using a helical resonator discharge
|DE93-016454| p 803 N94-14590

COATINGS
Computer code for scattering from impedance bodies of revolution. Part 3: Surface impedance with s and phi variation. Analytical and numerical results
|NASA-CR-193396| p 599 N94-13264
Reflective coatings for solar applications
|DE93-010026| p 702 N94-13381
Barium fluoride research and development at Lawrence Livermore National Laboratory
|DE93-014682| p 807 N94-13405
Impedance-power effects on plasma polymer surface finish using a helical resonator discharge
|DE93-016454| p 803 N94-14590
Solution chemistry optimization of sol-gel processed PZT thin films
|DE93-013776| p 814 N94-14695

COAXIAL CABLES
Microwave interconnection
|DE93-016580| p 625 N94-14533

COAXIAL NOZZLES
Simulation of preburner sprays, volume 1
|NASA-CR-193844| p 647 N94-14906

COBALT
Novel Co:MgF2 lidar for aerosol profiler
|NASA-CR-191525| p 654 N94-13091

COCHLEA
Underwater hearing: A review
|ISVR-TR-212| p 777 N94-14130

COCKPITS
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323

CODE DIVISION MULTIPLE ACCESS
User needs for propagation data p 613 N94-14657

CODERS
Digital sound: Subjective tests on commentary-quality codecs
|BBC-RD-1993/2| p 598 N94-12926
Exploiting the cannibalistic traits of Reed-Solomon codes p 609 N94-14378

CODES
Codes from an N-dimensional torus simplicially or cellularly decomposed p 747 N94-13438

CODING
PACT user's guide
|DE93-013093| p 742 N94-12840
Codes from an N-dimensional torus simplicially or cellularly decomposed p 747 N94-13438
Coding performance of the Probe-Orbiter-Earth communication link p 608 N94-14377
Estimating the size of Huffman code preambles p 609 N94-14379
Transform coding for space applications
|NASA-TM-106362| p 612 N94-14542

COEFFICIENTS
The importance of hard core repulsion in models of activity coefficients in aqueous electrolyte solutions: Illustration in the case of hydration theory
|DE93-012476| p 561 N94-12881

COGNITION
Heidegger's thinking p 736 N94-13442

COGNITIVE PSYCHOLOGY
Selection of behavioral tasks and development of software for evaluation of rhesus monkey behavior during spaceflight
|NASA-CR-194176| p 728 N94-13865

COLD FLOW TESTS
Design and evaluation of single and dual flow thrust vector nozzles with post exit vanes
|NASA-CR-193393| p 638 N94-14086
Numerical simulation of velocity-coupled combustion response of solid rocket propellants p 585 N94-14490

COLD GAS
Evaluation of dual flow thrust vector nozzles with exhaust stream impingement
|NASA-CR-193392| p 630 N94-13078

COLD NEUTRONS
Quasi-elastic neutron scattering studies of protein dynamics
|DE93-015074| p 782 N94-13414

COLD PLASMAS
Plasma diffusion through multidipole magnetic fields
|INPE-5460-PRE/1768| p 795 N94-12901
Implicit multi-fluid simulation of interpenetrating plasmas
|DE93-013351| p 801 N94-14342

COLLAPSE
The numerical simulation of the collapse process of axially compressed cylindrical shells with measured imperfections
|LR-705| p 674 N94-13905
The motion of a conical shaped liner driven by explosive load
|ITN-93-85215| p 585 N94-14507

COLLISION PARAMETERS
Collisional effects of trapped electrons on the anomalous particle and thermal pinches
|PPL-128| p 800 N94-13853
Measurement of the Fe-56(n,p)Mn-56, Al-27(n,p)Mg-27 and Al-27(n,alpha)Na-24 cross sections at 16.0, 17.0 and 18.3 MeV
|NPL-RSA(EXT)-38| p 783 N94-13883

COLLISIONLESS PLASMAS
Small scale magnetic islands in collisionless plasmas
|PPL-131| p 799 N94-13836
Numerical Studies of Collisionless Current Layers
|NASA-CR-194337| p 800 N94-13854

COLLISIONS
Collisions and separations in 2D hydrodynamical code
|ITN-93-85225| p 639 N94-14503
The space-time and energy parameters of deuterium braking by the central collision with atoms
|DE93-624144| p 788 N94-14881

COLLOCATION
The Chebyshev-Legendre method: Implementing Legendre methods on Chebyshev points
|NASA-CR-191497| p 769 N94-13725

COLOR
Color image processing for flat panel visual display modeling
[NASA-CR-193660] p 790 N94-12797
Validation of an inexpensive illuminant for aeromedical color vision screening
[DOT/FAA/AM-93/16] p 736 N94-14854
COLOR VISION
Validity of FAA-approved color vision tests for class 2 and class 3 aeromedical screening
[DOT/FAA/AM-93/17] p 735 N94-14846
Validation of an inexpensive illuminant for aeromedical color vision screening
[DOT/FAA/AM-93/16] p 736 N94-14854
COLORIMETRY
Colorimetric qualification of shear sensitive liquid crystal coatings
[NASA-CR-194126] p 806 N94-13291
Spectral reflectance of soils from Sao Paulo State
[INPE-5424-PRP/172] p 684 N94-13377
COMBINATORIAL ANALYSIS
ORGBUG: A Windows-based combinatorial geometry debugger
[DE93-016640] p 755 N94-14515
COMBUSTIBLE FLOW
Chemical reactions in scramjet engines: Reduced kinetic models for ignition, combustion and nozzle flow
[NAL-TR-1184] p 563 N94-13458
A technique for direct measurement of skin friction in supersonic combustion flow p 503 N94-13555
Numerical simulation of velocity-coupled combustion response of solid rocket propellants p 585 N94-14490
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
Studying Turbulence Using Numerical Simulation Databases. 4: Proceedings of the 1992 Summer Program
[NASA-CR-194556] p 643 N94-14745
COMBUSTION
Infrared spectroscopy of organic free radicals related to combustion processes
[DE93-017086] p 562 N94-13222
Combustion synthesis and engineering of nanoparticles for electronic, structural, and superconductor applications
[DE93-016286] p 809 N94-13981
Characterization of diamond film growth in a combustion flame
[AD-A266659] p 816 N94-14839
COMBUSTION CHAMBERS
Combustor technology for future small gas turbine aircraft
[NASA-TM-106312] p 517 N94-13142
An experimental investigation of mixing enhancement in a simulated scramjet combustor by use of swirling jets
[NASA-TM-109246] p 518 N94-13190
Turbulent particle dispersion in confined swirling flows
[DLR-FB-92-32] p 637 N94-14045
Propulsion integration p 508 N94-14174
COMBUSTION CHEMISTRY
Modeling ignition chemistry
[DE93-012340] p 561 N94-12910
Fifteenth Combustion Research Conference
[DE93-015758] p 562 N94-13045
COMBUSTION EFFICIENCY
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
[NAL-TR-1177] p 548 N94-12945
COMBUSTION PHYSICS
Coupled thermal response of objects and participating media in fires and large combustion systems
[DE93-012848] p 561 N94-12819
Modeling ignition chemistry
[DE93-012340] p 561 N94-12910
Fifteenth Combustion Research Conference
[DE93-015758] p 562 N94-13045
Infrared spectroscopy of organic free radicals related to combustion processes
[DE93-017086] p 562 N94-13222
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292
Comparative ignition of hexane and octane isomers in a shock tube
[DE93-016535] p 566 N94-14869
COMBUSTION PRODUCTS
Equation of state for detonation products
[DE93-012671] p 583 N94-12921
Flamespreading in granular solid propellant: Design of an experiment
[AD-A266009] p 583 N94-12987
Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384
Estimation of the concentration versus the time profile of zinc chloride particles in smoke clouds generated by the Raufoss A/S instantaneous smoke RA-90 and DM-45 HC smoke generator
[FFI-93/6001] p 708 N94-13821
The role of human activity and land use change in atmospheric chemistry and air quality
[DE93-011871] p 709 N94-14022
Biodiesel/aquatic species project report, FY 1992
[DE93-010024] p 709 N94-14087
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Three-dimensional modeling of diesel engine intake flow, combustion and emissions-2
[NASA-CR-191189] p 519 N94-14448
Summary of conclusions and recommendations from a visibility science workshop
[DE93-012770] p 710 N94-14523
COMBUSTION SYNTHESIS
Combustion synthesis and engineering of nanoparticles for electronic, structural, and superconductor applications
[DE93-016286] p 809 N94-13981
COMBUSTION WIND TUNNELS
Aerodynamic and aerothermal facilities 2: Continuous flow high enthalpy facilities p 506 N94-14160
COMET NUCLEI
Planning of a comet simulator
[ITN-93-85206] p 835 N94-13230
COMETS
Meteoroid environment near the Earth-Moon system
[NASA-CR-193670] p 835 N94-13203
Planning of a comet simulator
[ITN-93-85206] p 835 N94-13230
COMFORT
Body/cushion contact stress analysis during sitting
[ITN-93-85204] p 736 N94-13229
COMMITTEE ON SPACE RESEARCH
Planetary protection implementation on future Mars lander missions
[NASA-CP-3216] p 841 N94-13183
COMMUNICATING
The silent step in time
[CWI-CS-R9221] p 768 N94-13496
COMMUNICATION
Bulletin of the University of Electro-Communications, volume 6, no. 1, serial no. 11 p 746 N94-13432
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 37: The impact of political control on technical communications: A comparative study of Russian and US aerospace engineers and scientists
[NASA-TM-109329] p 826 N94-14488
COMMUNICATION NETWORKS
Multicluster
[AD-A265869] p 758 N94-12930
On the end-to-end communication problem in unreliable networks
[ITN-93-85188] p 598 N94-13195
High speed all-optical networks
[NASA-CR-194384] p 791 N94-13682
Communications and control for electric power systems
[NASA-CR-194503] p 622 N94-13811
The developments of satellite communications of China p 618 N94-14282
The current situation, trends, international cooperation of space communication technological development in the Republic of Korea p 699 N94-14283
Joint experiments using ETS-5 p 618 N94-14284
NTT's activities in satellite communications technology development p 618 N94-14286
Future outlook on international satellite communications in Asia Pacific region p 618 N94-14287
Coding performance of the Probe-Orbiter-Earth communication link p 608 N94-14377
Overview of the Scalable Coherent Interface, IEEE STD 1596 (SCI)
[DE93-015247] p 761 N94-14476
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 39: The role of computer networks in aerospace engineering
[NASA-TM-109331] p 825 N94-14487
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 38: Computer Mediated Communication (CMC) and the communication of technical information in aerospace
[NASA-TM-109330] p 826 N94-14489
COMMUNICATION SATELLITES
Technical support for digital systems technology development. Task order 1: ISP contention analysis and control
[NASA-CR-190758] p 537 N94-12809
Fine time uplink synchronization for frequency-hopped spread spectrum satellite communication system
[ISBN-0-315-54370-1] p 600 N94-13488
Characteristics of the amateur radio means of the Arsene satellite
[CNES-NT-131] p 605 N94-13950
Multiple-symbol differential detection of DPSK with frequency offset
[DREO-TN-92-5] p 606 N94-14063
COMMUNICATION THEORY
Toward a verifiable approach to the design of concurrent computations
[DE93-012908] p 756 N94-14844
COMPACT GALAXIES
ROSAT: X ray survey of compact groups
[NASA-CR-193297] p 829 N94-13181
COMPATIBILITY
Materials compatibility of hydride storage materials with austenitic stainless steels
[DE93-013688] p 703 N94-13691
Study of the intermateability of Cannon and Souriau subminiature connectors
[CNES-NT-132] p 624 N94-13951
Compatibility testing of vacuum seal materials
[DE93-014366] p 663 N94-14113
Compatibility of refrigerants and lubricants with motor materials
[DE93-014768] p 583 N94-14801
COMPENSATORS
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T.
[DE93-012964] p 607 N94-14291
COMPILERS
PACT user's guide
[DE93-013093] p 742 N94-12840
SCORE user's manual
[DE93-015987] p 822 N94-13121
Solving integer programs from dependence and synchronization problems
[AD-A265702] p 767 N94-13284
Programming languages made in Italy
[REPT-93-002] p 750 N94-13805
Hypertext Compiling Tools (HCT): Developing model based applications with standard hypertext systems
[REPT-92-049] p 750 N94-13822
COMPLEX COMPOUNDS
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778
CarbBank: A structural and bibliographic database for complex carbohydrates
[DE93-015582] p 827 N94-14803
COMPLEX SYSTEMS
Computational problems with the binomial failure rate model and incomplete common cause failure reliability data
[DE93-014346] p 669 N94-14143
The effects of internal fluctuations on a class of nonequilibrium statistical field theories
[DE93-016620] p 774 N94-14441
COMPLEXITY
Three, four, five, six or the complexity of scheduling with communication delays
[CWI-BS-R9229] p 751 N94-14004
COMPONENT RELIABILITY
Early detection of insulation failure in electric motors
[PB93-198208] p 626 N94-14686
COMPOSITE FUNCTIONS
Dynamic Forms. Part 1: Functions
[NASA-TP-3397] p 596 N94-13790
COMPOSITE MATERIALS
Flight service evaluation of composite components on the Bell helicopter model 206L
[NASA-CR-191499] p 555 N94-13267
Thermodiffusion in heterogeneous elastic solids and homogenization
[REPT-14/1993] p 578 N94-13468
Testing and analysis of curved frame specimens made from a Long Discontinuous Fiber (LDF) material
[NASA-TM-109014] p 557 N94-13711
Casting of superconducting composite materials (M-4) p 586 N94-13736
On the orthotropicity assumption and discontinuity conditions of conical shells
[LR-703] p 673 N94-13787
Review of Canadian aeronautical fatigue work, 1991-1993
[LTR-ST-1932] p 674 N94-13861
CMAPP user's manual, part 2
[DSIS-93-00858-PT-2] p 751 N94-14017
Development of software for composite materials analysis, phase 1, part 1
[DSIS-93-00857-PT-1-PHASE-1] p 558 N94-14105
Dynamic mechanical deformation of a SiC(sub p)/Al-Li (8090) composite
[DE93-014586] p 558 N94-14121
The structure and mechanical properties of Ru-Cu and Ru-Ti nanolayer composites
[DE93-014453] p 558 N94-14469

Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black
[DE93-012707] p 559 N94-14690
A study of fiber volume fraction effects in notched unidirectional SCS-6/Ti-15V-3Cr-3Al-3Sn composite
[NASA-CR-191165] p 559 N94-14769
Materials and structures p 546 N94-14835

COMPOSITE STRUCTURES
Resin transfer molding of textile composites
[NASA-CR-191505] p 554 N94-12833
A probabilistic method for the buckling assessment of stiffened composite shells
[NASA-TM-106286] p 671 N94-13379
Finite element analysis of composite plates by use of modified complementary energy principle
p 672 N94-13596
Structural investigation of a damaged GRP/foam sandwich composite using x ray computed tomography
p 669 N94-13857
Hierarchical nonlinear behavior of hot composite structures
[NASA-TM-106229] p 676 N94-14041
Probabilistic micromechanics for high-temperature composites
[NASA-CR-191150] p 676 N94-14408
Buckling analysis of laminated thin shells in a hot environment
[NASA-TM-106302] p 683 N94-14776
Smart materials/structures technical analysis
[AD-A266771] p 766 N94-14785
Materials and structures p 546 N94-14835

COMPRESSED GAS
Low pressure storage of natural gas on activated carbon
[DE93-014053] p 660 N94-12851
Gas atomized Er3Ni powder for cryocooler applications
[DE93-011564] p 568 N94-13000
Aerodynamic and aerothermal facilities 2. Part 1: Short-duration, high-enthalpy facilities
p 506 N94-14159

COMPRESSIBILITY
Sub-grid scale modeling for large eddy simulations in analysis of shock-turbulence interactions
[DE93-013425] p 631 N94-13250
Response of a supersonic boundary layer to a compression corner p 645 N94-14759

COMPRESSIBILITY EFFECTS
Rapid distortion analysis and direct simulation of compressible homogeneous turbulence at finite Mach number p 645 N94-14757

COMPRESSIBLE BOUNDARY LAYER
Large-eddy simulation of laminar-turbulent breakdown at high speeds with dynamic subgrid-scale modeling
[NASA-CR-4533] p 629 N94-13064

COMPRESSIBLE FLOW
Three-Dimensional Boundary-Layer program (BL3D) for swept subsonic or supersonic wings with application to laminar flow control
[NASA-CR-4531] p 629 N94-13073
A time-accurate numerical method for chemically reacting flows at all Mach numbers p 500 N94-13198
A solution algorithm for the prediction of compressible laminar and turbulent shear flows p 634 N94-13635
Preconditioning and the limit to the incompressible flow equations
[NASA-CR-191500] p 769 N94-13717
Canonical forms of multidimensional steady inviscid flows
[NASA-CR-191488] p 769 N94-13722
CNSFV code development, virtual zone Navier-Stokes computations of oscillating control surfaces and computational support of the laminar flow supersonic wind tunnel
[NASA-CR-194259] p 504 N94-14030
Numerical simulation of velocity-coupled combustion response of solid rocket propellants
p 585 N94-14490
An implicit finite volume nodal point scheme for the solution of two-dimensional compressible Navier-Stokes equations p 640 N94-14603
Navier-Stokes simulation of transonic vortex flow over a delta wing p 640 N94-14606
A finite volume method for computation of viscous flow in complex configurations p 640 N94-14607
Development of an explicit multiblock/multigrid flow solver for viscous flows in complex geometries
[NASA-TM-106356] p 642 N94-14728
Studying Turbulence Using Numerical Simulation Databases. 4: Proceedings of the 1992 Summer Program
[NASA-CR-194556] p 643 N94-14745
Investigation of the dilatational dissipation in compressible homogeneous shear flow
p 645 N94-14758
Vortex-induced disturbance field in a compressible shear layer p 645 N94-14760
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

COMPRESSION LOADS
Inelastic deformation mechanisms in SCS-6/Ti 15-3 MMC lamina under compression
[NASA-CR-191170] p 555 N94-13378
Buckling analysis of laminated thin shells in a hot environment
[NASA-TM-106302] p 683 N94-14776

COMPRESSION TESTS
The numerical simulation of the collapse process of axially compressed cylindrical shells with measured imperfections
[LR-705] p 674 N94-13905

COMPRESSIVE STRENGTH
An experimental investigation into the damage resistance and compression-after-impact strength of T800H/3900-2
[LTR-ST-1909] p 675 N94-13945
Effect of size, shape, and end condition of test specimen on compressive strength of high-strength concrete
[DE93-500412] p 682 N94-14653

COMPRESSOR BLADES
Performance of gas turbine compressor cleaners
[NLR-TP-91291-U] p 519 N94-14450

COMPRESSORS
Double inlet pulse tube cryocooler theory
[AD-A266832] p 597 N94-14877

COMPTON EFFECT
Gamma-insensitive optical focal plane array
[DE93-013100] p 792 N94-14317
The E2 N(yields)(Delta) transition from polarized Compton scattering
[DE93-012522] p 785 N94-14363

COMPUTATION
Smooth transitions between bump rendering algorithms
[DE93-012504] p 742 N94-12883
Computation and graphics in mathematical research
[DE93-016512] p 740 N94-13069

COMPUTATIONAL CHEMISTRY
Modeling and simulation of transport and combustion phenomena in a supersonic mixing layer
[ONERA-NT-1992-11] p 565 N94-14194
Theory, modeling, and simulation
[DE93-015607] p 755 N94-14571

COMPUTATIONAL FLUID DYNAMICS
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations
[NASA-TM-109009] p 514 N94-12850
Approaches to high aspect ratio triangulations
[NASA-TM-107684] p 739 N94-12886
Integration of viscous effects into inviscid computational methods
[NASA-CR-193677] p 629 N94-13007
Large-eddy simulation of laminar-turbulent breakdown at high speeds with dynamic subgrid-scale modeling
[NASA-CR-4533] p 629 N94-13064
Three-Dimensional Boundary-Layer program (BL3D) for swept subsonic or supersonic wings with application to laminar flow control
[NASA-CR-4531] p 629 N94-13073
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers
[NASA-CR-191510] p 629 N94-13074
Averaging techniques for steady and unsteady calculations of a transonic fan stage
[NASA-TM-106231] p 499 N94-13108
Interacting scales and energy transfer in isotropic turbulence
[NASA-CR-191477] p 630 N94-13133
A time-accurate numerical method for chemically reacting flows at all Mach numbers p 500 N94-13198
The NAS parallel benchmarks
[NASA-TM-103863] p 740 N94-13200
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
Fully developed turbulent flow in rectangular interrupted-plate ducts
[ISBN-0-315-63594-0] p 632 N94-13474
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations
[NLR-TP-91397-U] p 503 N94-13531
A high-resolution Lax-Friedrichs scheme for hyperbolic conservation laws with source terms: Application to shallow water equations
[DM-62] p 632 N94-13535
Thermodynamic status of static and dynamic contact angles
[ISBN-0-315-73844-8] p 817 N94-13554
Numerical simulations of unsteady flows in turbomachines p 633 N94-13569
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
Passage-averaged approximation of turbomachinery flows using vorticity-potential method
[ISBN-0-315-72716-0] p 634 N94-13598
Calculation of hypersonic shock structure using flux-split algorithms
[NASA-CR-194296] p 504 N94-13607
A future view of computational science in aircraft
[NASA-TM-109284] p 504 N94-13621
Numerical simulation of steady three-dimensional flows in axial turbomachinery bladerows p 634 N94-13630
A control volume finite element method for three-dimensional, incompressible, viscous fluid flow
[ISBN-0-315-72019-0] p 635 N94-13683
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
A computational study of the base region flow field for the M865 projectile
[ARL-TR-109] p 504 N94-13795
Images constructed from computed flow fields
[NASA-CR-194397] p 650 N94-13814
Numerical investigations in three-dimensional internal flows
[NASA-CR-194143] p 637 N94-13827
Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
CNSFV code development, virtual zone Navier-Stokes computations of oscillating control surfaces and computational support of the laminar flow supersonic wind tunnel
[NASA-CR-194259] p 504 N94-14030
The spectral viscosity method applied to simulation of waves in a stratified atmosphere
[FFI-92/7047] p 637 N94-14040
Computational techniques and capabilities
p 506 N94-14162
Extrapolation of ground test data to flight
p 507 N94-14170
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322
Domain connectivity among systems of overset grids
[NASA-CR-193390] p 508 N94-14326
Least-squares finite element solutions for three-dimensional backward-facing step flow
[NASA-TM-106353] p 770 N94-14407
An adaptive projection method for the incompressible Euler equations
[DE93-016428] p 639 N94-14434
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540
Proceedings of the Fluid Dynamics Symposium in honour of Professor R. Narasimha on his 60th birthday
[NAL-SP-9315] p 639 N94-14598
A vertex-based finite-volume algorithm for the Navier-Stokes equations p 639 N94-14599
Development of full-potential codes in the decade 1983-1993 p 639 N94-14600
The structure of laminar flow in a three-dimensional driven cavity p 640 N94-14601
A vortex method for viscous unsteady flows
p 640 N94-14602
An implicit finite volume nodal point scheme for the solution of two-dimensional compressible Navier-Stokes equations p 640 N94-14603
Wall interference studies: Revisited
p 640 N94-14604
Stability of spatially developing boundary layers
p 640 N94-14605
Navier-Stokes simulation of transonic vortex flow over a delta wing p 640 N94-14606
A finite volume method for computation of viscous flow in complex configurations p 640 N94-14607
A grid generation package for high aspect ratio wings
p 510 N94-14608
The phenomenon of vortex breakdown
p 510 N94-14609
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
Hypersonic viscous flow computations
p 510 N94-14612
Development of a general purpose multigrid accelerated Navier-Stokes solver p 641 N94-14613
Development of parallel processing at NAL: A retrospect p 641 N94-14614
Panel codes for aerodynamic analysis at NAL
p 510 N94-14617

Numerical study of shock-induced combustion in methane-air mixtures
| NASA-TM-106354 | p 642 N94-14722
Development of an explicit multiblock/multigrid flow solver for viscous flows in complex geometries
| NASA-TM-106356 | p 642 N94-14728
Vibrational relaxation in hypersonic flow fields
| NASA-TP-3367 | p 776 N94-14733
Low altitude plume impingement handbook
| NASA-CR-194193 | p 643 N94-14741
LES versus DNS: A comparative study
p 644 N94-14753
Behavior of streamwise rib vortices in a three-dimensional mixing layer p 644 N94-14754
Estimation of the vortex length scale and intensity from two-dimensional samples p 645 N94-14756
DNS and modeling of the interaction between turbulent premixed flames and walls p 646 N94-14763
The evolution equation for the flame surface density in turbulent premixed combustion p 567 N94-14764
Numerical simulations of turbulent premixed H2/O2/N2 flames with complex chemistry p 567 N94-14765
Effect of finite-rate chemistry and unequal Schmidt numbers on turbulent non-premixed flames modeled with single-step chemistry p 567 N94-14766
Structure of turbulent non-premixed flames modeled with two-step chemistry p 567 N94-14767
Stochastic modeling of turbulent reacting flows
p 647 N94-14768
Contributions to numerical solution of Navier-Stokes equations in two and three dimensional flows
| ETN-93-94395 | p 647 N94-14816
A new Lagrangian method for three-dimensional steady supersonic flows
| NASA-TM-106068 | p 510 N94-14847
The development of a scalable parallel 3-D CFD algorithm for turbomachinery
| NASA-CR-193604 | p 664 N94-14848
Analytical description of the breakup of liquid jets in air
| NASA-CR-191503 | p 647 N94-14849

COMPUTATIONAL GEOMETRY
Approaches to high aspect ratio triangulations
| NASA-TM-107684 | p 739 N94-12886

COMPUTATIONAL GRIDS
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
| NASA-CR-194260 | p 527 N94-14322
Domain connectivity among systems of overset grids
| NASA-CR-193390 | p 508 N94-14326
Multigrid solution of internal flows using unstructured solution adaptive meshes
| NASA-CR-194233 | p 638 N94-14356
An adaptive projection method for the incompressible Euler equations
| DE93-016428 | p 639 N94-14434
Collisions and separations in 2D hydrodynamical code
| ITN-93-85225 | p 639 N94-14503
A grid generation package for high aspect ratio wings
p 510 N94-14608
Development of an explicit multiblock/multigrid flow solver for viscous flows in complex geometries
| NASA-TM-106356 | p 642 N94-14728

COMPUTER AIDED DESIGN
Method of characteristics design of a supersonic wind tunnel nozzle with square cross-section, supplement 3
| NASA-CR-194359 | p 527 N94-12824
A knowledge-based expert system to coordinate CAD/CAE with integration and test
| NASA-CR-191394 | p 745 N94-13130
Parachute system design, analysis, and simulation tool
| DE93-013755 | p 501 N94-13260
Software synthesis using generic architectures
| NASA-CR-194201 | p 745 N94-13355
The KASE approach to domain-specific software systems p 745 N94-13357
Creating a strategic plan for configuration management using computer aided software engineering (CASE) tools
| DE93-013663 | p 746 N94-13394
Designing and generating a GUI module using GUI
p 747 N94-13437
Software design by reusing architectures
| NASA-CR-194151 | p 747 N94-13443
Programming the multimodal interface
| DE93-013084 | p 748 N94-13576
Test/analysis correlation and model updating of the STARS 1 and 2 missile systems
| DE93-013774 | p 748 N94-13578
Mathematical optimization: A tool for aircraft design
| MBB-LME-251-S-PUB-0492 | p 751 N94-14006
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 1: User's guide
| NASA-CR-191183 | p 663 N94-14445
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 2: Mathematical formulation and analysis
| NASA-CR-191182 | p 664 N94-14446
Enterprise integration: A tool's perspective
| DE93-015651 | p 755 N94-14528
Development of PC-based Aeronautical Software (AEROWARE) p 641 N94-14611
SRISTI: The NAL method for the design and analysis of Natural Laminar Flow (NLF) airfoils
p 516 N94-14615
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
| NASA-CR-194515 | p 677 N94-14618
A component modes projection and assembly model reduction methodology for articulated, multi-flexible body structures p 677 N94-14622
Caesy: A software tool for computer-aided engineering
p 678 N94-14627
Control system design for flexible structures using data models p 527 N94-14646
Analysis of new composite architectures
| NASA-CR-194524 | p 559 N94-14715
Derated ion thruster development status
| NASA-TM-106292 | p 553 N94-14726
Optical systems integrated modeling
p 547 N94-14837
CAD data exchange with Martin Marietta Energy Systems, Inc., Oak Ridge, TN
| DE93-017233 | p 757 N94-14871
The further development and refinement of an expert-systems approach to the creative design of mechanisms and mechanical systems
| AD-A266812 | p 665 N94-14901

COMPUTER AIDED MANUFACTURING
Data fusion for adaptive control in manufacturing: Impact on engineering information models
| DE93-011555 | p 743 N94-12999
Rapid intelligent inspection process definition for dimensional measurement in advanced manufacturing
| DE93-011271 | p 748 N94-13480
Discrete event simulation using object-oriented programming: Application to manufacturing
| ERB-1037 | p 753 N94-14200
Enterprise integration: A tool's perspective
| DE93-015651 | p 755 N94-14528

COMPUTER AIDED TOMOGRAPHY
Tomographic methods in flow diagnostics
| NASA-TM-106330 | p 650 N94-13876

COMPUTER ANIMATION
Animation of multi-flexible body systems and its use in control system design p 678 N94-14629
Computational Control Workstation: Users' perspectives p 681 N94-14648

COMPUTER COMPATIBLE TAPES
Toxic Substances Control Act (TSCA) chemical substances inventory: Revised inventory synonym and preferred name file, Jan. 1993 documentation
| PB93-155166 | p 710 N94-14508

COMPUTER GRAPHICS
FORTRAN graphics routines for the Macintosh
| DE93-013092 | p 742 N94-12864
Smooth transitions between bump rendering algorithms
| DE93-012504 | p 742 N94-12883
VISART: Artificial vision for industrial use. A comprehensive system
| INPE-5379-TDI/474 | p 665 N94-12941
Computation and graphics in mathematical research
| DE93-016512 | p 740 N94-13069
View generated database
| NASA-CR-191397 | p 822 N94-13116
ULTRA 2 user's manual for ULTRA 2 revision 3.0
| DE93-015970 | p 744 N94-13120
Parametric binary dissection
| NASA-CR-191496 | p 762 N94-13184
Calculating intersections of surfaces in screen space
| NASA-CR-191498 | p 745 N94-13185
EGS (underscore) windows 2: An enhanced graphical interface to EGS
| DE93-010447 | p 746 N94-13382
Programming the multimodal interface
| DE93-013084 | p 748 N94-13576
Rotor stator CGI
| NASA-TM-109313 | p 518 N94-13608
A perspective on AVS in an engineering sciences environment
| DE93-015011 | p 596 N94-13889
USRA/RIACS
| NASA-CR-194334 | p 750 N94-13932
Ground Attack Profile Selector Program, version 3.0
| DSIS-93-00702 | p 753 N94-14207
An overview of parallel scientific visualization
| DE93-017105 | p 755 N94-14521

COMPUTER INFORMATION SECURITY
Multicluster
| AD-A265869 | p 758 N94-12930
UNICOS(trade name) security testing
| DE93-011680 | p 759 N94-13043
Security clauses in the writing and analysis of standards
| NPL-DITC-216-93 | p 824 N94-13879
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
| NASA-TM-109272 | p 738 N94-13979
Kerberos: A UNIX-TCP/IP network authentication system
| DE93-011677 | p 760 N94-14011
Uniform user and group IDs on a large network
| DE93-013047 | p 760 N94-14315

COMPUTER NETWORKS
A network evaluation and analysis tool
| DE93-012647 | p 758 N94-12917
Multicluster
| AD-A265869 | p 758 N94-12930
Building the repositories to serve --- Superconducting Super Collider information system
| DE93-014100 | p 821 N94-12983
Development of ISO connection-oriented/correctionless gateways
| NASA-CR-193667 | p 821 N94-13030
UNICOS(trade name) security testing
| DE93-011680 | p 759 N94-13043
Mobile host internetworking using IP loose source routing
| AD-A265713 | p 759 N94-13052
Adaptive Transfer Function Networks
| DE93-014344 | p 745 N94-13151
High speed packet switching
| NASA-CR-191334 | p 759 N94-13177
High speed all-optical networks
| NASA-CR-194384 | p 791 N94-13682
A data distributed parallel algorithm for ray-traced volume rendering
| NASA-CR-191520 | p 749 N94-13721
Space and Earth sciences, computer systems, and scientific data analysis support, volume 1
| NASA-CR-194535 | p 741 N94-13788
USRA/RIACS
| NASA-CR-194334 | p 750 N94-13932
Kerberos: A UNIX-TCP/IP network authentication system
| DE93-011677 | p 760 N94-14011
Uniform user and group IDs on a large network
| DE93-013047 | p 760 N94-14315
Storage systems for national information assets
| DE93-015101 | p 825 N94-14331
Public census data on CD-ROM at Lawrence Berkeley Laboratory
| DE93-015273 | p 825 N94-14433
The National Storage Laboratory: A collaborative research project
| DE93-015099 | p 760 N94-14475
Overview of the Scalable Coherent Interface, IEEE STD 1596 (SCI)
| DE93-015247 | p 761 N94-14476
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 39: The role of computer networks in aerospace engineering
| NASA-TM-109331 | p 825 N94-14487
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 38: Computer Mediated Communication (CMC) and the communication of technical information in aerospace
| NASA-TM-109330 | p 826 N94-14489
An overview of parallel scientific visualization
| DE93-017105 | p 755 N94-14521

COMPUTER PROGRAMMING
PACT user's guide
| DE93-013093 | p 742 N94-12840
Beyond core: Making parallel computer I/O practical
| DE93-012347 | p 758 N94-12878
Artificial intelligence support for scientific model-building
| NASA-TM-109252 | p 761 N94-12890
Lecture notes on software process improvement

[DE93-015099] p 760 N94-14475

COMPUTER SYSTEMS DESIGN
Fail-safe PVM: A portable package for distributed programming with transparent recovery
[AD-A266594] p 749 N94-13779
Transformation and composition of refusal graphs: Testability analysis
[LAAS-92435] p 751 N94-13995
Guide to the software architectural design phase
[ESA-PSS-05-04-ISSUE-1] p 753 N94-14190
Guide to the software detailed design and production phase
[ESA-PSS-05-05-ISSUE-1] p 753 N94-14191

COMPUTER SYSTEMS PERFORMANCE
UNICOS(trade name) security testing
[DE93-011680] p 759 N94-13043
Diskless supercomputers: Scalable, reliable I/O for the Tera-Op technology base
[NASA-CR-194089] p 740 N94-13363
Transformation and composition of refusal graphs: Testability analysis
[LAAS-92435] p 751 N94-13995
A design methodology for portable software on parallel computers
[NASA-CR-194181] p 752 N94-14139
Switchover software reliability estimate for Paducah freezer/sublimer computer systems
[DE93-013844] p 756 N94-14696

COMPUTER SYSTEMS PROGRAMS
Software synthesis using generic architectures
[NASA-CR-194201] p 745 N94-13355
ASPT software source code: SUN driver package
[DSIS-93-00262] p 751 N94-14014
ASPT software source code: Development system package, VME-C30 component
[DSIS-93-00276] p 751 N94-14016
A design methodology for portable software on parallel computers
[NASA-CR-194181] p 752 N94-14139
ASPT software source code: Host development system package
[DSIS-93-00277] p 753 N94-14197

COMPUTER SYSTEMS SIMULATION
Transformation and composition of refusal graphs: Testability analysis
[LAAS-92435] p 751 N94-13995

COMPUTER TECHNIQUES
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (IDNB) Experiment
[DE93-014144] p 797 N94-13100
Study of computer system as a musical instrument
p 747 N94-13439
The identification of ability requirements and selection instruments for fighter pilot training
[AD-A266340] p 735 N94-13582
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 2. Results
[NASA-TM-102877] p 538 N94-13989

COMPUTER VISION
VISART: Artificial vision for industrial use. A comprehensive system
[INPE-5379-TDI/474] p 665 N94-12941
View generated database
[NASA-CR-191397] p 822 N94-13116
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Three dimensional tracking of four point planar patterns using corners
[ISBN-0-315-52149-X] p 791 N94-13490
Close range 3-D position sensing using stereo vision and point-of-correspondance through mathematical morphology
[ISBN-0-315-61012-3] p 763 N94-13515
Bayesian estimation of motion fields from image sequences
[ISBN-0-315-57212-4] p 772 N94-13540
Development of a tactile and vision integrated system, and object identification techniques for SPDM applications
[DSIS-93-00153] p 764 N94-13842
Development of a computer vision system to supplement the active tactile sensing capability in a structured environment
[DSIS-93-00072] p 764 N94-13844
Computer vision and sensor fusion for detecting buried objects
[DE93-012605] p 700 N94-14566
Passive recovery of scene geometry for an unmanned ground vehicle
[AD-A266670] p 766 N94-14777
Depths from focusing and defocusing
[AD-A266644] p 735 N94-14797

COMPUTERIZED SIMULATION
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
MHD shocks in coronal mass ejections
[NASA-CR-193418] p 828 N94-12970
Comparison of analytic Whipple bumper shield ballistic limits with CTH simulations
[DE93-015126] p 539 N94-13006
Electric propulsion system technology
[NASA-CR-194100] p 549 N94-13055
Computer simulations for the adsorption of polymers onto surfaces
[DE93-016667] p 577 N94-13070
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers
[NASA-CR-191510] p 629 N94-13074
A wall interference assessment/correction system
[NASA-CR-194174] p 500 N94-13076
View generated database
[NASA-CR-191397] p 822 N94-13116
Control algorithm implementation for a redundant degree of freedom manipulator
[NASA-CR-191339] p 762 N94-13131
Adaptive Transfer Function Networks
[DE93-014344] p 745 N94-13151
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
[DE93-014418] p 797 N94-13207
Magnetic fusion computing: A personal retrospective view
[DE93-014147] p 797 N94-13217
Molecular dynamics simulation of electronically excited polyatomic molecules
[DE93-623045] p 781 N94-13225
Application of new electro-optic technology to Space Station Freedom data management system
[NASA-CR-177622] p 538 N94-13257
Parachute system design, analysis, and simulation tool
[DE93-013755] p 501 N94-13260
Advanced computers and simulation
[DE93-014354] p 740 N94-13286
A model for rotorcraft flying qualities studies
p 523 N94-13308
Attitude determination of stratospheric balloons using Kalman filters
[INPE-5498-TDI/513] p 649 N94-13366
Future developments of the NLR research flight simulator
[NLR-TP-92143-U] p 528 N94-13498
Hashing and rehashing in emulated shared memory
[CWI-CS-R9240] p 740 N94-13525
On the foundations of final semantics: Non-standard sets, metric spaces, partial orders
[CWI-CS-R9241] p 768 N94-13526
Rotor stator CGI
[NASA-TM-109313] p 518 N94-13608
Numerical simulation of steady three-dimensional flows in axial turbomachinery bladerows p 634 N94-13630
Six degree of freedom
[NASA-TM-109295] p 749 N94-13636
Numerical simulation and parameterization of orographic gravity waves p 713 N94-13647
ANNS: An X Window based version of the AFIT neural network simulator
[AD-A266540] p 764 N94-13704

Numerical Studies of Collisionless Current Layers
[NASA-CR-194337] p 800 N94-13854
A perspective on AVS in an engineering sciences environment
[DE93-015011] p 596 N94-13889
Numerical simulations of Nd:YAG laser amplifiers
[FFI/RAPPORT-92/7028] p 657 N94-13970
Human factors in aviation maintenance: Phase 3, volume 1
[DOT/FAA/AM-93/15] p 738 N94-14023
Hierarchical nonlinear behavior of hot composite structures
[NASA-TM-106229] p 676 N94-14041
Computer program for thermal and transport properties of parahydrogen from 20 to 10,000 K
[NASA-TP-3378] p 552 N94-14102
Computational techniques and capabilities
p 506 N94-14162
Discrete event simulation using object-oriented programming: Application to manufacturing
[ERB-1037] p 753 N94-14200
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342
Cammatic: An approach to improve DSS 13 antenna gravity-loading performance p 608 N94-14374
Multi-dimensional high order essentially non-oscillatory finite difference methods in generalized coordinates
[NASA-CR-194031] p 770 N94-14429
Turbulent diffusion in homogeneous shear flow with stable density stratification
[DLR-FB-92-26] p 639 N94-14443
Sidewall thermometry perturbations to nonlinear heat transport near the (lambda) transition in He-4
[DE93-014990] p 817 N94-14453
Enterprise integration: A tool's perspective
[DE93-015651] p 755 N94-14528
Theory, modeling, and simulation
[DE93-015607] p 755 N94-14571
Development of PC-based Aeronautical Software (AEROWARE) p 641 N94-14611
VSAERO analysis of a Piper Cub aircraft
p 516 N94-14616
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630
Computational strategies in the dynamic simulation of constrained flexible MBS p 679 N94-14635
Parallel methods for dynamic simulation of multiple manipulator systems p 680 N94-14637
Real-time dynamics simulation of the Cassini spacecraft using DARTS. Part 1: Functional capabilities and the spatial algebra algorithm p 680 N94-14638
Real-time dynamic simulation of the Cassini spacecraft using DARTS. Part 2: Parallel/vectorized real-time implementation p 680 N94-14639
Simulation of linear mechanical systems
p 680 N94-14641
Simulation of hypersonic, reacting flow around reentry bodies: Comparisons of numerical and experimental results
[MBB-LME-211-S-PUB-507] p 509 N94-14710
Studying Turbulence Using Numerical Simulation Databases. 4: Proceedings of the 1992 Summer Program
[NASA-CR-194556] p 643 N94-14745
On the local nature of the energy cascade
p 643 N94-14748
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749
Robust non convex optimization algorithms: Codes and numerical simulation of large scale
[ETN-93-94354] p 756 N94-14813

CONCATENATED CODES
Enhanced decoding for the Galileo S-band mission
p 609 N94-14380

CONCENTRATION (COMPOSITION)
Two color holographic interferometry for microgravity application
[NASA-CR-194424] p 651 N94-14447

CONCENTRATORS
High-flux testing of heat pipes for point-focus solar collector systems
[DE93-011581] p 628 N94-12884

CONCRETE STRUCTURES
A data base for aging of structural materials
[DE93-009714] p 824 N94-13915

CONCRETES
Effect of size, shape, and end condition of test specimen on compressive strength of high-strength concrete
[DE93-500412] p 682 N94-14653

CONCURRENT PROCESSING
Toward a verifiable approach to the design of concurrent computations
[DE93-012908] p 756 N94-14844

CONDENSATION
Planning of a comet simulator
[ITN-93-85206] p 835 N94-13230

CONDENSING
Dust production in the envelopes of carbon stars: R Coronae Borealis
[ETN-93-94389] p 839 N94-14075

CONDUCTING POLYMERS
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
[DE93-012713] p 580 N94-14179

CONDUCTION ELECTRONS
Theory of the negative magnetoresistance in magnetic metallic multilayers
[DE93-013912] p 776 N94-14584

CONDUCTIVE HEAT TRANSFER
Coupled thermal response of objects and participating media in fires and large combustion systems
[DE93-012848] p 561 N94-12819
Project proposal for partial computational physics support for Survivability of Coatings program
[DE93-013788] p 576 N94-12939
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Meteorological data, new series A monographs. Volume 6, no. 4: Modelization of heat fluxes at Earth ground with consideration of vegetation
[ETN-93-94169] p 723 N94-14546
Thermal design of hybrid circuits: Tools and methodology
[LAAS-92515] p 626 N94-14713

CONDUCTIVITY
Modeling ignition chemistry
[DE93-012340] p 561 N94-12910

CONDUCTORS
Study of novel conductive paints for solar cell electromagnetic fields
[DE93-015088] p 581 N94-14337
Microwave interconnection
[DE93-016580] p 625 N94-14533
The electric field of a current-carrying conductor
[DE93-626637] p 617 N94-14892

CONFERENCES
The 1992 JSEE/JWEA Joint Conference
[DE93-793955] p 700 N94-12822
High-temperature corrosion and protection of materials
[DE93-011072] p 568 N94-12998
Proceedings of the Workshop on Applications of Synchrotron Radiation to Trace Impurity Analysis for Advanced Silicon Processing
[DE93-013389] p 805 N94-13020
Fifteenth Combustion Research Conference
[DE93-015758] p 562 N94-13045
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Conference presentations
[NASA-CR-194514] p 665 N94-13153
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334
The American Geophysical Union Chapman Conference on Tectonics and Topography
[NASA-CR-193454] p 713 N94-13335
Proceedings of the 11th Space Surveillance Workshop, volume 1
[AD-A265120] p 531 N94-13358
Electrical Actuation Technology Bridging
[NASA-CP-3213] p 551 N94-13417
STS-32 post-flight press conference
[NASA-TM-109294] p 541 N94-13634
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698
The 8th Workshop on the Mathematical Foundations of Programming Semantics
[AD-A266436] p 749 N94-13700
Asia-Pacific ISY conference, volume 1
[NASDA-CM-199-1] p 532 N94-14098
CCI working group on climate data and its rapporteurs
[WCDMP-21] p 723 N94-14118
Methodology of Hypersonic Testing
[VKI-LS-1993-03] p 505 N94-14153
Asia-Pacific ISY Conference, volume 2
[NASDA-CM-199-VOL-2] p 688 N94-14209
The Eighth Annual NASA/Contractors Conference and 1991 National Symposium on Quality and Productivity: Extending the boundaries of total quality management
[NASA-TM-109276] p 669 N94-14321
Fourteenth National Industrial Energy Technology Conference: Proceedings
[DE93-016698] p 710 N94-14516
Proceedings of the Fluid Dynamics Symposium in honour of Professor R. Narasimha on his 60th birthday
[NAL-SP-9315] p 639 N94-14598
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
[NASA-CR-194515] p 677 N94-14618
STS-35 post-flight press conference
[NASA-TM-109490] p 537 N94-14736
Studying Turbulence Using Numerical Simulation Databases. 4: Proceedings of the 1992 Summer Program
[NASA-CR-194556] p 643 N94-14745
The 4th International Symposium on Analysis and Detection of Explosives
[DE93-620280] p 585 N94-14829
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
[DE93-014032] p 711 N94-14859

CONFIGURATION MANAGEMENT
Creating a strategic plan for configuration management using computer aided software engineering (CASE) tools
[DE93-013663] p 746 N94-13394

CONFINEMENT
Active density control in DIII-D H-mode plasmas
[DE93-015477] p 802 N94-14570
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
[DE93-015474] p 802 N94-14583

CONFORMAL MAPPING
Scalar curvature and spherical-type Riemannian manifolds
[DE93-622852] p 767 N94-12895
Torsion problem of elastostatics: An application of boundary element method and relation with conformal mapping
[DSIS-92-03794] p 674 N94-13833

CONICAL BODIES
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456

CONJUGATE GRADIENT METHOD
Optimization and eigenvalue computation with application to meteorology and oceanography
[DE93-015310] p 744 N94-13024
Deconvolution for positive signals
[DE93-013044] p 773 N94-14314
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
[NASA-TM-106351] p 771 N94-14731

CONNECTION MACHINE
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
A data distributed parallel algorithm for ray-traced volume rendering
[NASA-CR-191520] p 749 N94-13721

CONSERVATION
Fourteenth National Industrial Energy Technology Conference: Proceedings
[DE93-016698] p 710 N94-14516

CONSERVATION EQUATIONS
A control volume finite element method for three-dimensional, incompressible, viscous fluid flow
[ISBN-0-315-72019-0] p 635 N94-13683
Review of mathematical and physical basis of two-phase flow modeling
[KFK-4759] p 642 N94-14708

CONSERVATION LAWS
A high-resolution Lax-Friedrichs scheme for hyperbolic conservation laws with source terms: Application to shallow water equations
[DM-62] p 632 N94-13535
A control volume finite element method for three-dimensional, incompressible, viscous fluid flow
[ISBN-0-315-72019-0] p 635 N94-13683
Full Riemann solution of the one- and two-dimensional Euler equations
[DLR-FB-92-34] p 638 N94-14188
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
[DE93-624179] p 617 N94-14883

CONSTITUTIVE EQUATIONS
A continuum theory for liquid crystals describing different degrees of orientational order
[ETN-93-94392] p 807 N94-13590
Development of time-dependent orthotropic constitutive law of a thermoplastic composite material
p 556 N94-13595
Evaluation for rheological constitutive relations, using the indentation technique p 775 N94-13627

Probabilistic micromechanics for high-temperature composites
| NASA-CR-191150 | p 676 N94-14408
Microstructural influences on the mechanical properties of solder
| DE93-015044 | p 573 N94-14474
CONSTRAINTS
Kinematics and constraints associated with swashplate blade pitch control
| NASA-TM-102265 | p 520 N94-12820
Generating knight's tours without backtracking from errors
| AD-A266807 | p 772 N94-14900
CONSTRUCTION
Application of synchrotron radiation in chemical dynamics
| DE93-015040 | p 563 N94-13411
On the construction and decoding of hyperelliptic codes p 747 N94-13435
Construction of the Courant-Snyder invariants for the non-linear equations of motion under presence of the linear coupling
| DE93-017565 | p 788 N94-14872
CONSTRUCTION MATERIALS
Sequestering carbon dioxide in industrial polymers: Building materials for the 21st century
| DE93-016087 | p 580 N94-14297
Compatibility of refrigerants and lubricants with motor materials
| DE93-014768 | p 583 N94-14801
CONTACT LOADS
A vacuum four-ball tribometer to evaluate liquid lubricants for space applications
| NASA-TM-106264 | p 575 N94-12842
Some aspects of sheet forming simulation using explicit finite element techniques
| DE93-012479 | p 663 N94-13975
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 2: Mathematical formulation and analysis
| NASA-CR-191182 | p 664 N94-14446
CONTACTORS
Plasma contactor technology for Space Station Freedom
| NASA-TM-106291 | p 553 N94-14725
CONTAINERLESS MELTS
Stabilized electromagnetic levitator
| NASA-CR-194261 | p 586 N94-12805
Drop dynamics in space and interference with acoustic field (M-15) p 588 N94-13747
Preparation of optical materials used in non-visible region (M-17) p 589 N94-13749
Protein crystal growth p 591 N94-13756
Containerless processing of undercooled melts
| NASA-CR-194350 | p 572 N94-14123
CONTAMINANTS
AQUIS: A PC-based source information manager
| DE93-012893 | p 707 N94-13383
CONTAMINATION
Integrated, flexible, and rapid geophysical surveying
| DE93-009989 | p 712 N94-12906
Vendor information system for innovative treatment technologies. User manual (VISITT version 2.0). Number 2
| PB93-196640 | p 821 N94-12936
Proceedings of the Workshop on Applications of Synchrotron Radiation to Trace Impurity Analysis for Advanced Silicon Processing
| DE93-013389 | p 805 N94-13020
Stability of reference masses 1: Evidence for posiible variations in the mass of reference kilograms arising from mercury contamination
| NPL-DMM(A)-86 | p 708 N94-13667
A review of robust detection
| DSIS-93-00400 | p 603 N94-13829
Optical degradation issues for XUV projection lithography systems
| DE93-012658 | p 626 N94-14805
CONTINENTAL SHELVES
Overview: Gas hydrate geology and geography
| DE93-014043 | p 688 N94-14151
CONTINUITY EQUATION
Contributions to numerical solution of Navier-Stokes equations in two and three dimensional flows
| ETN-93-94395 | p 647 N94-14816
CONTINUOUS RADIATION
Predicted performance of a dc beam driven FEM oscillator designed for fusion applications at 200-250 GHz
| DE93-013414 | p 655 N94-13145
Beam halo formation from space-charge dominated beams in uniform focusing channels
| DE93-014458 | p 789 N94-13209
Long-pulse operation of a gyrotron with beam/RF separation
| DE93-015007 | p 649 N94-13410
Microchannel cooled heatsinks for high average power laser diode arrays
| DE93-016533 | p 658 N94-14442
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
| NASA-CR-194527 | p 659 N94-14576
CONTINUOUS SPECTRA
The continuum emission of active galactic nuclei
| ITN-93-85208 | p 847 N94-13232
CONTINUUM MECHANICS
Microstructural influences on the mechanical properties of solder
| DE93-015044 | p 573 N94-14474
Differential Sensitivity Theory applied to the MESA code for high pressure interactions
| DE93-016460 | p 676 N94-14591
Computational strategies in the dynamic simulation of constrained flexible MBS p 679 N94-14635
Nonlinear analysis, scientific computation, and continuum mechanics applied to the science of materials
| AD-A266641 | p 817 N94-14680
Review of mathematical and physical basis of two-phase flow modeling
| KFK-4759 | p 642 N94-14708
CONTOURS
Splines, contours and SVD subroutines
| DE93-016088 | p 757 N94-14866
CONTRACT MANAGEMENT
Johnson Space Center procurement: Controls over payments to contractors should be strengthened
| AD-A265722 | p 819 N94-13060
Shared visions: Partnership of Rockwell International and NASA Cost Effectiveness Enhancements (CEE) for the space shuttle system integration program p 668 N94-13166
CONTRACTORS
Photovoltaics: Contract lists, fiscal year 1992
| DE93-000093 | p 701 N94-12902
Johnson Space Center procurement: Controls over payments to contractors should be strengthened
| AD-A265722 | p 819 N94-13060
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
| NASA-CR-194513 | p 665 N94-13148
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Conference presentations
| NASA-CR-194514 | p 665 N94-13153
Kennedy Space Center's NASA/Contractor Team-Centered Total Quality Management Seminar: Results, methods, and lessons learned p 667 N94-13162
NASA Johnson Space Center: Total quality partnership p 668 N94-13165
NASA/contractor partnership on the second TDRSS ground terminal program: Breaking barriers p 668 N94-13168
The Eighth Annual NASA/Contractors Conference and 1991 National Symposium on Quality and Productivity: Extending the boundaries of total quality management
| NASA-TM-109276 | p 669 N94-14321
CONTROL BOARDS
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
CONTROL EQUIPMENT
Electrical Actuation Technology Bridging
| NASA-CP-3213 | p 551 N94-13417
Techniques for improving the performance of a simplified electronic fuel controller with incremental actuation for small gas turbine engines
| ISBN-0-315-56062-2 | p 661 N94-13521
Mongoose ASIC microcontroller programming guide
| NASA-RP-1319 | p 623 N94-13871
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
| DE93-016529 | p 658 N94-14437
Switchover software reliability estimate for Paducah freezer/sublimer computer systems
| DE93-013844 | p 756 N94-14696
CONTROL MOMENT GYROSCOPES
A superconducting large-angle magnetic suspension
| NASA-CR-189735 | p 596 N94-13141
CONTROL SIMULATION
Propulsion simulator for magnetically-suspended wind tunnel models
| NASA-CR-189560 | p 527 N94-13127
Simulator study of uncoupled control functions. Use of manual pointing modes when aiming at ground targets and oncoming airborne target
| FFA-TN-1992-18 | p 528 N94-13588
Real-time dynamics simulation of the Cassini spacecraft using DARTS. Part 1: Functional capabilities and the spatial algebra algorithm p 680 N94-14638
Real-time dynamic simulation of the Cassini spacecraft using DARTS. Part 2: Parallel/vectorized real-time implementation p 680 N94-14639
Control structural interaction testbed: A model for multiple flexible body verification p 544 N94-14649
CONTROL STABILITY
Development of a high-speed mechanical drive system for oscillating an annular blade row in the bending mode
| NAL-TR-1170 | p 502 N94-13342
Generalized impedance control of a redundant manipulator p 661 N94-13575
Robust synthesis of discrete-time multivariable control systems with induced delays p 662 N94-13642
Optimization-based controller design for rotorcraft p 527 N94-14642
CONTROL STICKS
The application of active side arm controllers in helicopters p 522 N94-13302
A four-axis hand controller for helicopter flight control p 522 N94-13305
CONTROL SURFACES
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
| NASA-TM-4493 | p 520 N94-13255
CNSFV code development, virtual zone Navier-Stokes computations of oscillating control surfaces and computational support of the laminar flow supersonic wind tunnel
| NASA-CR-194259 | p 504 N94-14030
CONTROL SYSTEMS DESIGN
Roller-gear drives for robotic manipulators design, fabrication and test
| NASA-CR-194248 | p 660 N94-12802
Feasibility study of an orbiting laboratory for testing CSI technology
| NASA-CR-191524 | p 540 N94-13016
Inertial confinement fusion program
| DE93-013372 | p 796 N94-13047
Force reflecting hand controller for manipulator teleoperation
| NASA-CR-191345 | p 661 N94-13129
A superconducting large-angle magnetic suspension
| NASA-CR-189735 | p 596 N94-13141
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
Compatibility of information and mode of control: The case for natural control systems p 523 N94-13307
Control system design of a cable-mounted model used for dynamic wind tunnel testing
| NAL-TR-1161 | p 528 N94-13337
Transmission zeros of spacecraft attitude control system
| NAL-TR-1166 | p 540 N94-13339
Electrical Actuation Technology Bridging
| NASA-CP-3213 | p 551 N94-13417
A hardware implementation of a provably correct design of a fault-tolerant clock synchronization circuit
| NASA-TM-109001 | p 759 N94-13450
Dynamic Forms. Part 1: Functions
| NASA-TP-3397 | p 596 N94-13790
Piston engine intake and exhaust system design
| ISVR-TR-222 | p 663 N94-13874
Tuning of Gaussian stochastic control systems
| CWI-BS-R9223 | p 765 N94-14018
Self-tuning control techniques for multivariable systems
| INPE-5449-TDI/495 | p 765 N94-14084
Propulsion integration p 508 N94-14174
Strategic avionics technology definition studies. Subtask 3-1A: Electrical Actuation (ELA) systems
| NASA-CR-194393 | p 536 N94-14323
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
| NASA-SP-7085(05) | p 543 N94-14411
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
| NASA-CR-194515 | p 677 N94-14618
A component modes projection and assembly model reduction methodology for articulated, multi-flexible body structures p 677 N94-14622
Caesy: A software tool for computer-aided engineering p 678 N94-14627
ASTEC and MODEL: Controls software development at Goddard Space Flight Center p 678 N94-14628
Animation of multi-flexible body systems and its use in control system design p 678 N94-14629
Real-time dynamic simulation of the Cassini spacecraft using DARTS. Part 2: Parallel/vectorized real-time implementation p 680 N94-14639
Optimization-based controller design for rotorcraft p 527 N94-14642
Control system design for flexible structures using data models p 527 N94-14646

PACE: A test bed for the dynamics and control of flexible multibody systems p 527 N94-14650
A program for the investigation of the Multibody Modeling, Verification, and Control Laboratory p 682 N94-14652
A new treatment of periodic systems with applications to helicopter rotor blade dynamics
| AD-A266770 | p 510 N94-14784

CONTROL THEORY
Relegation for decentralized control
| AD-A265720 | p 819 N94-13059
Active control of acoustic pressure fields using smart material technologies
| NASA-CR-191480 | p 768 N94-13354
Generalized impedance control of a redundant manipulator p 661 N94-13575
Stochastic realization of finite-valued processes and primes in the positive matrices
| CWI-BS-R9222 | p 773 N94-13677
Decentralized control of uncertain systems via sensitivity models
| DE93-012963 | p 766 N94-14568
Simulation of linear mechanical systems p 680 N94-14641
On l(1): Optimal decentralized performance p 681 N94-14643
PACE: A test bed for the dynamics and control of flexible multibody systems p 527 N94-14650

CONTROL VALVES
Electrical Actuation Technology Bridging
| NASA-CP-3213 | p 551 N94-13417

CONTROLLABILITY
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
The development and potential of inverse simulation for the quantitative assessment of helicopter handling qualities p 523 N94-13311
Handling qualities effects of display latency p 517 N94-13316
Effects of simulator motion and visual characteristics on rotorcraft handling qualities evaluations p 524 N94-13317
Design and pilot evaluation of the RAH-66 Comanche Core AFCS p 525 N94-13321
Design and pilot evaluation of the RAH-66 Comanche selectable control modes p 525 N94-13322
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323
Flight testing and frequency domain analysis for rotorcraft handling qualities characteristics p 526 N94-13324
Low-speed wind tunnel tests on a joined-wing aircraft model with various upper-fin
| NAL-TR-1169 | p 501 N94-13341

CONTROLLED FUSION
Magnetic fusion computing: A personal retrospective view
| DE93-014147 | p 797 N94-13217
Nonlinear evolution of tearing modes in inhomogeneous plasmas
| PPL-133 | p 798 N94-13564
The status of cold fusion
| DE93-012731 | p 802 N94-14567

CONTROLLERS
Kinematics and constraints associated with swashplate blade pitch control
| NASA-TM-102265 | p 520 N94-12820
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (iDNB) Experiment
| DE93-014144 | p 797 N94-13100
Force reflecting hand controller for manipulator teleoperation
| NASA-CR-191345 | p 661 N94-13129
The application of active side arm controllers in helicopters p 522 N94-13302
A four-axis hand controller for helicopter flight control p 522 N94-13305
Design and performance of an automated video-based laser beam alignment system
| DE93-012571 | p 656 N94-13481
Strategic avionics technology definition studies. Subtask 3-1A: Electrical Actuation (ELA) systems
| NASA-CR-194393 | p 536 N94-14323
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630
A neural-network approach to robotic control p 679 N94-14634
Optimization-based controller design for rotorcraft p 527 N94-14642
On l(1): Optimal decentralized performance p 681 N94-14643
An application of the IMC software to controller design for the JPL LSCL Experiment Facility p 681 N94-14645
Control system design for flexible structures using data models p 527 N94-14646
Design and control of a macro-micro robot for precise force applications p 682 N94-14651

CONVECTION
AMIP: Diagnostic subproject on the variability in the tropics: Synoptic to intraseasonal time scales
| DE93-009287 | p 721 N94-13914

CONVECTIVE FLOW
Fluxes of heat and water vapour in a convective mixed layer during EFEDA
| DLR-FB-92-21 | p 716 N94-14132
An adaptive projection method for the incompressible Euler equations
| DE93-016428 | p 639 N94-14434
Interactions among convection, magnetic fields and p-mode oscillations in the sun
| NASA-CR-194477 | p 845 N94-14479

CONVECTIVE HEAT TRANSFER
Experimental measurement of local heat transfer coefficients over discrete roughened plates using infrared thermography p 635 N94-13652
Fluxes of heat and water vapour in a convective mixed layer during EFEDA
| DLR-FB-92-21 | p 716 N94-14132

CONVERGENCE
A new method to assess Monte Carlo convergence
| DE93-012667 | p 772 N94-12919
Optimization and eigenvalue computation with application to meteorology and oceanography
| DE93-015310 | p 744 N94-13024
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
Mathematical algorithms for multidimensional inverse scattering problems in inhomogeneous medium
| AD-A266440 | p 749 N94-13702
Preconditioning and the limit to the incompressible flow equations
| NASA-CR-191500 | p 769 N94-13717
On the superconvergence of Galerkin methods for hyperbolic IBVP
| NASA-CR-194293 | p 770 N94-13922
On the superconvergence of Galerkin methods for hyperbolic IBPV
| NASA-CR-194488 | p 770 N94-14307
On a convergence of iterative Newton's scheme
| DE93-626604 | p 772 N94-14886

CONVERGENT NOZZLES
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
| NASA-TM-106364 | p 508 N94-14208

CONVERGENT-DIVERGENT NOZZLES
An experimental investigation of shock wave/vortex interaction p 634 N94-13574
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
| NASA-TM-106364 | p 508 N94-14208

CONVEXITY
Approaches to high aspect ratio triangulations
| NASA-TM-107684 | p 739 N94-12886

CONVOLUTION INTEGRALS
Deconvolution for positive signals
| DE93-013044 | p 773 N94-14314

COOL STARS
Basic research in solar physics
| NASA-CR-193632 | p 844 N94-13234

COOLANTS
Long-range global warming impact of gaseous diffusion plant operation
| DE93-011686 | p 710 N94-14459

COOLERS
Double inlet pulse tube cryocooler theory
| AD-A266832 | p 597 N94-14677

COOLING
Observation of the coalescing of beam into an asymmetric RF bucket by stochastic cooling
| DE93-015133 | p 783 N94-13895
Containerless processing of undercooled melts
| NASA-CR-194350 | p 572 N94-14123

COOLING FLOWS (ASTROPHYSICS)
Studies of gas in cooling flow clusters
| NASA-CR-193597 | p 628 N94-12959

COOLING SYSTEMS
High flux heat exchanger
| AD-A266341 | p 636 N94-13730

COORDINATION
Program operations plan
| DE93-012765 | p 710 N94-14182

COPOLYMERS
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
| AD-A265827 | p 577 N94-12985
Computer simulations for the adsorption of polymers onto surfaces
| DE93-016667 | p 577 N94-13070
Phase transition in polymer blends and structure of ionomers and copolymers
| DE93-016256 | p 579 N94-13978
Surface characterization of LDEF materials
| NASA-CR-194519 | p 543 N94-14683
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
| AD-A265509 | p 560 N94-14794

COPPER
Ohmic heating of composite candidate graphite-fiber/coating combinations
| NASA-TM-4491 | p 554 N94-12871
The x ray dichroism experiments using circular polarization
| DE93-013195 | p 568 N94-13036
On the hardening and softening of nanocrystalline materials
| DE93-012901 | p 810 N94-14185
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
| DE93-016529 | p 658 N94-14437
The structure and mechanical properties of Ru-Cu and Ru-Ti nanolayer composites
| DE93-014453 | p 558 N94-14469
Electrochemical planarization for microelectronic circuits
| DE93-017214 | p 627 N94-14870

COPPER ALLOYS
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
| DE93-013770 | p 812 N94-14345

COPPER OXIDES
The study of structure-processing-property relations in copper oxide based high (Tc) superconductors
| DE93-015066 | p 804 N94-13003

COPPER SELENIDES
Activities of the Basic Sciences Branch
| DE93-010012 | p 851 N94-14455

CORE FLOW
Simultaneous solution for core magnetic field and fluid flow beneath an electrically conducting mantle
| NASA-TM-4536 | p 716 N94-13960
Tracking of change of a warm-core ring structure p 696 N94-14267

CORE SAMPLING
Maximum entropy spectral analysis of the geological time series of the oxygen isotope record from deep-sea cores
| INPE-5465-PRE/1773 | p 725 N94-13728

CORONAL LOOPS
Comparative study of x ray and microwave emissions during solar flares
| NASA-CR-194532 | p 845 N94-14577

CORONAS
Parametric instabilities in large nonuniform laser plasmas
| DE93-013184 | p 797 N94-13393

CORRELATION
Correlations of the growth, structure, and stress with the adhesion of diamond films on tungsten
| DE93-012855 | p 576 N94-12912

CORRELATION COEFFICIENTS
Statistical analysis of the m rankings problem: Kendall's prototype and the grouping estimate method based on normal scores
| DSIS-93-00139 | p 773 N94-13848

CORRELATION DETECTION
Acousto-optical post-processor time-integrating correlator updates
| DSIS-93-00314 | p 777 N94-13831

CORROSION
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
| DE93-013800 | p 701 N94-13093
The corrosion behavior of 8001 Al under heat-transfer conditions in an aqueous loop system
| DE93-013450 | p 569 N94-13242
A study of hydrogen effects on fracture behavior of radioactive waste storage tanks
| DE93-018171 | p 574 N94-14873

CORROSION PREVENTION
High-temperature corrosion and protection of materials
| DE93-011072 | p 568 N94-12998
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
| AD-A266547 | p 556 N94-13583

Metastability of yttrium-oxides
[DE93-016548] p 813 N94-14440
Insoluble coatings for Stirling engine heat pipe condenser surfaces
[NASA-CR-191188] p 554 N94-14771
CORROSION RESISTANCE
High-temperature corrosion and protection of materials
[DE93-011072] p 568 N94-12998
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
[DE93-013800] p 701 N94-13093
About the influence of inert gas ion implantation on metal corrosion stability
[DE93-620574] p 569 N94-13360
Modified carbon for improved corrosion resistance
[AD-D015741] p 556 N94-13663
The effect of TiN coatings on the rolling contact fatique behavior of M50 bearing steel
[ARL-TR-40] p 662 N94-13794
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-005] p 559 N94-14575
CORROSION TESTS
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
[DE93-013800] p 701 N94-13093
The corrosion behavior of 8001 Al under heat-transfer conditions in an aqueous loop system
[DE93-013450] p 569 N94-13242
Fatigue crack initiation and propagation in aluminum alloys 8090 and 2124 in hydrogenous atmospheres
p 570 N94-13670
COSMIC BACKGROUND EXPLORER SATELLITE
Inflation after COBE: Lectures on inflationary cosmology
[DE93-014008] p 834 N94-13096
COSMIC DUST
UV extinction properties of carina nebular dust
[NASA-CR-193424] p 835 N94-13233
Physical properties of gas disks around shell stars with and without dust
[NASA-CR-193655] p 835 N94-13239
Dust production in the envelopes of carbon stars: R Coronae Borealis
[ETN-93-94389] p 839 N94-14075
COSMIC GASES
ROSAT: X ray survey of compact groups
[NASA-CR-193297] p 829 N94-13181
The extent and content of low-ionization gas in galaxies p 837 N94-13551
COSMIC PLASMA
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
Physical properties of gas disks around shell stars with and without dust
[NASA-CR-193655] p 835 N94-13239
COSMIC RAY ALBEDO
Dynamical model for the distribution of geomagnetically trapped anomalous-component ions
[ATR-91(9558)-6] p 784 N94-13936
COSMIC RAY SHOWERS
Search for UHE point-source emission over various time scales
[DE93-012718] p 846 N94-12922
Search for emission of ultra high energy radiation from active galactic nuclei
[DE93-012719] p 846 N94-12923
Angular resolution studies of the CYGNUS array using the shadows of the Sun and Moon
[DE93-012723] p 846 N94-12946
Search for ultra-high-energy radiation from gamma-ray bursts
[DE93-012721] p 847 N94-12964
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461
COSMIC RAYS
Search for UHE point-source emission over various time scales
[DE93-012718] p 846 N94-12922
Search for UHE emission from Cygnus X-3
[DE93-012720] p 846 N94-12924
Search for continuous and single day emission from ultra-high-energy sources
[DE93-012724] p 846 N94-12947
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
The beta(+) decay and cosmic-ray half-life of Mn-54
[DE93-013913] p 848 N94-13695
Cosmic and solar gamma ray and neutron experiments
[NASA-CR-193359] p 849 N94-13965
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461
COSMOCHEMISTRY
On inhomogeneous halo collapse and the globular cluster metallicity gradient
[DE93-013090] p 834 N94-13011
COSMOLOGY
Inflation after COBE: Lectures on inflationary cosmology
[DE93-014008] p 834 N94-13096
GRO: Black hole models for gamma ray bursts
[NASA-CR-193244] p 829 N94-13178
Dilaton quantum cosmology in two dimensions
[DE93-621377] p 836 N94-13361
The reionization of the intergalactic medium
p 838 N94-13651
A classical instability for black strings and p-branes
[DE93-014577] p 839 N94-14116
Mathematics and string theory
[DE93-017903] p 817 N94-14417
Multiplicative noise: Applications in cosmology and field theory
[DE93-016624] p 840 N94-14536
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
COST ANALYSIS
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars
[NASA-TP-3312] p 846 N94-12875
Advanced protein crystal growth programmatic sensitivity study
[NASA-CR-193827] p 804 N94-12934
Compendium of executive summaries from the maglev system concept definition
[PB93-154938/GAR] p 661 N94-13285
Field of solar collectors: Effect of shadowing on the optimal field design
[ITN-93-85197] p 702 N94-13570
Selected data on academic science and engineering R and D expenditures: Fiscal Year 1991
[NSF-92-329] p 819 N94-13982
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502
COST EFFECTIVENESS
Shared visions: Partnership of Rockwell International and NASA Cost Effectiveness Enhancements (CEE) for the space shuttle system integration program
p 668 N94-13166
COST ESTIMATES
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars
[NASA-TP-3312] p 846 N94-12875
COST REDUCTION
Johnson Space Center procurement: Controls over payments to contractors should be strengthened
[AD-A265722] p 819 N94-13060
Spacecraft COst REduction Team (SCORE): TQM/CI on a massive scale p 667 N94-13160
Shared visions: Partnership of Rockwell International and NASA Cost Effectiveness Enhancements (CEE) for the space shuttle system integration program
p 668 N94-13166
Continuous roll-to-roll a-Si photovoltaic manufacturing technology
[DE93-010006] p 704 N94-14109
Flexibility and costs in the design process: A decision support model
[ISBN-9-06-814522-3] p 597 N94-14808
COUETTE FLOW
Stability of oscillatory two phase Couette flow
[NASA-CR-191501] p 636 N94-13817
COUNTERFLOW
A coherent flame model of premixed turbulent combustion in a counterflow geometry
[CUED/A-THERMO/TR.60] p 562 N94-13085
COUNTERMEASURES
Physical countermeasures for long-term manned space flights
[ESA-SP-1160] p 733 N94-14860
COUPLERS
Flex-gear electrical power transmission
[NASA-CR-194422] p 661 N94-13445
Polarization effects in optical fiber current sensors based on Sagnac interferometers with 3 by 3 couplers
[DE93-012665] p 792 N94-14367
COUPLING
Coupled thermal response of objects and participating media in fires and large combustion systems
[DE93-012848] p 561 N94-12819
COVALENT BONDS
Poling of thin polymer films in electro optic applications
[AD-A266562] p 579 N94-13584
COVARIANCE
Coherent Doppler lidar signal covariance including wind shear and wind turbulence
[NASA-CR-194492] p 721 N94-13723
Decentralized control of uncertain systems via sensitivity models
[DE93-012963] p 766 N94-14568
CRACK GEOMETRY
A survey of crack path stability criteria and their application to crack flapping phenomena in stiffened structures
[LR-681] p 675 N94-13929
CRACK INITIATION
Fatigue crack initiation and propagation in aluminum alloys 8090 and 2124 in hydrogenous atmospheres
p 570 N94-13670
Contribution to comparison of methods for determining welding procedures for the avoidance of hydrogen cracking
[VTT-PUBS-107] p 674 N94-13887
Fatigue predictions and scatter
[LR-696] p 675 N94-13933
A study of fiber volume fraction effects in notched unidirectional SCS-6/Ti-15V-3Cr-3Al-3Sn composite
[NASA-CR-191165] p 559 N94-14769
Microstructural origins and modeling of intergranular crack initiation in an Al-Li-Cu-Mg-(Zr) alloy
[ISAL-91-0012] p 574 N94-14814
CRACK PROPAGATION
Automated crack identification for cement paste
[AD-A265753] p 665 N94-13042
Modern aluminium sheet alloys for aerospace applications
[NLR-TP-92057-U] p 570 N94-13497
Combustion-induced crack/debond propagation in solid propellants p 584 N94-13560
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
Fatigue crack initiation and propagation in aluminum alloys 8090 and 2124 in hydrogenous atmospheres
p 570 N94-13670
Some computational tools for the analysis of through cracks in stiffened fuselage shells
[LR-701] p 673 N94-13726
Micromechanical damage theories for brittle solids with interacting microcracks
[AD-A266348] p 673 N94-13778
A survey of crack path stability criteria and their application to crack flapping phenomena in stiffened structures
[LR-681] p 675 N94-13929
Fatigue predictions and scatter
[LR-696] p 675 N94-13933
MSD in fuselage lap joints: Requirements for inspection intervals for typical fuselage lap joint panels with Multiple Site Damage
[LR-697] p 675 N94-13986
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
[DE93-016666] p 812 N94-14354
A study of fiber volume fraction effects in notched unidirectional SCS-6/Ti-15V-3Cr-3Al-3Sn composite
[NASA-CR-191165] p 559 N94-14769
A computer program to calculate growth rates for cracks at notches in regions of residual stress
[RAE-TM-MAT/STR-1207] p 683 N94-14818
The growth of short fatigue cracks in an aluminium alloy
[RAE-TR-92063] p 574 N94-14828
CRACK TIPS
A survey of crack path stability criteria and their application to crack flapping phenomena in stiffened structures
[LR-681] p 675 N94-13929
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
[DE93-016666] p 812 N94-14354
CRACKING (FRACTURING)
The ASCOR test: A simple automated method for stress corrosion testing of aluminium alloys
[NLR-TP-91438-U] p 570 N94-13532
CRACKS
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Fracture behavior of vanadium/vanadium silicide in-situ composites
[DE93-013422] p 556 N94-13389
Theoretical studies of breakdown in random media
[DE93-018107] p 558 N94-14418
CRASHES
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972
CRASHWORTHINESS
Design and application of a quasistatic crush test fixture for investigating scale effects in energy absorbing composite plates
[NASA-CR-4526] p 670 N94-13063

CRAY COMPUTERS
Cray Y-MP
| NASA-TM-109303 | p 741 N94-13609
Computational mechanics and supercomputing at LLNL
| DE93-016453 | p 754 N94-14435
CREEP PROPERTIES
Development of time-dependent orthotropic constitutive law of a thermoplastic composite material
p 556 N94-13595
Computational strategies in the dynamic simulation of constrained flexible MBS p 679 N94-14635
CREEP TESTS
Development of time-dependent orthotropic constitutive law of a thermoplastic composite material
p 556 N94-13595
Evaluation for rheological constitutive relations, using the indentation technique p 775 N94-13627
CREW PROCEDURES (INFLIGHT)
Flight crew interface aspects of forward-looking airborne windshear detection systems
| NASA-CR-191437 | p 516 N94-12829
CRITICAL EXPERIMENTS
MCNP benchmark analyses of critical experiments for the Space Nuclear Thermal Propulsion program
| DE93-014046 | p 548 N94-12981
CRITICAL LOADING
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
CRITICAL TEMPERATURE
Effects of depositon rate on Bi2Sr2CaCu2O(8+x) and Bi2Sr(1.6)La(0.4)CuO(6+x) epitaxial thin film growth by pulsed-laser ablation
| DE93-015797 | p 812 N94-14362
On the statistical theory of the even-even nucleons levels' density
| DE93-623990 | p 788 N94-14875
CROP GROWTH
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
| NASA-TM-109272 | p 738 N94-13979
CROPS
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land
| BCRS-92-13 | p 684 N94-13123
CROSS FLOW
The effect of crossflow on Taylor vortices: A model problem
| NASA-CR-191487 | p 630 N94-13128
CROSSTALK
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
| DE93-013958 | p 601 N94-13696
CRRES (SATELLITE)
CRRES to blaze new trails in orbit
| NASA-TM-109314 | p 713 N94-13620
CRUDE OIL
Biodiesel/aquatic species project report, FY 1992
| DE93-010024 | p 709 N94-14087
BOAST 2 for the IBM 3090 and RISC 6000
| DE93-000138 | p 638 N94-14351
CRYOGENIC COOLING
Three-stage linear, split-Stirling cryocooler for 1 to 2K magnetic cold stage
| NASA-CR-4538 | p 776 N94-13897
A recuperative superfluid Stirling refrigerator
| DE93-016521 | p 597 N94-14592
CRYOGENIC EQUIPMENT
Residual contact restraints in cryogenics
| ETN-93-94375 | p 671 N94-13501
Sloshing dynamics on rotating helium dewar tank
| NASA-CR-194403 | p 637 N94-13959
Double inlet pulse tube cryocooler theory
| AD-A266832 | p 597 N94-14877
CRYOGENIC FLUID STORAGE
The feasibility of producing aluminum-lithium structures for cryogenic tankage applications by laser beam welding
| NASA-CR-191527 | p 595 N94-14026
CRYOGENIC FLUIDS
Cryogenic fluid film bearing tester development study
| NASA-CR-192586 | p 660 N94-12791
CFM technologies for space transportation: Multipurpose hydrogen testbed system definition and tank procurement
| NASA-CR-194355 | p 539 N94-12827
CRYOGENIC ROCKET PROPELLANTS
CFM technologies for space transportation: Multipurpose hydrogen testbed system definition and tank procurement
| NASA-CR-194355 | p 539 N94-12827
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
| NAL-TR-1177 | p 548 N94-12945
CRYOGENIC TEMPERATURE
Thermal conductance of pressed metallic contacts augmented with Indium foil or Apiezon-N (tm) grease at liquid helium temperatures
| NASA-TM-108779 | p 776 N94-14027
CRYOGENICS
Thermal conductance of pressed metallic contacts augmented with Indium foil or Apiezon-N (tm) grease at liquid helium temperatures
| NASA-TM-108779 | p 776 N94-14027
A cryogenic seven-element HEMT front end for DSS 13 p 608 N94-14375
CRYOSTATS
Gas atomized Er3Ni powder for cryocooler applications
| DE93-011564 | p 568 N94-13000
CRYSTAL DEFECTS
Flux-pinning related defect structures in melt-processed YBa2Cu3O(7-x)
| DE93-012759 | p 804 N94-12818
Deposition of crystalline boron thick layers from gas phase
| DE93-620499 | p 576 N94-12867
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
| DE93-013421 | p 806 N94-13136
Annealing study of main electron irradiation-induced defects (H4 and H5) in P-InP using DLTS technique
| DE93-623204 | p 806 N94-13213
Growth experiment of narrow band-gap semiconductor PbSnTe single crystals in space (M-1)
p 586 N94-13733
Effects of growth conditions and substrate orientation on the properties of InSb
| DE93-013766 | p 812 N94-14344
CRYSTAL FIELD THEORY
Protein crystal growth p 591 N94-13756
CRYSTAL GROWTH
Reduce fluid experiment system flight data from IML-1
| NASA-CR-193835 | p 804 N94-12873
Correlations of the growth, structure, and stress with the adhesion of diamond films on tungsten
| DE93-012855 | p 576 N94-12912
Adaptive control of interface by temperature and interface profile feedback in transparent multi-zone crystal growth furnace
| NASA-CR-194140 | p 762 N94-13253
Low temperature metal-organic chemical vapor deposition growth processes for high efficiency solar cells
| DE92-010562 | p 702 N94-13386
Fabrication of AlGaAs/GaAs-light-emitting devices by selective MOCVD using dialkylmetalchloride
p 627 N94-13433
Crystal growth of ZnSe and related ternary compound semiconductors by physical vapor transport
| NASA-CR-193834 | p 807 N94-13444
Growth experiment of narrow band-gap semiconductor PbSnTe single crystals in space (M-1)
p 586 N94-13733
Growth of PbSnTe single crystal by traveling-zone method in low gravity (M-2) p 586 N94-13734
Growth of semiconductor compound single crystal InSb by floating zone method (M-3) p 586 N94-13735
Growth of Si spherical crystals and the surface oxidation (M-9) p 587 N94-13741
Solidification of eutectic system alloys in space (M-19)
p 589 N94-13751
Growth of samarskite crystal under microgravity conditions (M-20) p 590 N94-13752
Growth experiment of organic metal crystal in low gravity (M-21) p 590 N94-13753
Crystal growth of compound semiconductors in a low-gravity environment (InGaAs crystals) (M-22)
p 590 N94-13754
Cesium iodide (CsI) crystal manufacture
| DE93-012146 | p 808 N94-13973
Effects of depositon rate on Bi2Sr2CaCu2O(8+x) and Bi2Sr(1.6)La(0.4)CuO(6+x) epitaxial thin film growth by pulsed-laser ablation
| DE93-015797 | p 812 N94-14362
Two color holographic interferometry for microgravity application
| NASA-CR-194424 | p 651 N94-14447
Activities of the Basic Sciences Branch
| DE93-010012 | p 851 N94-14455
Molecular simulator: A basic tool for submicron MOS processes development
| LAAS-92484 | p 814 N94-14697
Measurements of crystal growth kinetics at extreme deviations from equilibrium
| DE93-014526 | p 815 N94-14798
CRYSTAL LATTICES
Deposition of crystalline boron thick layers from gas phase
| DE93-620499 | p 576 N94-12867
Structural change of graphite during electron irradiation
| DE93-015961 | p 582 N94-14531
The Lindemann criterion of melting for pure and mixed ionic crystals
| ITN-93-85210 | p 814 N94-14554
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
| ITN-93-85222 | p 566 N94-14558
Magnetic interactions and disorder - phase transitions in dilute spin-glasses and high temperature superconductors
| ITN-93-85217 | p 815 N94-14825
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
| ITN-93-85218 | p 816 N94-14826
CRYSTAL STRUCTURE
Recovery of materials impacted at high velocity
| DE93-014150 | p 576 N94-12885
Correlations of the growth, structure, and stress with the adhesion of diamond films on tungsten
| DE93-012855 | p 576 N94-12912
Determination of channeling perspectives for complex crystal structures
| DE93-012872 | p 805 N94-13009
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
| DE93-013421 | p 806 N94-13136
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
| DE93-014335 | p 806 N94-13150
A continuum theory for liquid crystals describing different degrees of orientational order
| ETN-93-94392 | p 807 N94-13590
Theory of the electronic and structural properties of solid state oxides
| DE93-016051 | p 811 N94-14296
Metastability of yttrium-oxides
| DE93-016548 | p 813 N94-14440
The Lindemann criterion of melting for pure and mixed ionic crystals
| ITN-93-85210 | p 814 N94-14554
Ion assisted sputter deposition of Mo-Si multilayers
| DE93-013830 | p 583 N94-14693
CRYSTAL SURFACES
Adaptive control of interface by temperature and interface profile feedback in transparent multi-zone crystal growth furnace
| NASA-CR-194140 | p 762 N94-13253
Barium fluoride research and development at Lawrence Livermore National Laboratory
| DE93-014682 | p 807 N94-13405
Boundary stability under nonequilibrium conditions
| DE93-016259 | p 809 N94-13980
CRYSTALLINITY
Photovoltaic Subcontract Program
| DE93-000092 | p 700 N94-12868
On the hardening and softening of nanocrystalline materials
| DE93-012901 | p 810 N94-14185
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
| DE93-016666 | p 812 N94-14354
CRYSTALLITES
Procedures for analysis of debris relative to Space Shuttle systems
| NASA-TM-109190 | p 534 N94-12900
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
| AD-A265827 | p 577 N94-12985
Reverse micelle synthesis of nanoscale metal containing catalysts
| DE93-012869 | p 572 N94-14184
CRYSTALLIZATION
Optimization of the processing parameters of high temperature superconducting glass-ceramics: Center Director's discretionary fund final report
| NASA-TM-108421 | p 808 N94-13938
Theory of the electronic and structural properties of solid state oxides
| DE93-016051 | p 811 N94-14296
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
| ITN-93-85222 | p 566 N94-14558
CRYSTALLOGRAPHY
Crystallographic phase identification in the scanning electron microscope: Backscattered electron Kikuchi patterns
| DE93-011574 | p 804 N94-12813

Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
| DE93-014335 | p 806 N94-13150
The effect of crystal tilt on high resolution micrographs of small metal particles
| DE93-013915 | p 574 N94-14795

CRYSTALS
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
| DE93-014335 | p 806 N94-13150
Barium fluoride research and development at Lawrence Livermore National Laboratory
| DE93-014682 | p 807 N94-13405
Quasi-elastic neutron scattering studies of protein dynamics
| DE93-015074 | p 782 N94-13414
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
| DE93-012905 | p 848 N94-13483
Optical and physical properties of the LiSrAlF6:Cr laser crystal
| DE93-014657 | p 808 N94-13881
Cesium iodide (CsI) crystal manufacture
| DE93-012146 | p 808 N94-13973
Optical properties of CO2 ice and CO2 snow in the ultraviolet, visible, and infrared
| NASA-CR-194110 | p 686 N94-14081
Electronic schematics for the Donner 600 Crystal Tomograph
| DE93-015277 | p 625 N94-14336
The effect of crystal tilt on high resolution micrographs of small metal particles
| DE93-013915 | p 574 N94-14795
Multiplicity spectrometry on neutron filtered beams
| DE93-617529 | p 790 N94-14843

CUES
Visual cueing aids for rotorcraft landings p 524 N94-13313
Visual information for judging temporal range p 524 N94-13314
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays p 524 N94-13315
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318

CULTURE (SOCIAL SCIENCES)
Here's the beef: A case study in organizational transformation p 667 N94-13163
Building a quality culture in the Office of Space Flight: Approach, lessons learned and implications for the future p 667 N94-13164

CULTURE TECHNIQUES
Studies on the effects of microgravity on the ultrastructure and functions of cultured mammalian cells (L-6) p 592 N94-13763
Gravity, chromosomes, and organized development in aseptically cultured plant cells p 592 N94-13764
Bone culture research p 595 N94-13773

CUMULUS CLOUDS
Remote sensing of low level cloud optical characteristics p 691 N94-14229

CURRENT DENSITY
Advanced magnetic flux compression generator development issues: A comparison of coaxial and disk generators
| DE93-014025 | p 794 N94-12849
Metal oxide varistor feasibility study
| DE93-012921 | p 620 N94-13031
Electrocatalysis issues in polymer electrolyte fuel cells
| DE93-014450 | p 702 N94-13402
Current distribution tomography for determination of internal current density distributions
| DE93-015463 | p 604 N94-13899
Ploughing on gold using a Scanning Tunneling Microscope
| DE93-012632 | p 812 N94-14365

CURRENT DISTRIBUTION
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
Current distribution tomography for determination of internal current density distributions
| DE93-015463 | p 604 N94-13899

CURRENT REGULATORS
Multi-output flyback converter with ultrafast current protection
| CNES-NT-133 | p 625 N94-14138

CURTAINS
Polymer infiltration studies
| NASA-CR-194521 | p 582 N94-14539

CURVATURE
Scalar curvature and spherical-type Riemannian manifolds
| DE93-622852 | p 767 N94-12895
Exploratory study of in-plane streamline curvature effects on a turbulent boundary layer at a Mach number of 3
| NASA-CR-193673 | p 501 N94-13292
Integrable system describing surfaces of non-constant curvature
| PREPRINT-734 | p 768 N94-13499
A hydrogen atom in the curved space: Orthogonality of radial wave functions with respect to the critical momentum
| DE93-626623 | p 788 N94-14891

CURVE FITTING
Removing noise from discontinuous data
| ITN-93-85211 | p 826 N94-14555

CURVED PANELS
Testing and analysis of curved frame specimens made from a Long Discontinuous Fiber (LDF) material
| NASA-TM-109014 | p 557 N94-13711

CUSHIONS
Body/cushion contact stress analysis during sitting
| ITN-93-85204 | p 736 N94-13229
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
| DOT/FAA/AM-93/14 | p 738 N94-13972

CUTTING
Recent results from material processing studies on new generation lasers
| DE93-013841 | p 653 N94-12898
Knowledge base technology for CT-DIMS: Report 1
| DE93-013118 | p 743 N94-13014

CYANATES
The evolution of energy-transducing systems: Studies with archaebacteria
| NASA-CR-194130 | p 728 N94-13562

CYCLIC LOADS
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
| DE93-016666 | p 812 N94-14354

CYCLOGENESIS
Cyclogenesis and cyclone over South America
| INPE-5400-TDI/479 | p 719 N94-13175

CYCLOHEXANE
Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black
| DE93-012707 | p 559 N94-14690

CYCLONES
Cyclogenesis and cyclone over South America
| INPE-5400-TDI/479 | p 719 N94-13175

CYCLOTRON FREQUENCY
Direct electron heating and current drive with fast waves in D3-D
| DE93-013028 | p 801 N94-14293

CYCLOTRON RESONANCE
The multi-ion, multi-event test of ion cyclotron resonance heating
| NASA-CR-194134 | p 789 N94-13419
The de Haas-van Alphen studies and Fermi surface properties of organic superconductors (ET)2X
| DE93-015157 | p 623 N94-13925

CYCLOTRON RESONANCE DEVICES
Microwave generation for magnetic fusion energy applications
| DE93-013864 | p 654 N94-13058
Long-pulse operation of a gyrotron with beam/RF separation
| DE93-015007 | p 649 N94-13410

CYCLOTRONS
The de Haas-van Alphen studies and Fermi surface properties of organic superconductors (ET)2X
| DE93-015157 | p 623 N94-13925

CYGNUS CONSTELLATION
Search for UHE emission from Cygnus X-3
| DE93-012720 | p 846 N94-12924
Angular resolution studies of the CYGNUS array using the shadows of the Sun and Moon
| DE93-012723 | p 846 N94-12946

CYLINDRICAL BODIES
Capillary surfaces in a wedge: Differing contact angles
| DE93-013903 | p 631 N94-13244
Thermal gradient-induced deflection of a thick-walled cylinder with bending residual stresses
| AD-A266347 | p 673 N94-13777
Current distribution tomography for determination of internal current density distributions
| DE93-015463 | p 604 N94-13899
The accuracy of approximating radiative heat transfer using a temperature dependent thermal conductivity
| DE93-013105 | p 638 N94-14318
Dynamic soil pressures on rigid cylindrical vaults
| DE93-013930 | p 676 N94-14585

CYLINDRICAL SHELLS
A probabilistic method for the buckling assessment of stiffened composite shells
| NASA-TM-106286 | p 671 N94-13379
The numerical simulation of the collapse process of axially compressed cylindrical shells with measured imperfections
| LR-705 | p 674 N94-13905

D

DAMAGE
Micromechanical damage theories for brittle solids with interacting microcracks
| AD-A266348 | p 673 N94-13778
Theoretical studies of breakdown in random media
| DE93-018107 | p 558 N94-14418
Study of deferred acoustic emission in carbon epoxy composites
| ISAL-91-0078 | p 560 N94-14815

DAMAGE ASSESSMENT
An advanced test technique to quantify thermomechanical fatigue damage accumulation in composite materials
| NASA-CR-191147 | p 555 N94-13139
Micromechanical damage theories for brittle solids with interacting microcracks
| AD-A266348 | p 673 N94-13778
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Satellite remote sensing for disaster mitigation p 693 N94-14244
A concept for the world environment and disaster observation system p 693 N94-14245
Estimation of vegetation damage due to ash fall in Mt. Pinatubo area using MOS-1 data p 695 N94-14259
Secondary impact hazard assessment
| NASA-CR-188261 | p 543 N94-14483
Optimal maintenance policies of a Markovian system
| ITN-93-85216 | p 774 N94-14502

DARK MATTER
Cold dark matter halos p 838 N94-13649
The reionization of the intergalactic medium p 838 N94-13651
The first data from the MACHO experiment
| DE93-014423 | p 840 N94-14467

DARKENING
Laboratory simulations of lunar darkening processes p 843 N94-14301

DARKNESS
A circadian rhythm of conidiation in Neurospora crassa (L-12) p 593 N94-13769

DATA ACQUISITION
DATAA: Data acquisition made easy
| DE93-014683 | p 823 N94-13406
Arctic ozone expedition
| NASA-TM-109301 | p 708 N94-13602
Operational test of the airborne data acquisition system: SADA, the Bara Bonita experiment
| INPE-5451-NTC/305 | p 685 N94-13610
Buoy experiments to obtain the sea-truth data for OCTS/NSCAT, part 1
| NASDA-CNT-930005-PT-1 | p 725 N94-13653
Adaptive Signal Processing Testbed
| DSIS-93-00258 | p 604 N94-13869
Advanced solid-state array spectroradiometer data collection during HAPEX-2 Sahel
| NASA-CR-194144 | p 808 N94-13875
An experimental assessment of the use of ground-level microphones to measure the fly-over noise of jet-engined aircraft
| NPL-RSA(EXT)-0039 | p 777 N94-13885
Adaptive Signal Processing Testbed application software: User's manual
| DSIS-93-00261 | p 606 N94-14038
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
| EOC-92-01-0007 | p 687 N94-14091
CCI working group on climate data and its rapporteurs
| WCDMP-21 | p 723 N94-14118
Geologic application of JERS-1 SAR data p 688 N94-14211
Outline of ISY sea surface temperature data sets p 696 N94-14261
The Telecommunications and Data Acquisition Report
| NASA-CR-194388 | p 607 N94-14369
Overview of the Scalable Coherent Interface, IEEE STD 1596 (SCI)
| DE93-015247 | p 761 N94-14476
A description of the computer program CALDK38 which controls instrumentation set-up and data acquisition during deadweight calibration using an HBM DK 38 S6 digital measuring unit
| LTR-ST-1935 | p 754 N94-14496
Data collection with the ACTS propagation terminal p 615 N94-14675
A fast frame rate 512 x 512 CCD digital camera system
| DE93-013048 | p 653 N94-14792

DATA BASE MANAGEMENT SYSTEMS
Making the connection between information modeling and implementation
| DE93-011588 | p 820 N94-12907
Knowledge base technology for CT-DIMS: Report 1
| DE93-013118 | p 743 N94-13014
AQUIS: A PC-based source information manager
| DE93-012893 | p 707 N94-13383
Magic mirror on the wall, who's the fastest database of them all? A survey of database benchmarks
| AD-A266437 | p 823 N94-13701
An evaluation of ZIM and entity-relational models in managing databases for decision support systems
| ERB-1034 | p 824 N94-14202
Oak Ridge Environmental Information System (ORIES) site workstation information packet for OREIS 6.2
| DE93-010761 | p 825 N94-14458
Earth science and application
| NASA-CR-184381 | p 683 N94-14484
Enterprise integration: A tool's perspective
| DE93-015651 | p 755 N94-14528
Integrating PAW, a graphical analysis interface to Sybase
| DE93-014172 | p 755 N94-14581

DATA BASES
Making the connection between information modeling and implementation
| DE93-011588 | p 820 N94-12907
Vendor information system for innovative treatment technologies. User manual (VISITT version 2.0). Number 2
| PB93-196640 | p 821 N94-12936
Knowledge base technology for CT-DIMS: Report 1
| DE93-013118 | p 743 N94-13014
ARTI Refrigerant Database
| DE93-014774 | p 595 N94-13021
Development of ISO connection-oriented/correctionless gateways
| NASA-CR-193667 | p 821 N94-13030
Archiving of HEAO-1 data products and the creation of a general user's guide to the archive
| NASA-CR-193415 | p 822 N94-13062
View generated database
| NASA-CR-191397 | p 822 N94-13116
Methods for evaluating the predictive accuracy of structural dynamic models
| NASA-CR-191337 | p 671 N94-13124
VIEWCACHE: An incremental pointer-base access method for distributed databases. Part 1: The universal index system design document. Part 2: The universal index system low-level design document. Part 3: User's guide. Part 4: Reference manual. Part 5: UIMS test suite
| NASA-CR-191788 | p 822 N94-13126
EOS workstation
| NASA-CR-191326 | p 736 N94-13132
Parachute system design, analysis, and simulation tool
| DE93-013755 | p 501 N94-13260
Creating a strategic plan for configuration management using computer aided software engineering (CASE) tools
| DE93-013663 | p 746 N94-13394
NASA aerospace database subject scope: An overview
| NASA-SP-7107 | p 823 N94-13401
Magic mirror on the wall, who's the fastest database of them all? A survey of database benchmarks
| AD-A266437 | p 823 N94-13701
Space and Earth sciences, computer systems, and scientific data analysis support, volume 1
| NASA-CR-194535 | p 741 N94-13788
The DREO Elint Browser Utility (DEBU) reference manual
| DSIS-92-03900 | p 603 N94-13837
A data base for aging of structural materials
| DE93-009714 | p 824 N94-13915
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
| NASA-TM-109272 | p 738 N94-13979
Generic results of the space physics community survey
| NASA-CR-194538 | p 818 N94-13984
Summary of the NOAA/NESDIS Workshop on Development of a Global Satellite/In Situ Environmental Database
| NOAA-TR-NESDIS-72 | p 826 N94-14498
A database for propagation models
p 614 N94-14665
ACTS data center p 616 N94-14677
Studying Turbulence Using Numerical Simulation Databases. 4: Proceedings of the 1992 Summer Program
| NASA-CR-194556 | p 643 N94-14745
CarbBank: A structural and bibliographic database for complex carbohydrates
| DE93-015582 | p 827 N94-14803
INGDB-90. The International Neutron Nuclear Data Base for geophysics applications
| DE93-624095 | p 827 N94-14880
The space-time and energy parameters of deuterium braking by the central collision with atoms
| DE93-624144 | p 788 N94-14881

DATA COMPRESSION
Knowledge-based oceanographic image compression
| AD-A265752 | p 821 N94-13041
Image coding using entropy-constrained residual vector quantization
| NASA-CR-193728 | p 744 N94-13113
Estimating the size of Huffman code preambles
p 609 N94-14379
Transform coding for space applications
| NASA-TM-106362 | p 612 N94-14542

DATA CONVERSION ROUTINES
FORTRAN graphics routines for the Macintosh
| DE93-013092 | p 742 N94-12864

DATA FLOW ANALYSIS
Signal design for data communication through rapidly varying linear channels
| ITN-93-85195 | p 601 N94-13567
Simulator for heterogeneous dataflow architectures
| NASA-CR-191545 | p 622 N94-13797
Adaptive Signal Processing Testbed: Software design specification
| DSIS-93-00259 | p 604 N94-13870

DATA INTEGRATION
Data fusion for adaptive control in manufacturing: Impact on engineering information models
| DE93-011555 | p 743 N94-12999
Satellite imagery and exogenous data integration by neural network in automation land-cover classification
| INPE-5480-PRE/1778 | p 686 N94-13729
Nonlinear aspects of data integration for land-cover classification in a neural network environment
| INPE-5479-PRE/1778 | p 686 N94-13789
Advanced Communications ESM System (ACES) testbed: Integration study
| DSIS-93-00345 | p 604 N94-13939
Computer vision and sensor fusion for detecting buried objects
| DE93-012605 | p 700 N94-14566

DATA LINKS
Development of ISO connection-oriented/correctionless gateways
| NASA-CR-193667 | p 821 N94-13030
Characteristics of the amateur radio means of the Arsene satellite
| CNES-NT-131 | p 605 N94-13950
Asynchronous transfer mode link performance over ground networks p 610 N94-14385
Overview of the Scalable Coherent Interface, IEEE STD 1596 (SCI)
| DE93-015247 | p 761 N94-14476

DATA MANAGEMENT
Application of new electro-optic technology to Space Station Freedom data management system
| NASA-CR-177622 | p 538 N94-13257
CCI working group on climate data and its rapporteurs
| WCDMP-21 | p 723 N94-14118
Satellite technology for environmental monitoring in developing countries p 692 N94-14236
A concept for the world environment and disaster observation system p 693 N94-14245
Development of a remote sensing geographic information system for land cover changes and assessment of risk due to natural and man made hazards covering the area of the inner delta of the Yellow River p 694 N94-14249

DATA PROCESSING
JTEC Panel report on knowledge-based systems in Japan
| PB93-170124 | p 820 N94-12801
ICE/ISEE plasma wave data analysis
| NASA-CR-194375 | p 796 N94-13081
SCORE user's manual
| DE93-015987 | p 822 N94-13121
J2000.0 modelling of GEOAIM in the analysis of VLBI data from the NASA crustal dynamics project
| ISBN-0-315-59463-2 | p 684 N94-13368
Magic mirror on the wall, who's the fastest database of them all? A survey of database benchmarks
| AD-A266437 | p 823 N94-13701
Space and Earth sciences, computer systems, and scientific data analysis support, volume 1
| NASA-CR-194535 | p 741 N94-13788
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
| NASA-CR-194175 | p 714 N94-13816
Theory of post-block 2 VLBI observable extraction
| NASA-CR-194543 | p 686 N94-13872
PSM: A new generation of data modeling
| TR-92-13 | p 824 N94-14072
Overview of the ILAS operational data processing system p 690 N94-14220
Visualization techniques to aid in the analysis of multi-spectral astrophysical data sets
| NASA-CR-194489 | p 840 N94-14482
Preprocessing data collected with the ACTS propagation terminal p 616 N94-14676
ACTS data center p 616 N94-14677

DATA PROCESSING EQUIPMENT
Manual on the global data-processing system. Volume 1: (Annex 4 to the WMO regulations) global aspects (1992 edition)
| WMO-485-VOL-1 | p 721 N94-13686
Manual on the global data-processing system. Volume 2: Regional aspects (1992 edition)
| WMO-485-VOL-2 | p 722 N94-14071
The BIRIS server: Integration of a three-dimensional range sensor into a harmony-based realtime architecture
| ERB-1036 | p 765 N94-14201

DATA RECORDERS
PC based A320 quick access recorder readout facility
| PD-AL-9109 | p 744 N94-13077
DATAA: Data acquisition made easy
| DE93-014683 | p 823 N94-13406
Center of trace algorithms for extracting digitized waveforms from two-dimensional images
| DE93-015082 | p 753 N94-14295

DATA REDUCTION
Reduce fluid experiment system flight data from IML-1
| NASA-CR-193835 | p 804 N94-12873
Study on TRMM data utilization for meteorology
| NASDA-CNT-930007 | p 721 N94-13643
Theory of post-block 2 VLBI observable extraction
| NASA-CR-194543 | p 686 N94-13872
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
| EOC-92-01-0007 | p 687 N94-14091
Calibration and in-house validation results of JERS-1 data p 687 N94-14092
Earth observation experiment data analysis
p 687 N94-14093
Results from ERS-1 and JERS-1 SAR calibration experiments and data analysis p 688 N94-14210
Geologic application of JERS-1 SAR data
p 688 N94-14211
An exact processing algorithm for wide beam spaceborne SAR data p 689 N94-14213
Image processing and analysis of airborne POLDER data p 689 N94-14219
Overview of the ILAS operational data processing system p 690 N94-14220
TRMM precipitation radar algorithm
p 690 N94-14224
Estimate of sampling errors of TRMM rainfall observation by using radar-AMeDAS composite data
p 690 N94-14225
Integration of SST data sets using MOS-1 satellite data: For validation and monitoring p 696 N94-14262
Visualization techniques to aid in the analysis of multi-spectral astrophysical data sets
| NASA-CR-194489 | p 840 N94-14482
H2S data reduction
| NASA-CR-193389 | p 617 N94-14743
Exploratory data analysis: Past, present and future
| AD-A266775 | p 774 N94-14788
Image motion photography
| DE93-013962 | p 653 N94-14858

DATA RETRIEVAL
A path-oriented matrix-based knowledge representation system
| NASA-CR-4539 | p 744 N94-13065
The DREO Elint Browser Utility (DEBU) reference manual
| DSIS-92-03900 | p 603 N94-13837

DATA SAMPLING
Estimate of sampling errors of TRMM rainfall observation by using radar-AMeDAS composite data
p 690 N94-14225

DATA STORAGE
Archiving of HEAO-1 data products and the creation of a general user's guide to the archive
| NASA-CR-193415 | p 822 N94-13062
Satellite technology for environmental monitoring in developing countries p 692 N94-14236
The National Storage Laboratory: A collaborative research project
| DE93-015099 | p 760 N94-14475
Earth science and application
| NASA-CR-184381 | p 683 N94-14484
Data collection with the ACTS propagation terminal
p 615 N94-14675

DATA STRUCTURES
PSM: A new generation of data modeling
| TR-92-13 | p 824 N94-14072
AXAF FITS standard for ray trace interchange
| NASA-CR-194025 | p 832 N94-14305

Earth science and application
| NASA-CR-184361 | p 683 N94-14484
Implementation and experimentation with a motion planning system
| ITN-93-85213 | p 755 N94-14505
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630

DATA SYSTEMS
PC based A320 quick access recorder readout facility
| PD-AL-9109 | p 744 N94-13077
Manual on the global data-processing system. Volume 1: (Annex 4 to the WMO regulations) global aspects (1992 edition)
| WMO-485-VOL-1 | p 721 N94-13686
Mongoose ASIC microcontroller programming guide
| NASA-RP-1319 | p 623 N94-13871
Manual on the global data-processing system. Volume 2: Regional aspects (1992 edition)
| WMO-485-VOL-2 | p 722 N94-14071
Payload/GSE/data system interface: Users guide for the VPF (Vertical Processing Facility)
| NASA-CR-194385 | p 532 N94-14148
Asia-Pacific ISY Conference, volume 2
| NASDA-CM-199-VOL-2 | p 688 N94-14209
Sensor operation of Advanced Earth Observing Satellite (ADEOS) p 689 N94-14215
Overview of the ILAS operational data processing system p 690 N94-14220
TRMM precipitation radar algorithm p 690 N94-14224
Development of a remote sensing geographic information system for land cover changes and assessment of risk due to natural and man made hazards covering the area of the inner delta of the Yellow River p 694 N94-14249
Control system design for flexible structures using data models p 527 N94-14646

DATA TRANSFER (COMPUTERS)
Specimen files in VAMAS standard data transfer format (EXAMPLE 1.TXT to EXAMPLE 4.TXT)
| NPL-DMM(A)-90 | p 749 N94-13688

DATA TRANSMISSION
On the end-to-end communication problem in unreliable networks
| ITN-93-85188 | p 598 N94-13195
Application of new electro-optic technology to Space Station Freedom data management system
| NASA-CR-177622 | p 538 N94-13257
Transmission zeros of spacecraft attitude control system
| NAL-TR-1166 | p 540 N94-13339
Signal design for data communication through rapidly varying linear channels
| ITN-93-85195 | p 601 N94-13567
The developments of satellite communications of China p 618 N94-14282
The current situation, trends, international cooperation of space communication technological development in the Republic of Korea p 699 N94-14283
Joint experiments using ETS-5 p 618 N94-14284
Space communications technology research in CRL p 618 N94-14285
NTT's activities in satellite communications technology development p 618 N94-14286
Future outlook on international satellite communications in Asia Pacific region p 618 N94-14287
Technological development for broadcasting satellites in NHK Laboratories p 618 N94-14288
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
| NASA-SP-7085(05) | p 543 N94-14411
Transform coding for space applications
| NASA-TM-106362 | p 612 N94-14542
CAD data exchange with Martin Marietta Energy Systems, Inc., Oak Ridge, TN
| DE93-017233 | p 757 N94-14871

DAYTIME
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method
| DE93-015177 | p 704 N94-14333

DEBONDING (MATERIALS)
Combustion-induced crack/debond propagation in solid propellants p 584 N94-13560
Enhanced NDE systems
| NASA-CR-192603 | p 669 N94-14101

DEBYE-HUCKEL THEORY
Monte Carlo simulation of the OCP freezing transition
| DE93-013039 | p 811 N94-14313

DECAY
Charged scalar particles and (tau) leptonic decay
| DE93-622969 | p 779 N94-12882

DECISION MAKING
Reasoning with uncertain and incomplete information in aerospace applications
| NLR-TP-91366-U | p 763 N94-13529
Decision support for material planners
| ISBN-9-03-860201-4 | p 819 N94-14449
Flexibility and costs in the design process: A decision support model
| ISBN-9-06-814522-3 | p 597 N94-14808

DECISION THEORY
Tree reconstruction from partial orders
| DE93-009841 | p 743 N94-12991
Generating knight's tours without backtracking from errors
| AD-A266807 | p 772 N94-14900

DECODERS
Digital sound: Subjective tests on commentary-quality codecs
| BBC-RD-1993/2 | p 598 N94-12926

DECODING
On the construction and decoding of hyperelliptic codes p 747 N94-13435
Enhanced decoding for the Galileo S-band mission p 609 N94-14380

DECOMPOSITION
Discussion of stress tensor nonuniqueness with application to nonuniform, particulate systems
| DE93-014352 | p 816 N94-13206
On the construction and decoding of hyperelliptic codes p 747 N94-13435
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments
| NASA-TP-3368 | p 813 N94-14409
How to read a phase equilibrium diagram for high-temperature ceramics material as main object
| DE93-512333 | p 582 N94-14513
Mathematic methods and algorithms for real-time applications
| AD-A266776 | p 771 N94-14789

DECOMPRESSION SICKNESS
Metabolic rate measurements comparing supine with upright upper-body exercises
| NASA-CR-4549 | p 729 N94-14028

DECONDITIONING
Health monitoring of Japanese payload specialist: Autonomic nervous and cardiovascular responses under reduced gravity condition (L-0) p 591 N94-13757

DECONTAMINATION
Camera calibration in a hazardous environment performed in situ with automated analysis and verification
| DE93-010274 | p 651 N94-14046

DECOUPLING
Hybrid S(sub N)/Monte Carlo research and results
| DE93-012677 | p 773 N94-14178

DEEP SPACE
Design and application of electromechanical actuators for deep space missions
| NASA-CR-194145 | p 663 N94-14134
Preliminary design and implementation of the baseline digital baseband architecture for advanced deep space transponders p 611 N94-14393
Optimizing interplanetary trajectories with deep space maneuvers
| NASA-CR-4546 | p 532 N94-14851

DEEP SPACE NETWORK
Environmental projects. Volume 15: Environmental assessment: Proposed 1-megawatt radar transmitter at the Mars site
| NASA-CR-194098 | p 598 N94-13090
Sequential ranging: How it works
| NASA-CR-194508 | p 532 N94-13796
The Telecommunications and Data Acquisition Report
| NASA-CR-194388 | p 607 N94-14369
Radio metric errors due to mismatch and offset between a DSN antenna beam and the beam of a troposphere calibration instrument p 607 N94-14370
A cryogenic seven-element HEMT front end for DSS 13 p 608 N94-14375
Insertion loss and noise-temperature contribution of high-temperature superconducting bandpass filters centered at 2.3 and 8.45 GHz p 608 N94-14376
Stability measurements of the radio science system at the 34-m high-efficiency antennas p 609 N94-14381
Performance results of a digital test signal generator p 609 N94-14382
PC4CAST: A tool for DSN load forecasting and capacity planning p 610 N94-14384
Asynchronous transfer mode link performance over ground networks p 610 N94-14385
An overview of the Galileo Optical Experiment (GOPEX) p 610 N94-14386
Galileo Optical Experiment (GOPEX) optical train: Design and validation at the Table Mountain Facility p 610 N94-14390
Preliminary design and implementation of the baseline digital baseband architecture for advanced deep space transponders p 611 N94-14393
Layout and cabling considerations for a large communications antenna array p 611 N94-14395
The flight performance of the Galileo orbiter USO p 611 N94-14398

DEFECTS
1/f noise and oxide traps in MOSFETs
| DE93-007581 | p 619 N94-12942
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
| DE93-012942 | p 577 N94-13032
Changes in electrical device characteristics during the formation of dislocations in situ in the TEM
| DE93-013910 | p 808 N94-13694
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling
| DE93-014655 | p 580 N94-14124
Shock compression and quasielastic release in tantalum
| DE93-014566 | p 811 N94-14329
The effect of initial imperfections on shell stability: An updated review
| LR-695 | p 682 N94-14692

DEFENSE PROGRAM
Defense information infrastructure: Rationale for defense management report decision 918
| AD-A266014 | p 821 N94-12958
STS-28 crew presentation clip
| NASA-TM-109298 | p 531 N94-13640
A history of the Defence Research Establishment, Ottawa
| CTN-93-60737 | p 850 N94-14060
An ultra-compact processor module based on the R3000
| DE93-012549 | p 625 N94-14427

DEFLECTION
Electromagnetic deflection of spinning particles
| DE93-622866 | p 778 N94-12858
Thermal gradient-induced deflection of a thick-walled cylinder with bending residual stresses
| AD-A266347 | p 673 N94-13777
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 1: User's guide
| NASA-CR-191183 | p 663 N94-14445
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 2: Mathematical formulation and analysis
| NASA-CR-191182 | p 664 N94-14446

DEFOCUSING
Depths from focusing and defocusing
| AD-A266644 | p 735 N94-14797

DEFORESTATION
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
| INPE-5454-TDI/496 | p 707 N94-13330
Climatic change due to land surface alterations
| INPE-5495-PRE/1786 | p 721 N94-13672

DEFORMATION
Micromechanical strength effects in shock compression of solids
| DE93-014425 | p 670 N94-12887
The 3-D massively parallel impact simulations using PCTH
| DE93-011593 | p 670 N94-12908
Using a focal-plane array to estimate antenna pointing errors
| NASA-CR-194502 | p 602 N94-13810
Dynamic mechanical deformation of a SiC(sub p)/Al-Li (8090) composite
| DE93-014586 | p 558 N94-14121
Machining and grinding: High rate deformation in practice
| DE93-010718 | p 664 N94-14457
Yield properties of tungsten and tungsten heavy alloys
| AD-A266833 | p 575 N94-14878

DEGASSING
Regional tectonic analysis of Venus as part of the Pioneer Venus guest investigator project
| NASA-CR-194079 | p 842 N94-13561
BAKEOUT: A computer program for predicting diffusive outgassing from stainless steel
| DE93-012613 | p 573 N94-14364

DEGRADATION
Degradation of the visible and near-infrared channels of the advanced very high resolution radiometer on the NOAA-9 spacecraft: Assessment and recommendations for corrections
| NOAA-TR-NESDIS-70 | p 544 N94-13029
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments
| NASA-TP-3368 | p 813 N94-14409
Ion assisted sputter deposition of Mo-Si multilayers
| DE93-013830 | p 583 N94-14693

Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805

DEGREES OF FREEDOM
Control algorithm implementation for a redundant degree of freedom manipulator
[NASA-CR-191339] p 762 N94-13131
Generalized impedance control of a redundant manipulator p 661 N94-13575
Six degree of freedom
[NASA-TM-109295] p 749 N94-13636
Self organized criticality
[DE93-013182] p 773 N94-14320
Implementation and experimentation with a motion planning system
[ITN-93-85213] p 755 N94-14505

DELAY
Three, four, five, six or the complexity of scheduling with communication delays
[CWI-BS-R9229] p 751 N94-14004
Radio metric errors due to mismatch and offset between a DSN antenna beam and the beam of a troposphere calibration instrument p 607 N94-14370

DELAY LINES
Processing, fabrication and demonstration of HTS integrated microwave circuits
[AD-A265789] p 619 N94-12892

DELTA FUNCTION
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

DELTA WINGS
Estimation of critical values and vibration characteristics on supersonic delta wings. Part 2: Locally-stationary time series analysis of nonstationary random responses
[NAL-TR-1179] p 502 N94-13345
Experimental studies of vortex flaps and vortex plates. Part 2: 1.15m span 60 deg delta wing
[NAL-TR-1180T-PT-2] p 502 N94-13454
Experimental studies of vortex flaps and vortex plates. Part 1: 0.53 m span 60 deg delta wing
[DE93-767969] p 505 N94-14059
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322
Navier-Stokes simulation of transonic vortex flow over a delta wing p 640 N94-14606

DEMODULATION
Multiple-symbol differential detection of DPSK with frequency offset
[DREO-TN-92-5] p 606 N94-14063
I/Q demodulation of radar signals with calibration and filtering
[DREO-RN-1119] p 606 N94-14064

DEMODULATORS
Digital quadrature demodulation for radar ESM applications
[DREO-TN-92-10] p 603 N94-13838
Multiple-symbol differential detection of DPSK with frequency offset
[DREO-TN-92-5] p 606 N94-14063
I/Q demodulation of radar signals with calibration and filtering
[DREO-RN-1119] p 606 N94-14064

DEMOGRAPHY
Generic results of the space physics community survey
[NASA-CR-194538] p 818 N94-13984

DENDRITIC CRYSTALS
The influence of a microgravity environment on the dendritic morphology during directional solidification of hypoeutectic Al-Si alloys
[NASA-CR-194139] p 571 N94-13891

DENSE PLASMAS
The 24 GHz measurements of 2.2 lambda conical horn antennas illuminating a conducting sheet
[NASA-TM-109002] p 598 N94-12811
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
[DE93-014129] p 784 N94-14140
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342

DENSITY (MASS/VOLUME)
Preliminary results on the hydrological measurements in the Aegean Sea off Crete: Cruise, Georgia, 1989
[PREPRINT-736] p 725 N94-13500

DENSITY DISTRIBUTION
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332
Cold dark matter halos p 838 N94-13649
The use of polarised neutron reflection for unique density profile determination in thin films
[PB93-187136] p 579 N94-13783
Current distribution tomography for determination of internal current density distributions
[DE93-015463] p 604 N94-13899

DENSITY MEASUREMENT
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
A rocket-borne lidar for studies of the middle atmosphere
[FFI/RAPPORT-92/7034] p 715 N94-13949

DEOXIDIZING
Formation of deoxidization products in iron ingot by the addition of Al, Si, and/or Mn (M-5) p 587 N94-13737

DEOXYRIBONUCLEIC ACID
Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129

DEPOSITION
Role of Ca(++)/calmodulin in the regulation of microtubules in higher plants
[DE93-015885] p 727 N94-12835
Amorphous sol-gel insulating films
[DE93-012859] p 576 N94-12866
Impedance-power effects on plasma polymer surface finish using a helical resonator discharge
[DE93-016454] p 803 N94-14590
Ion assisted sputter deposition of Mo-Si multilayers
[DE93-013830] p 583 N94-14693

DEPTH
Measurement of penetration depth lambda(T) in YBa2Cu3O(7-delta) thin film
[DE93-014587] p 810 N94-14122
Depths from focusing and defocusing
[AD-A266644] p 735 N94-14797

DEPTH MEASUREMENT
Depths from focusing and defocusing
[AD-A266644] p 735 N94-14797

DESCENT TRAJECTORIES
Visual cueing aids for rotorcraft landings p 524 N94-13313
Optimal lateral escape maneuvers for microburst encounters during final approach
[LR-691] p 511 N94-13534

DESERTIFICATION
Climatic change due to land surface alterations
[INPE-5495-PRE/1786] p 721 N94-13672

DESERTS
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424

DESIGN ANALYSIS
A knowledge-based expert system to coordinate CAD/CAE with integration and test
[NASA-CR-191394] p 745 N94-13130
Parachute system design, analysis, and simulation tool
[DE93-013755] p 501 N94-13260
Multidisciplinary design techniques applied to conceptual aerospace vehicle design
[NASA-CR-194409] p 515 N94-13618
Galileo Optical Experiment (GOPEX) optical train: Design and validation at the Table Mountain Facility p 610 N94-14390
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473
The further development and refinement of an expert-systems approach to the creative design of mechanisms and mechanical systems
[AD-A266812] p 665 N94-14901

DESORPTION
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
Construction and test of a facility for photon-stimulated field description using excimer laser and time of flight
[ETN-93-94386] p 657 N94-13996
Quantum state resolved desorption of CO from solid surfaces
[DE93-016876] p 814 N94-14597

DESTRUCTIVE TESTS
Review of test methods for material flammability
[DSIS-93-00480] p 564 N94-13942

DETECTION
A general contact detection algorithm for finite element analysis
[DE93-012846] p 742 N94-12956
Early detection of insulation failure in electric motors
[PB93-198208] p 626 N94-14686
The 4th International Symposium on Analysis and Detection of Explosives
[DE93-620280] p 585 N94-14829

DETERIORATION
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502

DETONATION
Equation of state for detonation products
[DE93-012671] p 583 N94-12921
Hydrogen peroxide safety issues
[DE93-013895] p 565 N94-14346

DETONATION WAVES
High order hybrid numerical simulations of two dimensional detonation waves
[NASA-CR-191506] p 769 N94-13792
Numerical study of shock-induced combustion in methane-air mixtures
[NASA-TM-106354] p 642 N94-14722

DEUTERIUM
Charged-particle evaluation methodology at Lawrence Livermore National Laboratory
[DE93-013429] p 781 N94-13251
The space-time and energy parameters of deuterium braking by the central collision with atoms
[DE93-624144] p 788 N94-14881

DEUTERONS
The space-time and energy parameters of deuterium braking by the central collision with atoms
[DE93-624144] p 788 N94-14881
The evolution of tensor polarization
[DE93-017209] p 790 N94-14897

DIAGNOSIS
Completing fault models for abductive diagnosis
[DE93-003832] p 761 N94-12859

DIALLYL COMPOUNDS
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
[AD-A265832] p 577 N94-12986

DIAMOND FILMS
Correlations of the growth, structure, and stress with the adhesion of diamond films on tungsten
[DE93-012855] p 576 N94-12912
Scanning tunneling microscopy studies of diamond films and optoelectronic materials
[NASA-CR-194363] p 578 N94-13246
Characterization of diamond film growth in a combustion flame
[AD-A266659] p 816 N94-14839

DIAMONDS
Lattice site of helium implanted in Si and diamond
[DE93-015365] p 805 N94-13012
Simulation studies for surfaces and materials strength
[NASA-CR-193305] p 671 N94-13179
Scanning tunneling microscopy studies of diamond films and optoelectronic materials
[NASA-CR-194363] p 578 N94-13246
Machining aspects of nickel-phosphorus coatings
[DE93-013037] p 580 N94-14311

DIATOMIC GASES
Calculation of hypersonic shock structure using flux-split algorithms
[NASA-CR-194296] p 504 N94-13607

DICHROISM
The x ray dichroism experiments using circular polarization
[DE93-013195] p 568 N94-13036

DICTIONARIES
Glossary of SSDC terms and acronyms
[DE93-013697] p 823 N94-13352

DIELECTRIC PROPERTIES
Amorphous sol-gel insulating films
[DE93-012859] p 576 N94-12866
Moisture meter evaluation
[DE93-016581] p 652 N94-14534
Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
[PB93-198851] p 652 N94-14687
A high voltage dielectrically isolated smart power technology based on silicon direct bonding
[LAAS-92492] p 626 N94-14698

DIELECTRICS
Laser CO2 beam transmission through hollow metallic waveguide coated by a thin internal dielectric layer
[ITN-93-85201] p 656 N94-13571
Theoretical investigation of scattering by homogeneous or coated dielectric spheres illuminated with a steady state or pulsed laser beam p 657 N94-13624
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling
[DE93-014655] p 580 N94-14124
Prism-film coupling in anisotropic planar waveguides of epitaxial (101) rutile thin films
[DE93-012912] p 811 N94-14304
Theoretical studies of breakdown in random media
[DE93-018107] p 558 N94-14418
Moisture meter evaluation
[DE93-016581] p 652 N94-14534

Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
| PB93-198851 | p 652 N94-14687
Materials and structures p 546 N94-14835
Electrochemical planarization for microelectronic circuits
| DE93-017214 | p 627 N94-14870

DIES
An experimental study on the effect of die geometry on swell and sag in the parison extrusion stage
| IMI-93RT-42400-1476-G | p 597 N94-14070

DIESEL ENGINES
Futurepath 2
| NASA-TM-109285 | p 518 N94-13623
Biodiesel/aquatic species project report, FY 1992
| DE93-010024 | p 709 N94-14087
Three-dimensional modeling of diesel engine intake flow, combustion and emissions-2
| NASA-CR-191189 | p 519 N94-14448

DIESEL FUELS
Biodiesel/aquatic species project report, FY 1992
| DE93-010024 | p 709 N94-14087
Biofuels for transportation: The road from research to the marketplace
| DE93-000091 | p 585 N94-14454

DIFFERENCE EQUATIONS
Preconditioning and the limit to the incompressible flow equations
| NASA-CR-191500 | p 769 N94-13717
Self-tuning control techniques for multivariable systems
| INPE-5449-TDI/495 | p 765 N94-14084
On a difference equation for generalizations of Charlier polynomials
| REPT-92-101 | p 770 N94-14150

DIFFERENTIAL EQUATIONS
A hybrid Pade-Galerkin technique for differential equations
| NASA-CR-191494 | p 767 N94-13289
Theory for iterative solution of large dynamical systems using parallel computation
| TKK-MAT-A304 | p 760 N94-14187
An adaptive projection method for the incompressible Euler equations
| DE93-016428 | p 639 N94-14434
ASTEC and MODEL: Controls software development at Goddard Space Flight Center p 678 N94-14628
Functional differential equations with piecewise continuous argument
| AD-A266660 | p 772 N94-14840

DIFFERENTIAL GEOMETRY
On the differential structure of matrix-valued rational inner functions
| CWI-BS-R9228 | p 770 N94-14003

DIFFRACTION
On the neutron EDM search in the Laue diffraction by the crystal without a centre of symmetry
| DE93-622971 | p 804 N94-12828
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
| DE93-012905 | p 848 N94-13483
Fabrication p 546 N94-14834

DIFFRACTION PATTERNS
A Fourier transform microscope for x ray and/or gamma ray imaging
| AD-D015742 | p 791 N94-13664
Advanced ballistic range technology
| NASA-CR-194530 | p 533 N94-14540

DIFFRACTOMETERS
Measurement of strain in individual phases of composites before, during, and after mechanical loading
| DE93-014585 | p 558 N94-14119

DIFFUSE RADIATION
Analysis of data from the energetic gamma-ray experiment on the gamma ray observatory
| NASA-CR-194178 | p 847 N94-13087
NREL solar radiation resource assessment project: Status and outlook
| DE93-010034 | p 704 N94-14422

DIFFUSION
Study of multicomponent diffusion and transport phenomena
| DE93-015095 | p 804 N94-13005
Transport properties of disordered porous media from the microstructure
| DE93-016065 | p 806 N94-13152
Mathematical algorithms for multidimensional inverse scattering problems in inhomogeneous medium
| AD-A266440 | p 749 N94-13702
Gas-evaporation in low-gravity field (cogelation mechanism of metal vapors) (M-14) p 588 N94-13746
Growth experiment of organic metal crystal in low gravity (M-21) p 590 N94-13753
Crystal growth of compound semiconductors in a low-gravity environment (InGaAs crystals) (M-22) p 590 N94-13754
Boundary stability under nonequilibrium conditions
| DE93-016259 | p 809 N94-13980

DIFFUSION COEFFICIENT
Stormtime transport of ring current and radiation belt ions
| NASA-CR-194416 | p 714 N94-13793
Contribution to comparison of methods for determining welding procedures for the avoidance of hydrogen cracking
| VTT-PUBS-107 | p 674 N94-13887
Direct determination of alpha particle transport coefficients
| DE93-013488 | p 787 N94-14691
Manufacturing and examination of integrated optical waveguide components in silicon
| ETN-93-94393 | p 793 N94-14704

DIFFUSION FLAMES
Structure of turbulent non-premixed flames modeled with two-step chemistry p 567 N94-14767

DIFFUSION THEORY
Stochastic dynamics: Crossover from 1/f(sup 3) to flicker noise
| DE93-622862 | p 772 N94-12896

DIFFUSIVITY
Temperature dependence of diffusivities, preliminary definition phase
| NASA-CR-192613 | p 648 N94-13326
The resonance broadening theory revisited
| PPL-134 | p 798 N94-13563

DIGITAL COMPUTERS
Adaptive Transfer Function Networks
| DE93-014344 | p 745 N94-13151

DIGITAL DATA
Digital sound: The selection of critical programme material and preparation of recordings for CCIR tests on low bit-rate codecs
| BBC-RD-1993/1 | p 598 N94-12925
Digital sound: Subjective tests on commentary-quality codecs
| BBC-RD-1993/2 | p 598 N94-12926
Evaluation of beta-spline interpolation in digital terrain models
| INPE-5475-TDI/506 | p 684 N94-13364
DATAA: Data acquisition made easy
| DE93-014683 | p 823 N94-13406
Study of computer system as a musical instrument p 747 N94-13439
Net radiation mapping of mountainous terrain using Landsat-5 thematic mapper imagery and digital terrain data
| ISBN-0-315-57755-X | p 685 N94-13475
Development of an automated film-reading system for ballistic ranges
| NASA-CR-194398 | p 650 N94-13815
Advanced Communications ESM System (ACES) testbed: Integration study
| DSIS-93-00345 | p 604 N94-13939
EWTEST signal excision testbed: System evaluation
| DSIS-93-00346 | p 607 N94-14065
Obtaining digital regional planning information from aerial pictures
| REPT-228 | p 700 N94-14810

DIGITAL FILTERS
Spatially-varying IIR filter banks for image coding
| NASA-CR-193727 | p 619 N94-12897
Recursive time-varying filter banks for subband image coding
| NASA-CR-193726 | p 598 N94-12920
A combined analogue and digital pulse compression system using large time bandwidth product signals for use in synthetic aperture radar
| ISBN-0-315-54373-6 | p 600 N94-13489
Robust filters for image smoothing
| ERB-1033 | p 769 N94-13545

DIGITAL RADAR SYSTEMS
A combined analogue and digital pulse compression system using large time bandwidth product signals for use in synthetic aperture radar
| ISBN-0-315-54373-6 | p 600 N94-13489

DIGITAL SIMULATION
Numerical simulation of hypersonic flow for the design of the H-2 orbiting plane (HOPE), part 3
| NAL-TR-1168-PT-3 | p 499 N94-12948
Transmission zeros of spacecraft attitude control system
| NAL-TR-1166 | p 540 N94-13339
The nocturnal wind maximum: An interactive forecast method
| KNMI-TR-142 | p 722 N94-13985
Precipitation verification LAM
| KNMI-TR-143 | p 722 N94-13991
Turbulent particle dispersion in confined swirling flows
| DLR-FB-92-32 | p 637 N94-14045
Numerical simulation of dynamic stall of NACA0012 airfoil oscillating near static stall angle using the Navier-Stokes equations
| DE93-767970 | p 505 N94-14061
Turbulent diffusion in homogeneous shear flow with stable density stratification
| DLR-FB-92-26 | p 639 N94-14443

DIGITAL SYSTEMS
Destination-directed, packet-switched architecture for a geostationary communications satellite network
| NASA-TP-3379 | p 538 N94-13111
Techniques for improving the performance of a simplified electronic fuel controller with incremental actuation for small gas turbine engines
| ISBN-0-315-56062-2 | p 661 N94-13521
Digital quadrature demodulation for radar ESM applications
| DREO-TN-92-10 | p 603 N94-13838
Preliminary design and implementation of the baseline digital baseband architecture for advanced deep space transponders p 611 N94-14393
Coverage aspects of a single frequency network designed for digital audio broadcasting
| BBC-RD-1993/3 | p 616 N94-14742
A fast frame rate 512 x 512 CCD digital camera system
| DE93-013048 | p 653 N94-14792

DIGITAL TECHNIQUES
Intelligent environment for interpretation tasks of remotely sensed images
| INPE-5466-PRE/1774 | p 687 N94-14082

DIGITAL TELEVISION
Optimization of a subband coding for high definition television with motion controlled three dimensional frequency band decomposition
| ETN-93-94396 | p 617 N94-14817

DIMENSIONAL ANALYSIS
Integration of space and in-situ observations to study atmosphere, ocean and land processes
| NASA-CR-194495 | p 683 N94-14500

DIMENSIONAL MEASUREMENT
Rapid intelligent inspection process definition for dimensional measurement in advanced manufacturing
| DE93-011271 | p 748 N94-13480
The use of polarised neutron reflection for unique density profile determination in thin films
| PB93-187136 | p 579 N94-13783

DIMETHYL COMPOUNDS
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
| AD-A265509 | p 560 N94-14794

DIODES
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
| ETN-93-94387 | p 703 N94-13997

DIPOLE MOMENTS
On the neutron EDM search in the Laue diffraction by the crystal without a centre of symmetry
| DE93-622971 | p 804 N94-12828

DIPOLES
Plasma diffusion through multidipole magnetic fields
| INPE-5460-PRE/1768 | p 795 N94-12901

DIRAC EQUATION
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550

DIRECT BROADCAST SATELLITES
The current situation, trends, international cooperation of space communication technological development in the Republic of Korea p 699 N94-14283

DIRECT CURRENT
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
Direct electron heating and current drive with fast waves in D3-D
| DE93-013028 | p 801 N94-14293
A high-precision direct current measuring device over a kiloampere range
| DE93-626409 | p 627 N94-14885

DIRECTION FINDING
Portable multipath measurement system
| DSIS-93-00177 | p 603 N94-13843

DIRECTIONAL SOLIDIFICATION (CRYSTALS)
The influence of a microgravity environment on the dendritic morphology during directional solidification of hypoeutectic Al-Si alloys
| NASA-CR-194139 | p 571 N94-13891
Immiscible phase incorporation during directional solidification of hypermonotectics
| NASA-CR-194412 | p 565 N94-14480

DIRECTIVITY
Measurements of the spatial structure and directivity of 100 KeV photon sources in solar flares using PVO and ISEE-3 spacecraft
| NASA-CR-194080 | p 845 N94-14492

DIRICHLET PROBLEM
Modulational stability of periodic solutions of the Kuramoto-Sivaskinsky equation
| NASA-CR-191502 | p 628 N94-12888
DISASTERS
Application of satellite remote sensing technology in disaster mitigation: A case study of Bangladesh
p 692 N94-14238
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Satellite remote sensing for disaster mitigation
p 693 N94-14244
A concept for the world environment and disaster observation system p 693 N94-14245
A tentative plan on China and Asian-Pacific satellite system for disaster reduction p 693 N94-14247
DISCONTINUITY
Removing noise from discontinuous data
| ITN-93-85211 | p 826 N94-14555
DISLOCATIONS (MATERIALS)
Boundary stability under nonequilibrium conditions
| DE93-016259 | p 809 N94-13980
DISPERSING
A model for fuel fire duration and application to the B-1B bomber
| DE93-013000 | p 512 N94-14292
DISPLACEMENT
Sampling of globular clusters and the distance to the galactic center
| INPE-5446-TDI/492 | p 837 N94-13449
DISPLACEMENT MEASUREMENT
A benchmark bending test of a thick specimen, Part 1: Experiments
| ARL-RR-6-PT-1 | p 670 N94-12927
A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
| ARL-RR-6-PT-2 | p 670 N94-12928
DISPLAY DEVICES
Color image processing for flat panel visual display modeling
| NASA-CR-193660 | p 790 N94-12797
Advanced display object selection methods for enhancing user-computer productivity
| AD-A265806 | p 743 N94-12974
PC based A320 quick access recorder readout facility
| PD-AL-9109 | p 744 N94-13077
A perspective on the FAA approval process: Integrating rotorcraft displays, controls and workload
p 521 N94-13298
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
Handling qualities effects of display latency
p 517 N94-13316
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches
p 517 N94-13323
Programming the multimodal interface
| DE93-013084 | p 748 N94-13576
Eye-gaze and intent: Application in 3D interface control
| DE93-015210 | p 738 N94-14335
An overview of parallel scientific visualization
| DE93-017105 | p 755 N94-14521
DISSOLVING
Synthesis and properties of novel cluster phases
| DE93-017056 | p 577 N94-13072
Modeling surface area to volume effects on borosilicate glass dissolution
| DE93-011891 | p 581 N94-14432
DISTORTION
Electromagnetic wave test p 508 N94-14173
DISTRIBUTED PARAMETER SYSTEMS
Applications of computer algebra to distributed parameter systems p 677 N94-14623
DISTRIBUTED PROCESSING
A network evaluation and analysis tool
| DE93-012647 | p 758 N94-12917
Multicluster
| AD-A265869 | p 758 N94-12930
VIEWCACHE: An incremental pointer-base access method for distributed databases. Part 1: The universal index system design document. Part 2: The universal index system low-level design document. Part 3: User's guide. Part 4: Reference manual. Part 5: UIMS test suite
| NASA-CR-191788 | p 822 N94-13126
The KSR1: Experimentation and modeling of poststore
| DE93-012539 | p 759 N94-13470
Fail-safe PVM: A portable package for distributed programming with transparent recovery
| AD-A266594 | p 749 N94-13779
A distributed, visual object system using aggregation objects with a local namespace
| IME-MET-TR-007 | p 764 N94-13860
Distributed processor Monte Carlo: MCNP results on a 16-node IBM cluster
| DE93-012639 | p 752 N94-14176
Storage systems for national information assets
| DE93-015101 | p 825 N94-14331
Computational mechanics and supercomputing at LLNL
| DE93-016453 | p 754 N94-14435
Toward a verifiable approach to the design of concurrent computations
| DE93-012908 | p 756 N94-14844
DISTRIBUTION FUNCTIONS
Smooth transitions between bump rendering algorithms
| DE93-012504 | p 742 N94-12883
Fatigue predictions and scatter
| LR-696 | p 675 N94-13933
DISULFIDES
Dry film lubricant evaluation
| DE93-013114 | p 578 N94-13118
DIVERGENCE
Discussion of stress tensor nonuniqueness with application to nonuniform, particulate systems
| DE93-014352 | p 816 N94-13206
DIVERTERS
Dependence of beta(tau) on plasma shape in D3-D
| DE93-015473 | p 800 N94-13900
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T.
| DE93-012964 | p 607 N94-14291
Variation of divertor plasma parameters with divertor depth for H-mode discharges in D3-D
| DE93-015475 | p 801 N94-14347
D3-D research operations
| DE93-016729 | p 802 N94-14519
DMSP SATELLITES
DMSP F11 SSM/T-2 calibration and validation
| AD-A265817 | p 719 N94-12978
DOCUMENTATION
Goddard Space Flight Center robotics demo
| NASA-TM-109302 | p 662 N94-13604
PSM: A new generation of data modeling
| TR-92-13 | p 824 N94-14072
DOCUMENTS
Glossary of SSDC terms and acronyms
| DE93-013697 | p 823 N94-13352
DOMAINS
Domain connectivity among systems of overset grids
| NASA-CR-193390 | p 508 N94-14326
DOMES (STRUCTURAL FORMS)
Some flow properties of telescope enclosures estimated from water channel tests: Application of the flow visualization techniques
| NAL-TR-1178T | p 830 N94-13452
DOMESTIC SATELLITE COMMUNICATIONS SYSTEMS
The developments of satellite communications of China p 618 N94-14282
The current situation, trends, international cooperation of space communication technological development in the Republic of Korea p 699 N94-14283
DOORS
The development of inspection and repair methods for the C-17 aft cargo door
| LR-704 | p 499 N94-13904
DOPED CRYSTALS
Poling of thin polymer films in electro optic applications
| AD-A266562 | p 579 N94-13584
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells
| DE93-010009 | p 704 N94-14110
Laser and spectroscopic properties of Yb-doped apatite crystals
| DE93-014656 | p 810 N94-14125
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
| DE93-012713 | p 580 N94-14179
Structure and stability of microvoids in A-Si:H
| DE93-016625 | p 813 N94-14413
Is K3C60 a line phase?
| DE93-016700 | p 813 N94-14517
Time resolved measurement of electron temperatures of exploding foil x ray laser plasmas
| DE93-017161 | p 803 N94-14894
DOPPLER EFFECT
Trellis coding with Continuous Phase Modulation (CPM) for satellite-based land-mobile communications
| NASA-CR-191325 | p 604 N94-13909
DOPPLER RADAR
Venus gravity
| NASA-CR-194077 | p 841 N94-12823
Development of a global backscatter model for NASA's laser atmospheric wind sounder
| NASA-CR-192581 | p 718 N94-12957
Coherent Doppler lidar signal covariance including wind shear and wind turbulence
| NASA-CR-194492 | p 721 N94-13723
DORNIER AIRCRAFT
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
| NAL-TR-1175 | p 513 N94-13344
Performance evaluation tests of the GPS/DGPS navigation system installed in the NAL Dornier 228: Preliminary ground test results
| NAL-TM-649 | p 513 N94-13346
DOSIMETERS
Study on the biological effect of cosmic radiation and the development of radiation protection technology (L-11) p 593 N94-13768
Investigations of low-temperature neutron embrittlement of ferritic steels
| DE93-015460 | p 573 N94-14700
DOUBLE SIDEBAND TRANSMISSION
The MRIS feasibility study
| NASA-TM-107763 | p 597 N94-12804
DOWNLINKING
Sequential ranging: How it works
| NASA-CR-194508 | p 532 N94-13796
Simulation of downlink synchronization for a frequency-hopped satellite communication system
| DSIS-93-00477 | p 605 N94-13941
Stability measurements of the radio science system at the 34-m high-efficiency antennas p 609 N94-14381
Transform coding for space applications
| NASA-TM-106362 | p 612 N94-14542
DRAG MEASUREMENT
Aerodynamics of a sphere and an oblate spheroid for Mach numbers from 0.6 to 10.5 including some effects of test conditions
| NASA-TM-109016 | p 500 N94-13172
DRAG REDUCTION
Direct simulation of polymer drag reduction in free shear flows and vortex dipoles p 644 N94-14755
DRAINAGE
BOAST 2 for the IBM 3090 and RISC 6000
| DE93-000138 | p 638 N94-14351
DRILLING
Recent results from material processing studies on new generation lasers
| DE93-013841 | p 653 N94-12898
Promotion of geothermal energy development in 1991
| DE93-799057 | p 701 N94-13214
Overview: Gas hydrate geology and geography
| DE93-014043 | p 688 N94-14151
DROP SIZE
A parameterization of cloud droplet nucleation
| DE93-007998 | p 718 N94-12903
Experimental determination of droplets local mean diameter of a sprag from impinging jets
| INPE-5469-TDI/500 | p 631 N94-13365
DROPS (LIQUIDS)
A parameterization of cloud droplet nucleation
| DE93-007998 | p 718 N94-12903
Linkage of anthropogenic aerosol to clouds and climate
| DE93-016434 | p 719 N94-13080
Experimental determination of droplets local mean diameter of a sprag from impinging jets
| INPE-5469-TDI/500 | p 631 N94-13365
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
Drop dynamics in space and interference with acoustic field (M-15) p 588 N94-13747
Liquid metal drop ejection
| NASA-CR-193718 | p 572 N94-14133
Droplet-turbulence interactions in sprays exposed to supercritical environmental conditions
| NASA-CR-194408 | p 638 N94-14308
DROSOPHILA
Genetic effects of HZE and cosmic radiation (L-9)
p 593 N94-13766
DROUGHT
Sea surface temperature forcing and phase locking of Nordeste precipitation
| DE93-011873 | p 723 N94-14426
DRY HEAT
Hot Dry Rock energy
| DE93-014452 | p 702 N94-13403
DRYING
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
| AD-A265827 | p 577 N94-12985
DUAL THRUST NOZZLES
Evaluation of dual flow thrust vector nozzles with exhaust stream impingement
| NASA-CR-193392 | p 630 N94-13078

Design and evaluation of single and dual flow thrust vector nozzles with post exit vanes
[NASA-CR-193393] p 638 N94-14086
DUCTED FAN ENGINES
Active control of fan-generated plane wave noise
[NASA-TM-109008] p 777 N94-14481
DUCTED FLOW
Fully developed turbulent flow in rectangular interrupted-plate ducts
[ISBN-0-315-63594-0] p 632 N94-13474
DUCTED ROCKET ENGINES
Hypersonic propulsion characterization p 505 N94-14156
DUCTILITY
Fracture behavior of vanadium/vanadium silicide in-situ composites
[DE93-013422] p 556 N94-13389
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
Machining and grinding: High rate deformation in practice
[DE93-010718] p 664 N94-14457
DUCTS
Fully developed turbulent flow in rectangular interrupted-plate ducts
[ISBN-0-315-63594-0] p 632 N94-13474
DUFFING DIFFERENTIAL EQUATION
Stability of subharmonics and escape phenomena in the twin-well potential duffing system p 775 N94-13235
DUMMIES
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972
DURABILITY
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Reflective coatings for solar applications
[DE93-010026] p 702 N94-13381
Canonical correlation of waste glass compositions and durability, including pH
[DE93-012754] p 578 N94-13493
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A266350] p 571 N94-13697
Optical and physical properties of the LiSrAlF6:Cr laser crystal
[DE93-014657] p 808 N94-13881
Relationship between borosilicate glass composition, structure, and durability test response (SRS)
[DE93-013578] p 581 N94-14343
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574
DUST
Infrared transmission and path radiance through dust and fog
[AD-A265825] p 791 N94-12979
DWARF STARS
Spectra of late type dwarf stars of known abundance for stellar population models
[NASA-CR-194301] p 831 N94-13681
Rocket and laboratory studies in astronomy
[NASA-CR-194410] p 832 N94-13966
DYE LASERS
Recent results from material processing studies on new generation lasers
[DE93-013841] p 653 N94-12898
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
Single event effects and laser simulation studies
[NASA-CR-194506] p 657 N94-13812
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
DYNAMIC CHARACTERISTICS
System identification for Space Station Freedom using observer/Kalman filter Markov parameters
[NASA-CR-191521] p 539 N94-12976
Investigation of an aeroelastic oscillator: Analysis of one-degree-of-freedom galloping with combined translational and torsional effects
[LR-707] p 527 N94-13906
Computational diagnostics for detecting phase transitions during nanoindentation
[DE93-016536] p 813 N94-14439
DYNAMIC CONTROL
A component modes projection and assembly model reduction methodology for articulated, multi-flexible body structures p 677 N94-14622
Computational Controls Workstation: Algorithms and hardware p 678 N94-14626
Control system design for flexible structures using data models p 527 N94-14646
PACE: A test bed for the dynamics and control of flexible multibody systems p 527 N94-14650
DYNAMIC LOADS
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 1: User's guide
[NASA-CR-191183] p 663 N94-14445
DYNAMIC MODELS
Methods for evaluating the predictive accuracy of structural dynamic models
[NASA-CR-191337] p 671 N94-13124
X ray emission from dynamical shock models in hot-star winds
[NASA-CR-194093] p 847 N94-13288
A model for rotorcraft flying qualities studies p 523 N94-13308
An analytic modeling and system identification study of rotor/fuselage dynamics at hover p 524 N94-13312
Attitude determination of stratospheric balloons using Kalman filters
[INPE-5498-TDI/513] p 649 N94-13366
Dynamics and design of nonholonomic robotic mechanical systems
[ISBN-0-315-72009-3] p 662 N94-13597
Transition of building energy consumption using multi-input, single-output dynamic model
[VTT-PUBS-116] p 597 N94-14055
Stress stiffening and approximate equations in flexible multibody dynamics p 677 N94-14620
DYNAMIC PRESSURE
Dynamic soil pressures on rigid cylindrical vaults
[DE93-013930] p 676 N94-14585
DYNAMIC PROGRAMMING
Parameter identification of a model of the process of software development
[REPT-93-008] p 750 N94-13807
Speaker independent recognition of isolated words using vector quantization and neural networks
[ETN-93-94390] p 616 N94-14724
DYNAMIC RESPONSE
Structural design/margin assessment
[NASA-TP-3410] p 669 N94-12831
Molecular solvent-dynamical effects on activated electron-transfer kinetics: How important is solvent friction?
[AD-A265886] p 779 N94-12894
Movement of deployable truss p 531 N94-13280
Development of test techniques to simulate high-frequency mechanical shock on weapon components
[KCP-613-4998] p 675 N94-13907
Some aspects of sheet forming simulation using explicit finite element techniques
[DE93-012479] p 663 N94-13975
Spatial operator algebra for flexible multibody dynamics p 679 N94-14631
Non-recursive augmented Lagrangian algorithms for the forward and inverse dynamics of constrained flexible multibodies p 679 N94-14633
Computational strategies in the dynamic simulation of constrained flexible MBS p 679 N94-14635
Simulation of linear mechanical systems p 680 N94-14641
DYNAMIC STABILITY
Movement of deployable truss p 531 N94-13280
Study of a one-dimensional deployable structure employing telescopic members p 531 N94-13282
DYNAMIC STRUCTURAL ANALYSIS
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations
[NASA-TM-109009] p 514 N94-12850
Dynamics of adaptive structures: Design through simulations
[NASA-CR-193724] p 540 N94-13112
Methods for evaluating the predictive accuracy of structural dynamic models
[NASA-CR-191337] p 671 N94-13124
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
[NASA-TM-4493] p 520 N94-13255
Optical fiber sensors for materials and structures characterization
[NASA-CR-194090] p 791 N94-13353
Variational approach to probabilistic finite elements
[NASA-CR-187179] p 674 N94-13873
Some frequency and damping measurements of laminated beryllium beams
[DE93-015909] p 676 N94-14530
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
[NASA-CR-194515] p 677 N94-14618
Stress stiffening and approximate equations in flexible multibody dynamics p 677 N94-14620
Some experiences with Krylov vectors and Lanczos vectors p 677 N94-14621
Spatial operator algebra for flexible multibody dynamics p 679 N94-14631
Non-recursive augmented Lagrangian algorithms for the forward and inverse dynamics of constrained flexible multibodies p 679 N94-14633
Computational strategies in the dynamic simulation of constrained flexible MBS p 679 N94-14635
Parallel O(log n) algorithms for open- and closed-chain rigid multibody systems based on a new mass matrix factorization technique p 679 N94-14636
Parallel methods for dynamic simulation of multiple manipulator systems p 680 N94-14637
Space Station Common Berthing Mechanism, a multi-body simulation application p 544 N94-14640
Simulation of linear mechanical systems p 680 N94-14641
Computational issues in optimal tuning and placement of passive dampers p 681 N94-14647
Computational Control Workstation: Users' perspectives p 681 N94-14648
DYNAMIC TESTS
Identifying the NAL spaceplane aerodynamic model using dynamic wind tunnel tests
[NAL-TR-1171] p 500 N94-12951
Movement of deployable truss p 531 N94-13280
Study of a one-dimensional deployable structure employing telescopic members p 531 N94-13282
Smart skin technology development for measuring ice accretion, stall, and high AOA aircraft performance. Part 1: Capacitive ice detector development
[NASA-CR-194252] p 511 N94-13424
Machinery dynamics activities in Canadian industries
[IME-MET-TR-006] p 663 N94-14147
A program for the investigation of the Multibody Modeling, Verification, and Control Laboratory p 682 N94-14652
DYNAMICAL SYSTEMS
Theory for iterative solution of large dynamical systems using parallel computation
[TKK-MAT-A304] p 760 N94-14187
Identification of continuous-time dynamical systems: Neural network based algorithms and parallel implementation
[DE93-014427] p 766 N94-14737
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738

E

EARLY STARS
A photometric study of massive x-ray binaries
[ITN-93-85207] p 829 N94-13231
EARLY WARNING SYSTEMS
A program of correlated observations using the EGRET instrument on GRO and the IMB neutrino detector
[NASA-CR-194367] p 783 N94-13856
EARTH ATMOSPHERE
National atmospheric sciences program, fiscal years 1987-1990
[NSF-92-16] p 711 N94-12794
Determination of spectroscopic properties of atmospheric molecules from high resolution vacuum ultraviolet cross section and wavelength measurements
[NASA-CR-194024] p 712 N94-13092
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
[INPE-5454-TDI/496] p 707 N94-13330
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912
Terrestrial environment (climatic) criteria guidelines for use in aerospace vehicle development, 1993 revision
[NASA-TM-4511] p 533 N94-14824
EARTH CORE
Simultaneous solution for core magnetic field and fluid flow beneath an electrically conducting mantle
[NASA-TM-4536] p 716 N94-13960
EARTH CRUST
J2000.0 modelling of GEOAIM in the analysis of VLBI data from the NASA crustal dynamics project
[ISBN-0-315-59463-2] p 684 N94-13368
The determination of crustal motions using laser ranging to Lageos-2 and Lageos-1
[NASA-CR-193787] p 717 N94-14306

EARTH ENVIRONMENT
National atmospheric sciences program, fiscal years 1987-1990
| NSF-92-16 | p 711 N94-12794
A concept for the world environment and disaster observation system p 693 N94-14245
EARTH IONOSPHERE
The role of ionospheric plasma in the magnetosphere
| NASA-CR-194404 | p 716 N94-13967
Ionospheric calibration for single frequency altimeter measurements
| NASA-CR-194282 | p 716 N94-14049
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
| DE93-015084 | p 612 N94-14512
EARTH MAGNETOSPHERE
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
| AD-A265805 | p 834 N94-12971
TROPIX: A solar electric propulsion flight experiment
| NASA-TM-106297 | p 534 N94-13028
Advances in low energy neutral atom imaging techniques
| DE93-012745 | p 782 N94-13492
Stormtime transport of ring current and radiation belt ions
| NASA-CR-194416 | p 714 N94-13793
Energetic neutral atoms: Imaging the magnetospheric ring current
| NASA-CR-194339 | p 715 N94-13826
The role of ionospheric plasma in the magnetosphere
| NASA-CR-194404 | p 716 N94-13967
Investigations of transitions from order to chaos in dynamical systems
| DE93-014438 | p 818 N94-14738
EARTH MANTLE
Simultaneous solution for core magnetic field and fluid flow beneath an electrically conducting mantle
| NASA-TM-4536 | p 716 N94-13960
EARTH MOVEMENTS
Dynamic soil pressures on rigid cylindrical vaults
| DE93-013930 | p 676 N94-14585
EARTH OBSERVATIONS (FROM SPACE)
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
| INPE-5444-TDI/490 | p 720 N94-13614
Minutes of the Sixth CEOS Plenary Meeting
| NASA-TM-108252 | p 542 N94-14112
Some potentials of the Indonesian region for Earth observation p 692 N94-14237
Earth observation from low-inclination orbit as a necessary complement to polar missions p 694 N94-14248
ERS-1 system
| ESA-SP-1146 | p 699 N94-14353
EARTH OBSERVING SYSTEM (EOS)
EOS workstation
| NASA-CR-191326 | p 736 N94-13132
Phase aligner for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
| NASA-TM-4518 | p 623 N94-13878
Minutes of the Sixth CEOS Plenary Meeting
| NASA-TM-108252 | p 542 N94-14112
EARTH ORBITAL ENVIRONMENTS
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
| NASA-CR-193647 | p 575 N94-12789
Meteoroid environment near the Earth-Moon system
| NASA-CR-193670 | p 835 N94-13203
Surface characterization of LDEF materials
| NASA-CR-194519 | p 543 N94-14683
Atomic research
| NASA-CR-193843 | p 788 N94-14905
EARTH ORIENTATION
The determination of crustal motions using laser ranging to Lageos-2 and Lageos-1
| NASA-CR-193787 | p 717 N94-14306
Use of global positioning system measurements to determine geocentric coordinates and variations in Earth orientation p 514 N94-14372
EARTH RADIATION BUDGET
Nimbus-7 Earth radiation budget calibration history. Part 1: The solar channels
| NASA-RP-1316 | p 844 N94-13963
Space measurements for determining the Earth's energy and water cycles p 690 N94-14227
Earth radiation budget, cloud, and aerosol parameters derived from AVHRR and TOVS measurements p 691 N94-14233
EARTH RADIATION BUDGET EXPERIMENT
Nimbus-7 Earth radiation budget calibration history. Part 1: The solar channels
| NASA-RP-1316 | p 844 N94-13963
EARTH RESOURCES
Minutes of the Sixth CEOS Plenary Meeting
| NASA-TM-108252 | p 542 N94-14112
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
| DE93-014032 | p 711 N94-14859
EARTH ROTATION
The 1990 Western Pacific Geophysics meeting
| NASA-CR-193456 | p 712 N94-13334
Variations common to the interplanetary magnetic field, the zonal atmospheric circulation and the Earth's rotation
| COMMUNICATIONS-SER-B-157 | p 837 N94-13504
On the space-time ocean current variability and its effects on the length-of-day
| ISBN-0-315-59510-8 | p 726 N94-14205
The determination of crustal motions using laser ranging to Lageos-2 and Lageos-1
| NASA-CR-193787 | p 717 N94-14306
EARTH SCIENCES
National atmospheric sciences program, fiscal years 1987-1990
| NSF-92-16 | p 711 N94-12794
A history of the Defence Research Establishment, Ottawa
| CTN-93-60737 | p 850 N94-14060
Applications of the Advanced Light Source to problems in the earth, soil, and environmental sciences
| DE93-015258 | p 710 N94-14477
The 1991 research and technology report, Goddard Space Flight Center
| NASA-TM-108738 | p 851 N94-14791
EARTH SURFACE
Climatic change due to land surface alterations
| INPE-5495-PRE/1786 | p 721 N94-13672
Advanced solid-state array spectroradiometer data collection during HAPEX-2 Sahel
| NASA-CR-194144 | p 808 N94-13875
EARTH TERMINALS
SCAILET: An intelligent assistant for satellite ground terminal operations
| NASA-TM-105879 | p 538 N94-13918
The ACTS propagation terminal delivery and support p 615 N94-14674
ACTS propagation experiment discussion: Ka-band propagation measurements using the ACTS propagation terminal and the CSU-CHILL and Space Communications Technology Center Florida propagation program p 616 N94-14678
EARTH TIDES
Tidal interactions in the Earth Moon system
| COMMUNICATIONS-SER-B-160 | p 837 N94-13503
EARTH-MOON SYSTEM
Meteoroid environment near the Earth-Moon system
| NASA-CR-193670 | p 835 N94-13203
Tidal interactions in the Earth Moon system
| COMMUNICATIONS-SER-B-160 | p 837 N94-13503
EARTHQUAKES
The 1990 Western Pacific Geophysics meeting
| NASA-CR-193456 | p 712 N94-13334
Dynamic soil pressures on rigid cylindrical vaults
| DE93-013930 | p 676 N94-14585
EBERT SPECTROMETERS
NASA airborne satellite instrumentation calibrator (NASIC) technical reference
| NASA-RP-1315 | p 545 N94-13713
ECHELLE GRATINGS
Photometry and spectroscopy in the open cluster Alpha Persei, 2
| NASA-CR-193397 | p 833 N94-14358
ECLIPSING BINARY STARS
The soft x ray transient Cen X-4 in quiescence
| NASA-CR-194033 | p 833 N94-14406
Analysis of the IUE spectra of the strongly interacting binary beta Lyrae
| NASA-CR-194118 | p 833 N94-14493
ECOLOGY
Molten carbonate fuel cell product development test environmental assessment/protection plan
| DE93-000288 | p 702 N94-13380
Gordon Research Conference on Chronobiology, 1991
| AD-A266354 | p 728 N94-13698
Minutes of the Sixth CEOS Plenary Meeting
| NASA-TM-108252 | p 542 N94-14112
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
| DE93-014032 | p 711 N94-14859
ECONOMIC ANALYSIS
Hot Dry Rock energy
| DE93-014452 | p 702 N94-13403
Field of solar collectors: Effect of shadowing on the optimal field design
| ITN-93-85197 | p 702 N94-13570
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
| DE93-010025 | p 584 N94-14089
ECONOMIC DEVELOPMENT
Fourteenth National Industrial Energy Technology Conference: Proceedings
| DE93-016698 | p 710 N94-14516
ECONOMIC FACTORS
Sequestering carbon dioxide in industrial polymers: Building materials for the 21st century
| DE93-016087 | p 580 N94-14297
ECOSYSTEMS
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
| DE93-015093 | p 717 N94-14338
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
| DE93-014032 | p 711 N94-14859
EDDY VISCOSITY
Two-dimensional Navier-Stokes heat transfer analysis for rough turbine blades
| NASA-TM-106008 | p 629 N94-13027
A multiple-scale turbulence model for incompressible flow
| NASA-TM-106113 | p 631 N94-13385
An implicit finite volume nodal point scheme for the solution of two-dimensional compressible Navier-Stokes equations p 640 N94-14603
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749
LES versus DNS: A comparative study p 644 N94-14753
A transport equation for eddy viscosity p 646 N94-14762
EDGE DETECTION
Feature extraction and classification algorithms for high dimensional data
| NASA-CR-194298 | p 743 N94-13023
EDUCATION
Lecture notes on software process improvement
| AD-A265200 | p 744 N94-13049
Workshop for coordinating South Carolina's pre-college systemic initiatives in science and mathematics
| DE93-012263 | p 818 N94-13216
Selected data on academic science and engineering R and D expenditures: Fiscal Year 1991
| NSF-92-329 | p 819 N94-13982
Oak Ridge Environmental Information System (ORIES) site workstation information packet for OREIS 6.2
| DE93-010761 | p 825 N94-14458
Educational module for the Higher Agricultural Education. Part 2: Eutrophication observed by remote sensing: An educational approach to water quality monitoring
| BCRS-92-11B | p 818 N94-14462
Nonlinear analysis, scientific computation, and continuum mechanics applied to the science of materials
| AD-A266641 | p 817 N94-14680
Center of excellence in rotary wing technology
| AD-A266655 | p 510 N94-14799
Educational module for the higher agricultural education. Part 1: Land use classification using satellite pictures
| BCRS-92-11A | p 819 N94-14809
EFFECTIVE PERCEIVED NOISE LEVELS
Noise levels from a model turbofan engine with simulated noise control measures applied
| NASA-TM-106318 | p 518 N94-14036
EFFICIENCY
Robot-task compliance: The energy criterion
| ITN-93-85196 | p 763 N94-13568
EFFUSIVES
Estimation of vegetation damage due to ash fall in Mt. Pinatubo area using MOS-1 data p 695 N94-14259
EGGS
Amphibian fertilization and development in microgravity p 594 N94-13770
EIGENVALUES
On curve veering and flutter of rotating blades
| NASA-TM-106282 | p 670 N94-12872
Optimization and eigenvalue computation with application to meteorology and oceanography
| DE93-015310 | p 744 N94-13024
A robust multilevel simultaneous eigenvalue solver
| NASA-CR-191491 | p 767 N94-13202
Some experiences with Krylov vectors and Lanczos vectors p 677 N94-14621
On I(1): Optimal decentralized performance p 681 N94-14643
Spherical anharmonic oscillator in self-similar approximation
| DE93-626622 | p 772 N94-14890

EIGENVECTORS
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
|AD-A265805| p 834 N94-12971
A robust multilevel simultaneous eigenvalue solver
|NASA-CR-191491| p 767 N94-13202
EJECTION
Liquid metal drop ejection
|NASA-CR-193718| p 572 N94-14133
ELASTIC DEFORMATION
Stress stiffening and approximate equations in flexible multibody dynamics p 677 N94-14620
ELASTIC MEDIA
Thermodiffusion in heterogeneous elastic solids and homogenization
|REPT-14/1993| p 578 N94-13468
ELASTIC PROPERTIES
Modeling the impact behavior of AD85 ceramic under multi-axial loading
|AD-A265877| p 576 N94-12932
A process for evaluation of mechanical behavior of surface films
|W-1/92| p 579 N94-14007
ELASTIC SCATTERING
Measurements of scattering processes in negative ion-atom collisions
|DE93-013863| p 779 N94-12940
Calculation of electron-lithium scattering using the coupled-channel optical method
|DE93-623049| p 806 N94-13226
High energy hadron-hadron collisions
|DE93-015584| p 784 N94-13927
Resonances in the Sigma NN system
|DE93-014353| p 785 N94-14144
The E2 N(yields)(Delta) transition from polarized Compton scattering
|DE93-012522| p 785 N94-14363
Scattering calculations and confining interactions
|NASA-CR-194242| p 786 N94-14549
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550
Proton-proton scattering contribution to emittance growth
|DE93-016090| p 787 N94-14588
ELASTIC WAVES
Micromechanical strength effects in shock compression of solids
|DE93-014425| p 670 N94-12887
ELASTOMERS
Compatibility testing of vacuum seal materials
|DE93-014366| p 663 N94-14113
Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black
|DE93-012707| p 559 N94-14690
ELASTOPLASTICITY
Variational approach to probabilistic finite elements
|NASA-CR-187179| p 674 N94-13873
Elastic-plastic mixed-iterative finite element analysis: Implementation and performance assessment
|NASA-TM-106164| p 675 N94-13919
A process for evaluation of mechanical behavior of surface films
|W-1/92| p 579 N94-14007
ELASTOSTATICS
Torsion problem of elastostatics: An application of boundary element method and relation with conformal mapping
|DSIS-92-03794| p 674 N94-13833
ELECTRIC BATTERIES
Battery testing at Argonne National Laboratory
|DE93-011761| p 624 N94-14012
ELECTRIC CHARGE
Electric charge quantization
|DE93-622901| p 778 N94-12845
Determination of critical density of charge
|DE93-622897| p 775 N94-12877
A method for determination of the superficial charge density
|DE93-622896| p 619 N94-12891
Stripping efficiencies for 277 MeV/amu gold beam on copper foils
|DE93-014306| p 569 N94-13221
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
|DE93-012713| p 580 N94-14179
The electric field of a current-carrying conductor
|DE93-626637| p 617 N94-14892
ELECTRIC CONDUCTORS
Mutual inductance between partially wound tori and a bifilar conductor
|ETN-93-94388| p 624 N94-13998
Utilization of boundary element method for extraction of frequency dependent conductivity parameters of lossy intra-chip transmission lines
|ETN-93-94385| p 771 N94-14807
ELECTRIC CONNECTORS
Rigid-flexible printed wiring boards
|DE93-013938| p 620 N94-13094
Flex-gear electrical power transmission
|NASA-CR-194422| p 661 N94-13445
Changes in electrical device characteristics during the formation of dislocations in situ in the TEM
|DE93-013910| p 808 N94-13694
Study of the intermateability of Cannon and Souriau subminiature connectors
|CNES-NT-132| p 624 N94-13951
Microwave interconnection
|DE93-016580| p 625 N94-14533
ELECTRIC CONTACTS
Flex-gear electrical power transmission
|NASA-CR-194422| p 661 N94-13445
Miniature mechanism assembly
|DE93-015595| p 624 N94-13928
Study of novel conductive paints for solar cell electromagnetic fields
|DE93-015088| p 581 N94-14337
ELECTRIC CURRENT
Advanced magnetic flux compression generator development issues: A comparison of coaxial and disk generators
|DE93-014025| p 794 N94-12849
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
Polarization effects in optical fiber current sensors based on Sagnac interferometers with 3 by 3 couplers
|DE93-012665| p 792 N94-14367
The electric field of a current-carrying conductor
|DE93-626637| p 617 N94-14892
ELECTRIC DIPOLES
On the neutron EDM search in the Laue diffraction by the crystal without a centre of symmetry
|DE93-622971| p 804 N94-12828
ELECTRIC DISCHARGES
Determination of critical density of charge
|DE93-622897| p 775 N94-12877
Lightning simulation and determination of expected striking points
|ITN-93-85202| p 719 N94-13188
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
ELECTRIC FIELD STRENGTH
Lightning simulation and determination of expected striking points
|ITN-93-85202| p 719 N94-13188
Induced voltages at air gaps due to electromagnetic field caused by direct and indirect lightning strokes
|ITN-93-85203| p 599 N94-13237
ELECTRIC FIELDS
Investigation of dynamics of plasma fluxes generated by the quasi-stationary plasma accelerator P-50
|DE93-621665| p 794 N94-12854
Electrodynamics of the middle atmosphere: Superpressure balloon program
|NASA-CR-193671| p 712 N94-13293
Folded waveguide designs for tokamaks
|DE93-013274| p 798 N94-13577
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
|AD-A266346| p 622 N94-13776
Analysis of microstrip patch antennas with nonzero surface resistance
|NASA-TP-3362| p 604 N94-13916
Implicit multi-fluid simulation of interpenetrating plasmas
|DE93-013351| p 801 N94-14342
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
|DE93-012592| p 789 N94-14460
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
|DE93-015474| p 802 N94-14583
The electric field of a current-carrying conductor
|DE93-626637| p 617 N94-14892
ELECTRIC HYBRID VEHICLES
Technology assessments of advanced energy storage systems for electric and hybrid vehicles
|DE93-014395| p 701 N94-12913
ELECTRIC MOTOR VEHICLES
Battery testing at Argonne National Laboratory
|DE93-011761| p 624 N94-14012
ELECTRIC MOTORS
Advanced electric motor technology flux mapping
|NASA-CR-193824| p 621 N94-13186
Compatibility of refrigerants and lubricants with motor materials
|DE93-014768| p 583 N94-14801
ELECTRIC POTENTIAL
The study of structure-processing-property relations in copper oxide based high (Tc) superconductors
|DE93-015066| p 804 N94-13003
Lightning simulation and determination of expected striking points
|ITN-93-85202| p 719 N94-13188
Induced voltages at air gaps due to electromagnetic field caused by direct and indirect lightning strokes
|ITN-93-85203| p 599 N94-13237
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
Separation of biogenic materials by electrophoresis under zero gravity (L-3) p 592 N94-13760
Development of UHF spark-switched L-C Oscillators
|DE93-015019| p 623 N94-13892
Ploughing on gold using a Scanning Tunneling Microscope
|DE93-012632| p 812 N94-14365
NASA metrology and calibration, 1993
|NASA-TM-109280| p 597 N94-14410
Kinetic simulations of ultra-intense laser plasma interactions
|DE93-014419| p 802 N94-14564
Plasma contactor technology for Space Station Freedom
|NASA-TM-106291| p 553 N94-14725
The electric field of a current-carrying conductor
|DE93-626637| p 617 N94-14892
ELECTRIC POWER SUPPLIES
Student's works and power supplies in electronic circuit laboratory p 627 N94-13434
Communications and control for electric power systems
|NASA-CR-194503| p 622 N94-13811
Communications and control for electric power systems: Power flow classification for static security assessment
|NASA-CR-194512| p 624 N94-13948
ELECTRIC PROPULSION
Recent testing of 30 kW hydrogen arcjet thrusters
|NASA-TM-106214| p 551 N94-13430
Low thrust space propulsion
|NASA-TM-109286| p 552 N94-13625
Battery testing at Argonne National Laboratory
|DE93-011761| p 624 N94-14012
ELECTRIC ROCKET ENGINES
Low power pulsed MPD thruster system analysis and applications
|NASA-CR-191187| p 550 N94-13415
ELECTRIC SWITCHES
Miniature mechanism assembly
|DE93-015595| p 624 N94-13928
Design and optimization of high voltage lateral DMOS devices using RESURF technology
|LAAS-92511| p 626 N94-14711
ELECTRIC WIRE
Microwave interconnection
|DE93-016580| p 625 N94-14533
ELECTRICAL ENGINEERING
Bulletin of the University of Electro-Communications, volume 6, no. 1, serial no. 11 p 746 N94-13432
ELECTRICAL FAULTS
Early detection of insulation failure in electric motors
|PB93-198208| p 626 N94-14686
A high voltage dielectrically isolated smart power technology based on silicon direct bonding
|LAAS-92492| p 626 N94-14698
ELECTRICAL IMPEDANCE
Utilization of boundary element method for extraction of frequency dependent conductivity parameters of lossy intra-chip transmission lines
|ETN-93-94385| p 771 N94-14807
ELECTRICAL INSULATION
Amorphous sol-gel insulating films
|DE93-012859| p 576 N94-12866
Early detection of insulation failure in electric motors
|PB93-198208| p 626 N94-14686
ELECTRICAL MEASUREMENT
A method for determination of the superficial charge density
|DE93-622896| p 619 N94-12891
Electrodynamics of the middle atmosphere: Superpressure balloon program
|NASA-CR-193671| p 712 N94-13293
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
Changes in electrical device characteristics during the formation of dislocations in situ in the TEM
|DE93-013910| p 808 N94-13694
A high-precision direct current measuring device over a kiloampere range
|DE93-626409| p 627 N94-14885

ELECTRICAL PROPERTIES
Changes in electrical device characteristics during the formation of dislocations in situ in the TEM
| DE93-013910 | p 808 N94-13694
The Large Area Pulsed Solar Simulator (LAPSS)
| NASA-CR-194507 | p 703 N94-13940
Structural and electronic studies of a-SiGe:H alloys
| DE93-010021 | p 809 N94-14085
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells
| DE93-010009 | p 704 N94-14110
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
| DE93-012713 | p 580 N94-14179
Effects of growth conditions and substrate orientation on the properties of InSb
| DE93-013766 | p 812 N94-14344

ELECTRICAL RESISTANCE
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments
| NASA-TP-3368 | p 813 N94-14409
Design and optimization of high voltage lateral DMOS devices using RESURF technology
| LAAS-92511 | p 626 N94-14711

ELECTRICAL RESISTIVITY
Non-linear effects in vortex viscous flow in superconductors-role of finite heat removal velocity
| DE93-621785 | p 618 N94-12856
Application of transient airborne electromagnetic and ground resistivity methods to geological mapping in tropical terrains
| ISBN-0-315-57172-1 | p 685 N94-13542
Study of novel conductive paints for solar cell electromagnetic fields
| DE93-015088 | p 581 N94-14337
High counting rate resistive-plate chamber
| DE93-014928 | p 651 N94-14452
Thermal history effects on electrical relaxation and conductivity for potassium silicate glass with low alkali concentrations
| NASA-TM-106324 | p 583 N94-14845

ELECTRICITY
Flex-gear electrical power transmission
| NASA-CR-194422 | p 661 N94-13445

ELECTRO-OPTICS
Energy and technology review, March 1993
| DE93-013941 | p 849 N94-13019
Nonlinear laser spectroscopy studies of semiconductor heterostructures
| AD-A265728 | p 805 N94-13037
Application of new electro-optic technology to Space Station Freedom data management system
| NASA-CR-177622 | p 538 N94-13257
Radiation effects on optoelectronic analog link for particle detectors
| DE93-015794 | p 793 N94-14529

ELECTROCATALYSTS
Electrocatalysis issues in polymer electrolyte fuel cells
| DE93-014450 | p 702 N94-13402

ELECTROCHEMICAL CELLS
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
| DE93-015068 | p 563 N94-13413
Electrochemical noise in lithium primary cells
| DSIS-93-00236 | p 623 N94-13846

ELECTROCHEMICAL CORROSION
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
| AD-A266547 | p 556 N94-13583

ELECTROCHEMICAL MACHINING
Electrochemical planarization for microelectronic circuits
| DE93-017214 | p 627 N94-14870

ELECTRODE MATERIALS
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
| DE93-013800 | p 701 N94-13093
Combustion synthesis and engineering of nanoparticles for electronic, structural, and superconductor applications
| DE93-016286 | p 809 N94-13981

ELECTRODEPOSITION
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
| AD-A265141 | p 575 N94-12812

ELECTRODES
Separation of biogenic materials by electrophoresis under zero gravity (L-3) p 592 N94-13760
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells
| DE93-010009 | p 704 N94-14110
High counting rate resistive-plate chamber
| DE93-014928 | p 651 N94-14452

ELECTRODYNAMICS
Electrodynamics of helical plasma structures
| DE93-620981 | p 797 N94-13240
Electrodynamics of the middle atmosphere: Superpressure balloon program
| NASA-CR-193671 | p 712 N94-13293

ELECTROKINETICS
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
| AD-A265141 | p 575 N94-12812

ELECTROLYSIS
Primary and secondary electrical space power based on advanced PEM systems
| DE93-012643 | p 553 N94-14689

ELECTROLYTES
The importance of hard core repulsion in models of activity coefficients in aqueous electrolyte solutions: Illustration in the case of hydration theory
| DE93-012476 | p 561 N94-12881
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
| DE93-012713 | p 580 N94-14179

ELECTROLYTIC CELLS
Electrocatalysis issues in polymer electrolyte fuel cells
| DE93-014450 | p 702 N94-13402
Status of SOFC development in USA
| DE93-015568 | p 704 N94-14355

ELECTROMAGNETIC ABSORPTION
Gathering and exchange information on atmospheric chemistry and polluted atmospheres
| DE93-009940 | p 705 N94-12869
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
| DE93-014418 | p 797 N94-13207
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
| DE93-013853 | p 655 N94-13243
Quantitative luminescence imaging system
| DE93-015691 | p 793 N94-14702

ELECTROMAGNETIC COUPLING
Ultrafast photoinduced electron transfer reactions in supramolecular arrays: Studies of electronic coupling and solvation
| DE93-012910 | p 782 N94-13484

ELECTROMAGNETIC ENVIRONMENT EXPERIMENT
Stabilized electromagnetic levitator
| NASA-CR-194261 | p 586 N94-12805

ELECTROMAGNETIC FIELDS
Parametric instabilities in large nonuniform laser plasmas
| DE93-013184 | p 797 N94-13393
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling
| DE93-014655 | p 580 N94-14124
Study of novel conductive paints for solar cell electromagnetic fields
| DE93-015088 | p 581 N94-14337
Multiple Schroedinger cats from multilevel atoms
| DE93-013412 | p 786 N94-14526
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
| DE93-624179 | p 617 N94-14883

ELECTROMAGNETIC INTERACTIONS
Electromagnetic deflection of spinning particles
| DE93-622866 | p 778 N94-12858
Study of electroweak interactions
| DE93-015067 | p 782 N94-13412
The (mu)(+) yields e(+)gamma
| DE93-012750 | p 785 N94-14181
Wake-field and space charge effects on high brightness beams calculations and measured results for the laser driven photoelectrons at BNL-ATF
| DE93-015787 | p 659 N94-14572

ELECTROMAGNETIC INTERFERENCE
Induced voltages at air gaps due to electromagnetic field caused by direct and indirect lightning strokes
| ITN-93-85203 | p 599 N94-13237
Kalman filter based architectures for interference excision
| DSIS-93-00034 | p 603 N94-13818
A comparison of recursive least squares and Kalman filtering excisors for swept tone interference
| DSIS-93-00362 | p 606 N94-14054

ELECTROMAGNETIC MEASUREMENT
High temperature electromagnetic characterization of thermal protection system tile materials
| NASA-CR-189687 | p 578 N94-13431
Application of transient airborne electromagnetic and ground resistivity methods to geological mapping in tropical terrains
| ISBN-0-315-57172-1 | p 685 N94-13542
Measurement electronics of industrial microwave resonator sensors
| TKK-S-RAD-S194 | p 625 N94-14096
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
| DE93-015080 | p 717 N94-14294

ELECTROMAGNETIC NOISE
1/f noise and oxide traps in MOSFETs
| DE93-007581 | p 619 N94-12942
Flex-gear electrical power transmission
| NASA-CR-194422 | p 661 N94-13445
Electrochemical noise in lithium primary cells
| DSIS-93-00236 | p 623 N94-13846
Electrical noise in microwave field effect and bipolar transistors
| LAAS-93042 | p 616 N94-14717

ELECTROMAGNETIC PROPULSION
Electromagnetic propulsion for spacecraft
| NASA-CR-191186 | p 551 N94-13416

ELECTROMAGNETIC RADIATION
Investigation of plasma instabilities in the Polar cusp
| NASA-CR-194283 | p 796 N94-13084
A hybrid finite element-boundary integral for the analysis of cavity-backed antennas of arbitrary shape
| NASA-CR-193719 | p 599 N94-13236
The propagation characteristics and instability properties of low-frequency electromagnetic waves in the Io plasma torus p 601 N94-13650
Electromagnetic wave test p 508 N94-14173
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
| DE93-015084 | p 612 N94-14512
Quantitative luminescence imaging system
| DE93-015691 | p 793 N94-14702

ELECTROMAGNETIC SCATTERING
Computer code for scattering from impedance bodies of revolution. Part 3: Surface impedance with s and phi variation. Analytical and numerical results
| NASA-CR-193396 | p 599 N94-13264
Theoretical investigation of scattering by homogeneous or coated dielectric spheres illuminated with a steady state or pulsed laser beam p 657 N94-13624
Portable multipath measurement system
| DSIS-93-00177 | p 603 N94-13843
Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
| PB93-198851 | p 652 N94-14687

ELECTROMAGNETIC WAVE TRANSMISSION
Theoretical investigation of scattering by homogeneous or coated dielectric spheres illuminated with a steady state or pulsed laser beam p 657 N94-13624

ELECTROMECHANICAL DEVICES
Self tuning and adaptive control: Evaluations and improvements of algorithms
| ITN-93-85192 | p 762 N94-13329
Design and application of electromechanical actuators for deep space missions
| NASA-CR-194145 | p 663 N94-14134
Superconductivity devices: Commercial use of space
| NASA-CR-194163 | p 625 N94-14324

ELECTROMECHANICS
Activities report of the National Electrotechnical Institute Galileo Ferraris
| ETN-93-94224 | p 627 N94-14812

ELECTROMIGRATION
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
| DE93-013770 | p 812 N94-14345

ELECTRON BEAM WELDING
Welding technologies as applied to nuclear manufacturing
| DE93-010924 | p 664 N94-14565

ELECTRON BEAMS
Inertial confinement fusion program
| DE93-013372 | p 796 N94-13047
Microwave generation for magnetic fusion energy applications
| DE93-013864 | p 654 N94-13058
Investigation of plasma instabilities in the Polar cusp
| NASA-CR-194283 | p 796 N94-13084
EBIT Trapping Program
| DE93-014422 | p 788 N94-13208
Research on radiation resistance properties of structural materials for space use p 529 N94-13271
Low energy response of the DO calorimeter and jet energy measurement
| DE93-013569 | p 781 N94-13350
Long-pulse operation of a gyrotron with beam/RF separation
| DE93-015007 | p 649 N94-13410
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
Structural change of graphite during electron irradiation
| DE93-015961 | p 582 N94-14531

Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
| ITN-93-85224 | p 659 N94-14547
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
| DE93-017154 | p 790 N94-14893

ELECTRON BUNCHING
Wake-field and space charge effects on high brightness beams calculations and measured results for the laser driven photoelectrons at BNL-ATF
| DE93-015787 | p 659 N94-14572

ELECTRON CAPTURE
Metastable enhancement of C(+) and O(+) capture reactions
| DE93-015075 | p 807 N94-13373
Charge-exchange reactions and weak interaction rates for Type 2 supernovae
| DE93-015104 | p 783 N94-13893

ELECTRON CYCLOTRON HEATING
Dimensionally similar discharges with central RF heating on the D3-D tokamak
| DE93-012776 | p 795 N94-12953
Ion cyclotron heating experiments and plans for the Advanced Toroidal Facility (ATF)
| DE93-012965 | p 795 N94-13033
Long-pulse operation of a gyrotron with beam/RF separation
| DE93-015007 | p 649 N94-13410
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
Direct electron heating and current drive with fast waves in D3-D
| DE93-013028 | p 801 N94-14293
Active density control in DIII-D H-mode plasmas
| DE93-015477 | p 802 N94-14570

ELECTRON DENSITY (CONCENTRATION)
The MRIS feasibility study
| NASA-TM-107763 | p 597 N94-12804
Sites of fine-scale electron density turbulence in the interstellar medium
| NASA-CR-193708 | p 839 N94-13864
On MHD mode equations in toroidal plasmas
| PPL-139 | p 800 N94-13877
The fractional quantum Hall effect and the spherical shell model
| DE93-014553 | p 818 N94-14740

ELECTRON DENSITY PROFILES
Active density control in DIII-D H-mode plasmas
| DE93-015477 | p 802 N94-14570

ELECTRON EMISSION
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
| DE93-013506 | p 782 N94-13485
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
| DE93-014129 | p 784 N94-14140

ELECTRON ENERGY
Cosmic physics data analysis program
| NASA-CR-194357 | p 846 N94-12826
Phobos/Harp post launch support
| NASA-CR-193676 | p 540 N94-13109
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
| DE93-014418 | p 797 N94-13207
A search for strong-field direct two electron ionization using coincidence spectroscopy
| DE93-013435 | p 781 N94-13241
High resolution electron energy loss studies of surface vibrations
| DE93-014441 | p 781 N94-13283
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
| DE93-013506 | p 782 N94-13485
Folded waveguide designs for tokamaks
| DE93-013274 | p 798 N94-13577
Small scale magnetic islands in collisionless plasmas
| PPL-131 | p 799 N94-13836
Dependence of beta(tau) on plasma shape in D3-D
| DE93-015473 | p 800 N94-13900
Direct electron heating and current drive with fast waves in D3-D
| DE93-013028 | p 801 N94-14293
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
| DE93-012592 | p 789 N94-14460
Structural change of graphite during electron irradiation
| DE93-015961 | p 582 N94-14531
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
| ITN-93-85224 | p 659 N94-14547
Time resolved measurement of electron temperatures of exploding foil x ray laser plasmas
| DE93-017161 | p 803 N94-14894

ELECTRON IMPACT
EBIT Trapping Program
| DE93-014422 | p 788 N94-13208
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
| DE93-014129 | p 784 N94-14140
Coherent excitation of autoionizing resonances by electron impact
| DE93-018169 | p 785 N94-14419

ELECTRON IRRADIATION
Annealing study of main electron irradiation-induced defects (H4 and H5) in P-InP using DLTS technique
| DE93-623204 | p 806 N94-13213
Structural change of graphite during electron irradiation
| DE93-015961 | p 582 N94-14531

ELECTRON MICROSCOPES
Current titles --- National Center for Electron Microscopy
| DE93-015859 | p 851 N94-14587
Laser lithography by photon scanning tunneling microscopy
| DE93-015962 | p 660 N94-14863

ELECTRON MICROSCOPY
Procedures for analysis of debris relative to Space Shuttle systems
| NASA-TM-109190 | p 534 N94-12900
High spatial resolution x ray microanalysis: Comparison of experiment and incoherent scattering calculations
| DE93-011685 | p 648 N94-13044
Current titles --- National Center for Electron Microscopy
| DE93-015859 | p 851 N94-14587

ELECTRON MOBILITY
Anomalous low-temperature free-exciton transport in GaAs structures
| DE93-009845 | p 809 N94-14108
Small polaron conduction in Y2Ti2O7
| ITN-93-85221 | p 814 N94-14557

ELECTRON PHONON INTERACTIONS
Small polaron conduction in Y2Ti2O7
| ITN-93-85221 | p 814 N94-14557
Dynamic Jahn-Teller effect: Calculation of fine structure spectrum, isotope shift and Zeeman behavior at deep center Ni2+ in CdS
| ETN-93-94394 | p 815 N94-14705

ELECTRON PROBES
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661

ELECTRON SCATTERING
Calculation of electron-lithium scattering using the coupled-channel optical method
| DE93-623049 | p 806 N94-13226
High-resolution Z-contrast imaging and hole concentration mapping of YBCO thin films
| DE93-015803 | p 808 N94-13930
The E2 N(yields)(Delta) transition from polarized Compton scattering
| DE93-012522 | p 785 N94-14363

ELECTRON SPECTROSCOPY
High-resolution Z-contrast imaging and hole concentration mapping of YBCO thin films
| DE93-015803 | p 808 N94-13930

ELECTRON STATES
Grain-boundary electronic states by multiple-scattering theory
| DE93-013198 | p 805 N94-13010
Infrared spectroscopy of organic free radicals related to combustion processes
| DE93-017086 | p 562 N94-13222
Empirical tight-binding parameters for solid C(sub 60)
| DE93-623061 | p 807 N94-13510
Electronic states in systems of reduced dimensionality
| DE93-014440 | p 815 N94-14739

ELECTRON TRANSFER
Molecular solvent-dynamical effects on activated electron-transfer kinetics: How important is solvent friction?
| AD-A265886 | p 779 N94-12894
Project proposal for partial computational physics support for Survivability of Coatings program
| DE93-013788 | p 576 N94-12939
Experimental and theoretical study of inhomogeneous electron transfer in betaine: Comparisons of measured and predicted spectral dynamics
| AD-A265703 | p 780 N94-13051
Variance reduction unique to coupled electron/photon Monte Carlo transport
| DE93-014999 | p 782 N94-13409
Ultrafast photoinduced electron transfer reactions in supramolecular arrays: Studies of electronic coupling and solvation
| DE93-012910 | p 782 N94-13484
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
| DE93-012713 | p 580 N94-14179

ELECTRON TRANSITIONS
A sum-rule of luminescence spectrum
| ITN-93-85223 | p 814 N94-14559
Dynamic Jahn-Teller effect: Calculation of fine structure spectrum, isotope shift and Zeeman behavior at deep center Ni2+ in CdS
| ETN-93-94394 | p 815 N94-14705

ELECTRON TUBES
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
| AD-A266346 | p 622 N94-13776

ELECTRON TUNNELING
Electrical and optical properties of multiple quantum well structures and their applications to infrared detectors
| FFI-92/7012 | p 809 N94-14010
Ploughing on gold using a Scanning Tunneling Microscope
| DE93-012632 | p 812 N94-14365
Laser lithography by photon scanning tunneling microscopy
| DE93-015962 | p 660 N94-14863

ELECTRON-ION RECOMBINATION
EBIT Trapping Program
| DE93-014422 | p 788 N94-13208

ELECTRON-POSITRON PAIRS
Top quark search: Results and prospects at Fermilab
| DE93-013016 | p 786 N94-14524

ELECTRONIC CONTROL
Electrical Actuation Technology Bridging
| NASA-CP-3213 | p 551 N94-13417
Techniques for improving the performance of a simplified electronic fuel controller with incremental actuation for small gas turbine engines
| ISBN-0-315-56062-2 | p 661 N94-13521
Performance seeking control: Program overview and future directions
| NASA-TM-4531 | p 519 N94-14855

ELECTRONIC EQUIPMENT
Center of trace algorithms for extracting digitized waveforms from two-dimensional images
| DE93-015082 | p 753 N94-14295

ELECTRONIC EQUIPMENT TESTS
Chip-level testability requirements guidelines
| AD-A262583 | p 619 N94-12967
Design automation tools for testable VLSI circuits
| ISBN-0-315-61461-7 | p 621 N94-13333

ELECTRONIC MAIL
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 38: Computer Mediated Communication (CMC) and the communication of technical information in aerospace
| NASA-TM-109330 | p 826 N94-14489

ELECTRONIC MODULES
An ultra-compact processor module based on the R3000
| DE93-012549 | p 625 N94-14427

ELECTRONIC PACKAGING
Solderability of surface mount devices
| AD-A265751 | p 620 N94-13040
MMIC packaging technology development
| NASA-CR-194183 | p 621 N94-13336
An ultra-compact processor module based on the R3000
| DE93-012549 | p 625 N94-14427

ELECTRONIC WARFARE
Advanced Communications ESM System (ACES) testbed: Integration study
| DSIS-93-00345 | p 604 N94-13939
Simulation of downlink synchronization for a frequency-hopped satellite communication system
| DSIS-93-00477 | p 605 N94-13941
A history of the Defence Research Establishment, Ottawa
| CTN-93-60737 | p 850 N94-14060

ELECTRONS
Low energy response of the DO calorimeter and jet energy measurement
| DE93-013569 | p 781 N94-13350
EGS (underscore) windows 2: An enhanced graphical interface to EGS
| DE93-010447 | p 746 N94-13382
Variance reduction unique to coupled electron/photon Monte Carlo transport
| DE93-014999 | p 782 N94-13409
Monte Carlo simulation of the OCP freezing transition
| DE93-013039 | p 811 N94-14313
Physics of gas breakdown for ion beam transport in gas
| DE93-015646 | p 801 N94-14349
Coherent excitation of autoionizing resonances by electron impact
| DE93-018169 | p 785 N94-14419

Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531

ELECTROPHORESIS
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812
Separation of biogenic materials by electrophoresis under zero gravity (L-3) p 592 N94-13760
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
[DE93-013770] p 812 N94-14345

ELECTROPLATING
Design and testing of planar magnetic micromotors fabricated by deep x ray lithography and electroplating
[DE93-012856] p 618 N94-12821
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Electrochemical planarization for microelectronic circuits
[DE93-017214] p 627 N94-14870

ELECTRORHEOLOGICAL FLUIDS
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126

ELECTROSTATICS
Determination of critical density of charge
[DE93-622897] p 775 N94-12877
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954

ELECTROSTRICTION
Superconductivity devices: Commercial use of space
[NASA-CR-194163] p 625 N94-14324

ELEMENTARY EXCITATIONS
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339

ELEMENTARY PARTICLE INTERACTIONS
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
Scattering calculations and confining interactions
[NASA-CR-194242] p 786 N94-14549

ELEMENTARY PARTICLES
E789 and P865: High-rate fixed-target studies of charm and beauty
[DE93-017223] p 788 N94-14898

ELEVATION ANGLE
Characterisation of the LMS propagation channel at L- and S-bands: Narrowband experimental data and channel modelling p 615 N94-14669
Results of multiband (L, S, Ku band) propagation measurements and model for high elevation angle land mobile satellite channel p 615 N94-14670

ELLIPSOMETRY
Effect of microstructure on passive film formation and breakdown on Al alloys
[AD-A265339] p 569 N94-13050

ELLIPTICITY
Cold dark matter halos p 838 N94-13649

ELUTION
Direct probing of chromatography columns by laser-induced fluorescence
[DE93-015208] p 654 N94-13022
Reactor studies of metal ions associated with chromatographic silica
[AD-A266675] p 573 N94-14779

EMBEDDING
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706

EMBRITTLEMENT
Investigations of low-temperature neutron embrittlement of ferritic steels
[DE93-015460] p 573 N94-14700

EMBRYOLOGY
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418

EMISSION
Three dimensional time-dependent hydrodynamic and propagation modeling of x ray laser emission
[DE93-012575] p 654 N94-12962

EMISSION SPECTRA
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
[AD-A265106] p 790 N94-12863
The evidence for clumpy accretion in the Herbig Ae star HR 5999
[NASA-TM-108257] p 828 N94-12915
Search for UHE emission from Cygnus X-3
[DE93-012720] p 846 N94-12924
Studies of gas in cooling flow clusters
[NASA-CR-193597] p 628 N94-12959
Molecular dynamics simulation of electronically excited polyatomic molecules
[DE93-623045] p 781 N94-13225
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332
The onset of galactic winds in early-type galaxies
[NASA-CR-193640] p 836 N94-13446
The infrared solar spectrum
[COMMUNICATIONS-SER-B-159] p 844 N94-13502
The extent and content of low-ionization gas in galaxies p 837 N94-13551
Investigation of an alternating current plasma as an element selective atomic emission detector for high-resolution capillary gas chromatography and as a source for atomic absorption and atomic emission spectrometry p 798 N94-13678
Laser and spectroscopic properties of Yb-doped apatite crystals
[DE93-014656] p 810 N94-14125
Emission line variability in active galactic nuclei
[ITN-93-85209] p 849 N94-14553
Comparative study of x ray and microwave emissions during solar flares
[NASA-CR-194532] p 845 N94-14577
Was 49: Mirror for a hidden Seyfert 1 galaxy
[NASA-CR-194537] p 840 N94-14685
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865
Time resolved measurement of electron temperatures of exploding foil x ray laser plasmas
[DE93-017161] p 803 N94-14894

EMITTANCE
The optical constants and spectral specular reflectivity of Highly Oriented Pyrolytic Graphite (HOPG)
[DE93-011894] p 790 N94-12865
Measuring opacity of shock generated argon plasmas
[DE93-013038] p 801 N94-14312
Proton-proton scattering contribution to emittance growth
[DE93-016090] p 787 N94-14588

EMITTERS
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776
Emitter Wrap-Through solar cell
[DE93-014996] p 703 N94-13886

ENCLOSURES
Some flow properties of telescope enclosures estimated from water channel tests: Application of the flow visualization techniques
[NAL-TR-1178T] p 830 N94-13452

END EFFECTORS
Force reflecting hand controller for manipulator teleoperation
[NASA-CR-191345] p 661 N94-13129
New prosthetic devices
[NASA-TM-109304] p 737 N94-13611
The further development and refinement of an expert-systems approach to the creative design of mechanisms and mechanical systems
[AD-A266812] p 665 N94-14901

END-TO-END DATA SYSTEMS
On the end-to-end communication problem in unreliable networks
[ITN-93-85188] p 598 N94-13195

ENDANGERED SPECIES
Birds of Wallops Island, Virginia, 1970 - 1992
[NASA-TM-104589] p 850 N94-13923

ENDOCRINE SYSTEMS
Gender differences in endocrine responses to posture and 7 days of 6 deg head down bed rest
[NASA-TM-103991] p 731 N94-12972

ENDOCRINOLOGY
Gender differences in endocrine responses to posture and 7 days of 6 deg head down bed rest
[NASA-TM-103991] p 731 N94-12972
Endocrine and metabolic changes in payload specialist (L-1) p 591 N94-13758

ENERGETIC PARTICLES
Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826

ENERGY ABSORPTION
Design and application of a quasistatic crush test fixture for investigating scale effects in energy absorbing composite plates
[NASA-CR-4526] p 670 N94-13063
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

ENERGY BANDS
Empirical tight-binding parameters for solid C(sub 60)
[DE93-623061] p 807 N94-13510
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465
Magnetic interactions and disorder - phase transitions in dilute spin-glasses and high temperature superconductors
[ITN-93-85217] p 815 N94-14825

ENERGY BUDGETS
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995

ENERGY CONSERVATION
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method
[DE93-015177] p 704 N94-14333
Fourteenth National Industrial Energy Technology Conference: Proceedings
[DE93-016698] p 710 N94-14516

ENERGY CONSUMPTION
Bibliography of urban climate in tropical/subtropical areas, 1981-1991
[WCASP-25] p 718 N94-12918
Transition of building energy consumption using multi-input, single-output dynamic model
[VTT-PUBS-116] p 597 N94-14055

ENERGY CONVERSION
Catalysis and biocatalysis program
[NASA-CR-194105] p 727 N94-12793
Solar dynamic power system development for Space Station Freedom
[NASA-RP-1310] p 548 N94-12807
A history of the Defence Research Establishment, Ottawa
[CTN-93-60737] p 850 N94-14060

ENERGY CONVERSION EFFICIENCY
Low temperature metal-organic chemical vapor deposition growth processes for high efficiency solar cells
[DE92-010562] p 702 N94-13386
Emitter Wrap-Through solar cell
[DE93-014996] p 703 N94-13886
Colorado State University program for developing, testing, evaluating, and optimizing solar heating and cooling systems
[DE93-016018] p 705 N94-14504

ENERGY DISSIPATION
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
Numerical simulations and experiments on physics of high Mach number shockwave: Turbulent flow interactions
[DE93-013424] p 631 N94-13249
Surfaces and interfaces of ceramics and metals
[DE93-014959] p 578 N94-13408
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456
Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531
A study of the fine scale motions of incompressible time-developing mixing layers p 644 N94-14751

ENERGY DISTRIBUTION
Spectra of late type dwarf stars of known abundance for stellar population models
[NASA-CR-194301] p 831 N94-13681

ENERGY GAPS (SOLID STATE)
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085

ENERGY LEVELS
The International Colloquium on Atomic Spectra and Oscillator Strengths for Astrophysical and Laboratory Plasmas
[NASA-TM-109255] p 849 N94-13376
A study of the role of homogeneous process in heterogeneous high explosives
[DE93-012733] p 585 N94-14180
Multiple Schroedinger cats from multilevel atoms
[DE93-013412] p 786 N94-14526
Isospin flip as a relativistic effect: NN interactions
[CEBAF-PR-89-023] p 786 N94-14552
Dynamic Jahn-Teller effect: Calculation of fine structure spectrum, isotope shift and Zeeman behavior at deep center Ni2+ in CdS
[ETN-93-94394] p 815 N94-14705
On the statistical theory of the even-even nucleons levels' density
[DE93-623990] p 788 N94-14875

ENERGY METHODS
Some computational tools for the analysis of through cracks in stiffened fuselage shells
| LR-701 | p 673 N94-13726
Compressive buckling of curved, anisotropic panels stiffened in two directions. Part 1: Derivation of the governing equations
| LR-694 | p 675 N94-13931
ENERGY POLICY
Program operations plan
| DE93-012765 | p 710 N94-14182
Fourteenth National Industrial Energy Technology Conference: Proceedings
| DE93-016698 | p 710 N94-14516
ENERGY REQUIREMENTS
Strategic avionics technology definition studies. Subtask 3-1A: Electrical Actuation (ELA) systems
| NASA-CR-194393 | p 536 N94-14323
ENERGY SPECTRA
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
| NASA-CR-194127 | p 847 N94-13211
A multiple-scale turbulence model for incompressible flow
| NASA-TM-106113 | p 631 N94-13385
Rare muon processes
| DE93-012646 | p 785 N94-14366
ENERGY STORAGE
NASA handbook for nickel-hydrogen batteries
| NASA-RP-1314 | p 550 N94-13265
ENERGY TECHNOLOGY
Photovoltaic Subcontract Program
| DE93-000092 | p 700 N94-12868
Energy and technology review, March 1993
| DE93-013941 | p 849 N94-13019
Study on superconducting basic technology for space application, part 1
| NASDA-CNT-930015-PT-1 | p 622 N94-13425
Status of SOFC development in USA
| DE93-015568 | p 704 N94-14355
NREL solar radiation resource assessment project: Status and outlook
| DE93-010034 | p 704 N94-14422
Colorado State University program for developing, testing, evaluating, and optimizing solar heating and cooling systems
| DE93-016018 | p 705 N94-14504
Fourteenth National Industrial Energy Technology Conference: Proceedings
| DE93-016698 | p 710 N94-14516
ENERGY TRANSFER
Experimental and theoretical study of inhomogeneous electron transfer in betaine: Comparisons of measured and predicted spectral dynamics
| AD-A265703 | p 780 N94-13051
Interacting scales and energy transfer in isotropic turbulence
| NASA-CR-191477 | p 630 N94-13133
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
| INPE-5445-TDI/491 | p 835 N94-13174
Sub-grid scale modeling for large eddy simulations in analysis of shock-turbulence interactions
| DE93-013425 | p 631 N94-13250
Variance reduction unique to coupled electron/photon Monte Carlo transport
| DE93-014999 | p 782 N94-13409
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
| DE93-013506 | p 782 N94-13485
Studies of momentum and energy transfer across wavy gas-liquid interfaces
| AD-A266432 | p 635 N94-13699
On energy transport equations for turbulent magnetized plasma
| PPL-135 | p 800 N94-13850
A study of the role of homogeneous process in heterogeneous high explosives
| DE93-012733 | p 585 N94-14180
Wind mass and energy deposition
| DE93-013345 | p 839 N94-14341
Lawrence Berkeley Laboratory Chemical Sciences Division
| DE93-015260 | p 851 N94-14401
Selective excitation, relaxation, and energy channeling in molecular systems
| DE93-018819 | p 785 N94-14420
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
| ITN-93-85224 | p 659 N94-14547
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
| DE93-015474 | p 802 N94-14583
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749
Triad interactions in the dissipation range p 644 N94-14750
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
| DE93-624179 | p 617 N94-14883
ENGINE AIRFRAME INTEGRATION
Propulsion integration p 508 N94-14174
ENGINE DESIGN
Advanced Turbine Technology Applications Project (ATTAP)
| NASA-CR-191088 | p 828 N94-12931
Electric propulsion system technology
| NASA-CR-194099 | p 549 N94-13068
Combustor technology for future small gas turbine aircraft
| NASA-TM-106312 | p 517 N94-13142
Low thrust space propulsion
| NASA-TM-109286 | p 552 N94-13625
Gas core nuclear thermal rocket engine research and development in the former USSR
| DE93-012165 | p 552 N94-14013
Noise levels from a model turbofan engine with simulated noise control measures applied
| NASA-TM-106318 | p 518 N94-14036
Aeropropulsion facilities p 506 N94-14161
Derated ion thruster development status
| NASA-TM-106292 | p 553 N94-14726
A hot dynamic seal rig for measuring hypersonic engine seal durability and flow performance
| NASA-TM-106294 | p 664 N94-14727
ENGINE FAILURE
Identification and interpretation of patterns in rocket engine data
| NASA-CR-194534 | p 552 N94-14309
ENGINE INLETS
Analysis of the Harrier forebody/inlet design using computational techniques
| NASA-CR-193616 | p 503 N94-13463
Piston engine intake and exhaust system design
| ISVR-TR-222 | p 663 N94-13874
Three-dimensional modeling of diesel engine intake flow, combustion and emissions-2
| NASA-CR-191189 | p 519 N94-14448
ENGINE MONITORING INSTRUMENTS
Strain sensing technology for high temperature applications
| NASA-TM-4498 | p 648 N94-12874
ENGINE NOISE
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
| NASA-TM-106364 | p 508 N94-14208
Active control of fan-generated plane wave noise
| NASA-TM-109008 | p 777 N94-14481
ENGINE PARTS
NDE of titanium alloy MMC rings for gas turbine engines
| NASA-TM-106188 | p 555 N94-13138
Compatibility of refrigerants and lubricants with motor materials
| DE93-014768 | p 583 N94-14801
ENGINE TESTS
Advanced Turbine Technology Applications Project (ATTAP)
| NASA-CR-191088 | p 828 N94-12931
Electric propulsion system technology
| NASA-CR-194099 | p 549 N94-13068
Aircraft engine type certification handbook: Advisory circular
| AC-33-2B | p 518 N94-13252
ENGINEERING
Selected data on academic science and engineering R and D expenditures: Fiscal Year 1991
| NSF-92-329 | p 819 N94-13982
Science, technology, and the federal government: National goals for a new era p 627 N94-14115
ENGINEERING DRAWINGS
CAD data exchange with Martin Marietta Energy Systems, Inc., Oak Ridge, TN
| DE93-017233 | p 757 N94-14871
ENGINEERS
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 18: A comparison of the technical communication practices of aerospace engineers and scientists in India and the United States
| NASA-TM-109006 | p 821 N94-13057
Generic results of the space physics community survey
| NASA-CR-194538 | p 818 N94-13984
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 34: Users and uses of DOD technical reports: A report from the field
| NASA-TM-109327 | p 825 N94-14485
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 36: Technical uncertainty as a correlate of information use by US industry-affiliated aerospace engineers and scientists
| NASA-TM-109328 | p 825 N94-14486
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 39: The role of computer networks in aerospace engineering
| NASA-TM-109331 | p 825 N94-14487
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 37: The impact of political control on technical communications: A comparative study of Russian and US aerospace engineers and scientists
| NASA-TM-109329 | p 826 N94-14488
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 38: Computer Mediated Communication (CMC) and the communication of technical information in aerospace
| NASA-TM-109330 | p 826 N94-14489
Scientists, engineers, and technicians in nonmanufacturing industries: 1990. Detailed statistical tables
| NSF-92-334 | p 820 N94-14499
ENTROPY
Beam halo in high-intensity beams
| DE93-014565 | p 789 N94-13328
A multiphase model for shock-induced flow in low density foam
| DE93-013767 | p 632 N94-13397
Statistical mechanical theory of liquid entropy
| DE93-016524 | p 817 N94-14593
ENVIRONMENT EFFECTS
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
| AD-A265106 | p 790 N94-12863
A review of the global emissions, transport, and effects of heavy metals in the environment
| DE93-013507 | p 706 N94-12937
Environmental projects. Volume 15: Environmental assessment: Proposed 1-megawatt radar transmitter at the Mars site
| NASA-CR-194098 | p 598 N94-13090
Promotion of geothermal energy development in 1991
| DE93-799057 | p 701 N94-13214
Promotion of geothermal energy development in 1991
| DE93-799058 | p 701 N94-13215
Pollution prevention through total quality
| DE93-013814 | p 707 N94-13390
Birds of Wallops Island, Virginia, 1970 - 1992
| NASA-TM-104589 | p 850 N94-13923
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
Long-range global warming impact of gaseous diffusion plant operation
| DE93-011686 | p 710 N94-14459
Summary of conclusions and recommendations from a visibility science workshop
| DE93-012770 | p 710 N94-14523
Promotion of geothermal energy development in 1991
| DE93-799061 | p 705 N94-14679
ENVIRONMENT MANAGEMENT
Environmental awareness
| DE93-014192 | p 707 N94-13218
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
| DE93-015080 | p 717 N94-14294
Fourteenth National Industrial Energy Technology Conference: Proceedings
| DE93-016698 | p 710 N94-14516
ENVIRONMENT MODELS
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
| INPE-5454-TDI/496 | p 707 N94-13330
Integration between geographic information systems and environmental simulation models
| REPT-93-004 | p 823 N94-13806
Summary of the NOAA/NESDIS Workshop on Development of a Global Satellite/In Situ Environmental Database
| NOAA-TR-NESDIS-72 | p 826 N94-14498
ENVIRONMENT POLLUTION
Snow cover models in operational watershed forecasting
| DE93-778332 | p 718 N94-12837
Spatial and temporal variability of precipitation and chemistry: Case studies from the frontal boundary study
| DE93-007883 | p 708 N94-13910
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
| DE93-010025 | p 584 N94-14089
Study of the consequences of the Chernobyl accident and technogenic activity in the Republic Belarus using aerospace methods p 693 N94-14246

ENVIRONMENT PROTECTION
Vendor information system for innovative treatment technologies. User manual (VISITT version 2.0). Number 2
| PB93-196640 | p 821 N94-12936
Planetary protection implementation on future Mars lander missions
| NASA-CP-3216 | p 841 N94-13183
Environmental awareness
| DE93-014192 | p 707 N94-13218
Multisensor remote sensing data and GIS techniques for monitoring preservation areas: A case study
| INPE-5317-PRE/1714 | p 688 N94-14131
Long-range global warming impact of gaseous diffusion plant operation
| DE93-011686 | p 710 N94-14459
Toxic Substances Control Act (TSCA) chemical substances inventory: Revised inventory synonym and preferred name file, Jan. 1993 documentation
| PB93-155166 | p 710 N94-14508

ENVIRONMENT SIMULATION
Planning of a comet simulator
| ITN-93-85206 | p 835 N94-13230
Taecannautics: Sharing the dream
| NASA-TM-109309 | p 818 N94-13619

ENVIRONMENTAL CHEMISTRY
Spatial variability of throughfall chemistry in a tropical rainforest (Central Amazonia, Brazil)
| INPE-5431-PRE/1765 | p 720 N94-13429
Quality assurance for environmental chemistry, 1991, volume 1
| DE93-011791 | p 709 N94-14020

ENVIRONMENTAL ENGINEERING
Recycling in space
| NASA-TM-109307 | p 737 N94-13615

ENVIRONMENTAL MONITORING
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land
| BCRS-92-13 | p 684 N94-13123
Molten carbonate fuel cell product development test environmental assessment/protection plan
| DE93-000288 | p 702 N94-13380
Environmental radioactivity intercomparison 1992
| NPL-RSA(EXT)-37 | p 708 N94-13880
Minutes of the Sixth CEOS Plenary Meeting
| NASA-TM-108252 | p 542 N94-14112
CCI working group on climate data and its rapporteurs
| WCDMP-21 | p 723 N94-14118
Asia-Pacific ISY Conference, volume 2
| NASDA-CM-199-VOL-2 | p 688 N94-14209
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
TRMM system overview and status in the United States p 690 N94-14221
TRMM Project in Japan: Overview and status p 690 N94-14222
Clouds and the Earth's Radiant Energy System (CERES) on the Tropical Rainfall Measuring Mission (TRMM) p 690 N94-14223
Climate products from NOAA operational satellites p 691 N94-14231
Satellite technology for environmental monitoring in developing countries p 692 N94-14236
Application of satellite remote sensing technology in disaster mitigation: A case study of Bangladesh p 692 N94-14238
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Soil erosion mapping using remote sensing and GIS techniques p 692 N94-14240
Detecting land cover changes in Chiang-Mai area in Thailand p 693 N94-14241
Land evaluation for agricultural productivity in North-East Thailand using LANDSAT TM data and geographic information p 693 N94-14242
Satellite remote sensing for disaster mitigation p 693 N94-14244
A concept for the world environment and disaster observation system p 693 N94-14245
Study of the consequences of the Chernobyl accident and technogenic activity in the Republic Belarus using aerospace methods p 693 N94-14246
A tentative plan on China and Asian-Pacific satellite system for disaster reduction p 693 N94-14247
Earth observation from low-inclination orbit as a necessary complement to polar missions p 694 N94-14248
Development of a remote sensing geographic information system for land cover changes and assessment of risk due to natural and man made hazards covering the area of the inner delta of the Yellow River p 694 N94-14249
Some thoughts on the space programs in the Asia Pacific regions p 697 N94-14272
Summary of the NOAA/NESDIS Workshop on Development of a Global Satellite/In Situ Environmental Database
| NOAA-TR-NESDIS-72 | p 826 N94-14498
The National Remote Sensing Program (NRSP-2 1991 - 2000): The 1992 annual plan of the Netherlands Remote Sensing Board
| BCRS-92-22 | p 700 N94-14544
Terrestrial environment (climatic) criteria guidelines for use in aerospace vehicle development, 1993 revision
| NASA-TM-4511 | p 533 N94-14824

ENVIRONMENTAL QUALITY
Performance of gas turbine compressor cleaners
| NLR-TP-91291-U | p 519 N94-14450

ENVIRONMENTAL RESEARCH SATELLITES
Summary of the NOAA/NESDIS Workshop on Development of a Global Satellite/In Situ Environmental Database
| NOAA-TR-NESDIS-72 | p 826 N94-14498

ENVIRONMENTAL SURVEYS
Promotion of geothermal energy development in 1991
| DE93-799057 | p 701 N94-13214
Rover imaging system for the Mars rover/sample return mission
| NASA-CR-193413 | p 649 N94-13464
Activities report of the Netherlands Remote Sensing Board
| ETN-93-93880 | p 686 N94-14073

ENVIRONMENTAL TESTS
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
| NASA-CR-193647 | p 575 N94-12789
Study on improvement of flammability, odor and offgassing tests for materials
| NASDA-CNT-930009 | p 563 N94-13471
Test report for single event effects of the 80386DX microprocessor
| NASA-CR-194509 | p 741 N94-13943
Development of an advanced spacecraft tandem mass spectrometer
| NASA-CR-194195 | p 545 N94-13953
Materials/structures testing p 506 N94-14164

ENZYME ACTIVITY
The evolution of energy-transducing systems: Studies with archaebacteria
| NASA-CR-194130 | p 728 N94-13562
The first steps of chlorophyll synthesis: RNA involvement and regulation
| DE93-014398 | p 730 N94-14509

ENZYMES
Evolution of catalytic RNA in the laboratory
| NASA-CR-194124 | p 727 N94-13210
Crystal growth of enzymes in low gravity (L-5) p 592 N94-13762
Biomimetic methane oxidation
| DE93-013196 | p 705 N94-14510
A characterization of carboxylesterases in rat and guinea pig: Their heterogeneity and role in detoxication of organophosphorus compounds
| NDRE-PUBL-93-1001 | p 730 N94-14852

EPITAXY
Scanning tunneling microscopy studies of diamond films and optoelectronic materials
| NASA-CR-194363 | p 578 N94-13246
Prism-film coupling in anisotropic planar waveguides of epitaxial (101) rutile thin films
| DE93-012912 | p 811 N94-14304
Formation of textured YBCO films by laser ablation
| DE93-013131 | p 581 N94-14319
Manufacturing and examination of integrated optical waveguide components in silicon
| ETN-93-94393 | p 793 N94-14704

EPOXY MATRIX COMPOSITES
Study of deferred acoustic emission in carbon epoxy composites
| ISAL-91-0078 | p 560 N94-14815

EPOXY RESINS
Automated crack identification for cement paste
| AD-A265753 | p 665 N94-13042
Miniature mechanism assembly
| DE93-015595 | p 624 N94-13928

EQUATIONS OF MOTION
Electromagnetic deflection of spinning particles
| DE93-622866 | p 778 N94-12858
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory p 556 N94-13558
PACE: A test bed for the dynamics and control of flexible multibody systems p 527 N94-14650
Construction of the Courant-Snyder invariants for the non-linear equations of motion under presence of the linear coupling
| DE93-017565 | p 788 N94-14872
The evolution of tensor polarization
| DE93-017209 | p 790 N94-14897

EQUATIONS OF STATE
Theoretical treatment of the bulk and surface properties of fluids containing long, flexible molecules
| DE93-015560 | p 575 N94-12861
Equation of state for detonation products
| DE93-012671 | p 583 N94-12921
Multiphase equation of state for iron
| DE93-013956 | p 568 N94-12977
Direct determination of alpha particle transport coefficients
| DE93-013488 | p 787 N94-14691

EQUILIBRIUM FLOW
Least-squares finite element solutions for three-dimensional backward-facing step flow
| NASA-TM-106353 | p 770 N94-14407
The structure of intense vorticity in homogeneous isotropic turbulence p 643 N94-14747

EQUIPMENT
Activities of Hawker Siddeley Canada Inc.
| CTN-93-60865 | p 849 N94-13505

EQUIPMENT SPECIFICATIONS
The study on large space structure assembly technology: The study on deployable truss structure, part 2 and 3
| NASDA-TMR-930003-PT-2-3 | p 541 N94-13659
High performance multi-mode radar altimeter for future spaceborne application p 548 N94-14214

ERROR ANALYSIS
Completing fault models for abductive diagnosis
| DE93-003832 | p 761 N94-12859
Methods for evaluating the predictive accuracy of structural dynamic models
| NASA-CR-191337 | p 671 N94-13124
Lower bounds on time of arrival estimation of pulse compression waveforms
| ITN-93-85189 | p 599 N94-13196
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
| NASA-CR-193646 | p 512 N94-13238
A priori error estimates for an hp-version of the discontinuous Galerkin method for hyperbolic conservation laws
| NASA-TM-108993 | p 632 N94-13467
GPS satellite sky distribution: Impact on the propagation of some important errors in precise relative positioning
| ISBN-0-315-51838-3 | p 513 N94-13541
Bounds on time delay estimation given unknown signal spectral parameters
| ITN-93-85194 | p 601 N94-13566
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
Orbit determination error analysis based on the requirements of ADEOS mission
| NASDA-CNT-930008 | p 532 N94-13644
Theory of post-block 2 VLBI observable extraction
| NASA-CR-194543 | p 686 N94-13872
Test report for single event effects of the 80386DX microprocessor
| NASA-CR-194509 | p 741 N94-13943
Estimate of sampling errors of TRMM rainfall observation by using radar-AMeDAS composite data p 690 N94-14225
SHEAN (Simplified Human Error Analysis code) and automated THERP
| DE93-014904 | p 738 N94-14451

ERROR CORRECTING CODES
Investigation for improving Global Positioning System (GPS) orbits using a discrete sequential estimator and stochastic models of selected physical processes
| NASA-CR-194167 | p 512 N94-13082

ERROR CORRECTING DEVICES
Telescope pointing for GOPEX p 610 N94-14389

ERRORS
On the construction and decoding of hyperelliptic codes p 747 N94-13435
Design and performance of an automated video-based laser beam alignment system
| DE93-012571 | p 656 N94-13481
HOPE real time flight operations analyses for return to earth phase, part B
| NASDA-CNT-930011 | p 535 N94-13599
HOPE real time flight operations analyses for return to earth phase, part A
| NASDA-CNT-930010-PT-A | p 535 N94-13645
Estimate of sampling errors of TRMM rainfall observation by using radar-AMeDAS composite data p 690 N94-14225
Radio metric errors due to mismatch and offset between a DSN antenna beam and the beam of a troposphere calibration instrument p 607 N94-14370
Small scale adaptive optics experiment systems engineering
| NASA-CR-194419 | p 793 N94-14548

H2S data reduction
[NASA-CR-193389] p 617 N94-14743
Generating knight's tours without backtracking from errors
[AD-A266807] p 772 N94-14900

ERS-1 (ESA SATELLITE)
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land
[BCRS-92-13] p 684 N94-13123
ERS-1 system
[ESA-SP-1146] p 699 N94-14353

ESA SPACECRAFT
Space transportation systems within ESA programmes: Current status and perspectives p 537 N94-14275

ESSENTIALLY NON-OSCILLATORY SCHEMES
A comparison of two formulations for high-order accurate essentially non-oscillatory schemes
[NASA-CR-191476] p 499 N94-12852
A high-resolution Lax-Friedrichs scheme for hyperbolic conservation laws with source terms: Application to shallow water equations
[DM-62] p 632 N94-13535
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
Multi-dimensional high order essentially non-oscillatory finite difference methods in generalized coordinates
[NASA-CR-194031] p 770 N94-14429
Removing noise from discontinuous data
[ITN-93-85211] p 826 N94-14555

ESTIMATES
Scientists, engineers, and technicians in nonmanufacturing industries: 1990. Detailed statistical tables
[NSF-92-334] p 820 N94-14499

ESTIMATING
Investigation for improving Global Positioning System (GPS) orbits using a discrete sequential estimator and stochastic models of selected physical processes
[NASA-CR-194167] p 512 N94-13082
Estimation of aircraft aerodynamic derivatives with the Total Least Squares Method
[NAL-TR-1150] p 502 N94-13392
Kalman filter input estimation
[NAL-TR-1182] p 649 N94-13456
Bounds on time delay estimation given unknown signal spectral parameters
[ITN-93-85194] p 601 N94-13566

ETA-MESONS
Further study of the X(1910) meson
[DE93-621443] p 782 N94-13362

ETCHING
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
[DE93-014335] p 806 N94-13150
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776
Microchannel cooled heatsinks for high average power laser diode arrays
[DE93-016533] p 658 N94-14442

ETHYL ALCOHOL
Biofuels for transportation: The road from research to the marketplace
[DE93-000091] p 585 N94-14454

EUKARYOTES
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338

EULER EQUATIONS OF MOTION
Clebsch variable model for unsteady, transonic flow; application to 2D airfoils
[NLR-TP-91387-U] p 503 N94-13530
Canonical forms of multidimensional steady inviscid flows
[NASA-CR-191488] p 769 N94-13722
Full Riemann solution of the one- and two-dimensional Euler equations
[DLR-FB-92-34] p 638 N94-14188
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503
Analytical description of the breakup of liquid jets in air
[NASA-CR-191503] p 647 N94-14849

EUROPEAN COMMUNICATIONS SATELLITE
ECS: Eighth year in orbit
[ESA-BR-82] p 543 N94-14352

EUROPEAN SPACE AGENCY
European space for exclusively peaceful purposes
[ESA-BR-86] p 851 N94-14137

EUROPEAN SPACE PROGRAMS
European space for exclusively peaceful purposes
[ESA-BR-86] p 851 N94-14137
Space transportation systems within ESA programmes: Current status and perspectives p 537 N94-14275

EUTECTIC ALLOYS
Solidification of eutectic system alloys in space (M-19) p 589 N94-13751
Influence of heat treatment on microstructure of Ti-35wt Al prepared by elemental powder metallurgy
[GKSS/92/E/27] p 574 N94-14821

EUTROPHICATION
Educational module for the Higher Agricultural Education. Part 2: Eutrophication observed by remote sensing: An educational approach to water quality monitoring
[BCRS-92-11B] p 818 N94-14462

EVALUATION
A knowledge-based expert system to coordinate CAD/CAE with integration and test
[NASA-CR-191394] p 745 N94-13130
A measurement and evaluation process model applied to software engineering environments
[INPE-5345-PUD/048] p 746 N94-13428

EVAPORATION
Promotion of geothermal energy development in 1991
[DE93-799058] p 701 N94-13215
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685

EVAPOTRANSPIRATION
Potential evapotranspiration in Belgium: Spatial and temporal variability
[PUBL-SER-A-130] p 686 N94-13994

EVEN-EVEN NUCLEI
On the statistical theory of the even-even nucleons levels' density
[DE93-623990] p 788 N94-14875

EXCIMER LASERS
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
Excimer laser surface processing of titanium
[DE93-012633] p 570 N94-13512

EXCITATION
Excitation of coupled waves in plasma periodic structures by relativistic electron beam and acceleration of charged particles
[DE93-621657] p 794 N94-12853
Comment of parameter excitation of Alfven and Heliicon waves in a magnetoactive compensated semiconductor by microwave radiation
[DE93-623203] p 806 N94-13228

EXCITONS
Free-exciton recombination in GaAs
[DE93-009843] p 809 N94-14079
Intrinsic and interfacial recombination in OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As heterostructures
[DE93-009844] p 809 N94-14083
Anomalous low-temperature free-exciton transport in GaAs structures
[DE93-009845] p 809 N94-14108

EXERCISE PHYSIOLOGY
Metabolic rate measurements comparing supine with upright upper-body exercises
[NASA-CR-4549] p 729 N94-14028
Variability of prediction of maximal oxygen concumption on the cycle ergometer using standard equations
[NASA-TP-3412] p 729 N94-14032

EXHAUST EMISSION
AQUIS: A PC-based source information manager
[DE93-012893] p 707 N94-13383
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459

EXHAUST GASES
Propulsion simulator for magnetically-suspended wind tunnel models
[NASA-CR-189560] p 527 N94-13127
Combustor technology for future small gas turbine aircraft
[NASA-TM-106312] p 517 N94-13142
AQUIS: A PC-based source information manager
[DE93-012893] p 707 N94-13383
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511
Terrestrial environment (climatic) criteria guidelines for use in aerospace vehicle development, 1993 revision
[NASA-TM-4511] p 533 N94-14824

EXHAUST NOZZLES
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812

EXHAUST SYSTEMS
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874

EXHAUST VELOCITY
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682

EXOBIOLOGY
Planetary protection implementation on future Mars lander missions
[NASA-CP-3216] p 841 N94-13183
Studies on the effects of microgravity on the ultrastructure and functions of cultured mammalian cells (L-6) p 592 N94-13763
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379)
[NASA-SP-7011(379)] p 733 N94-14412

EXOTHERMIC REACTIONS
Chemical reactions in scramjet engines: Reduced kinetic models for ignition, combustion and nozzle flow
[NAL-TR-1184] p 563 N94-13458

EXPANDABLE STRUCTURES
The Second Workshop on Deployment and Assembly Experiment of Large Space Structure on Orbit
[NASDA-CON-930003] p 529 N94-13268
Structural design of hexa-link truss deployable antenna p 529 N94-13269
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270
Development of modular cable mesh deployable antenna p 530 N94-13274
Helical truss beam development for large space structure p 530 N94-13276
Trial manufacture model and in-space verification method of deployable antenna p 530 N94-13278
A concept on on-orbit experiments of deployable structures utilizing JEM/HOPE p 531 N94-13279
Movement of deployable truss p 531 N94-13280
Development and application of one dimensional deployable truss p 531 N94-13281
The study on large space structure assembly technology: The study on deployable truss structure, part 1
[NASDA-TMR-930002] p 541 N94-13658
The study on large space structure assembly technology: The study on deployable truss structure, part 2 and 3
[NASDA-TMR-930003-PT-2-3] p 541 N94-13659

EXPEDITIONS
Airborne Arctic stratospheric expedition: Ozone
[NASA-TM-109312] p 515 N94-13606

EXPERIMENT DESIGN
A benchmark bending test of a thick specimen, Part 1: Experiments
[ARL-RR-6-PT-1] p 670 N94-12927
Heavy section steel irradiation experiment
[DE93-015517] p 573 N94-14537

EXPERIMENTATION
Development of experimental demonstration processes for laminar-turbulent flow states at wing profiles in free flight
[ILR-MITT-280(1993)] p 510 N94-14800

EXPERT SYSTEMS
JTEC Panel report on knowledge-based systems in Japan
[PB93-170124] p 820 N94-12801
Advancing automation and robotics technology for the Space Station Freedom and for the U.S. economy
[NASA-TM-104024] p 739 N94-12838
Knowledge base technology for CT-DIMS: Report 1
[DE93-013118] p 743 N94-13014
A knowledge-based expert system to coordinate CAD/CAE with integration and test
[NASA-CR-191394] p 745 N94-13130
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 1. Overview
[NASA-TM-102877] p 538 N94-13201
Collection and analysis of dialogue protocols for the question-answering facility of the entity-relationship modeling advisor
[ERB-1032] p 740 N94-13546
An expert system for integrated structural analysis and design optimization for aerospace structures
[NASA-CR-194225] p 673 N94-13673
SCAILET: An intelligent assistant for satellite ground terminal operations
[NASA-TM-105879] p 538 N94-13918
Gate assignment using linear programming
[LR-698] p 775 N94-13987
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 2. Results
[NASA-TM-102877] p 538 N94-13989
An expert system class library for Audition
[IME-MET-TR-008] p 824 N94-14196
Identification and interpretation of patterns in rocket engine data
[NASA-CR-194534] p 552 N94-14309

An integrated knowledge system for the Space Shuttle hazardous gas detection system
| NASA-CR-194533 | p 536 N94-14310
The further development and refinement of an expert-systems approach to the creative design of mechanisms and mechanical systems
| AD-A266812 | p 665 N94-14901

EXPIRATION
Flow limitation and flutter in membrane walled collapsible tubes: A model for expiratory wheezing
| ISBN-0-315-73875-8 | p 635 N94-13662

EXPLOSIONS
The motion of a conical shaped liner driven by explosive load
| ITN-93-85215 | p 585 N94-14507

EXPLOSIVES
Synthesis and characterization of 1,4-dinitroglycoluril (DINGU)
| DE93-014111 | p 584 N94-13099
Destruction of waste energetic materials using base hydrolysis
| DE93-012738 | p 584 N94-13491
A study of the role of homogeneous process in heterogeneous high explosives
| DE93-012733 | p 585 N94-14180
Nonlinear wave predictions in ceramics
| DE93-016516 | p 582 N94-14436
The 4th International Symposium on Analysis and Detection of Explosives
| DE93-620280 | p 585 N94-14829

EXPOSURE
Phase-shifting effect of light and exercise on the human circadian clock
| AD-A265732 | p 732 N94-13038

EXTENSOMETERS
Strain sensing technology for high temperature applications
| NASA-TM-4498 | p 648 N94-12874

EXTERNAL TANKS
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 1
| NASA-CR-167690 | p 534 N94-12810
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot transonic wind tunnel, volume 2
| NASA-CR-185697 | p 534 N94-12965
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (Model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 2
| NASA-CR-167691 | p 536 N94-14047

EXTINCTION
Homogeneous-hetergeneous combustion: Thermal and chemical coupling
| DE93-016050 | p 565 N94-14403

EXTRAGALACTIC RADIO SOURCES
Sites of fine-scale electron density turbulence in the interstellar medium
| NASA-CR-193708 | p 839 N94-13864

EXTRAPOLATION
Extrapolation of ground test data to flight
p 507 N94-14170

EXTRATERRESTRIAL INTELLIGENCE
Search for extraterrestrial intelligence/high resolution microwave survey team member
| NASA-CR-194177 | p 739 N94-13086

EXTRATERRESTRIAL RADIATION
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
| NASA-CR-194127 | p 847 N94-13211
Genetic effects of HZE and cosmic radiation (L-9)
p 593 N94-13766
Single Event Upset (SEU) testing of semiconductor components at the McMaster Accelerator Laboratory
| DSIS-93-00071 | p 623 N94-13834

EXTRATERRESTRIAL RESOURCES
The studies on lunar and planetary exploration and utilization: The study on lunar resources utilization
| NASDA-CNT-930014 | p 842 N94-13655

EXTRAVEHICULAR ACTIVITY
STS-30 Magellan IUS/EVA training in WETF
| NASA-TM-109300 | p 737 N94-13601
Metabolic rate measurements comparing supine with upright upper-body exercises
| NASA-CR-4549 | p 729 N94-14028
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
| NASA-SP-7085(05) | p 543 N94-14411
STS-35 EVA payload training in WETF
| NASA-TM-109492 | p 739 N94-14790

EXTREME ULTRAVIOLET RADIATION
Vacuum ultraviolet instrumentation for solar irradiance and thermospheric airglow
| NASA-CR-194525 | p 652 N94-14684
Optical degradation issues for XUV projection lithography systems
| DE93-012658 | p 626 N94-14805

EXTREMELY HIGH FREQUENCIES
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry
p 830 N94-13591

EXTRUDING
An experimental study on the effect of die geometry on swell and sag in the parison extrusion stage
| IMI-93RT-42400-1476-G | p 597 N94-14070

EYE MOVEMENTS
Manual control in space research on perceptual-motor functions under zero gravity conditions (L-10)
p 593 N94-13767
Eye-gaze and intent: Application in 3D interface control
| DE93-015210 | p 738 N94-14335

EYE PROTECTION
Novel Co:MgF2 lidar for aerosol profiler
| NASA-CR-191525 | p 654 N94-13091

F

F-15 AIRCRAFT
Preliminary flight results of a fly-by-throttle emergency flight control system on an F-15 airplane
| NASA-TM-4503 | p 520 N94-13254

FABRICATION
Roller-gear drives for robotic manipulators design, fabrication and test
| NASA-CR-194248 | p 660 N94-12802
Design and testing of planar magnetic micromotors fabricated by deep x ray lithography and electroplating
| DE93-012856 | p 618 N94-12821
Processing, fabrication and demonstration of HTS integrated microwave circuits
| AD-A265789 | p 619 N94-12892
Rigid-flexible printed wiring boards
| DE93-013938 | p 620 N94-13094
Fabrication of AlGaAs/GaAs-light-emitting devices by selective MOCVD using dialkylmetalchloride
p 627 N94-13433
Fabrication of very-low-density, high-stiffness carbon fiber/aluminum hybridized composite with ultra-low density and high stiffness (M-11) p 588 N94-13743
Fabrication of Si-As-Te ternary amorphous semiconductor in the microgravity environment (M-13)
p 588 N94-13745
Combustion synthesis and engineering of nanoparticles for electronic, structural, and superconductor applications
| DE93-016286 | p 809 N94-13981
Measurement of strain in individual phases of composites before, during, and after mechanical loading
| DE93-014585 | p 558 N94-14119
Machining aspects of nickel-phosphorus coatings
| DE93-013037 | p 580 N94-14311
Fabrication p 546 N94-14834
Investigation of Zerodur material processing
| NASA-CR-193842 | p 793 N94-14903

FABRICS
Review of test methods for material flammability
| DSIS-93-00480 | p 564 N94-13942

FABRY-PEROT INTERFEROMETERS
Optical fiber sensors for materials and structures characterization
| NASA-CR-194090 | p 791 N94-13353
Optical fibre Fabry-Perot interferometers for calorimetric heat transfer gauges
| RAE-TM-AERO/PROP-20 | p 653 N94-14701

FACE CENTERED CUBIC LATTICES
Determination of channeling perspectives for complex crystal structures
| DE93-012872 | p 805 N94-13009
Monte Carlo simulation of the OCP freezing transition
| DE93-013039 | p 811 N94-14313
Is K3C60 a line phase?
| DE93-016700 | p 813 N94-14517

FACTORIAL DESIGN
Effect of size, shape, and end condition of test specimen on compressive strength of high-strength concrete
| DE93-500412 | p 682 N94-14653

FACTORIZATION
Beyond core: Making parallel computer I/O practical
| DE93-012347 | p 758 N94-12878
On relations between Schmidt pairs arising in robust control
| CWI-BS-R9225 | p 764 N94-14000

FAIL-SAFE SYSTEMS
Fail-safe PVM: A portable package for distributed programming with transparent recovery
| AD-A266594 | p 749 N94-13779

FAILURE
Theoretical studies of breakdown in random media
| DE93-018107 | p 558 N94-14418

FAILURE ANALYSIS
STS-55 pad abort: Engine 2011 oxidizer preburner augmented spark igniter check valve leak
| NASA-CR-193830 | p 533 N94-12806
Surface analysis of bearings
| AD-A266800 | p 661 N94-13122
MSD in fuselage lap joints: Requirements for inspection intervals for typical fuselage lap joint panels with Multiple Site Damage
| LR-697 | p 675 N94-13986
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples, volume 1
| NASA-CR-194498 | p 542 N94-14076
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples. Volume 2: Software documentation
| NASA-CR-194499 | p 542 N94-14077
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples. Volume 3: Structure and listing of programs
| NASA-CR-194500 | p 542 N94-14078
Machining and grinding: High rate deformation in practice
| DE93-010718 | p 664 N94-14457
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 1: Methodology and applications
| NASA-CR-194496 | p 519 N94-14841
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 2: Software documentation
| NASA-CR-194497 | p 519 N94-14842

FAILURE MODES
Inelastic deformation mechanisms in SCS-6/Ti 15-3 MMC lamina under compression
| NASA-CR-191170 | p 555 N94-13378
Role of microstructure on fatigue durability of aluminum aircraft alloys
| AD-A266350 | p 571 N94-13697
Failure modes of reduced-order orbit determination filters and their remedies p 532 N94-14373
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 1: Methodology and applications
| NASA-CR-194496 | p 519 N94-14841
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 2: Software documentation
| NASA-CR-194497 | p 519 N94-14842

FAINT OBJECTS
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry
p 830 N94-13591
Rocket and laboratory studies in astronomy
| NASA-CR-194410 | p 832 N94-13966

FAIRINGS
Arc-heating tests of thermal protection system materials for the H-2 rocket fairing
| NAL-TR-1181 | p 551 N94-13455

FALKNER-SKAN EQUATION
Stability of spatially developing boundary layers
p 640 N94-14605

FALSE ALARMS
Constant False Alarm Rate (CFAR) detection in Weibull clutter
| ITN-93-85190 | p 600 N94-13537
Stochastic performance modeling and evaluation of obstacle detectability with imaging range sensors
| NASA-CR-194510 | p 605 N94-13946

FAR FIELDS
New vortex dynamics methods for rotor free wake analysis
| AD-A266656 | p 509 N94-14774

FAR INFRARED RADIATION
Analysis of interstellar cloud structure based on IRAS images
| NASA-CR-194341 | p 836 N94-13332
The origin of the far-infrared emission from galactic molecular clouds p 848 N94-13654

FAR ULTRAVIOLET RADIATION
Vacuum ultraviolet instrumentation for solar irradiance and thermospheric airglow
| NASA-CR-194525 | p 652 N94-14684

FARM CROPS
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber. BWT931 (Wheat cv. Yecora Rojo)
| NASA-TM-109272 | p 738 N94-13979

FARMLANDS
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
| DE93-010667 | p 717 N94-14424
FAST FOURIER TRANSFORMATIONS
An experimental regional scale climate simulation laboratory
| DE93-015935 | p 719 N94-13119
ULTRA 2 user's manual for ULTRA 2 revision 3.0
| DE93-015970 | p 744 N94-13120
FAST NEUTRONS
Cosmic and solar gamma ray and neutron experiments
| NASA-CR-193359 | p 849 N94-13965
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels
| DE93-011602 | p 572 N94-14058
AlGaAs diode laser blue shift resulting from fast neutron irradiation
| AD-A266642 | p 659 N94-14681
FATIGUE (MATERIALS)
Fatigue crack initiation and propagation in aluminum alloys 8090 and 2124 in hydrogenous atmospheres
p 570 N94-13670
Computational methods for reliable fatigue and damage tolerance dimensioning of aircraft structures
| FFA-TN-1993-05 | p 515 N94-13690
Fatigue and residual strength characteristics of fiber metal laminates subjected to incidental damage
| LR-708 | p 674 N94-13803
Review of Canadian aeronautical fatigue work, 1991-1993
| LTR-ST-1932 | p 674 N94-13861
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
| DE93-016666 | p 812 N94-14354
Inflow characteristics associated with high-blade-loading events in a wind farm
| DE93-010042 | p 704 N94-14423
A study of fiber volume fraction effects in notched unidirectional SCS-6/Ti-15V-3Cr-3Al-3Sn composite
| NASA-CR-191165 | p 559 N94-14769
Thermomechanical and isothermal fatigue behavior of a (90)sub 8 titanium matrix composite
| NASA-CR-191196 | p 560 N94-14822
FATIGUE LIFE
Fatigue predictions and scatter
| LR-696 | p 675 N94-13933
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 1: User's guide
| NASA-CR-191183 | p 663 N94-14445
Computer program for analysis of high speed, single row, angular contact, spherical roller bearing, SASHBEAN. Volume 2: Mathematical formulation and analysis
| NASA-CR-191182 | p 664 N94-14446
Thermomechanical and isothermal fatigue behavior of a (90)sub 8 titanium matrix composite
| NASA-CR-191196 | p 560 N94-14822
FATIGUE TESTS
An advanced test technique to quantify thermomechanical fatigue damage accumulation in composite materials
| NASA-CR-191147 | p 555 N94-13139
Fatigue crack initiation and propagation in aluminum alloys 8090 and 2124 in hydrogenous atmospheres
p 570 N94-13670
Role of microstructure on fatigue durability of aluminum aircraft alloys
| AD-A266350 | p 571 N94-13697
The effect of TiN coatings on the rolling contact fatigue behavior of M50 bearing steel
| ARL-TR-40 | p 662 N94-13794
Thermomechanical and isothermal fatigue behavior of a (90)sub 8 titanium matrix composite
| NASA-CR-191196 | p 560 N94-14822
The growth of short fatigue cracks in an aluminium alloy
| RAE-TR-92063 | p 574 N94-14828
FATTY ACIDS
Direct probing of chromatography columns by laser-induced fluorescence
| DE93-015208 | p 654 N94-13022
Structures and shear response of lipid monolayers
| DE93-015076 | p 730 N94-14802
FAULT DETECTION
Thermal Expert System (TEXSYS): Systems automony demonstration project, volume 1. Overview
| NASA-TM-102877 | p 538 N94-13201
Identification and interpretation of patterns in rocket engine data
| NASA-CR-194534 | p 552 N94-14309
An integrated knowledge system for the Space Shuttle hazardous gas detection system
| NASA-CR-194533 | p 536 N94-14310
FAULT TOLERANCE
A hardware implementation of a provably correct design of a fault-tolerant clock synchronization circuit
| NASA-TM-109001 | p 759 N94-13450
Fail-safe PVM: A portable package for distributed programming with transparent recovery
| AD-A266594 | p 749 N94-13779
A performance prediction model for a fault-tolerant computer during recovery and restoration
| NASA-CR-194490 | p 741 N94-14136
FAULT TREES
Completing fault models for abductive diagnosis
| DE93-003832 | p 761 N94-12859
FEASIBILITY ANALYSIS
The MRIS feasibility study
| NASA-TM-107763 | p 597 N94-12804
Feasibility study of an orbiting laboratory for testing CSI technology
| NASA-CR-191524 | p 540 N94-13016
Hot Dry Rock energy
| DE93-014452 | p 702 N94-13403
Physiological Anatomical Rodent Experiment (PARE) .04 Feasibility Test 1
| NASA-CR-194423 | p 728 N94-13473
Feasibility study of a synthesis procedure for array feeds to improve radiation performance of large distorted reflector antennas
| NASA-CR-194491 | p 612 N94-14501
FEDERAL BUDGETS
National atmospheric sciences program, fiscal years 1987-1990
| NSF-92-16 | p 711 N94-12794
Defense Information Technology Services organization FY 1994 budget estimates. Information Technology Systems budget
| PB93-199016 | p 826 N94-14562
FEEDBACK
Cellular mechanism of turnover of the stress induced protein HSP 70
| AD-A265723 | p 732 N94-13061
Characteristics of semiconductor lasers with optical feedback
| ISBN-0-315-55435-5 | p 656 N94-13522
Experimental and analytical analysis of the response of a smart beam to rate feedback
| AD-A266544 | p 557 N94-13706
FEEDBACK CONTROL
Self tuning and adaptive control: Evaluations and improvements of algorithms
| ITN-93-85192 | p 762 N94-13329
Design and performance of an automated video-based laser beam alignment system
| DE93-012571 | p 656 N94-13481
Experimental and analytical analysis of the response of a smart beam to rate feedback
| AD-A266544 | p 557 N94-13706
Dynamic Forms. Part 1: Functions
| NASA-TP-3397 | p 596 N94-13790
Decentralized control of uncertain systems via sensitivity models
| DE93-012963 | p 766 N94-14568
On l(1): Optimal decentralized performance
p 681 N94-14643
Smart materials/structures technical analysis
| AD-A266771 | p 766 N94-14785
Functional differential equations with piecewise continuous argument
| AD-A266660 | p 772 N94-14840
Anomalous ion transport and feedback control
| DE93-018324 | p 803 N94-14874
FEEDFORWARD CONTROL
Dynamics and design of nonholonomic robotic mechanical systems
| ISBN-0-315-72009-3 | p 662 N94-13597
Identification of continuous-time dynamical systems: Neural network based algorithms and parallel implementation
| DE93-014427 | p 766 N94-14737
Determining neural network connectivity using evolutionary programming
| AD-A266853 | p 766 N94-14882
FERMI LIQUIDS
To the theory of triplet pairing in Fermi-liquid model
| DE93-621770 | p 816 N94-12855
FERMI SURFACES
The de Haas-van Alphen studies and Fermi surface properties of organic superconductors (ET)2X
| DE93-015157 | p 623 N94-13925
FERMIONS
Muon spin relaxation studies of heavy fermion superconductors
| DE93-014576 | p 815 N94-14773
FERRIC IONS
Reactor studies of metal ions associated with chromatographic silica
| AD-A266675 | p 573 N94-14779
FERRITIC STAINLESS STEELS
Investigations of low-temperature neutron embrittlement of ferritic steels
| DE93-015460 | p 573 N94-14700
FERROELECTRICITY
Solution chemistry optimization of sol-gel processed PZT thin films
| DE93-013776 | p 814 N94-14695
FERROMAGNETIC MATERIALS
Spin polarized photoemission studies of interfacial and thin film magnetism
| DE93-014326 | p 580 N94-14142
Theory of the negative magnetoresistance in magnetic metallic multilayers
| DE93-013912 | p 776 N94-14584
FERROMAGNETISM
Canted magnetic moments at the Gd(0001) surface
| DE93-014327 | p 805 N94-13102
FERTILIZATION
Amphibian fertilization and development in microgravity p 594 N94-13770
FERTILIZERS
Environmental awareness
| DE93-014192 | p 707 N94-13218
FIBER COMPOSITES
Ohmic heating of composite candidate graphite-fiber/coating combinations
| NASA-TM-4491 | p 554 N94-12871
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
| DE93-012942 | p 577 N94-13032
Inelastic deformation mechanisms in SCS-6/Ti 15-3 MMC lamina under compression
| NASA-CR-191170 | p 555 N94-13378
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
| AD-A266547 | p 556 N94-13583
A stochastic model for behavior analysis of fiber-reinforced quasi-brittle materials
p 672 N94-13594
Modified carbon for improved corrosion resistance
| AD-D015741 | p 556 N94-13663
Fatigue and residual strength characteristics of fiber metal laminates subjected to incidental damage
| LR-708 | p 674 N94-13803
Characterization of composite materials for aerospace structures
| ESA-TT-1260 | p 557 N94-13804
Probabilistic micromechanics for high-temperature composites
| NASA-CR-191150 | p 676 N94-14408
Immiscible phase incorporation during directional solidification of hypermonotectics
| NASA-CR-194412 | p 565 N94-14480
Thermoelastic response of metal matrix composites with large-diameter fibers subjected to thermal gradients
| NASA-TM-106344 | p 560 N94-14823
FIBER OPTICS
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
| AD-A265106 | p 790 N94-12863
Application of new electro-optic technology to Space Station Freedom data management system
| NASA-CR-177622 | p 538 N94-13257
Proceedings of the 11th Space Surveillance Workshop, volume 1
| AD-A265120 | p 531 N94-13358
Polarization effects in optical fiber current sensors based on Sagnac interferometers with 3 by 3 couplers
| DE93-012665 | p 792 N94-14367
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
| DE93-012592 | p 789 N94-14460
Advanced optical instruments technology
p 547 N94-14838
FIBER ORIENTATION
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
| DE93-012942 | p 577 N94-13032
FIBER STRENGTH
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
| DE93-012942 | p 577 N94-13032
FIBER VOLUME FRACTION
A study of fiber volume fraction effects in notched unidirectional SCS-6/Ti-15V-3Cr-3Al-3Sn composite
| NASA-CR-191165 | p 559 N94-14769
FIELD EFFECT TRANSISTORS
1/f noise and oxide traps in MOSFETs
| DE93-007581 | p 619 N94-12942

An x ray detector using superconducting aluminum tunnel junctions
| DE93-015103 | p 811 N94-14332
Electrical noise in microwave field effect and bipolar transistors
| LAAS-93042 | p 616 N94-14717

FIELD OF VIEW
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays
p 524 N94-13315

FIELD THEORY (PHYSICS)
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
| AD-A265805 | p 834 N94-12971
The effects of internal fluctuations on a class of nonequilibrium statistical field theories
| DE93-016620 | p 774 N94-14441
Multiple Schroedinger cats from multilevel atoms
| DE93-013412 | p 786 N94-14526
Multiplicative noise: Applications in cosmology and field theory
| DE93-016624 | p 840 N94-14536
Renormalized band structure of CuO2 layers in superconducting compounds: A mean field approach
| PREPRINT-730 | p 815 N94-14720
Soliton equations and self-dual gauge fields
| DE93-626620 | p 818 N94-14887
Studies in quantum field theory
| DE93-017201 | p 818 N94-14896

FIGHTER AIRCRAFT
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
The identification of ability requirements and selection instruments for fighter pilot training
| AD-A266340 | p 735 N94-13582
High flux heat exchanger
| AD-A266341 | p 636 N94-13730
Qualitative investigation of a generic fighter model in radio controlled gliding flight
| LM-AA-003 | p 516 N94-13898

FIGURE OF MERIT
Robot-task compliance: The energy criterion
| ITN-93-85196 | p 763 N94-13568

FILE MAINTENANCE (COMPUTERS)
Generic software architecture based redesign
p 745 N94-13290

FILM COOLING
Experimental investigation of the effects of blowing ratio parameter on heat transfer to a film-cooled flat plate
| AD-A266599 | p 636 N94-13780

FILM THICKNESS
Effect of microstructure on passive film formation and breakdown on Al alloys
| AD-A265339 | p 569 N94-13050
The use of polarised neutron reflection for unique density profile determination in thin films
| PB93-187136 | p 579 N94-13783
Direct submillimeter absorptivity measurements on epitaxial Ba(1-x)K(x)BiO3 films at 2K
| DE93-013904 | p 815 N94-14699

FILMS
A process for evaluation of mechanical behavior of surface films
| W-1/92 | p 579 N94-14007

FINANCIAL MANAGEMENT
Selected data on academic science and engineering R and D expenditures: Fiscal Year 1991
| NSF-92-329 | p 819 N94-13982

FINE STRUCTURE
Recent developments in multiple-scattering calculations of XAFS and XANES
| DE93-010999 | p 563 N94-13477
Many-body corrections in XAFS
| DE93-011002 | p 563 N94-13478

FINITE DIFFERENCE THEORY
A comparison of two formulations for high-order accurate essentially non-oscillatory schemes
| NASA-CR-191476 | p 499 N94-12852
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
| DE93-013958 | p 601 N94-13696
Modelling of the temperature distribution in a copper roll for the design of a system of cooled rolls adapted to vertical strip casting
| IMI-93RT-21200-1436-G | p 557 N94-13866
Multi-dimensional high order essentially non-oscillatory finite difference methods in generalized coordinates
| NASA-CR-194031 | p 770 N94-14429
An adaptive projection method for the incompressible Euler equations
| DE93-016428 | p 639 N94-14434
Nonlinear wave predictions in ceramics
| DE93-016516 | p 582 N94-14436
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
A new Lagrangian method for three-dimensional steady supersonic flows
| NASA-TM-106068 | p 510 N94-14847

FINITE ELEMENT METHOD
Thermosolutal convection and macrosegregation in dendritic alloys
| NASA-CR-194039 | p 567 N94-12825
Modeling the impact behavior of AD85 ceramic under multi-axial loading
| AD-A265877 | p 576 N94-12932
A general contact detection algorithm for finite element analysis
| DE93-012846 | p 742 N94-12956
Advanced electric motor technology flux mapping
| NASA-CR-193824 | p 621 N94-13186
Body/cushion contact stress analysis during sitting
| ITN-93-85204 | p 736 N94-13229
A hybrid finite element-boundary integral for the analysis of cavity-backed antennas of arbitrary shape
| NASA-CR-193719 | p 599 N94-13236
A priori error estimates for an hp-version of the discontinuous Galerkin method for hyperbolic conservation laws
| NASA-TM-108993 | p 632 N94-13467
Fully developed turbulent flow in rectangular interrupted-plate ducts
| ISBN-0-315-63594-0 | p 632 N94-13474
Finite element calculation of stress-intensity factors for thumb-nail cracks in DEN specimens
| LTR-ST-1929 | p 850 N94-13548
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory
p 556 N94-13558
Shear buckling of fiber metal laminates: Comparison between orthotropic and anisotropic plate models using finite element method
| LTR-ST-1934 | p 671 N94-13565
Finite element analysis of composite plates by use of modified complementary energy principle
p 672 N94-13596
An expert system for integrated structural analysis and design optimization for aerospace structures
| NASA-CR-194225 | p 673 N94-13673
A control volume finite element method for three-dimensional, incompressible, viscous fluid flow
| ISBN-0-315-72019-0 | p 635 N94-13683
An 8-node axisymmetric acoustic finite element for non-axisymmetric fluid-structure interaction analysis
| FFA-TN-1993-03 | p 673 N94-13689
Computational methods for reliable fatigue and damage tolerance dimensioning of aircraft structures
| FFA-TN-1993-05 | p 515 N94-13690
Testing and analysis of curved frame specimens made from a Long Discontinuous Fiber (LDF) material
| NASA-TM-109014 | p 557 N94-13711
Application of symbolic and algebraic manipulation software in solving applied mechanics problems
| NASA-CR-4544 | p 596 N94-13798
Variational approach to probabilistic finite elements
| NASA-CR-187179 | p 674 N94-13873
Elastic-plastic mixed-iterative finite element analysis: Implementation and performance assessment
| NASA-TM-106164 | p 675 N94-13919
On the superconvergence of Galerkin methods for hyperbolic IBVP
| NASA-CR-194293 | p 770 N94-13922
Some aspects of sheet forming simulation using explicit finite element techniques
| DE93-012479 | p 663 N94-13975
A process for evaluation of mechanical behavior of surface films
| W-1/92 | p 579 N94-14007
Finite element calculation of stress-intensity factors for thru-thickness cracks in DEN specimens
| LTR-ST-1905 | p 675 N94-14035
On the superconvergence of Galerkin methods for hyperbolic IBPV
| NASA-CR-194488 | p 770 N94-14307
Least-squares finite element solutions for three-dimensional backward-facing step flow
| NASA-TM-106353 | p 770 N94-14407
Probabilistic micromechanics for high-temperature composites
| NASA-CR-191150 | p 676 N94-14408
Development of an hp-version finite element method for computational optimal control
| NASA-CR-194149 | p 766 N94-14444
Welding technologies as applied to nuclear manufacturing
| DE93-010924 | p 664 N94-14565
Large spatial, temporal, and algorithmic adaptivity for implicit nonlinear finite element analysis
| DE93-016438 | p 771 N94-14589
Analysis of new composite architectures
| NASA-CR-194524 | p 559 N94-14715
Elastic-plastic finite element analyses of an unidirectional, 9 vol percent tungsten fiber reinforced copper matrix composite
| NASA-TM-106304 | p 559 N94-14719
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
| NASA-TM-106351 | p 771 N94-14731
Buckling analysis of laminated thin shells in a hot environment
| NASA-TM-106302 | p 683 N94-14776
Nonlinear wave forces on large ocean structures
| AD-A266820 | p 683 N94-14902

FINITE VOLUME METHOD
A comparison of two formulations for high-order accurate essentially non-oscillatory schemes
| NASA-CR-191476 | p 499 N94-12852
A solution algorithm for the prediction of compressible laminar and turbulent shear flows p 634 N94-13635
CNSFV code development, virtual zone Navier-Stokes computations of oscillating control surfaces and computational support of the laminar flow supersonic wind tunnel
| NASA-CR-194259 | p 504 N94-14030
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
A vertex-based finite-volume algorithm for the Navier-Stokes equations p 639 N94-14599
An implicit finite volume nodal point scheme for the solution of two-dimensional compressible Navier-Stokes equations p 640 N94-14603
Navier-Stokes simulation of transonic vortex flow over a delta wing p 640 N94-14606
A finite volume method for computation of viscous flow in complex configurations p 640 N94-14607

FINNED BODIES
Low-speed wind tunnel tests on a joined-wing aircraft model with various upper-fin
| NAL-TR-1169 | p 501 N94-13341

FINS
Measurements of wing and fin buffeting on the standard dynamics model
| IAR-AN-76 | p 526 N94-13859

FIR FILTERS
Exact reconstruction analysis/synthesis filter banks with time-varying filters
| NASA-CR-193725 | p 600 N94-13466
Digital quadrature demodulation for radar ESM applications
| DREO-TN-92-10 | p 603 N94-13838

FIRES
Coupled thermal response of objects and participating media in fires and large combustion systems
| DE93-012848 | p 561 N94-12819
A model for fuel fire duration and application to the B-1B bomber
| DE93-013000 | p 512 N94-14292

FISHES
Neurophysiological study on visuo-vestibular control of posture and movement in fish during adaptation to weightlessness p 591 N94-13759
Warm streamers extended from Warm Core Rings (WCR's) and their role on fish migration and fishing ground formation p 697 N94-14270

FISHING
Warm streamers extended from Warm Core Rings (WCR's) and their role on fish migration and fishing ground formation p 697 N94-14270

FIXED WINGS
Measurements of wing and fin buffeting on the standard dynamics model
| IAR-AN-76 | p 526 N94-13859

FIXTURES
Design and application of a quasistatic crush test fixture for investigating scale effects in energy absorbing composite plates
| NASA-CR-4526 | p 670 N94-13063

FLAME PROPAGATION
Flamespreading in granular solid propellant: Design of an experiment
| AD-A266009 | p 583 N94-12987
A coherent flame model of premixed turbulent combustion in a counterflow geometry
| CUED/A-THERMO/TR.60 | p 562 N94-13085
Effect of finite-rate chemistry and unequal Schmidt numbers on turbulent non-premixed flames modeled with single-step chemistry p 567 N94-14766

FLAME RETARDANTS
Flammability of clothing, volume 2
| DSIS-93-00036-VOL-2 | p 564 N94-13819
Review of test methods for material flammability
| DSIS-93-00480 | p 564 N94-13942
Synthetic lubricants and high-performance functional fluids: Phosphazenes
| ARL-TR-45 | p 580 N94-14126

FLAMES
Characterization of diamond film growth in a combustion flame
| AD-A266659 | p 816 N94-14839
FLAMMABILITY
Study on improvement of flammability, odor and offgassing tests for materials
| NASDA-CNT-930009 | p 563 N94-13471
Flammability of clothing, volume 2
| DSIS-93-00036-VOL-2 | p 564 N94-13819
Review of test methods for material flammability
| DSIS-93-00480 | p 564 N94-13942
FLAPPING
A survey of crack path stability criteria and their application to crack flapping phenomena in stiffened structures
| LR-681 | p 675 N94-13929
FLARE STARS
A photometric study of massive x-ray binaries
| ITN-93-85207 | p 829 N94-13231
FLAT PLATES
An analytical investigation of transient effects on rewetting of heated thin flat plates
| NASA-TM-106120 | p 628 N94-12968
Design and application of a quasistatic crush test fixture for investigating scale effects in energy absorbing composite plates
| NASA-CR-4526 | p 670 N94-13063
Experimental investigation of the effects of blowing ratio parameter on heat transfer to a film-cooled flat plate
| AD-A266599 | p 636 N94-13780
FLAT SURFACES
Determination of the surface cleanliness of metals by FT-IR spectroscopy
| DE93-013252 | p 565 N94-14525
FLEXIBILITY
Rigid-flexible printed wiring boards
| DE93-013938 | p 620 N94-13094
FLEXIBLE BODIES
Nonlinear damping model for flexible structures
| NASA-CR-193711 | p 539 N94-12790
Relegation for decentralized control
| AD-A265720 | p 819 N94-13059
Flex-gear electrical power transmission
| NASA-CR-194422 | p 661 N94-13445
Geometric stiffening in multibody dynamics formulations p 677 N94-14619
Stress stiffening and approximate equations in flexible multibody dynamics p 677 N94-14620
Some experiences with Krylov vectors and Lanczos vectors p 677 N94-14621
Computational Controls Workstation: Algorithms and hardware p 678 N94-14626
Animation of multi-flexible body systems and its use in control system design p 678 N94-14629
Spatial operator algebra for flexible multibody dynamics p 679 N94-14631
Nonrecursive formulations of multibody dynamics and concurrent multiprocessing p 679 N94-14632
Non-recursive augmented Lagrangian algorithms for the forward and inverse dynamics of constrained flexible multibodies p 679 N94-14633
Computational strategies in the dynamic simulation of constrained flexible MBS p 679 N94-14635
Real-time dynamics simulation of the Cassini spacecraft using DARTS. Part 1: Functional capabilities and the spatial algebra algorithm p 680 N94-14638
Control system design for flexible structures using data models p 527 N94-14646
PACE: A test bed for the dynamics and control of flexible multibody systems p 527 N94-14650
A program for the investigation of the Multibody Modeling, Verification, and Control Laboratory p 682 N94-14652
FLEXIBLE SPACECRAFT
Relegation for decentralized control
| AD-A265720 | p 819 N94-13059
Dynamics of adaptive structures: Design through simulations
| NASA-CR-193724 | p 540 N94-13112
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
| NASA-CR-194515 | p 677 N94-14618
Spatial operator algebra for flexible multibody dynamics p 679 N94-14631
An application of the IMC software to controller design for the JPL LSCL Experiment Facility p 681 N94-14645
Control structural interaction testbed: A model for multiple flexible body verification p 544 N94-14649
FLIGHT CHARACTERISTICS
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
| NASA-CP-3220 | p 521 N94-13294
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator p 521 N94-13295
MIL-H-8501B: Application to shipboard terminal operations p 521 N94-13296
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
A perspective on the FAA approval process: Integrating rotorcraft displays, controls and workload p 521 N94-13298
Some lessons learned in three years with ADS-33C --- rotorcraft handling qualities specification p 521 N94-13299
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
The application of active side arm controllers in helicopters p 522 N94-13302
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
The impact of flying qualities on helicopter operational agility p 522 N94-13304
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
A model for rotorcraft flying qualities studies p 523 N94-13308
Interpreted Cooper-Harper for broader use p 523 N94-13309
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
Handling qualities effects of display latency p 517 N94-13316
Effects of simulator motion and visual characteristics on rotorcraft handling qualities evaluations p 524 N94-13317
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318
Piloting considerations for terminal area operations of civil tiltwing and tiltrotor aircraft p 525 N94-13320
Design and pilot evaluation of the RAH-66 Comanche Core AFCS p 525 N94-13321
Design and pilot evaluation of the RAH-66 Comanche selectable control modes p 525 N94-13322
Flight testing and frequency domain analysis for rotorcraft handling qualities characteristics p 526 N94-13324
Qualitative investigation of a generic fighter model in radio controlled gliding flight
| LM-AA-003 | p 516 N94-13898
The flight performance of the Galileo orbiter USO p 611 N94-14398
FLIGHT CLOTHING
Evaluation of the Retrograde Inflation Anti-G Suit (RIAGS)
| AD-A265884 | p 736 N94-12935
FLIGHT CONTROL
Preliminary flight results of a fly-by-throttle emergency flight control system on an F-15 airplane
| NASA-TM-4503 | p 520 N94-13254
Actuator and aerodynamic modeling for high-angle-of-attack aeroservoelasticity
| NASA-TM-4493 | p 520 N94-13255
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
| NASA-CP-3220 | p 521 N94-13294
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities p 522 N94-13300
The application of active side arm controllers in helicopters p 522 N94-13302
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
A four-axis hand controller for helicopter flight control p 522 N94-13305
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Compatibility of information and mode of control: The case for natural control systems p 523 N94-13307
Visual information for judging temporal range p 524 N94-13314
Piloting considerations for terminal area operations of civil tiltwing and tiltrotor aircraft p 525 N94-13320
Preliminary design features of the RASCAL: A NASA /Army rotorcraft in-flight simulator p 526 N94-13325
Flight path control for the approach and landing of the quiet STOL experimental aircraft ASKA
| NAL-TR-1183 | p 513 N94-13457
Dynamic Forms. Part 1: Functions
| NASA-TP-3397 | p 596 N94-13790
Mongoose ASIC microcontroller programming guide
| NASA-RP-1319 | p 623 N94-13871
The development and flight test of a deployable precision landing system for spacecraft recovery
| NASA-TM-4525 | p 537 N94-14853
FLIGHT CREWS
Work/rest schedules and performance of S-3 aviators during fleet exercise
| AD-A265807 | p 734 N94-12975
FLIGHT ENVELOPES
The impact of flying qualities on helicopter operational agility p 522 N94-13304
FLIGHT INSTRUMENTS
Rover imaging system for the Mars rover/sample return mission
| NASA-CR-193413 | p 649 N94-13464
FLIGHT MANAGEMENT SYSTEMS
Flight crew interface aspects of forward-looking airborne windshear detection systems
| NASA-CR-191437 | p 516 N94-12829
Cognitive engineering in aerospace application: Pilot interaction with cockpit automation
| NASA-CR-177617 | p 510 N94-13247
FLIGHT MECHANICS
Activities of Institute for Aerospace Research, Flight Research Laboratory
| CTN-93-60832 | p 850 N94-13519
FLIGHT OPERATIONS
Flight operations highlights, tapes 1 and 2
| NASA-TM-109293 | p 850 N94-13633
FLIGHT PATHS
Flight path control for the approach and landing of the quiet STOL experimental aircraft ASKA
| NAL-TR-1183 | p 513 N94-13457
Ground Attack Profile Selector Program, version 3.0
| DSIS-93-00702 | p 753 N94-14207
FLIGHT RECORDERS
PC based A320 quick access recorder readout facility
| PD-AL-9109 | p 744 N94-13077
FLIGHT SAFETY
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Preliminary nuclear safety assessment of the NEPST (Topaz 2) space reactor program
| DE93-012853 | p 551 N94-13514
Activities report of the Federal Administration for Flight Safety (Germany)
| ETN-93-94208 | p 511 N94-14008
FLIGHT SIMULATION
Vertical motion simulator familiarization guide
| NASA-TM-103923 | p 527 N94-13008
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
The application of active side arm controllers in helicopters p 522 N94-13302
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Interpreted Cooper-Harper for broader use p 523 N94-13309
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
The development and potential of inverse simulation for the quantitative assessment of helicopter handling qualities p 523 N94-13311
Visual cueing aids for rotorcraft landings p 524 N94-13313
Visual information for judging temporal range p 524 N94-13314
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays p 524 N94-13315
Handling qualities effects of display latency p 517 N94-13316
Effects of simulator motion and visual characteristics on rotorcraft handling qualities evaluations p 524 N94-13317
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318
Design and pilot evaluation of the RAH-66 Comanche Core AFCS p 525 N94-13321
Design and pilot evaluation of the RAH-66 Comanche selectable control modes p 525 N94-13322
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323
Control system design of a cable-mounted model used for dynamic wind tunnel testing
| NAL-TR-1161 | p 528 N94-13337
HELSCAM V2.0: Development and application guide
| DSIS-93-00137 | p 515 N94-13867
Laboratory simulation of spacecraft charging in the plasma wake region
| FFI-93-7007 | p 542 N94-14107
Ground Attack Profile Selector Program, version 3.0
| DSIS-93-00702 | p 753 N94-14207
FLIGHT SIMULATORS
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator p 521 N94-13295

Effects of simulator motion and visual characteristics on rotorcraft handling qualities evaluations
p 524 N94-13317
Preliminary design features of the RASCAL: A NASA /Army rotorcraft in-flight simulator p 526 N94-13325
Future developments of the NLR research flight simulator
[NLR-TP-92143-U] p 528 N94-13498
Simulator study of uncoupled control functions. Use of manual pointing modes when aiming at ground targets and oncoming airborne target
[FFA-TN-1992-18] p 528 N94-13588
Modis-N airborne simulator
[NASA-CR-194364] p 792 N94-13719

FLIGHT STABILITY TESTS
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
[NAL-TR-1175] p 513 N94-13344
Flight path control for the approach and landing of the quiet STOL experimental aircraft ASKA
[NAL-TR-1183] p 513 N94-13457

FLIGHT TEST INSTRUMENTS
Photogrammetric methods for trajectory measurements
[NLR-TP-91166-U] p 650 N94-13527

FLIGHT TESTS
TROPIX: A solar electric propulsion flight experiment
[NASA-TM-106297] p 534 N94-13028
Preliminary flight results of a fly-by-throttle emergency flight control system on an F-15 airplane
[NASA-TM-4503] p 520 N94-13254
Flight service evaluation of composite components on the Bell helicopter model 206L
[NASA-CR-191499] p 555 N94-13267
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator
p 521 N94-13295
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Flight testing and frequency domain analysis for rotorcraft handling qualities characteristics
p 526 N94-13324
Preliminary design features of the RASCAL: A NASA /Army rotorcraft in-flight simulator p 526 N94-13325
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
[NAL-TR-1175] p 513 N94-13344
Estimation of aircraft aerodynamic derivatives with the Total Least Squares Method
[NAL-TR-1150] p 502 N94-13392
Electromagnetic propulsion for spacecraft
[NASA-CR-191186] p 551 N94-13416
Modis-N airborne simulator
[NASA-CR-194364] p 792 N94-13719
Recent flight-test results of optical airdata techniques
[NASA-TM-4504] p 517 N94-13791
Flight validation of a pulsed smoke flow visualization system
[NASA-CR-186026] p 516 N94-14106
Methodology of Hypersonic Testing
[VKI-LS-1993-03] p 505 N94-14153
Aeropropulsion test and evaluation methods
p 506 N94-14165
Hypersonic flight test. Part 1: Propulsion flight testing
p 507 N94-14168
Hypersonic flight testing. Part 2: Aerothermal flight testing p 507 N94-14169
Extrapolation of ground test data to flight
p 507 N94-14170
The development and flight test of a deployable precision landing system for spacecraft recovery
[NASA-TM-4525] p 537 N94-14853
Performance seeking control: Program overview and future directions
[NASA-TM-4531] p 519 N94-14855

FLIGHT TRAINING
Work/rest schedules and performance of S-3 aviators during fleet exercise
[AD-A265807] p 734 N94-12975

FLOAT ZONES
Growth of semiconductor compound single crystal InSb by floating zone method (M-3) p 586 N94-13735
Growth of samarskite crystal under microgravity conditions (M-20) p 590 N94-13752

FLOODS
Sea surface temperature forcing and phase locking of Nordeste precipitation
[DE93-011873] p 723 N94-14426

FLOQUET THEOREM
Stability of oscillatory two phase Couette flow
[NASA-CR-191501] p 636 N94-13817

FLOW CHAMBERS
Flamespreading in granular solid propellant: Design of an experiment
[AD-A266009] p 583 N94-12987

FLOW CHARACTERISTICS
Numerical simulations and experiments on physics of high Mach number shockwave: Turbulent flow interactions
[DE93-013424] p 631 N94-13249
Flow limitation and flutter in membrane walled collapsible tubes: A model for expiratory wheezing
[ISBN-0-315-73875-8] p 635 N94-13662
Design and evaluation of single and dual flow thrust vector nozzles with post exit vanes
[NASA-CR-193393] p 638 N94-14086
Characterization of flow fields in hypersonic ground test facilities p 505 N94-14157
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749

FLOW DISTRIBUTION
Turbulence modeling of free shear layers for high-performance aircraft
[NASA-CR-193659] p 520 N94-12799
Large-eddy simulation of laminar-turbulent breakdown at high speeds with dynamic subgrid-scale modeling
[NASA-CR-4533] p 629 N94-13064
A wall interference assessment/correction system
[NASA-CR-194174] p 500 N94-13076
Averaging techniques for steady and unsteady calculations of a transonic fan stage
[NASA-TM-106231] p 499 N94-13108
Interacting scales and energy transfer in isotropic turbulence
[NASA-CR-191477] p 630 N94-13133
Colorimetric qualification of shear sensitive liquid crystal coatings
[NASA-CR-194126] p 806 N94-13291
Some flow properties of telescope enclosures estimated from water channel tests: Application of the flow visualization techniques
[NAL-TR-1178T] p 830 N94-13452
A three-dimensional supersonic turbulent boundary layer generated by an isentropic compression
p 503 N94-13556
Calculation of hypersonic shock structure using flux-split algorithms
[NASA-CR-194296] p 504 N94-13607
Rotor stator CGI
[NASA-TM-109313] p 518 N94-13608
Recent flight-test results of optical airdata techniques
[NASA-TM-4504] p 517 N94-13791
A computational study of the base region flow field for the M865 projectile
[ARL-TR-109] p 504 N94-13795
Images constructed from computed flow fields
[NASA-CR-194397] p 650 N94-13814
Numerical investigations in three-dimensional internal flows
[NASA-CR-194143] p 637 N94-13827
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (Model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 2
[NASA-CR-167691] p 536 N94-14047
Design and evaluation of single and dual flow thrust vector nozzles with post exit vanes
[NASA-CR-193393] p 638 N94-14086
Characterization of flow fields in hypersonic ground test facilities p 505 N94-14157
Hypersonic flow field measurements: Intrusive
p 507 N94-14166
Hypersonic flow-field measurements: Nonintrusive
p 507 N94-14167
Numerical simulation of velocity-coupled combustion response of solid rocket propellants
p 585 N94-14490
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540
The structure of laminar flow in a three-dimensional driven cavity p 640 N94-14601
Vibrational relaxation in hypersonic flow fields
[NASA-TP-3367] p 776 N94-14733
Low altitude plume impingement handbook
[NASA-CR-194193] p 643 N94-14741
The structure of intense vorticity in homogeneous isotropic turbulence p 643 N94-14747
Effect of finite-rate chemistry and unequal Schmidt numbers on turbulent non-premixed flames modeled with single-step chemistry p 567 N94-14766
The 3D pneumatic and 2D dynamic probes: Their development and subsequent use in a transonic fan
[RAE-TM-AERO/PROP-22] p 653 N94-14827
The development of a scalable parallel 3-D CFD algorithm for turbomachinery
[NASA-CR-193604] p 664 N94-14848

FLOW EQUATIONS
Thermal gravitational modelling and scaling of two-phase heat transport systems: Similarity considerations and useful equations predictions versus experimental results
[NLR-TP-91477-U] p 632 N94-13533
Preconditioning and the limit to the incompressible flow equations
[NASA-CR-191500] p 769 N94-13717
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
[DE93-010408] p 637 N94-14053
Proceedings of the Fluid Dynamics Symposium in honour of Professor R. Narasimha on his 60th birthday
[NAL-SP-9315] p 639 N94-14598
Development of full-potential codes in the decade 1983-1993 p 639 N94-14600
Review of mathematical and physical basis of two-phase flow modeling
[KFK-4759] p 642 N94-14708

FLOW MEASUREMENT
Three-dimensional structure of straight and curved plane wakes
[NASA-CR-194420] p 501 N94-13266
Hypersonic flow field measurements: Intrusive
p 507 N94-14166
Hypersonic flow-field measurements: Nonintrusive
p 507 N94-14167
NASA metrology and calibration, 1993
[NASA-TM-109280] p 597 N94-14410
An experimental study of a turbulent boundary layer in the trailing edge region of a curculation-control airfoil
[NASA-CR-194522] p 508 N94-14541
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
[RAE-TM-AERO/PROP-21] p 509 N94-14706

FLOW STABILITY
High speed transition prediction
[NASA-CR-194125] p 502 N94-13422
Studies of turbulent shear flows and their control
[NASA-CR-194114] p 635 N94-13676
Evolution of disturbances in stagnation point flow
[NASA-CR-191516] p 636 N94-13724
Stability of oscillatory two phase Couette flow
[NASA-CR-191501] p 636 N94-13817
The phenomenon of vortex breakdown
p 510 N94-14609
Linear instability of curved free shear layers
[NASA-TM-106290] p 642 N94-14729
The structure of intense vorticity in homogeneous isotropic turbulence p 643 N94-14747

FLOW VELOCITY
On the theory of the decaying developed turbulence with spontaneous parity violation
[DE93-623190] p 632 N94-13511
Widebody cabin water spray optimization tests
[DOT/FAA/CT-TN93/29] p 511 N94-14186
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586

FLOW VISUALIZATION
Colorimetric qualification of shear sensitive liquid crystal coatings
[NASA-CR-194126] p 806 N94-13291
Exploratory study of in-plane streamline curvature effects on a turbulent boundary layer at a Mach number of 3
[NASA-CR-193673] p 501 N94-13292
Low-speed wind tunnel tests on a joined-wing aircraft model with various upper-fin
[NAL-TR-1169] p 501 N94-13341
Some flow properties of telescope enclosures estimated from water channel tests: Application of the flow visualization techniques
[NAL-TR-1178T] p 830 N94-13452
Hypersonic aerodynamic characteristics of SSTO-type aerospace planes. Part 1: The NAL 0-th configuration
[NAL-TR-1186] p 514 N94-13459
A three-dimensional supersonic turbulent boundary layer generated by an isentropic compression
p 503 N94-13556
Marangoni effect induced convection in material processing under microgravity (M-18)
p 589 N94-13750
Images constructed from computed flow fields
[NASA-CR-194397] p 650 N94-13814
Flow-field interference produced by an asymmetrical support strut
[IAR-AN-75] p 504 N94-14031

Experimental studies of vortex flaps and vortex plates. Part 1: 0.53 m span 60 deg delta wing
| DE93-767969 | p 505 N94-14059
Advanced ballistic range technology
| NASA-CR-194396 | p 532 N94-14068
Design and evaluation of single and dual flow thrust vector nozzles with post exit vanes
| NASA-CR-193393 | p 638 N94-14086
Flight validation of a pulsed smoke flow visualization system
| NASA-CR-186026 | p 516 N94-14106
Hypersonic flow field measurements: Intrusive p 507 N94-14166
An overview of parallel scientific visualization
| DE93-017105 | p 755 N94-14521
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
| RAE-TM-AERO/PROP-21 | p 509 N94-14706
Interaction of two glancing, crossing shock waves with a turbulent boundary-layer at various Mach numbers
| NASA-TM-103740 | p 509 N94-14780

FLUENCE
Search for ultra-high-energy radiation from gamma-ray bursts
| DE93-012721 | p 847 N94-12964
Novel oxygen atom source for material degradation studies
| NASA-CR-191323 | p 562 N94-13115
Measurement of the Fe-56(n,p)Mn-56, Al-27(n,p)Mg-27 and Al-27(n,alpha)Na-24 cross sections at 16.0, 17.0 and 18.3 MeV
| NPL-RSA(EXT)-38 | p 783 N94-13883
UV and IR laser ablation for inductively coupled plasma mass spectrometry
| DE93-017124 | p 658 N94-14415

FLUID BOUNDARIES
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
| NASA-TM-106351 | p 771 N94-14731

FLUID DYNAMICS
Studies of turbulent shear flows and their control
| NASA-CR-194114 | p 635 N94-13676
Research and technoloqhy highlights, 1992
| NASA-TM-4452 | p 850 N94-13962
Flight validation of a pulsed smoke flow visualization system
| NASA-CR-186026 | p 516 N94-14106
Hypersonic overview p 505 N94-14154
A study of thin liquid sheet flows
| NASA-TM-106323 | p 642 N94-14732

FLUID FILMS
Cryogenic fluid film bearing tester development study
| NASA-CR-192586 | p 660 N94-12791
A study of thin liquid sheet flows
| NASA-TM-106323 | p 642 N94-14732

FLUID FILTERS
Evaluation for membrane components of water recycling system
| NAL-TM-646 | p 737 N94-13388

FLUID FLOW
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
| DE93-010408 | p 637 N94-14053

FLUID JETS
The motion of a conical shaped liner driven by explosive load
| ITN-93-85215 | p 585 N94-14507
Analytical description of the breakup of liquid jets in air
| NASA-CR-191503 | p 647 N94-14849

FLUID MANAGEMENT
CFM technologies for space transportation: Multipurpose hydrogen testbed system definition and tank procurement
| NASA-CR-194355 | p 539 N94-12827

FLUID MECHANICS
Modulational stability of periodic solutions of the Kuramoto-Sivaskinsky equation
| NASA-CR-191502 | p 628 N94-12888
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
| DE93-010408 | p 637 N94-14053
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
| JPRS-UEQ-93-006 | p 776 N94-14431

FLUID-SOLID INTERACTIONS
Thermodynamic status of static and dynamic contact angles
| ISBN-0-315-73844-8 | p 817 N94-13554
An 8-node axisymmetric acoustic finite element for non-axisymmetric fluid-structure interaction analysis
| FFA-TN-1993-03 | p 673 N94-13689
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
| NASA-TM-106351 | p 771 N94-14731

FLUORESCENCE
Ultra-soft x ray absorption spectroscopy: A bulk and surface probe of materials
| DE93-014325 | p 566 N94-14582

FLUORINE ORGANIC COMPOUNDS
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
| DE93-012713 | p 580 N94-14179

FLUOROPOLYMERS
Highly fluorinated polymers
| NASA-CR-194147 | p 579 N94-13964

FLUTTER
On curve veering and flutter of rotating blades
| NASA-TM-106282 | p 670 N94-12872
Flow limitation and flutter in membrane walled collapsible tubes: A model for expiratory wheezing
| ISBN-0-315-73875-8 | p 635 N94-13662

FLUTTER ANALYSIS
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations
| NASA-TM-109009 | p 514 N94-12850
On curve veering and flutter of rotating blades
| NASA-TM-106282 | p 670 N94-12872
Estimation of critical values and vibration characteristics on supersonic delta wings. Part 2: Locally-stationary time series analysis of nonstationary random responses
| NAL-TR-1179 | p 502 N94-13345

FLUX (RATE)
Phobos/Harp post launch support
| NASA-CR-193676 | p 540 N94-13109

FLUX DENSITY
Advanced electric motor technology flux mapping
| NASA-CR-193824 | p 621 N94-13186
Meteoroid environment near the Earth-Moon system
| NASA-CR-193670 | p 835 N94-13203
Schemes for the use of conducting polymers as active materials in electrochemical supercapacitors
| DE93-012713 | p 580 N94-14179
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
| DE93-626621 | p 849 N94-14889

FLUX PINNING
Flux-pinning related defect structures in melt-processed YBa2Cu3O(7-x)
| DE93-012759 | p 804 N94-12818
The study of structure-processing-property relations in copper oxide based high (Tc) superconductors
| DE93-015066 | p 804 N94-13003

FLUX VECTOR SPLITTING
Calculation of hypersonic shock structure using flux-split algorithms
| NASA-CR-194296 | p 504 N94-13607
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers
| AD-A266543 | p 504 N94-13705

FLY BY WIRE CONTROL
Preliminary flight results of a fly-by-throttle emergency flight control system on an F-15 airplane
| NASA-TM-4503 | p 520 N94-13254

FLYWHEELS
Technology assessments of advanced energy storage systems for electric and hybrid vehicles
| DE93-014395 | p 701 N94-12913

FOAMS
A multiphase model for shock-induced flow in low density foam
| DE93-013767 | p 632 N94-13397

FOCAL PLANE DEVICES
Using a focal-plane array to estimate antenna pointing errors
| NASA-CR-194502 | p 602 N94-13810
Gamma-insensitive optical focal plane array
| DE93-013100 | p 792 N94-14317

FOG
Infrared transmission and path radiance through dust and fog
| AD-A265825 | p 791 N94-12979
An algorithm for the remote sensing of fog using satellite-data and additional information
| DLR-FB-92-23 | p 688 N94-14135

FOKKER-PLANCK EQUATION
Nonlinear damping model for flexible structures
| NASA-CR-193711 | p 539 N94-12790

FOLDING STRUCTURES
Folded waveguide designs for tokamaks
| DE93-013274 | p 798 N94-13577

FORCE DISTRIBUTION
Techniques for estimating Space Station aerodynamic characteristics
| NASA-CR-193394 | p 541 N94-13955

FORCE-FREE MAGNETIC FIELDS
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
| AD-A265805 | p 834 N94-12971

FORECASTING
Snow cover models in operational watershed forecasting
| DE93-778332 | p 718 N94-12837
Circulation model experiments of the Gulf Stream using satellite-derived fields
| AD-A266067 | p 725 N94-12990
Application of satellite remote sensing technology in disaster mitigation: A case study of Bangladesh p 692 N94-14238

FOREST FIRE DETECTION
Multisensor remote sensing data and GIS techniques for monitoring preservation areas: A case study
| INPE-5317-PRE/1714 | p 688 N94-14131

FOREST MANAGEMENT
Dendrometric variables estimation in homogeneous forests using LANDSAT TM data
| INPE-5455-TDI/497 | p 684 N94-13331
Forest management for fixing and sequestering carbon
| DE93-013520 | p 707 N94-13486
Multi-source national forest inventory of Finland p 694 N94-14254
Global assessment of human activities p 695 N94-14255
The Swedish ISY contribution p 695 N94-14256
Vegetation mapping of Indo-China Peninsula using MOS-1 MESSR and NOAA AVHRR p 695 N94-14257
Remote sensing for monitoring tropical moist forests in the Indo-Chinese region p 695 N94-14258
Mangrove afforestation monitoring using remote sensing p 695 N94-14260
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
| DE93-014032 | p 711 N94-14859

FORESTS
Dendrometric variables estimation in homogeneous forests using LANDSAT TM data
| INPE-5455-TDI/497 | p 684 N94-13331
Forest management for fixing and sequestering carbon
| DE93-013520 | p 707 N94-13486
Moisture meter evaluation
| DE93-016581 | p 652 N94-14534

FORMALDEHYDE
Theoretical molecular studies of astrophysical interest
| NASA-CR-193300 | p 838 N94-13781

FORMALISM
Dynamic Forms. Part 1: Functions
| NASA-TP-3397 | p 596 N94-13790
Wake-field and space charge effects on high brightness beams calculations and measured results for the laser driven photoelectrons at BNL-ATF
| DE93-015787 | p 659 N94-14572

FORMAT
Specimen files in VAMAS standard data transfer format (EXAMPLE 1.TXT to EXAMPLE 4.TXT)
| NPL-DMM(A)-90 | p 749 N94-13688

FORMING TECHNIQUES
Processing and mechanical properties of silicon carbide platelet reinforced alumina composites p 556 N94-13557
Polymer infiltration studies
| NASA-CR-194521 | p 582 N94-14539

FORTRAN
FORTRAN graphics routines for the Macintosh
| DE93-013092 | p 742 N94-12864
ASTEC and MODEL: Controls software development at Goddard Space Flight Center p 678 N94-14628
Splines, contours and SVD subroutines
| DE93-016088 | p 757 N94-14866

FORWARD SCATTERING
Meteor forward scatter studies
| DSIS-93-00382 | p 602 N94-13801
A study of meteor scatter communications
| DSIS-93-00151 | p 603 N94-13841

FOSSIL FUELS
Ocean uptake of carbon dioxide
| DE93-012967 | p 707 N94-13384
The role of human activity and land use change in atmospheric chemistry and air quality
| DE93-011871 | p 709 N94-14022
Summary of conclusions and recommendations from a visibility science workshop
| DE93-012770 | p 710 N94-14523

FOSSILS
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
| DE93-015093 | p 717 N94-14338

FOUR-WAVE MIXING
Nonlinear laser spectroscopy studies of semiconductor heterostructures
[AD-A265728] p 805 N94-13037
FOURIER TRANSFORMATION
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
[AD-A265805] p 834 N94-12971
Solid state laser systems for space application
[NASA-CR-194133] p 656 N94-13420
A Fourier transform microscope for x ray and/or gamma ray imaging
[AD-D015742] p 791 N94-13664
Imaging Fourier transform spectrometer
[DE93-017193] p 651 N94-14416
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 585 N94-14465
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525
Image reconstruction for x ray holographic microscopy
[DE93-013094] p 653 N94-14772
FRACTALS
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332
Self organized criticality
[DE93-013182] p 773 N94-14320
FRACTIONATION
Deposition of impact-generated vapors in the lunar regolith p 843 N94-14302
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509
FRACTOGRAPHY
Fracture behavior of vanadium/vanadium silicide in-situ composites
[DE93-013422] p 556 N94-13389
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A266350] p 571 N94-13697
FRACTURE MECHANICS
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
[DE93-012942] p 577 N94-13032
Fracture behavior of vanadium/vanadium silicide in-situ composites
[DE93-013422] p 556 N94-13389
Processing and mechanical properties of silicon carbide platelet reinforced alumina composites
p 556 N94-13557
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
Computational methods for reliable fatigue and damage tolerance dimensioning of aircraft structures
[FFA-TN-1993-05] p 515 N94-13690
Review of Canadian aeronautical fatigue work, 1991-1993
[LTR-ST-1932] p 674 N94-13861
Thermal shock resistance of ceramic matrix composites
[NASA-CR-189136] p 557 N94-13920
An investigation of the role of second phase particles in the design of ultra high strength steels of improved toughness
[AD-A266774] p 573 N94-14786
A study of hydrogen effects on fracture behavior of radioactive waste storage tanks
[DE93-018171] p 574 N94-14873
FRACTURE STRENGTH
Fracture behavior of vanadium/vanadium silicide in-situ composites
[DE93-013422] p 556 N94-13389
Modern aluminium sheet alloys for aerospace applications
[NLR-TP-92057-U] p 570 N94-13497
Processing and testing of high toughness silicon nitride ceramics
[NASA-CR-191190] p 582 N94-14543
A study of fiber volume fraction effects in notched unidirectional SCS-6/Ti-15V-3Cr-3Al-3Sn composite
[NASA-CR-191165] p 559 N94-14769
An investigation of the role of second phase particles in the design of ultra high strength steels of improved toughness
[AD-A266774] p 573 N94-14786
FRACTURING
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
FRAGMENTATION
Semiempirical fragmentation models on galactic cosmic ray transport calculations with hydrogen target
[NASA-TP-3350] p 847 N94-13263
FREE BOUNDARIES
Heat flows and harmonic maps with a free boundary
[DE93-622856] p 632 N94-13509
FREE CONVECTION
Contributions to numerical solution of Navier-Stokes equations in two and three dimensional flows
[ETN-93-94395] p 647 N94-14816
FREE ELECTRON LASERS
Microwave generation for magnetic fusion energy applications
[DE93-013864] p 654 N94-13058
Predicted performance of a dc beam driven FEM oscillator designed for fusion applications at 200-250 GHz
[DE93-013414] p 655 N94-13145
Multi-bunch beam-break-up studies for a SWFEL/TBA
[DE93-016973] p 658 N94-14414
The standing wave FEL/TBA: Realistic cavity geometry and energy extraction
[DE93-016972] p 659 N94-14520
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
[ITN-93-85224] p 659 N94-14547
FREE FLIGHT
Development of experimental demonstration processes for laminar-turbulent flow states at wing profiles in free flight
[ILR-MITT-280(1993)] p 510 N94-14800
FREE FLOW
High freestream turbulence effects on the transport of heat and momentum p 633 N94-13559
Recent flight-test results of optical airdata techniques
[NASA-TM-4504] p 517 N94-13791
FREE MOLECULAR FLOW
Techniques for estimating Space Station aerodynamic characteristics
[NASA-CR-193394] p 541 N94-13955
FREE RADICALS
Infrared absorption spectroscopy and chemical kinetics of free radicals
[DE93-015078] p 562 N94-13004
Infrared spectroscopy of organic free radicals related to combustion processes
[DE93-017086] p 562 N94-13222
FREEZING
Monte Carlo simulation of the OCP freezing transition
[DE93-013039] p 811 N94-14313
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
[ITN-93-85222] p 566 N94-14558
FRENCH SPACE PROGRAM
Characteristics of the amateur radio means of the Arsene satellite
[CNES-NT-131] p 605 N94-13950
FREQUENCIES
Rotordynamic and leakage characteristics of a 4-stage brush seal
[AD-A266012] p 660 N94-12988
FREQUENCY ASSIGNMENT
New challenges in propagation research in the US
p 612 N94-14656
FREQUENCY DISCRIMINATORS
Envelope and instantaneous frequency estimation of narrowband modulated signals
[DREO-TN-92-3] p 605 N94-14033
FREQUENCY DISTRIBUTION
Testing various time-frequency distribution techniques
[DREO-TN-92-17] p 606 N94-14062
FREQUENCY DIVISION MULTIPLE ACCESS
Technical support for digital systems technology development. Task order 1: ISP contention analysis and control
[NASA-CR-190758] p 537 N94-12809
User needs for propagation data p 613 N94-14657
FREQUENCY DIVISION MULTIPLEXING
Coverage aspects of a single frequency network designed for digital audio broadcasting
[BBC-RD-1993/3] p 616 N94-14742
FREQUENCY HOPPING
Fine time uplink synchronization for frequency-hopped spread spectrum satellite communication system
[ISBN-0-315-54370-1] p 600 N94-13488
Simulation of downlink synchronization for a frequency-hopped satellite communication system
[DSIS-93-00477] p 605 N94-13941
FREQUENCY MEASUREMENT
Some frequency and damping measurements of laminated beryllium beams
[DE93-015909] p 676 N94-14530
Activities report of the National Electrotechnical Institute Galileo Ferraris
[ETN-93-94224] p 627 N94-14812
FREQUENCY MODULATION
Envelope and instantaneous frequency estimation of narrowband modulated signals
[DREO-TN-92-3] p 605 N94-14033
Coverage aspects of a single frequency network designed for digital audio broadcasting
[BBC-RD-1993/3] p 616 N94-14742
FREQUENCY RANGES
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T.
[DE93-012964] p 607 N94-14291
FREQUENCY RESPONSE
A rational interpolation method to compute frequency response p 681 N94-14644
FREQUENCY SCANNING
Optimization of a subband coding for high definition television with motion controlled three dimensional frequency band decomposition
[ETN-93-94396] p 617 N94-14817
FREQUENCY SHIFT
Trellis coding with Continuous Phase Modulation (CPM) for satellite-based land-mobile communications
[NASA-CR-191325] p 604 N94-13909
Multiple-symbol differential detection of DPSK with frequency offset
[DREO-TN-92-5] p 606 N94-14063
FREQUENCY STABILITY
Stability measurements of the radio science system at the 34-m high-efficiency antennas p 609 N94-14381
The flight performance of the Galileo orbiter USO
p 611 N94-14398
FRESNEL REFLECTORS
Horizontal-cavity surface-emitting lasers, superluminescent LEDs, and amplifiers, and parabolic gain unstable resonator semiconductor lasers
p 656 N94-13573
FRETTING
Autofrettage: Stress distribution under load and retained stresses after depressurization. A modified plane-strain case
[AD-A266320] p 671 N94-13579
FRICTION
Molecular solvent-dynamical effects on activated electron-transfer kinetics: How important is solvent friction?
[AD-A265886] p 779 N94-12894
FRICTION MEASUREMENT
A technique for direct measurement of skin friction in supersonic combustion flow p 503 N94-13555
FROGS
Amphibian fertilization and development in microgravity p 594 N94-13770
FROUDE NUMBER
Effects of surface thermal forcing on stratified flow past an isolated obstacle p 633 N94-13553
FUEL CELL POWER PLANTS
Molten carbonate fuel cell product development test environmental assessment/protection plan
[DE93-000288] p 702 N94-13380
FUEL CELLS
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
[DE93-013800] p 701 N94-13093
Molten carbonate fuel cell product development test environmental assessment/protection plan
[DE93-000288] p 702 N94-13380
Electrocatalysis issues in polymer electrolyte fuel cells
[DE93-014450] p 702 N94-13402
Performance effects of coal-derived contaminants on the carbonate fuel cell
[DE93-013801] p 703 N94-13693
Status of SOFC development in USA
[DE93-015568] p 704 N94-14355
FUEL COMBUSTION
Combustor technology for future small gas turbine aircraft
[NASA-TM-106312] p 517 N94-13142
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
Three-dimensional modeling of diesel engine intake flow, combustion and emissions-2
[NASA-CR-191189] p 519 N94-14448
Comparative ignition of hexane and octane isomers in a shock tube
[DE93-016535] p 566 N94-14869
FUEL CONSUMPTION
Trajectory optimization for the national aerospace plane
[NASA-CR-194146] p 516 N94-14104

FUEL CONTROL
Techniques for improving the performance of a simplified electronic fuel controller with incremental actuation for small gas turbine engines
[ISBN-0-315-56062-2] p 661 N94-13521

FUEL CORROSION
Review of nuclear thermal propulsion carbide reactor fuel corrosion and exhibit
[DE93-016605] p 585 N94-14535

FUEL INJECTION
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
[NAL-TR-1177] p 548 N94-12945
Combustor technology for future small gas turbine aircraft
[NASA-TM-106312] p 517 N94-13142

FUEL PRODUCTION
Biofuels for transportation: The road from research to the marketplace
[DE93-000091] p 585 N94-14454

FUEL SPRAYS
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685

FUEL SYSTEMS
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292

FUEL TESTS
Space reactor fuel element testing in upgraded TREAT
[DE93-012524] p 554 N94-14806

FULL SCALE TESTS
Technical Evaluation Motor No. 10 (TEM-10)
[NASA-CR-193846] p 554 N94-14907

FULLERENES
Empirical tight-binding parameters for solid C(sub 60)
[DE93-623061] p 807 N94-13510
Is K3C60 a line phase?
[DE93-016700] p 813 N94-14517
Electronic states in systems of reduced dimensionality
[DE93-014440] p 815 N94-14739

FUNCTIONAL DESIGN SPECIFICATIONS
Creating a strategic plan for configuration management using computer aided software engineering (CASE) tools
[DE93-013663] p 746 N94-13394
Functional categories for future flight deck designs
[NASA-TM-109005] p 517 N94-13710
Formal functional test designs with a test representation language p 609 N94-14383

FUNCTIONS (MATHEMATICS)
On the foundations of final semantics: Non-standard sets, metric spaces, partial orders
[CWI-CS-R9241] p 768 N94-13526
On the differential structure of matrix-valued rational inner functions
[CWI-BS-R9228] p 770 N94-14003

FURNACES
Adaptive control of interface by temperature and interface profile feedback in transparent multi-zone crystal growth furnace
[NASA-CR-194140] p 762 N94-13253

FUSELAGES
Some computational tools for the analysis of through cracks in stiffened fuselage shells
[LR-701] p 673 N94-13726
Compressive buckling of curved, anisotropic panels stiffened in two directions. Part 1: Derivation of the governing equations
[LR-694] p 675 N94-13931
MSD in fuselage lap joints: Requirements for inspection intervals for typical fuselage lap joint panels with Multiple Site Damage
[LR-697] p 675 N94-13986

FUSION (MELTING)
The Lindemann criterion of melting for pure and mixed ionic crystals
[ITN-93-85210] p 814 N94-14554

FUSION REACTORS
Growth curve analysis for plasma profiles using smoothing splines
[DE93-015741] p 795 N94-12984
Equilibrium reconstruction of the q-profile in tokamaks from motional Stark effect data
[DE93-015815] p 796 N94-13046
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349

FUSION WEAPONS
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017

FUZZY SETS
Supervised classification of remotely sensed images
[DLR-FB-92-07] p 700 N94-14428

FUZZY SYSTEMS
JTEC Panel report on knowledge-based systems in Japan
[PB93-170124] p 820 N94-12801

G

GADOLINIUM
Canted magnetic moments at the Gd(0001) surface
[DE93-014327] p 805 N94-13102

GALACTIC BULGE
The spectroscopic evolution of novae in the bulge of M31 and a search for their possible origin in the M31 globular cluster system p 831 N94-13668

GALACTIC CLUSTERS
Studies of gas in cooling flow clusters
[NASA-CR-193597] p 628 N94-12959
Redshift distortions of galaxy correlation functions
[DE93-014007] p 834 N94-12980
ROSAT: X ray survey of compact groups
[NASA-CR-193297] p 829 N94-13181
UV extinction properties of carina nebular dust
[NASA-CR-193424] p 835 N94-13233
A photometric and morphological study of compact groups of galaxies and their environments
[ISBN-0-315-59601-5] p 829 N94-13370
Sampling of globular clusters and the distance to the galactic center
[INPE-5446-TDI/492] p 837 N94-13449
ROSAT observations of clusters with wide-angle tailed radio sources
[NASA-CR-193784] p 833 N94-14405

GALACTIC COSMIC RAYS
Cosmic physics data analysis program
[NASA-CR-194357] p 846 N94-12826
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars
[NASA-TP-3312] p 846 N94-12875
Semiempirical fragmentation models on galactic cosmic ray transport calculations with hydrogen target
[NASA-TP-3350] p 847 N94-13263

GALACTIC EVOLUTION
On inhomogeneous halo collapse and the globular cluster metallicity gradient
[DE93-013090] p 834 N94-13011
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591
The reionization of the intergalactic medium p 838 N94-13651

GALACTIC HALOS
The onset of galactic winds in early-type galaxies
[NASA-CR-193640] p 836 N94-13446
Cold dark matter halos p 838 N94-13649
The first data from the MACHO experiment
[DE93-014423] p 840 N94-14467

GALACTIC MASS
The onset of galactic winds in early-type galaxies
[NASA-CR-193640] p 836 N94-13446

GALACTIC NUCLEI
Was 49: Mirror for a hidden Seyfert 1 galaxy
[NASA-CR-194537] p 840 N94-14685

GALACTIC RADIATION
Analysis of data from the energetic gamma-ray experiment on the gamma ray observatory
[NASA-CR-194178] p 847 N94-13087
The onset of galactic winds in early-type galaxies
[NASA-CR-193640] p 836 N94-13446
The extent and content of low-ionization gas in galaxies p 837 N94-13551

GALACTIC STRUCTURE
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332
The distance to the high velocity clouds of neutral hydrogen
[NASA-CR-194343] p 838 N94-13716
Emission line variability in active galactic nuclei
[ITN-93-85209] p 849 N94-14553

GALAXIES
Redshift distortions of galaxy correlation functions
[DE93-014007] p 834 N94-12980
The onset of galactic winds in early-type galaxies
[NASA-CR-193640] p 836 N94-13446
The extent and content of low-ionization gas in galaxies p 837 N94-13551
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591

GALERKIN METHOD
A hybrid Pade-Galerkin technique for differential equations
[NASA-CR-191494] p 767 N94-13289
A priori error estimates for an hp-version of the discontinuous Galerkin method for hyperbolic conservation laws
[NASA-TM-108993] p 632 N94-13467
On the superconvergence of Galerkin methods for hyperbolic IBVP
[NASA-CR-194293] p 770 N94-13922
On the superconvergence of Galerkin methods for hyperbolic IBPV
[NASA-CR-194488] p 770 N94-14307

GALILEO PROJECT
Enhanced decoding for the Galileo S-band mission p 609 N94-14380

GALILEO SPACECRAFT
Coding performance of the Probe-Orbiter-Earth communication link p 608 N94-14377
An overview of the Galileo Optical Experiment (GOPEX) p 610 N94-14386
Telescope pointing for GOPEX p 610 N94-14389
Galileo Optical Experiment (GOPEX) optical train: Design and validation at the Table Mountain Facility p 610 N94-14390
GOPEX laser transmission and monitoring systems p 611 N94-14391
GOPEX at the Starfire Optical Range p 611 N94-14392
The flight performance of the Galileo orbiter USO p 611 N94-14398

GALLIUM ARSENIDES
Liquid phase epitaxy of gallium arsenide: A review
[DE93-622212] p 804 N94-12893
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
[ETN-93-94387] p 703 N94-13997
Free-exciton recombination in GaAs
[DE93-009843] p 809 N94-14079
Intrinsic and interfacial recombination in OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As heterostructures
[DE93-009844] p 809 N94-14083
Anomalous low-temperature free-exciton transport in GaAs structures
[DE93-009845] p 809 N94-14108
Activities of the Basic Sciences Branch
[DE93-010012] p 851 N94-14455

GALLIUM ISOTOPES
Present status of SAGE
[DE93-014350] p 781 N94-13205

GAME THEORY
Stochastic scheduling games with Markov decision arrival processes
[CWI-BS-R9231] p 773 N94-14005
Generating knight's tours without backtracking from errors
[AD-A266807] p 772 N94-14900

GAMMA RAY ASTRONOMY
Search for ultra-high energy emission from Geminga and five unidentified EGRET sources
[DE93-012717] p 846 N94-12816
Search for emission of ultra high energy radiation from active galactic nuclei
[DE93-012719] p 846 N94-12923
Search for UHE emission from Cygnus X-3
[DE93-012720] p 846 N94-12924
Search for continuous and single day emission from ultra-high-energy sources
[DE93-012724] p 846 N94-12947
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
Multiwavelength observations of unidentified high energy gamma ray sources
[NASA-CR-194536] p 840 N94-14688

GAMMA RAY BURSTS
A new limit on the rate-density of evaporating black holes
[DE93-012716] p 834 N94-12815
Search for emission of ultra high energy radiation from active galactic nuclei
[DE93-012719] p 846 N94-12923
Search for ultra-high-energy radiation from gamma-ray bursts
[DE93-012721] p 847 N94-12964
GRO: Black hole models for gamma ray bursts
[NASA-CR-193244] p 829 N94-13178
ADP study of gamma-ray bursts
[NASA-CR-194311] p 848 N94-13708

GAMMA RAY OBSERVATORY
Analysis of data from the energetic gamma-ray experiment on the gamma ray observatory
[NASA-CR-194178] p 847 N94-13087
The four great observatories
[NASA-TM-109311] p 830 N94-13605

GAMMA RAY SPECTRA
ADP study of gamma-ray bursts
[NASA-CR-194311] p 848 N94-13708
GAMMA RAY SPECTROMETERS
Determining the solar-flare photospheric scale height from SMM gamma-ray measurements
[NASA-CR-194084] p 844 N94-13671
GAMMA RAY TELESCOPES
Search for emission of ultra high energy radiation from active galactic nuclei
[DE93-012719] p 846 N94-12923
Analysis of data from the energetic gamma-ray experiment on the gamma ray observatory
[NASA-CR-194178] p 847 N94-13087
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483
GAMMA RAYS
Search for ultra-high energy emission from Geminga and five unidentified EGRET sources
[DE93-012717] p 846 N94-12816
Search for continuous and single day emission from ultra-high-energy sources
[DE93-012724] p 846 N94-12947
Search for ultra-high-energy radiation from gamma-ray bursts
[DE93-012721] p 847 N94-12964
Metal-semiconductor, composite radiation detectors
[DE93-013313] p 619 N94-12994
Beta/gamma test problems for ITS
[DE93-013522] p 781 N94-13349
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483
Cosmic and solar gamma ray and neutron experiments
[NASA-CR-193359] p 849 N94-13965
Gamma-insensitive optical focal plane array
[DE93-013100] p 792 N94-14317
Measurements of the spatial structure and directivity of 100 KeV photon sources in solar flares using PVO and ISEE-3 spacecraft
[NASA-CR-194080] p 845 N94-14492
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529
Multiwavelength observations of unidentified high energy gamma ray sources
[NASA-CR-194536] p 840 N94-14688
GARBAGE
STS-35 crew trash compactor briefing
[NASA-TM-109487] p 533 N94-14735
GAS ANALYSIS
An integrated knowledge system for the Space Shuttle hazardous gas detection system
[NASA-CR-194533] p 536 N94-14310
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511
GAS ATOMIZATION
Gas atomized Er3Ni powder for cryocooler applications
[DE93-011564] p 568 N94-13000
GAS CHROMATOGRAPHY
Investigation of an alternating current plasma as an element selective atomic emission detector for high-resolution capillary gas chromatography and as a source for atomic absorption and atomic emission spectrometry p 798 N94-13678
Procurement and execution of PCB analyses: Customer-analyst interactions
[DE93-009964] p 566 N94-14694
GAS COMPOSITION
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area
[DE93-012852] p 708 N94-13495
GAS DETECTORS
A survey and analysis of experimental hydrogen sensors
[NASA-TM-106300] p 648 N94-13135
An integrated knowledge system for the Space Shuttle hazardous gas detection system
[NASA-CR-194533] p 536 N94-14310
GAS DISSOCIATION
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349
GAS DYNAMICS
ROSAT: X ray survey of compact groups
[NASA-CR-193297] p 829 N94-13181
An experimental investigation of shock wave/vortex interaction p 634 N94-13574
Hypersonic flow phenomenology p 505 N94-14155
Full Riemann solution of the one- and two-dimensional Euler equations
[DLR-FB-92-34] p 638 N94-14188
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
[JPRS-UEQ-93-006] p 776 N94-14431
Soliton equations and self-dual gauge fields
[DE93-626620] p 818 N94-14887
GAS EVOLUTION
Hydrogen peroxide safety issues
[DE93-013895] p 565 N94-14346
GAS EXCHANGE
Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384
GAS FLOW
Studies of momentum and energy transfer across wavy gas-liquid interfaces
[AD-A266432] p 635 N94-13699
Hypersonic propulsion characterization p 505 N94-14156
GAS GUNS
High velocity gas gun
[NASA-TM-109296] p 541 N94-13637
Development of test techniques to simulate high-frequency mechanical shock on weapon components
[KCP-613-4998] p 675 N94-13907
GAS HEATING
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586
GAS INJECTION
Analysis of gas turbine engines using water and oxygen injection to achieve high Mach numbers and high thrust
[NASA-TM-106270] p 518 N94-13143
BOAST 2 for the IBM 3090 and RISC 6000
[DE93-000138] p 638 N94-14351
GAS IONIZATION
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
A search for strong-field direct two electron ionization using coincidence spectroscopy
[DE93-013435] p 781 N94-13241
GAS LASERS
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
GAS MIXTURES
Numerical study of shock-induced combustion in methane-air mixtures
[NASA-TM-106354] p 642 N94-14722
H2S data reduction
[NASA-CR-193389] p 617 N94-14743
GAS PRESSURE
Measuring opacity of shock generated argon plasmas
[DE93-013038] p 801 N94-14312
GAS RECOVERY
BOAST 2 for the IBM 3090 and RISC 6000
[DE93-000138] p 638 N94-14351
GAS SPECTROSCOPY
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465
GAS STREAMS
Evaluation of dual flow thrust vector nozzles with exhaust stream impingement
[NASA-CR-193392] p 630 N94-13078
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586
GAS TEMPERATURE
Coupled thermal response of objects and participating media in fires and large combustion systems
[DE93-012848] p 561 N94-12819
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682
GAS TRANSPORT
Modeling ignition chemistry
[DE93-012340] p 561 N94-12910
BAKEOUT: A computer program for predicting diffusive outgassing from stainless steel
[DE93-012613] p 573 N94-14364
GAS TURBINE ENGINES
Advanced Turbine Technology Applications Project (ATTAP)
[NASA-CR-191088] p 828 N94-12931
NDE of titanium alloy MMC rings for gas turbine engines
[NASA-TM-106188] p 555 N94-13138
Combustor technology for future small gas turbine aircraft
[NASA-TM-106312] p 517 N94-13142
Techniques for improving the performance of a simplified electronic fuel controller with incremental actuation for small gas turbine engines
[ISBN-0-315-56062-2] p 661 N94-13521
Review of Canadian aeronautical fatigue work, 1991-1993
[LTR-ST-1932] p 674 N94-13861
GAS TURBINES
Performance of gas turbine compressor cleaners
[NLR-TP-91291-U] p 519 N94-14450
GASEOUS DIFFUSION
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459
Switchover software reliability estimate for Paducah freezer/sublimer computer systems
[DE93-013844] p 756 N94-14696
GASEOUS FUELS
Low pressure storage of natural gas on activated carbon
[DE93-014053] p 660 N94-12851
GASEOUS ROCKET PROPELLANTS
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
GATES (CIRCUITS)
Phase aligner for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
[NASA-TM-4518] p 623 N94-13878
GATES (OPENINGS)
Airport terminals: Optimum configurations and gate position requirement
[ISBN-0-315-61722-5] p 528 N94-13544
GAUGE INVARIANCE
Aspects of symmetry violation
[DE93-011003] p 779 N94-12997
On a nonminimal gauge interaction of a scalar field in D=2+1 Chern-Simons-Maxwell theory
[DE93-621380] p 621 N94-13224
Soliton equations and self-dual gauge fields
[DE93-626620] p 818 N94-14887
GAUGE THEORY
Gauging the octonion algebra
[DE93-622864] p 775 N94-12843
Electric charge quantization
[DE93-622901] p 778 N94-12845
On a nonminimal gauge interaction of a scalar field in D=2+1 Chern-Simons-Maxwell theory
[DE93-621380] p 621 N94-13224
Soliton equations and self-dual gauge fields
[DE93-626620] p 818 N94-14887
GAUSS EQUATION
The electric field of a current-carrying conductor
[DE93-626637] p 617 N94-14892
GEARS
Roller-gear drives for robotic manipulators design, fabrication and test
[NASA-CR-194248] p 660 N94-12802
GELS
Pore-size-distribution of cationic polyacrylamide hydrogels
[DE93-015218] p 581 N94-14400
GENE EXPRESSION
The surface-located YopN protein is involved in calcium signal transduction in Yersinia pseudotuberculosis
[FOA-B-40416-4.4] p 729 N94-14128
Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129
GENERAL AVIATION AIRCRAFT
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563
GENETIC ALGORITHMS
An analytic modeling and system identification study of rotor/fuselage dynamics at hover p 524 N94-13312
GENETIC CODE
Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129
GENETIC ENGINEERING
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509
GENETICS
Adaptively resizing populations: Algorithm, analysis, and first results
[NASA-CR-194277] p 742 N94-12808
Evolution of catalytic RNA in the laboratory
[NASA-CR-194124] p 727 N94-13210
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698
Genetic effects of HZE and cosmic radiation (L-9) p 593 N94-13766

Analysis of the V antigen lcrGVH-yopBD operon of Yersinia pseudotuberculosis: Evidence for a regulatory role of LcrH and LcrV
[FOA-B-40417-4.4] p 729 N94-14129

GEOBOTANY
A knowledge-based model for the integration of remote sensing into a mineral exploration program
[ISBN-0-315-58982-5] p 685 N94-13523

GEOCENTRIC COORDINATES
Improved treatment of global positioning system force parameters in precise orbit determination applications
p 514 N94-14371
Use of global positioning system measurements to determine geocentric coordinates and variations in Earth orientation p 514 N94-14372

GEOCHRONOLOGY
Maximum entropy spectral analysis of the geological time series of the oxygen isotope record from deep-sea cores
[INPE-5465-PRE/1773] p 725 N94-13728

GEOCORONAL EMISSIONS
Terrestrial magnetospheric imaging: Numerical modeling of low energy neutral atoms
[DE93-014561] p 717 N94-14328

GEODETIC SURVEYS
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334

GEODYNAMICS
J2000.0 modelling of GEOAIM in the analysis of VLB1 data from the NASA crustal dynamics project
[ISBN-0-315-59463-2] p 684 N94-13368
The determination of crustal motions using laser ranging to Lageos-2 and Lageos-1
[NASA-CR-193787] p 717 N94-14306

GEOGRAPHIC INFORMATION SYSTEMS
Integration between geographic information systems and environmental simulation models
[REPT-93-004] p 823 N94-13806
Multisensor remote sensing data and GIS techniques for monitoring preservation areas: A case study
[INPE-5317-PRE/1714] p 688 N94-14131

GEOGRAPHY
Overview: Gas hydrate geology and geography
[DE93-014043] p 688 N94-14151

GEOLOGICAL FAULTS
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338

GEOLOGICAL SURVEYS
Integrated, flexible, and rapid geophysical surveying
[DE93-009989] p 712 N94-12906
Promotion of geothermal energy development in 1991
[DE93-799057] p 701 N94-13214
Activities of Institute for Aerospace Research, Flight Research Laboratory
[CTN-93-60832] p 850 N94-13519
Application of transient airborne electromagnetic and ground resistivity methods to geological mapping in tropical terrains
[ISBN-0-315-57172-1] p 685 N94-13542
Geologic application of JERS-1 SAR data
p 688 N94-14211
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
[DE93-015080] p 717 N94-14294
Promotion of geothermal energy development in 1991
[DE93-799061] p 705 N94-14679

GEOLOGY
Overview: Gas hydrate geology and geography
[DE93-014043] p 688 N94-14151
Applications of the Advanced Light Source to problems in the earth, soil, and environmental sciences
[DE93-015258] p 710 N94-14477

GEOMAGNETISM
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
[INPE-5445-TDI/491] p 835 N94-13174
Variations common to the interplanetary magnetic field, the zonal atmospheric circulation and the Earth's rotation
[COMMUNICATIONS-SER-B-157] p 837 N94-13504
Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826
Aeromagnetic work in the Lincoln Sea: 1991 survey
[DSIS-93-00308] p 715 N94-13830
Dynamical model for the distribution of geomagnetically trapped anomalous-component ions
[ATR-91(9558)-6] p 784 N94-13936
Simultaneous solution for core magnetic field and fluid flow beneath an electrically conducting mantle
[NASA-TM-4536] p 716 N94-13960
Solar-geophysical data number 584, April 1993. Part 1: (Prompt reports). Data for March, February 1993, and late data
[PB93-198323] p 845 N94-14560

GEOMETRIC RECTIFICATION (IMAGERY)
Supervised classification of remotely sensed images
[DLR-FB-92-07] p 700 N94-14428

GEOMETRICAL OPTICS
Three dimensional time-dependent hydrodynamic and propagation modeling of x ray laser emission
[DE93-012575] p 654 N94-12962
Optimization study of x ray laser coherence in Ni-like Ta
[DE93-016419] p 660 N94-14888

GEOMETRICAL THEORY OF DIFFRACTION
The 24 GHz measurements of 2.2 lambda conical horn antennas illuminating a conducting sheet
[NASA-TM-109002] p 598 N94-12811

GEOMETRY
The geometric phase in quantum physics
[DE93-011121] p 817 N94-13479
Integrable system describing surfaces of non-constant curvature
[PREPRINT-734] p 768 N94-13499
Extremal polygon containment problems and other issues in parametric searching
[ITN-93-85214] p 771 N94-14506

GEOMORPHOLOGY
The American Geophysical Union Chapman Conference on Tectonics and Topography
[NASA-CR-193454] p 713 N94-13335

GEOPHYSICS
Integrated, flexible, and rapid geophysical surveying
[DE93-009989] p 712 N94-12906
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334
The American Geophysical Union Chapman Conference on Tectonics and Topography
[NASA-CR-193454] p 713 N94-13335
Solar-geophysical data number 584, April 1993. Part 1: (Prompt reports). Data for March, February 1993, and late data
[PB93-198323] p 845 N94-14560
Solar-geophysical data number 584, April 1993. Part 2: (Comprehensive reports). Data for October 1992 and miscellaneous
[PB93-198331] p 845 N94-14561
INGDB-90. The International Neutron Nuclear Data Base for geophysics applications
[DE93-624095] p 827 N94-14880

GEOPOTENTIAL HEIGHT
Cyclogenesis and cyclone over South America
[INPE-5400-TDI/479] p 719 N94-13175

GEOSAT SATELLITES
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
[NASA-CR-193646] p 512 N94-13238

GEOTHERMAL ENERGY CONVERSION
Hot Dry Rock energy
[DE93-014452] p 702 N94-13403

GEOTHERMAL ENERGY EXTRACTION
Hot Dry Rock energy
[DE93-014452] p 702 N94-13403

GEOTHERMAL RESOURCES
Promotion of geothermal energy development in 1991
[DE93-799057] p 701 N94-13214
Promotion of geothermal energy development in 1991
[DE93-799058] p 701 N94-13215
Hot Dry Rock energy
[DE93-014452] p 702 N94-13403

GEOTHERMAL TECHNOLOGY
Hot Dry Rock energy
[DE93-014452] p 702 N94-13403

GERMANIUM
Manufacturing and examination of integrated optical waveguide components in silicon
[ETN-93-94393] p 793 N94-14704

GERMANIUM ALLOYS
Effect of pressure on order and stability in alloys: The case of Al-Ge
[DE93-013842] p 567 N94-12899
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085
Evolving surface cusps during strained-layer epitaxy
[DE93-015430] p 813 N94-14478

GERMANIUM ISOTOPES
Present status of SAGE
[DE93-014350] p 781 N94-13205

GETTERS
Multicrystalline silicon solar cells: Gettering optimization and characterization
[DE93-015001] p 705 N94-14861

GIACOBINI-ZINNER COMET
ICE/ISEE plasma wave data analysis
[NASA-CR-194375] p 796 N94-13081

GLASS
Procedures for analysis of debris relative to Space Shuttle systems
[NASA-TM-109190] p 534 N94-12900
Poling of thin polymer films in electro optic applications
[AD-A266562] p 579 N94-13584
High temperature behavior of glass (M-8)
p 587 N94-13740
Fabrication of Si-As-Te ternary amorphous semiconductor in the microgravity environment (M-13)
p 588 N94-13745
Preparation of optical materials used in non-visible region (M-17) p 589 N94-13749
Optimization of the processing parameters of high temperature superconducting glass-ceramics: Center Director's discretionary fund final report
[NASA-TM-108421] p 808 N94-13938
Theoretical studies of breakdown in random media
[DE93-018107] p 558 N94-14418
High counting rate resistive-plate chamber
[DE93-014928] p 651 N94-14452
Investigation of Zerodur material processing
[NASA-CR-193842] p 793 N94-14903

GLASS FIBER REINFORCED PLASTICS
Structural investigation of a damaged GRP/foam sandwich composite using x ray computed tomography
p 669 N94-13857

GLASS FIBERS
Gamma-insensitive optical focal plane array
[DE93-013100] p 792 N94-14317

GLASS LASERS
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017

GLASS TRANSITION TEMPERATURE
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
[ITN-93-85222] p 566 N94-14558
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794

GLIDE PATHS
Visual cueing aids for rotorcraft landings
p 524 N94-13313
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches
p 517 N94-13323

GLIDING
Qualitative investigation of a generic fighter model in radio controlled gliding flight
[LM-AA-003] p 516 N94-13898

GLOBAL POSITIONING SYSTEM
Investigation for improving Global Positioning System (GPS) orbits using a discrete sequential estimator and stochastic models of selected physical processes
[NASA-CR-194167] p 512 N94-13082
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
[NASA-CR-193646] p 512 N94-13238
Performance evaluation tests of the GPS/DGPS navigation system installed in the NAL Dornier 228: Preliminary ground test results
[NAL-TM-649] p 513 N94-13346
GPS satellite sky distribution: Impact on the propagation of some important errors in precise relative positioning
[ISBN-0-315-51838-3] p 513 N94-13541
Helicopter precision approach capability using the Global Positioning System
[NASA-CR-194037] p 513 N94-13957
Ionospheric calibration for single frequency altimeter measurements
[NASA-CR-194282] p 716 N94-14049
Improved treatment of global positioning system force parameters in precise orbit determination applications
p 514 N94-14371
Use of global positioning system measurements to determine geocentric coordinates and variations in Earth orientation p 514 N94-14372
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563
The development and flight test of a deployable precision landing system for spacecraft recovery
[NASA-TM-4525] p 537 N94-14853

GLOBAL WARMING
The role of clouds and oceans in global greenhouse warming
[DE93-016206] p 706 N94-13079
Sequestering carbon dioxide in industrial polymers: Building materials for the 21st century
[DE93-016087] p 580 N94-14297
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459

GLOBULAR CLUSTERS
On inhomogeneous halo collapse and the globular cluster metallicity gradient
[DE93-013090] p 834 N94-13011
Sampling of globular clusters and the distance to the galactic center
[INPE-5446-TDI/492] p 837 N94-13449
The spectroscopic evolution of novae in the bulge of M31 and a search for their possible origin in the M31 globular cluster system p 831 N94-13668
GLOW DISCHARGES
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085
GLUCOSIDES
Improving physical performance by chemical stimulation
[DSIS-92-03763] p 728 N94-13823
GLUONS
No-lost theorem for parity violating nucleon-nucleon scattering experiments
[DE93-012737] p 779 N94-12949
Quark and gluon jets at CDF
[DE93-014919] p 783 N94-13884
GLUTAMATES
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509
GLYCINE
Determination of trace elements in triglycine sulfate solutions
[NASA-CR-193481] p 562 N94-13048
GOERTLER INSTABILITY
The effect of crossflow on Taylor vortices: A model problem
[NASA-CR-191487] p 630 N94-13128
On the secondary instability of the most dangerous Goertler vortex
[NASA-CR-191504] p 636 N94-13785
Linear instability of curved free shear layers
[NASA-TM-106290] p 642 N94-14729
GOES 7
Solar-geophysical data number 584, April 1993. Part 2: (Comprehensive reports). Data for October 1992 and miscellaneous
[PB93-198331] p 845 N94-14561
GOLD
Incomplete melting of the Au(100) surface
[DE93-623192] p 569 N94-13227
Ploughing on gold using a Scanning Tunneling Microscope
[DE93-012632] p 812 N94-14365
GOLD ISOTOPES
Stripping efficiencies for 277 MeV/amu gold beam on copper foils
[DE93-014306] p 569 N94-13221
GOVERNMENT/INDUSTRY RELATIONS
Shared visions: Partnership of Rockwell International and NASA Cost Effectiveness Enhancements (CEE) for the space shuttle system integration program p 668 N94-13166
Government/contractor partnerships for continuous improvement. A Goddard Space Flight Center example p 669 N94-13169
George M. Low Trophy: NASA's quality and excellence award. 1992 recipients: Honeywell Clearwater, IBM Houston
[NASA-TM-109265] p 669 N94-13396
User observations on information sharing (corporate knowledge and lessons learned)
[NASA-TM-104781] p 819 N94-13400
Technology parks and the cooperation among universities and firms: The cases of Campinas, Sao Jose dos Campos e Sao Carlos
[INPE-5251-TAE/04] p 818 N94-13427
GRAIN BOUNDARIES
The study of structure-processing-property relations in copper oxide based high (Tc) superconductors
[DE93-015066] p 804 N94-13003
Grain-boundary electronic states by multiple-scattering theory
[DE93-013198] p 805 N94-13010
Interfacial precipitation, segregation and deformation in alloy 600: Implications on primary-side IGSCC
[DE93-013161] p 568 N94-13035
Computation and graphics in mathematical research
[DE93-016512] p 740 N94-13069
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
[DE93-013421] p 806 N94-13136
Microstructural evolution of NARloy-Z at elevated temperatures
[NASA-TM-108419] p 571 N94-13715
Boundary stability under nonequilibrium conditions
[DE93-016259] p 809 N94-13980
GRAIN SIZE
On the hardening and softening of nanocrystalline materials
[DE93-012901] p 810 N94-14185
GRAMMARS
Reconsideration of the autonomous view of language p 618 N94-13441
GRAPH THEORY
Transformation and composition of refusal graphs: Testability analysis
[LAAS-92435] p 751 N94-13995
On the solution of a class of graph problems by parallel algorithms
[LAAS-92514] p 756 N94-14712
GRAPHICAL USER INTERFACE
Artificial intelligence support for scientific model-building
[NASA-TM-109252] p 761 N94-12890
Advanced display object selection methods for enhancing user-computer productivity
[AD-A265806] p 743 N94-12974
Designing and generating a GUI module using GUI p 747 N94-13437
Mass market computers for software development
[ERB-1035] p 741 N94-13547
Programming the multimodal interface
[DE93-013084] p 748 N94-13576
Integrating PAW, a graphical analysis interface to Sybase
[DE93-014172] p 755 N94-14581
GRAPHITE
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871
Scanning tunneling microscopy studies of diamond films and optoelectronic materials
[NASA-CR-194363] p 578 N94-13246
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
[AD-A266547] p 556 N94-13583
Development of time-dependent orthotropic constitutive law of a thermoplastic composite material p 556 N94-13595
Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531
GRAPHITE-EPOXY COMPOSITES
Design and application of a quasistatic crush test fixture for investigating scale effects in energy absorbing composite plates
[NASA-CR-4526] p 670 N94-13063
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706
An experimental investigation into the damage resistance and compression-after-impact strength of T800H/3900-2
[LTR-ST-1909] p 675 N94-13945
GRAPHS (CHARTS)
Simulated annealing for the problem of multiresource location on graph
[REPT-93-033] p 770 N94-13809
GRASSLANDS
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon
[INPE-5454-TDI/496] p 707 N94-13330
GRATINGS (SPECTRA)
Advances in low energy neutral atom imaging techniques
[DE93-012745] p 782 N94-13492
Advanced optical instruments technology p 547 N94-14838
GRAVELS
Stochastic performance modeling and evaluation of obstacle detectability with imaging range sensors
[NASA-CR-194510] p 605 N94-13946
GRAVIMETRY
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
[DE93-015080] p 717 N94-14294
GRAVITATION
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334
Dilaton quantum cosmology in two dimensions
[DE93-621377] p 836 N94-13361
On the symmetry algebra of the discrete states in d less than 2 closed string theory
[DE93-622903] p 769 N94-13536
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
GRAVITATION THEORY
The general gravitational potential field of a homogeneous cylinder rotating about its axis
[DE93-622853] p 775 N94-13508
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
GRAVITATIONAL COLLAPSE
On inhomogeneous halo collapse and the globular cluster metallicity gradient
[DE93-013090] p 834 N94-13011
GRAVITATIONAL EFFECTS
Evaluation of the Retrograde Inflation Anti-G Suit (RIAGS)
[AD-A265884] p 736 N94-12935
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418
Spacelab J experiment descriptions
[NASA-TM-4517] p 586 N94-13732
The influence of a microgravity environment on the dendritic morphology during directional solidification of hypoeutectic Al-Si alloys
[NASA-CR-194139] p 571 N94-13891
GRAVITATIONAL FIELDS
The general gravitational potential field of a homogeneous cylinder rotating about its axis
[DE93-622853] p 775 N94-13508
GRAVITATIONAL PHYSIOLOGY
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418
Endocrine and metabolic changes in payload specialist (L-1) p 591 N94-13758
GRAVITY ANOMALIES
Venus gravity
[NASA-CR-194077] p 841 N94-12823
GRAVITY WAVES
Theoretical support for the Airborne Antarctic Ozone Experiment
[NASA-CR-193669] p 713 N94-13465
Numerical simulation and parameterization of orographic gravity waves p 713 N94-13647
The spectral viscosity method applied to simulation of waves in a stratified atmosphere
[FFI-92/7047] p 637 N94-14040
GRAY GAS
Coupled thermal response of objects and participating media in fires and large combustion systems
[DE93-012848] p 561 N94-12819
GRAZING
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525
GRAZING INCIDENCE
Proceedings of the Workshop on Applications of Synchrotron Radiation to Trace Impurity Analysis for Advanced Silicon Processing
[DE93-013389] p 805 N94-13020
GREEN'S FUNCTIONS
Hydrodynamic asymptotics of Green functions in magnetics with spontaneously broken symmetry
[DE93-621349] p 767 N94-13223
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
GREENHOUSE EFFECT
The role of clouds and oceans in global greenhouse warming
[DE93-016206] p 706 N94-13079
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459
GRENADES
Estimation of the concentration versus the time profile of zinc chloride particles in smoke clouds generated by the Raufoss A/S instantaneous smoke RA-90 and DM-45 HC smoke generator
[FFI-93/6001] p 708 N94-13821
GRID GENERATION (MATHEMATICS)
Parallel implementation of an algorithm for Delaunay triangulation
[NASA-TM-103951] p 740 N94-12973
Numerical simulation of steady three-dimensional flows in axial turbomachinery bladerows p 634 N94-13630
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
[DE93-013958] p 601 N94-13696

Numerical investigations in three-dimensional internal flows
[NASA-CR-194143] p 637 N94-13827
A perspective on AVS in an engineering sciences environment
[DE93-015011] p 596 N94-13889
Some aspects of sheet forming simulation using explicit finite element techniques
[DE93-012479] p 663 N94-13975
VFGEN: A parallel volume fraction generator for hydrocodes
[DE93-011673] p 752 N94-14019
Computational techniques and capabilities
p 506 N94-14162
Domain connectivity among systems of overset grids
[NASA-CR-193390] p 508 N94-14326
Multigrid solution of internal flows using unstructured solution adaptive meshes
[NASA-CR-194233] p 638 N94-14356
An adaptive projection method for the incompressible Euler equations
[DE93-016428] p 639 N94-14434
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456
A grid generation package for high aspect ratio wings
p 510 N94-14608

GROOVES
Scattering by a groove in an impedance plane
[NASA-CR-193362] p 602 N94-13720

GROUND EFFECT (AERODYNAMICS)
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322

GROUND OPERATIONAL SUPPORT SYSTEM
Sensor operation of Advanced Earth Observing Satellite (ADEOS) p 689 N94-14215

GROUND STATE
Metastable enhancement of C(+) and O(+) capture reactions
[DE93-015075] p 807 N94-13373

GROUND STATIONS
National use of the groups 7wwW1W2 and 960ww for ground stations
[KNMI-PUBL-181] p 722 N94-13926
Sensor operation of Advanced Earth Observing Satellite (ADEOS) p 689 N94-14215

GROUND SUPPORT EQUIPMENT
An experimental assessment of the use of ground-level microphones to measure the fly-over noise of jet-engined aircraft
[NPL-RSA(EXT)-0039] p 777 N94-13885
Payload/GSE/data system interface: Users guide for the VPF (Vertical Processing Facility)
[NASA-CR-194385] p 532 N94-14148

GROUND SUPPORT SYSTEMS
Control system design of a cable-mounted model used for dynamic wind tunnel testing
[NAL-TR-1161] p 528 N94-13337
Space and Earth sciences, computer systems, and scientific data analysis support, volume 1
[NASA-CR-194535] p 741 N94-13788
Sensor operation of Advanced Earth Observing Satellite (ADEOS) p 689 N94-14215
Asynchronous transfer mode link performance over ground networks p 610 N94-14385

GROUND TESTS
Performance evaluation tests of the GPS/DGPS navigation system installed in the NAL Dornier 228: Preliminary ground test results
[NAL-TM-649] p 513 N94-13346
Methodology of Hypersonic Testing
[VKI-LS-1993-03] p 505 N94-14153
Computational techniques and capabilities
p 506 N94-14162
Test and evaluation methods p 506 N94-14163
Materials/structures testing p 506 N94-14164
Aeropropulsion test and evaluation methods
p 506 N94-14165
Extrapolation of ground test data to flight
p 507 N94-14170
Control structural interaction testbed: A model for multiple flexible body verification p 544 N94-14649
A program for the investigation of the Multibody Modeling, Verification, and Control Laboratory
p 682 N94-14652

GROUND TRUTH
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703
Integration of remotely sensed data and cadastral ownership boundaries for land inventory purposes
[BCRS-92-16] p 687 N94-14127

GROUND WATER
Integrated, flexible, and rapid geophysical surveying
[DE93-009989] p 712 N94-12906
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
[DE93-010408] p 637 N94-14053
Promotion of geothermal energy development in 1991
[DE93-799061] p 705 N94-14679

GROUND-AIR-GROUND COMMUNICATION
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744

GROUP DYNAMICS
The effects of evaluation and production blocking on the performance of brainstorming groups
[AD-A265495] p 734 N94-12929

GROUP THEORY
Mathematics and string theory
[DE93-017903] p 817 N94-14417

GUIDE VANES
Numerical simulations of unsteady flows in turbomachines p 633 N94-13569

GULF STREAM
Circulation model experiments of the Gulf Stream using satellite-derived fields
[AD-A266067] p 725 N94-12990

GUN PROPELLANTS
Flamespreading in granular solid propellant: Design of an experiment
[AD-A266009] p 583 N94-12987

GYROFREQUENCY
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
Comparative study of x ray and microwave emissions during solar flares
[NASA-CR-194532] p 845 N94-14577

GYROSCOPES
Performance evaluation of the honeywell GG1308 miniature ring laser gyroscope
[AD-A266694] p 653 N94-14782

GYROTROPISM
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
[DE93-624179] p 617 N94-14883

H

H I REGIONS
The extent and content of low-ionization gas in galaxies p 837 N94-13551

H II REGIONS
Abundance markers in H II regions of late spiral galaxies
[ISBN-0-315-62457-4] p 836 N94-13372

H-60 HELICOPTER
Optimization-based controller design for rotorcraft
p 527 N94-14642

HABITABILITY
Life support and habitability manual, volume 1
[ESA-PSS-03-406-ISSUE-1-VOL] p 737 N94-13901
Life support and habitability manual, volume 2
[ESA-PSS-03-406-ISSUE-1-VOL] p 738 N94-13902

HABITATS
Birds of Wallops Island, Virginia, 1970 - 1992
[NASA-TM-104589] p 850 N94-13923
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
[DE93-014032] p 711 N94-14859

HADRONS
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
Medium energy hadron-nucleus scattering in the 1/N expansion formalism
[DE93-622957] p 778 N94-12848
Polarization and color transparency
[DE93-014319] p 780 N94-13101
Low energy response of the DO calorimeter and jet energy measurement
[DE93-013569] p 781 N94-13350
Measurements of optical properties of waveshifting optical fiber for liquid scintillator hadron calorimetry
[DE93-012606] p 791 N94-13482
High energy hadron-hadron collisions
[DE93-015584] p 784 N94-13927
Research in theoretical nuclear physics
[DE93-015096] p 839 N94-14330
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
Comparing the Z(sup 0) mass and inclusive widths to the standard electroweak theory
[PREPRINT-731] p 787 N94-14721

HAFNIUM OXIDES
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
[DE93-013853] p 655 N94-13243

HAIL
Remote identification of rain and hail with a polarization diversity radar
[ISBN-0-315-55623-4] p 720 N94-13516

HALF LIFE
The beta(+) decay and cosmic-ray half-life of Mn-54
[DE93-013913] p 848 N94-13695

HALL EFFECT
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344
The fractional quantum Hall effect and the spherical shell model
[DE93-014553] p 818 N94-14740

HALOS
On inhomogeneous halo collapse and the globular cluster metallicity gradient
[DE93-013090] p 834 N94-13011
Beam halo formation from space-charge dominated beams in uniform focusing channels
[DE93-014458] p 789 N94-13209
Evolution of the interplanetary magnetic field
[DE93-012631] p 836 N94-13262
Design for low beam loss in accelerators for intense neutron source applications
[DE93-014557] p 789 N94-13327
Beam halo in high-intensity beams
[DE93-014565] p 789 N94-13328

HAMILTON-JACOBI EQUATION
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538

HAMILTONIAN FUNCTIONS
Hydrodynamic asymptotics of Green functions in magnetics with spontaneously broken symmetry
[DE93-621349] p 767 N94-13223
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory
p 556 N94-13558
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
Multiplicative noise: Applications in cosmology and field theory
[DE93-016624] p 840 N94-14536
Construction of the Courant-Snyder invariants for the non-linear equations of motion under presence of the linear coupling
[DE93-017565] p 788 N94-14872
Spherical anharmonic oscillator in self-similar approximation
[DE93-626622] p 772 N94-14890

HANDBOOKS
Aircraft engine type certification handbook: Advisory circular
[AC-33-2B] p 518 N94-13252
NASA handbook for nickel-hydrogen batteries
[NASA-RP-1314] p 550 N94-13265

HANDLING EQUIPMENT
An experimental study of tether reel system: A laboratory model
[NAL-TR-1176T] p 539 N94-12943

HANKEL FUNCTIONS
On some results by Fuhrmann on Hankel operators
[CWI-BS-R9224] p 764 N94-13999
On relations between Schmidt pairs arising in robust control
[CWI-BS-R9225] p 764 N94-14000
On the Schmidt pairs of multivariable Hankel operators and robust control
[CWI-BS-R9226] p 765 N94-14001

HARDNESS
A process for evaluation of mechanical behavior of surface films
[W-1/92] p 579 N94-14007
On the hardening and softening of nanocrystalline materials
[DE93-012901] p 810 N94-14185

HARDNESS TESTS
The structure and mechanical properties of Ru-Cu and Ru-Ti nanolayer composites
[DE93-014453] p 558 N94-14469

HARDWARE
Hardware design for the Autonomous Visibility Monitoring (AVM) observatory p 533 N94-14394

HARMONIC FUNCTIONS
An 8-node axisymmetric acoustic finite element for non-axisymmetric fluid-structure interaction analysis
[FFA-TN-1993-03] p 673 N94-13689

HARMONIC GENERATIONS
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
[DE93-014418] p 797 N94-13207
High-order harmonic generation with short-pulse lasers
[DE93-016532] p 659 N94-14594
HARMONIC OSCILLATORS
Stability of subharmonics and escape phenomena in the twin-well potential duffing system p 775 N94-13235
Spherical anharmonic oscillator in self-similar approximation
[DE93-626622] p 772 N94-14890
HARRIER AIRCRAFT
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
HAZARDS
Integrated, flexible, and rapid geophysical surveying
[DE93-009989] p 712 N94-12906
Environmental awareness
[DE93-014192] p 707 N94-13218
HEAD DOWN TILT
Circadian rhythms during simulation of the D2-spaceflight
[DLR-FB-92-27] p 733 N94-14043
HEALTH PHYSICS
Beta/gamma test problems for ITS
[DE93-013522] p 781 N94-13349
HEAO
NASA images 11
[NASA-TM-109287] p 842 N94-13626
HEARING
Underwater hearing: A review
[ISVR-TR-212] p 777 N94-14130
HEAT ENGINES
Insoluble coatings for Stirling engine heat pipe condenser surfaces
[NASA-CR-191188] p 554 N94-14771
HEAT EXCHANGERS
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers
[NASA-CR-191510] p 629 N94-13074
High flux heat exchanger
[AD-A266341] p 636 N94-13730
Colorado State University program for developing, testing, evaluating, and optimizing solar heating and cooling systems
[DE93-016018] p 705 N94-14504
HEAT FLUX
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788
Test apparatus for ITER blanket cooling water distribution design
[DE93-753157] p 795 N94-12944
A technique for direct measurement of skin friction in supersonic combustion flow p 503 N94-13555
Experimental measurement of local heat transfer coefficients over discrete roughened plates using infrared thermography p 635 N94-13652
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912
Fluxes of heat and water vapour in a convective mixed layer during EFEDA
[DLR-FB-92-21] p 716 N94-14132
Sidewall thermometry perturbations to nonlinear heat transport near the (lambda) transition in He-4
[DE93-014990] p 817 N94-14453
Optical fibre Fabry-Perot interferometers for calorimetric heat transfer gauges
[RAE-TM-AERO/PROP-20] p 653 N94-14701
HEAT MEASUREMENT
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788
Measurements of optical properties of waveshifting optical fiber for liquid scintillator hadron calorimetry
[DE93-012606] p 791 N94-13482
The status of cold fusion
[DE93-012731] p 802 N94-14567
HEAT PIPES
High-flux testing of heat pipes for point-focus solar collector systems
[DE93-011581] p 628 N94-12884
An analytical investigation of transient effects on rewetting of heated thin flat plates
[NASA-TM-106120] p 628 N94-12968
Insoluble coatings for Stirling engine heat pipe condenser surfaces
[NASA-CR-191188] p 554 N94-14771
HEAT PUMPS
Development of a nonazeotropic heat pump for crew hygiene water heating
[NASA-CR-194189] p 737 N94-13674
HEAT RESISTANT ALLOYS
System integration and demonstration of adhesive bonded high temperature aluminum alloys for aerospace structure, phase 2
[NASA-CR-191459] p 575 N94-12792
High-temperature corrosion and protection of materials
[DE93-011072] p 568 N94-12998
HEAT SINKS
Microchannel cooled heatsinks for high average power laser diode arrays
[DE93-016533] p 658 N94-14442
HEAT STORAGE
Colorado State University program for developing, testing, evaluating, and optimizing solar heating and cooling systems
[DE93-016018] p 705 N94-14504
HEAT TOLERANCE
Cellular mechanism of turnover of the stress induced protein HSP 70
[AD-A265723] p 732 N94-13061
HEAT TRANSFER
Study of possible mechanisms of instability due to heat transfer
[INPE-5448-TDI/494] p 628 N94-12966
Magnetic fusion computing: A personal retrospective view
[DE93-014147] p 797 N94-13217
The corrosion behavior of 8001 Al under heat-transfer conditions in an aqueous loop system
[DE93-013450] p 569 N94-13242
A multiphase model for shock-induced flow in low density foam
[DE93-013767] p 632 N94-13397
Heat flows and harmonic maps with a free boundary
[DE93-622856] p 632 N94-13509
Thermal gravitational modelling and scaling of two-phase heat transport systems: Similarity considerations and useful equations predictions versus experimental results
[NLR-TP-91477-U] p 632 N94-13533
Experimental investigation of the effects of blowing ratio parameter on heat transfer to a film-cooled flat plate
[AD-A266599] p 636 N94-13780
Sidewall thermometry perturbations to nonlinear heat transport near the (lambda) transition in He-4
[DE93-014990] p 817 N94-14453
A conduction model for the vacuum arc remelting process
[NPL-DMM(A)-98] p 639 N94-14464
Colorado State University program for developing, testing, evaluating, and optimizing solar heating and cooling systems
[DE93-016018] p 705 N94-14504
HEAT TRANSFER COEFFICIENTS
Experimental measurement of local heat transfer coefficients over discrete roughened plates using infrared thermography p 635 N94-13652
High frame rate thermal imager for hypersonic wind tunnel applications
[ONERA-NT-1992-12] p 650 N94-14009
A conduction model for the vacuum arc remelting process
[NPL-DMM(A)-98] p 639 N94-14464
HEAT TRANSMISSION
Recent results from material processing studies on new generation lasers
[DE93-013841] p 653 N94-12898
HEAT TREATMENT
Microstructural evolution of NARloy-Z at elevated temperatures
[NASA-TM-108419] p 571 N94-13715
The microstructural response of near gamma-TiAl+W to heat treatment
[DSIS-93-00237] p 571 N94-13840
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
[DE93-013770] p 812 N94-14345
Effect of thermal processing practices on the properties of superplastic Al-Li alloys
[NASA-CR-4548] p 574 N94-14850
Quenching and annealing effects on the specific heat of YBa2Cu3O(7-delta)
[DE93-016483] p 816 N94-14868
HEATING
The multi-ion, multi-event test of ion cyclotron resonance heating
[NASA-CR-194134] p 789 N94-13419
Problems and opportunities in microwave joining of ceramics
[DE93-014998] p 579 N94-13888
Microwave hybrid heating of alumina filaments
[DE93-012642] p 581 N94-14327
HEATING EQUIPMENT
Development of a nonazeotropic heat pump for crew hygiene water heating
[NASA-CR-194189] p 737 N94-13674
HEAVY IONS
Evolution of high-repetition-rate induction accelerators through advancements in switching
[DE93-012599] p 654 N94-12963
Neutral strange particle production at the AGS
[DE93-014044] p 780 N94-13098
Cellular track model for study of heavy ion beams
[NASA-TP-3351] p 732 N94-13714
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
Single event effects and laser simulation studies
[NASA-CR-194506] p 657 N94-13812
The theory of relativistic heavy ion collisions
[DE93-015934] p 784 N94-13952
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349
HEAVY NUCLEI
On the statistical theory of the even-even nucleons levels' density
[DE93-623990] p 788 N94-14875
HELICAL FLOW
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
HELICOPTER CONTROL
Kinematics and constraints associated with swashplate blade pitch control
[NASA-TM-102265] p 520 N94-12820
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator p 521 N94-13295
MIL-H-8501B: Application to shipboard terminal operations p 521 N94-13296
A perspective on the FAA approval process: Integrating rotorcraft displays, controls and workload p 521 N94-13298
Some lessons learned in three years with ADS-33C --- rotorcraft handling qualities specification p 521 N94-13299
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities p 522 N94-13300
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
The application of active side arm controllers in helicopters p 522 N94-13302
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
The impact of flying qualities on helicopter operational agility p 522 N94-13304
A four-axis hand controller for helicopter flight control p 522 N94-13305
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
Compatibility of information and mode of control: The case for natural control systems p 523 N94-13307
A model for rotorcraft flying qualities studies p 523 N94-13308
Interpreted Cooper-Harper for broader use p 523 N94-13309
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
The development and potential of inverse simulation for the quantitative assessment of helicopter handling qualities p 523 N94-13311
An analytic modeling and system identification study of rotor/fuselage dynamics at hover p 524 N94-13312
Visual cueing aids for rotorcraft landings p 524 N94-13313
Visual information for judging temporal range p 524 N94-13314
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays p 524 N94-13315
Effects of simulator motion and visual characteristics on rotorcraft handling qualities evaluations p 524 N94-13317
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
Design and pilot evaluation of the RAH-66 Comanche selectable control modes p 525 N94-13322
Flight testing and frequency domain analysis for rotorcraft handling qualities characteristics p 526 N94-13324
Preliminary design features of the RASCAL: A NASA /Army rotorcraft in-flight simulator p 526 N94-13325

HELICOPTER DESIGN
The impact of flying qualities on helicopter operational agility p 522 N94-13304
Design and pilot evaluation of the RAH-66 Comanche Core AFCS p 525 N94-13321
Preliminary design features of the RASCAL: A NASA /Army rotorcraft in-flight simulator p 526 N94-13325

HELICOPTER PERFORMANCE
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator p 521 N94-13295
MIL-H-8501B: Application to shipboard terminal operations p 521 N94-13296
A perspective on the FAA approval process: Integrating rotorcraft displays, controls and workload p 521 N94-13298
Some lessons learned in three years with ADS-33C --- rotorcraft handling qualities specification p 521 N94-13299
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities p 522 N94-13300
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
The application of active side arm controllers in helicopters p 522 N94-13302
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
The impact of flying qualities on helicopter operational agility p 522 N94-13304
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
A model for rotorcraft flying qualities studies p 523 N94-13308
Interpreted Cooper-Harper for broader use p 523 N94-13309
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
The development and potential of inverse simulation for the quantitative assessment of helicopter handling qualities p 523 N94-13311
Effects of simulator motion and visual characteristics on rotorcraft handling qualities evaluations p 524 N94-13317
Design and pilot evaluation of the RAH-66 Comanche selectable control modes p 525 N94-13322
Flight testing and frequency domain analysis for rotorcraft handling qualities characteristics p 526 N94-13324
An analysis of helicopter attrition using a low level combat simulation
[DSIS-93-00282] p 515 N94-13839

HELICOPTER WAKES
New vortex dynamics methods for rotor free wake analysis
[AD-A266656] p 509 N94-14774
Free-wake computation of helicopter rotor flowfield for general flight regimes
[AD-A266692] p 509 N94-14781

HELICOPTERS
Flight service evaluation of composite components on the Bell helicopter model 206L
[NASA-CR-191499] p 555 N94-13267
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
Helicopter precision approach capability using the Global Positioning System
[NASA-CR-194037] p 513 N94-13957
New vortex dynamics methods for rotor free wake analysis
[AD-A266656] p 509 N94-14774
A new treatment of periodic systems with applications to helicopter rotor blade dynamics
[AD-A266770] p 510 N94-14784
Center of excellence in rotary wing technology
[AD-A266655] p 510 N94-14799

HELIUM
Lattice site of helium implanted in Si and diamond
[DE93-015365] p 805 N94-13012

HELIUM IONS
The multi-ion, multi-event test of ion cyclotron resonance heating
[NASA-CR-194134] p 789 N94-13419
High-order harmonic generation with short-pulse lasers
[DE93-016532] p 659 N94-14594

HELIUM ISOTOPES
Charged-particle evaluation methodology at Lawrence Livermore National Laboratory
[DE93-013429] p 781 N94-13251
Sidewall thermometry perturbations to nonlinear heat transport near the (lambda) transition in He-4
[DE93-014990] p 817 N94-14453

HELIUM PLASMA
Investigation of an alternating current plasma as an element selective atomic emission detector for high-resolution capillary gas chromatography and as a source for atomic absorption and atomic emission spectrometry p 798 N94-13678

HELIUM-NEON LASERS
Laser lithography by photon scanning tunneling microscopy
[DE93-015962] p 660 N94-14863

HELMET MOUNTED DISPLAYS
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays p 524 N94-13315

HEMODYNAMIC RESPONSES
Health monitoring of Japanese payload specialist: Autonomic nervous and cardiovascular responses under reduced gravity condition (L-0) p 591 N94-13757

HERMETIC SEALS
MMIC packaging technology development
[NASA-CR-194183] p 621 N94-13336

HERTZSPRUNG-RUSSELL DIAGRAM
X ray observations of late-type stars using the ROSAT all-sky survey
[NASA-CR-193716] p 832 N94-14146

HESSIAN MATRICES
Optimization and eigenvalue computation with application to meteorology and oceanography
[DE93-015310] p 744 N94-13024

HETEROGENEITY
Thermodiffusion in heterogeneous elastic solids and homogenization
[REPT-14/1993] p 578 N94-13468
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912
A study of the role of homogeneous process in heterogeneous high explosives
[DE93-012733] p 585 N94-14180
Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black
[DE93-012707] p 559 N94-14690
A characterization of carboxylesterases in rat and guinea pig: Their heterogeneity and role in detoxication of organophosphorus compounds
[NDRE-PUBL-93-1001] p 730 N94-14852

HETEROJUNCTIONS
Intrinsic and interfacial recombination in OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As heterostructures
[DE93-009844] p 809 N94-14083

HEURISTIC METHODS
Quaternions and the heuristic role of mathematical structures in physics
[DE93-622865] p 816 N94-12844
Solving integer programs from dependence and synchronization problems
[AD-A265702] p 767 N94-13284
Extremal polygon containment problems and other issues in parametric searching
[ITN-93-85214] p 771 N94-14506

HIERARCHIES
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332

HIGH ACCELERATION
Isolation of a piezoresistive accelerometer used in high acceleration tests
[DE93-013764] p 649 N94-13395

HIGH ASPECT RATIO
Approaches to high aspect ratio triangulations
[NASA-TM-107684] p 739 N94-12886

HIGH CURRENT
Advanced magnetic flux compression generator development issues: A comparison of coaxial and disk generators
[DE93-014025] p 794 N94-12849
Instability heating of the HDZP
[DE93-012641] p 798 N94-13513
Multi-bunch beam-break-up studies for a SWFEL/TBA
[DE93-016973] p 658 N94-14414

HIGH DEFINITION TELEVISION
An acoustic charge transport imager for high definition television applications
[NASA-CR-194518] p 650 N94-14029
Optimization of a subband coding for high definition television with motion controlled three dimensional frequency band decomposition
[ETN-93-94396] p 617 N94-14817

HIGH ELECTRON MOBILITY TRANSISTORS
A cryogenic seven-element HEMT front end for DSS 13 p 608 N94-14375

HIGH ENERGY INTERACTIONS
Measurements of transverse energy and forward energy in high-energy nuclear collisions
[DE93-012755] p 788 N94-12817
Quark and gluon jets at CDF
[DE93-014919] p 783 N94-13884
High energy hadron-hadron collisions
[DE93-015584] p 784 N94-13927
The theory of relativistic heavy ion collisions
[DE93-015934] p 784 N94-13952
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
Wake-field and space charge effects on high brightness beams calculations and measured results for the laser driven photoelectrons at BNL-ATF
[DE93-015787] p 659 N94-14572
Integrating PAW, a graphical analysis interface to Sybase
[DE93-014172] p 755 N94-14581
The next century astrophysics program p 546 N94-14832
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
[DE93-017154] p 790 N94-14893

HIGH FREQUENCIES
Measurement electronics of industrial microwave resonator sensors
[TKK-S-RAD-S194] p 625 N94-14096

HIGH GRAVITY ENVIRONMENTS
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418

HIGH POWER LASERS
Microchannel cooled heatsinks for high average power laser diode arrays
[DE93-016533] p 658 N94-14442

HIGH PRESSURE
Differential Sensitivity Theory applied to the MESA code for high pressure interactions
[DE93-016460] p 676 N94-14591

HIGH RESOLUTION
High resolution electron energy loss studies of surface vibrations
[DE93-014441] p 781 N94-13283
High time resolution studies of binary x ray pulsars
[NASA-CR-194395] p 832 N94-13894
High-resolution Z-contrast imaging and hole concentration mapping of YBCO thin films
[DE93-015803] p 808 N94-13930
A widget based operations simulator for a planetary camera: A model for the high resolution stereo camera on Mars 94
[DLR-FB-92-30] p 651 N94-14044
The effect of crystal tilt on high resolution micrographs of small metal particles
[DE93-013915] p 574 N94-14795

HIGH REYNOLDS NUMBER
Three-dimensional structure of straight and curved plane wakes
[NASA-CR-194420] p 501 N94-13266

HIGH SPEED CAMERAS
Energy and technology review, March 1993
[DE93-013941] p 849 N94-13019
High frame rate thermal imager for hypersonic wind tunnel applications
[ONERA-NT-1992-12] p 650 N94-14009

HIGH SPEED PHOTOGRAPHY
Energy and technology review, March 1993
[DE93-013941] p 849 N94-13019

HIGH STRENGTH STEELS
An investigation of the role of second phase particles in the design of ultra high strength steels of improved toughness
[AD-A266774] p 573 N94-14786

HIGH TEMPERATURE
High-temperature corrosion and protection of materials
[DE93-011072] p 568 N94-12998
High temperature electromagnetic characterization of thermal protection system tile materials
[NASA-CR-189687] p 578 N94-13431
High temperature behavior of glass (M-8) p 587 N94-13740
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793

HIGH TEMPERATURE ENVIRONMENTS
Thermosolutal convection and macrosegregation in dendritic alloys
[NASA-CR-194039] p 567 N94-12825

Strain sensing technology for high temperature applications
[NASA-TM-4498] p 648 N94-12874
Interfacial precipitation, segregation and deformation in alloy 600: implications on primary-side IGSCC
[DE93-013161] p 568 N94-13035
A technique for direct measurement of skin friction in supersonic combustion flow p 503 N94-13555
Buckling analysis of laminated thin shells in a hot environment
[NASA-TM-106302] p 683 N94-14776

HIGH TEMPERATURE GAS COOLED REACTORS
A modular gas-cooled cermet reactor system for planetary base power
[DE93-013672] p 550 N94-13351

HIGH TEMPERATURE GASES
The onset of galactic winds in early-type galaxies
[NASA-CR-193640] p 836 N94-13446
Hypersonic flow phenomenology p 505 N94-14155
ROSAT observations of clusters with wide-angle tailed radio sources
[NASA-CR-193784] p 833 N94-14405

HIGH TEMPERATURE LUBRICANTS
A vacuum four-ball tribometer to evaluate liquid lubricants for space applications
[NASA-TM-106264] p 575 N94-12842
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126

HIGH TEMPERATURE PLASMAS
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
[DE93-014129] p 784 N94-14140

HIGH TEMPERATURE SUPERCONDUCTORS
Processing, fabrication and demonstration of HTS integrated microwave circuits
[AD-A265789] p 619 N94-12892
Analysis and characterizations of planar transmission structures and components for superconducting and monolithic integrated circuits
[NASA-CR-193675] p 619 N94-13026
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339
Kinetics of photodeposition of superconducting films
[DE93-015511] p 812 N94-14348
Insertion loss and noise-temperature contribution of high-temperature superconducting bandpass filters centered at 2.3 and 8.45 GHz p 608 N94-14376
Direct submillimeter absorptivity measurements on epitaxial Ba(1-x)K(x)BiO3 films at 2K
[DE93-013904] p 815 N94-14699
Renormalized band structure of CuO2 layers in superconducting compounds: A mean field approach
[PREPRINT-730] p 815 N94-14720

HIGH TEMPERATURE TESTS
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270
Aerodynamic and aerothermal facilities 2: Continuous flow high enthalpy facilities p 506 N94-14160
A hot dynamic seal rig for measuring hypersonic engine seal durability and flow performance
[NASA-TM-106294] p 664 N94-14727

HIGH VOLTAGES
Development of UHF spark-switched L-C Oscillators
[DE93-015019] p 623 N94-13892
A high voltage dielectrically isolated smart power technology based on silicon direct bonding
[LAAS-92492] p 626 N94-14698
Design and optimization of high voltage lateral DMOS devices using RESURF technology
[LAAS-92511] p 626 N94-14711

HISTORIES
Magnetic fusion computing: A personal retrospective view
[DE93-014147] p 797 N94-13217
Tidal interactions in the Earth Moon system
[COMMUNICATIONS-SER-B-160] p 837 N94-13503
Flight operations highlights, tapes 1 and 2
[NASA-TM-109293] p 850 N94-13633
A history of the Defence Research Establishment, Ottawa
[CTN-93-60737] p 850 N94-14060
My experiences in manned space flight p 698 N94-14276
Early baryon and meson spectroscopy culminating in the discovery of the Omega minus SU(3) and quarks
[DE93-014321] p 787 N94-14580

HOLDERS
Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
[PB93-198851] p 652 N94-14687

HOLE DISTRIBUTION (MECHANICS)
Quantitative mapping of pore fraction variations in silicon nitride using an ultrasonic contact scan technique
[NASA-TP-3377] p 665 N94-13056

HOLE MOBILITY
Structural and electronic studies of a-SiGe:H alloys
[DE93-010021] p 809 N94-14085

HOLES (ELECTRON DEFICIENCIES)
High-resolution Z-contrast imaging and hole concentration mapping of YBCO thin films
[DE93-015803] p 808 N94-13930
Renormalized band structure of CuO2 layers in superconducting compounds: A mean field approach
[PREPRINT-730] p 815 N94-14720
Magnetic interactions and disorder - phase transitions in dilute spin-glasses and high temperature superconductors
[ITN-93-85217] p 815 N94-14825

HOLES (MECHANICS)
A classical instability for black strings and p-branes
[DE93-014577] p 839 N94-14116

HOLLOW CATHODES
Plasma contactor technology for Space Station Freedom
[NASA-TM-106291] p 553 N94-14725

HOLOGRAPHIC INTERFEROMETRY
Two color holographic interferometry for microgravity application
[NASA-CR-194424] p 651 N94-14447

HOLOGRAPHY
Reduce fluid experiment system flight data from IML-1
[NASA-CR-193835] p 804 N94-12873
Measuring methods for CFRP laminates' bending and torsion rigidities characteristics p 529 N94-13272
Image reconstruction for x ray holographic microscopy
[DE93-013094] p 653 N94-14772
Optimization study of x ray laser coherence in Ni-like Ta
[DE93-016419] p 660 N94-14888

HOMEOSTASIS
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960

HOMOGENEOUS TURBULENCE
A multiple-scale turbulence model for incompressible flow
[NASA-TM-106113] p 631 N94-13385
Turbulent diffusion in homogeneous shear flow with stable density stratification
[DLR-FB-92-26] p 639 N94-14443
The structure of intense vorticity in homogeneous isotropic turbulence p 643 N94-14747
Rapid distortion analysis and direct simulation of compressible homogeneous turbulence at finite Mach number p 645 N94-14757

HOMOGENIZING
Thermodiffusion in heterogeneous elastic solids and homogenization
[REPT-14/1993] p 578 N94-13468

HOMOLOGY
On the symmetry algebra of the discrete states in d less than 2 closed string theory
[DE93-622903] p 769 N94-13536

HONEYCOMB STRUCTURES
Theoretical studies of breakdown in random media
[DE93-018107] p 558 N94-14418

HORIZON SCANNERS
Low cost attitude control system reaction wheel development
[NASA-CR-191332] p 540 N94-13140

HORIZONTAL FLIGHT
Free-wake computation of helicopter rotor flowfield for general flight regimes
[AD-A266692] p 509 N94-14781

HORMONE METABOLISMS
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Gender differences in endocrine responses to posture and 7 days of 6 deg head down bed rest
[NASA-TM-103991] p 731 N94-12972

HORMONES
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Endocrine and metabolic changes in payload specialist (L-1) p 591 N94-13758
Bone culture research p 595 N94-13773
Thyroid alterations in porcine after prolonged exposure to cold or heat
[AD-A266840] p 733 N94-14879

HORN ANTENNAS
The 24 GHz measurements of 2.2 lambda conical horn antennas illuminating a conducting sheet
[NASA-TM-109002] p 598 N94-12811
Antenna pattern control using impedance surfaces
[NASA-CR-194517] p 602 N94-13799
Using a focal-plane array to estimate antenna pointing errors
[NASA-CR-194502] p 602 N94-13810

HORNS
HRMS sky survey wideband feed system design for DSS 24 beam waveguide antenna p 611 N94-14397

HOT ATOMS
Detection of hot muonic hydrogen atoms emitted in vacuum using x-rays
[DE93-010253] p 778 N94-12860

HOT ELECTRONS
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
[DE93-014418] p 797 N94-13207
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983

HOT ISOSTATIC PRESSING
Influence of heat treatment on microstructure of Ti-35wt Al prepared by elemental powder metallurgy
[GKSS/92/E/27] p 574 N94-14821

HOT PRESSING
Gas atomized Er3Ni powder for cryocooler applications
[DE93-011564] p 568 N94-13000

HOT STARS
X ray emission from dynamical shock models in hot-star winds
[NASA-CR-194093] p 847 N94-13288
Rocket and laboratory studies in astronomy
[NASA-CR-194410] p 832 N94-13966

HOTSHOT WIND TUNNELS
Aerodynamic and aerothermal facilities 2. Part 1: Short-duration, high-enthalpy facilities p 506 N94-14159

HOVERING
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
An analytic modeling and system identification study of rotor/fuselage dynamics at hover p 524 N94-13312
Visual cueing aids for rotorcraft landings p 524 N94-13313
Optimization-based controller design for rotorcraft p 527 N94-14642
Free-wake computation of helicopter rotor flowfield for general flight regimes
[AD-A266692] p 509 N94-14781

HUBBLE SPACE TELESCOPE
The four great observatories
[NASA-TM-109311] p 830 N94-13605
A capacifiector-based robotic system
[NASA-CR-193783] p 833 N94-14359

HULLS (STRUCTURES)
Approaches to high aspect ratio triangulations
[NASA-TM-107684] p 739 N94-12886
Structural investigation of a damaged GRP/foam sandwich composite using x ray computed tomography p 669 N94-13857

HUMAN BEHAVIOR
Psychophysiological investigations of the biomedical problems of manned spaceflight
[NASA-CR-194107] p 732 N94-13782

HUMAN BODY
Body/cushion contact stress analysis during sitting
[ITN-93-85204] p 736 N94-13229

HUMAN FACTORS ENGINEERING
Evaluation of the Retrograde Inflation Anti-G Suit (RIAGS)
[AD-A265884] p 736 N94-12935
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
The application of active side arm controllers in helicopters p 522 N94-13302
A four-axis hand controller for helicopter flight control p 522 N94-13305
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
Analysis of differences between seating positions in simulators and orbiters
[NASA-TM-104776] p 737 N94-13399
Human factors in aviation maintenance: Phase 3, volume 1
[DOT/FAA/AM-93/15] p 738 N94-14023
SHEAN (Simplified Human Error Analysis code) and automated THERP
[DE93-014904] p 738 N94-14451
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563

HUMAN PERFORMANCE
Readiness to perform testing: A critical analysis of the concept and current practices
[DOT/FAA/AM-93/13] p 732 N94-13193
Functional categories for future flight deck designs
[NASA-TM-109005] p 517 N94-13710
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961
Human factors in aviation maintenance: Phase 3, volume 1
[DOT/FAA/AM-93/15] p 738 N94-14023
SHEAN (Simplified Human Error Analysis code) and automated THERP
[DE93-014904] p 738 N94-14451

HUMAN TOLERANCES
Evaluation of the Retrograde Inflation Anti-G Suit (RIAGS)
[AD-A265884] p 736 N94-12935
Psychophysiological investigations of the biomedical problems of manned spaceflight
[NASA-CR-194107] p 732 N94-13782
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972

HUMIDITY
Atmospheric soundings during the Washita 1992 campaign
[NASA-CR-194383] p 712 N94-13212
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
[INPE-5444-TDI/490] p 720 N94-13614
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
[DE93-007884] p 709 N94-13911
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments
[NASA-TP-3368] p 813 N94-14409

HUMIDITY MEASUREMENT
NASA metrology and calibration, 1993
[NASA-TM-109280] p 597 N94-14410

HYBRID CIRCUITS
Thermal design of hybrid circuits: Tools and methodology
[LAAS-92515] p 626 N94-14713

HYBRID COMPOSITES
Design and application of a quasistatic crush test fixture for investigating scale effects in energy absorbing composite plates
[NASA-CR-4526] p 670 N94-13063

HYBRID PROPULSION
Battery testing at Argonne National Laboratory
[DE93-011761] p 624 N94-14012

HYDRATES
Overview: Gas hydrate geology and geography
[DE93-014043] p 688 N94-14151

HYDRATION
The importance of hard core repulsion in models of activity coefficients in aqueous electrolyte solutions: Illustration in the case of hydration theory
[DE93-012476] p 561 N94-12881

HYDRAULIC FLUIDS
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126

HYDRIDES
First-principles studies of phase stability and the structural and dynamical properties of hydrogen-metal systems
[DE93-016129] p 570 N94-13374

HYDROBALLISTICS
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503

HYDROCARBONS
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
[AD-A265106] p 790 N94-12863
Direct probing of chromatography columns by laser-induced fluorescence
[DE93-015208] p 654 N94-13022
Overview: Gas hydrate geology and geography
[DE93-014043] p 688 N94-14151

HYDRODYNAMIC EQUATIONS
On MHD mode equations in toroidal plasmas
[PPL-139] p 800 N94-13877
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503

HYDRODYNAMICS
The 3-D massively parallel impact simulations using PCTH
[DE93-011593] p 670 N94-12908
Three dimensional time-dependent hydrodynamic and propagation modeling of x ray laser emission
[DE93-012575] p 654 N94-12962
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Comparison of analytic Whipple bumper shield ballistic limits with CTH simulations
[DE93-015126] p 539 N94-13006
Inertial confinement fusion program
[DE93-013372] p 796 N94-13047
Hydrodynamic asymptotics of Green functions in magnetics with spontaneously broken symmetry
[DE93-621349] p 767 N94-13223
Gas core nuclear thermal rocket engine research and development in the former USSR
[DE93-012165] p 552 N94-14013
A study of the role of homogeneous process in heterogeneous high explosives
[DE93-012733] p 585 N94-14180
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503
Nonlinear wave forces on large ocean structures
[AD-A266820] p 683 N94-14902

HYDROGEN
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
[NAL-TR-1177] p 548 N94-12945
Measurement of H zero excited states produced by foil stripping of 800-MeV H(-) ions
[DE93-014391] p 788 N94-13103
A survey and analysis of experimental hydrogen sensors
[NASA-TM-106300] p 648 N94-13135
Destruction of problematic airborne contaminants by hydrogen reduction using a Catalytically Active, Regenerable Sorbent (CARS)
[NASA-CR-194354] p 709 N94-14103
BAKEOUT: A computer program for predicting diffusive outgassing from stainless steel
[DE93-012613] p 573 N94-14364
A hydrogen atom in the curved space: Orthogonality of radial wave functions with respect to the critical momentum
[DE93-626623] p 788 N94-14891

HYDROGEN ATOMS
Detection of hot muonic hydrogen atoms emitted in vacuum using x-rays
[DE93-010253] p 778 N94-12860
Measurements of scattering processes in negative ion-atom collisions
[DE93-013863] p 779 N94-12940
Atomic hydrogen and nitrogen distributions from atmosphere explorer measurements
[NASA-CR-194336] p 714 N94-13825
Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826
Quantum state resolved desorption of CO from solid surfaces
[DE93-016876] p 814 N94-14597
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
A hydrogen atom in the curved space: Orthogonality of radial wave functions with respect to the critical momentum
[DE93-626623] p 788 N94-14891

HYDROGEN CLOUDS
The distance to the high velocity clouds of neutral hydrogen
[NASA-CR-194343] p 838 N94-13716

HYDROGEN EMBRITTLEMENT
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
[DE93-016666] p 812 N94-14354
A study of hydrogen effects on fracture behavior of radioactive waste storage tanks
[DE93-018171] p 574 N94-14873

HYDROGEN FUELS
Computer program for thermal and transport properties of parahydrogen from 20 to 10,000 K
[NASA-TP-3378] p 552 N94-14102

HYDROGEN IONS
Measurements of scattering processes in negative ion-atom collisions
[DE93-013863] p 779 N94-12940
Measurement of H zero excited states produced by foil stripping of 800-MeV H(-) ions
[DE93-014391] p 788 N94-13103

HYDROGEN OXYGEN ENGINES
Tensile properties of LE-7 engine material with welded joint
[NAL-TR-1188] p 570 N94-13460
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491

HYDROGEN PEROXIDE
Reduction of Pu(6) with hydrogen peroxide: Effects of plutonium, peroxide, and iron concentrations and of reaction time
[DE93-013598] p 564 N94-13487
Hydrogen peroxide safety issues
[DE93-013895] p 565 N94-14346

HYDROGEN PLASMA
Two temperature modeling and experimental measurements of laser sustained hydrogen plasmas
[AD-A265750] p 796 N94-13039

HYDROGEN SULFIDE
Promotion of geothermal energy development in 1991
[DE93-799061] p 705 N94-14679

HYDROGENATION
Catalytic arene hydrogenation using early transition metal hydride compounds
[DE93-015500] p 573 N94-14402

HYDROLOGICAL CYCLE
Circulation and rainfall climatology of a 10-year (1979 - 1988) integration with the Goddard Laboratory for atmospheres general circulation model
[NASA-TM-104591] p 723 N94-14074
Space measurements for determining the Earth's energy and water cycles p 690 N94-14227
Integration of space and in-situ observations to study atmosphere, ocean and land processes
[NASA-CR-194495] p 683 N94-14500

HYDROLOGY
Promotion of geothermal energy development in 1991
[DE93-799057] p 701 N94-13214
Promotion of geothermal energy development in 1991
[DE93-799058] p 701 N94-13215
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334
The American Geophysical Union Chapman Conference on Tectonics and Topography
[NASA-CR-193454] p 713 N94-13335

HYDROLYSIS
Destruction of waste energetic materials using base hydrolysis
[DE93-012738] p 584 N94-13491

HYDROSTATICS
Technology assessments of advanced energy storage systems for electric and hybrid vehicles
[DE93-014395] p 701 N94-12913

HYGIENE
Development of a nonazeotropic heat pump for crew hygiene water heating
[NASA-CR-194189] p 737 N94-13674

HYPERBOLIC DIFFERENTIAL EQUATIONS
A high-resolution Lax-Friedrichs scheme for hyperbolic conservation laws with source terms: Application to shallow water equations
[DM-62] p 632 N94-13535
On the superconvergence of Galerkin methods for hyperbolic IBVP
[NASA-CR-194293] p 770 N94-13922
On the superconvergence of Galerkin methods for hyperbolic IBPV
[NASA-CR-194488] p 770 N94-14307

HYPERBOLIC FUNCTIONS
A priori error estimates for an hp-version of the discontinuous Galerkin method for hyperbolic conservation laws
[NASA-TM-108993] p 632 N94-13467

HYPERCUBE MULTIPROCESSORS
An efficient parallel algorithm for matrix-vector multiplication
[DE93-015125] p 754 N94-14399

HYPERGEOMETRIC FUNCTIONS
Rare attributes in finite universe: Hypotheses testing specification and exact randomized upper confidence bounds
[DE93-012783] p 775 N94-12955

HYPERNUCLEI
Resonances in the Sigma NN system
[DE93-014353] p 785 N94-14144

HYPERSONIC BOUNDARY LAYER
Hypersonic flow phenomenology p 505 N94-14155
Hypersonic propulsion characterization p 505 N94-14156

HYPERSONIC COMBUSTION
Numerical study of shock-induced combustion in methane-air mixtures
[NASA-TM-106354] p 642 N94-14722

HYPERSONIC FLIGHT
Methodology of Hypersonic Testing
[VKI-LS-1993-03] p 505 N94-14153
Hypersonic overview p 505 N94-14154
Aerodynamic and aerothermal facilities 1: Hypersonic wind tunnels p 506 N94-14158
Hypersonic flight test. Part 1: Propulsion flight testing p 507 N94-14168

Hypersonic flight testing. Part 2: Aerothermal flight testing p 507 N94-14169
Shock/boundary-layer/shock interactions p 507 N94-14172

HYPERSONIC FLOW
Numerical simulation of hypersonic flow for the design of the H-2 orbiting plane (HOPE), part 3 [NAL-TR-1168-PT-3] p 499 N94-12948
Hypersonic aerodynamic characteristics of SSTO-type aerospace planes. Part 1: The NAL 0-th configuration [NAL-TR-1186] p 514 N94-13459
Methodology of Hypersonic Testing [VKI-LS-1993-03] p 505 N94-14153
Hypersonic overview p 505 N94-14154
Hypersonic flow phenomenology p 505 N94-14155
Aerodynamic and aerothermal facilities 1: Hypersonic wind tunnels p 506 N94-14158
Computational techniques and capabilities p 506 N94-14162
Hypersonic flow field measurements: Intrusive p 507 N94-14166
Hypersonic flow-field measurements: Nonintrusive p 507 N94-14167
Shock/boundary-layer/shock interactions p 507 N94-14172
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
Hypersonic viscous flow computations p 510 N94-14612
Simulation of hypersonic, reacting flow around reentry bodies: Comparisons of numerical and experimental results [MBB-LME-211-S-PUB-507] p 509 N94-14710
Numerical study of shock-induced combustion in methane-air mixtures [NASA-TM-106354] p 642 N94-14722
A hot dynamic seal rig for measuring hypersonic engine seal durability and flow performance [NASA-TM-106294] p 664 N94-14727
Vibrational relaxation in hypersonic flow fields [NASA-TP-3367] p 776 N94-14733

HYPERSONIC HEAT TRANSFER
Test and evaluation methods p 506 N94-14163

HYPERSONIC NOZZLES
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers [AD-A266543] p 504 N94-13705

HYPERSONIC SHOCK
Numerical simulations and experiments on physics of high Mach number shockwave: Turbulent flow interactions [DE93-013424] p 631 N94-13249
Sub-grid scale modeling for large eddy simulations in analysis of shock-turbulence interactions [DE93-013425] p 631 N94-13250
Calculation of hypersonic shock structure using flux-split algorithms [NASA-CR-194296] p 504 N94-13607

HYPERSONIC SPEED
Electromagnetic wave test p 508 N94-14173

HYPERSONIC TEST APPARATUS
Methodology of Hypersonic Testing [VKI-LS-1993-03] p 505 N94-14153
Characterization of flow fields in hypersonic ground test facilities p 505 N94-14157
Aerodynamic and aerothermal facilities 1: Hypersonic wind tunnels p 506 N94-14158
Aerodynamic and aerothermal facilities 2. Part 1: Short-duration, high-enthalpy facilities p 506 N94-14159
Aerodynamic and aerothermal facilities 2: Continuous flow high enthalpy facilities p 506 N94-14160
Aeropropulsion facilities p 506 N94-14161

HYPERSONIC VEHICLES
Strain sensing technology for high temperature applications [NASA-TM-4498] p 648 N94-12874
Hypersonic propulsion characterization p 505 N94-14156
Materials/structures testing p 506 N94-14164
Aeropropulsion test and evaluation methods p 506 N94-14165
Boundary-layer transition p 507 N94-14171
Propulsion integration p 508 N94-14174
Vibrational relaxation in hypersonic flow fields [NASA-TP-3367] p 776 N94-14733

HYPERSONIC WIND TUNNELS
Numerical simulation of hypersonic flow for the design of the H-2 orbiting plane (HOPE), part 3 [NAL-TR-1168-PT-3] p 499 N94-12948
High frame rate thermal imager for hypersonic wind tunnel applications [ONERA-NT-1992-12] p 650 N94-14009
Methodology of Hypersonic Testing [VKI-LS-1993-03] p 505 N94-14153
Characterization of flow fields in hypersonic ground test facilities p 505 N94-14157
Aerodynamic and aerothermal facilities 1: Hypersonic wind tunnels p 506 N94-14158
Test and evaluation methods p 506 N94-14163

HYPERSONICS
Hypersonic aerodynamic characteristics of SSTO-type aerospace planes. Part 1: The NAL 0-th configuration [NAL-TR-1186] p 514 N94-13459
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers [AD-A266543] p 504 N94-13705
Hypersonic overview p 505 N94-14154
Hypersonic viscous flow computations p 510 N94-14612

HYPERVELOCITY GUNS
High velocity gas gun [NASA-TM-109296] p 541 N94-13637

HYPERVELOCITY IMPACT
Recovery of materials impacted at high velocity [DE93-014150] p 576 N94-12885
The 3-D massively parallel impact simulations using PCTH [DE93-011593] p 670 N94-12908
VFGEN: A parallel volume fraction generator for hydrocodes [DE93-011673] p 752 N94-14019

HYPERVELOCITY LAUNCHERS
Experimental technique to simulate orbital-debris impact on space shields at impact velocities over 10 km/s [DE93-011619] p 539 N94-12909

HYPERVELOCITY PROJECTILES
Experimental technique to simulate orbital-debris impact on space shields at impact velocities over 10 km/s [DE93-011619] p 539 N94-12909
Comparison of analytic Whipple bumper shield ballistic limits with CTH simulations [DE93-015126] p 539 N94-13006
Simulation of orbital debris impacts on bumper shields [DE93-013773] p 540 N94-13398
Calibration of a magnetic induction system for measurement of hypervelocities [DE93-013949] p 652 N94-14578

HYPODYNAMIA
Clinical physiology of bed rest [NASA-TM-104010] p 727 N94-13447

I

ICE
Planning of a comet simulator [ITN-93-85206] p 835 N94-13230
Optical properties of CO2 ice and CO2 snow in the ultraviolet, visible, and infrared [NASA-CR-194110] p 686 N94-14081

ICE FORMATION
Numerical study of the effects of icing on viscous flow over wings [NASA-CR-193306] p 500 N94-13180
Smart skin technology development for measuring ice accretion, stall, and high AOA aircraft performance. Part 1: Capacitive ice detector development [NASA-CR-194252] p 511 N94-13424

ICE MAPPING
Outline of ISY sea surface temperature data sets p 696 N94-14261

IDEAL GAS
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers [AD-A266543] p 504 N94-13705

IGNITERS
STS-55 pad abort: Engine 2011 oxidizer preburner augmented spark igniter check valve leak [NASA-CR-193830] p 533 N94-12806

IGNITION
Modeling ignition chemistry [DE93-012340] p 561 N94-12910
Flamespreading in granular solid propellant: Design of an experiment [AD-A266009] p 583 N94-12987
Inertial Confinement Fusion [DE93-013303] p 795 N94-13017
Chemical reactions in scramjet engines: Reduced kinetic models for ignition, combustion and nozzle flow [NAL-TR-1184] p 563 N94-13458
Homogeneous-hetergeneous combustion: Thermal and chemical coupling [DE93-016050] p 565 N94-14403
Three-dimensional modeling of diesel engine intake flow, combustion and emissions-2 [NASA-CR-191189] p 519 N94-14448
Comparative ignition of hexane and octane isomers in a shock tube [DE93-016535] p 566 N94-14869

ILLUMINANCE
Fundamentals and techniques of nonimaging optics [DE93-013145] p 791 N94-13015
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method [DE93-015177] p 704 N94-14333

ILLUMINATING
Phase-shifting effect of light and exercise on the human circadian clock [AD-A265732] p 732 N94-13038
Validation of an inexpensive illuminant for aeromedical color vision screening [DOT/FAA/AM-93/16] p 736 N94-14854

IMAGE ANALYSIS
View generated database [NASA-CR-191397] p 822 N94-13116
EOS workstation [NASA-CR-191326] p 736 N94-13132
Bayesian estimation of motion fields from image sequences [ISBN-0-315-57212-4] p 772 N94-13540
Evaluation of the Shuttle remote manipulator [NASA-CR-194351] p 662 N94-13800
Determination of position and orientation of rigid bodies from image segments [FFI-92-4005] p 752 N94-14039
Intelligent environment for interpretation tasks of remotely sensed images [INPE-5466-PRE/1774] p 687 N94-14082
Asia-Pacific ISY Conference, volume 2 [NASDA-CM-199-VOL-2] p 688 N94-14209
Image processing and analysis of airborne POLDER data p 689 N94-14219
Data analysis for GOPEX image frames p 610 N94-14388
Obstacle detection by recognizing binary expansion patterns [NASA-CR-194415] p 514 N94-14495

IMAGE CLASSIFICATION
Feature extraction and classification algorithms for high dimensional data [NASA-CR-194298] p 743 N94-13023
Design of partially supervised classifiers for multispectral image data [NASA-CR-194299] p 823 N94-13192
A review and analysis of neural networks for classification of remotely sensed multispectral imagery [NASA-CR-194291] p 763 N94-13603
Nonlinear aspects of data integration for land-cover classification in a neural network environment [INPE-5479-PRE/1778] p 686 N94-13789

IMAGE CORRELATORS
Acousto-optical post-processor time-integrating correlator updates [DSIS-93-00314] p 777 N94-13831

IMAGE ENHANCEMENT
Advanced ballistic range technology [NASA-CR-194530] p 533 N94-14540

IMAGE FILTERS
Robust filters for image smoothing [ERB-1033] p 769 N94-13545

IMAGE FURNACES
High temperature behavior of glass (M-8) p 587 N94-13740

IMAGE INTENSIFIERS
Suppression of bright objects using a spatial light modulator when imaging with CCD- and image intensified cameras [FFI-93/7008] p 650 N94-13665

IMAGE MOTION COMPENSATION
Image motion photography [DE93-013962] p 653 N94-14858

IMAGE PROCESSING
Color image processing for flat panel visual display modeling [NASA-CR-193660] p 790 N94-12797
Reduce fluid experiment system flight data from IML-1 [NASA-CR-193835] p 804 N94-12873
Spatially-varying IIR filter banks for image coding [NASA-CR-193727] p 619 N94-12897
Recursive time-varying filter banks for subband image coding [NASA-CR-193726] p 598 N94-12920
Feature extraction and classification algorithms for high dimensional data [NASA-CR-194298] p 743 N94-13023
Knowledge-based oceanographic image compression [AD-A265752] p 821 N94-13041
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land [BCRS-92-13] p 684 N94-13123

EOS workstation
[NASA-CR-191326] p 736 N94-13132
Development of a portable multispectral thermal infrared camera
[NASA-CR-191340] p 648 N94-13176
Exact reconstruction analysis/synthesis filter banks with time-varying filters
[NASA-CR-193725] p 600 N94-13466
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
Three dimensional tracking of four point planar patterns using corners
[ISBN-0-315-52149-X] p 791 N94-13490
Close range 3-D position sensing using stereo vision and point-of-correspondance through mathematical morphology
[ISBN-0-315-61012-3] p 763 N94-13515
Robust filters for image smoothing
[ERB-1033] p 769 N94-13545
A data distributed parallel algorithm for ray-traced volume rendering
[NASA-CR-191520] p 749 N94-13721
Feature discovery on segmented objects in SAR imagery using self-organizing neural networks
[DE93-010685] p 686 N94-14056
Intelligent environment for interpretation tasks of remotely sensed images
[INPE-5466-PRE/1774] p 687 N94-14082
Asia-Pacific ISY Conference, volume 2
[NASDA-CM-199-VOL-2] p 688 N94-14209
Results from ERS-1 and JERS-1 SAR calibration experiments and data analysis p 688 N94-14210
Geologic application of JERS-1 SAR data p 688 N94-14211
An exact processing algorithm for wide beam spaceborne SAR data p 689 N94-14213
Image processing and analysis of airborne POLDER data p 689 N94-14219
Integration of SST data sets using MOS-1 satellite data: For validation and monitoring p 696 N94-14262
Center of trace algorithms for extracting digitized waveforms from two-dimensional images
[DE93-015082] p 753 N94-14295
Data analysis for GOPEX image frames p 610 N94-14388
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
Obstacle detection by recognizing binary expansion patterns
[NASA-CR-194415] p 514 N94-14495
Image reconstruction for x ray holographic microscopy
[DE93-013094] p 653 N94-14772
A fast frame rate 512 x 512 CCD digital camera system
[DE93-013048] p 653 N94-14792
Two dimensional measurement and evaluation of point images at microscope objectives
[ETN-93-94397] p 793 N94-14856
Image motion photography
[DE93-013962] p 653 N94-14858

IMAGE RECONSTRUCTION
Image reconstruction for x ray holographic microscopy
[DE93-013094] p 653 N94-14772
Optimization of a subband coding for high definition television with motion controlled three dimensional frequency band decomposition
[ETN-93-94396] p 617 N94-14817

IMAGE RESOLUTION
Confocal profilometer with nanometric vertical resolution
[DE93-622698] p 653 N94-12857
Image coding using entropy-constrained residual vector quantization
[NASA-CR-193728] p 744 N94-13113
Parametric binary dissection
[NASA-CR-191496] p 762 N94-13184
Mathematic methods and algorithms for real-time applications
[AD-A266776] p 771 N94-14789
Two dimensional measurement and evaluation of point images at microscope objectives
[ETN-93-94397] p 793 N94-14856

IMAGERY
A review and analysis of neural networks for classification of remotely sensed multispectral imagery
[NASA-CR-194291] p 763 N94-13603

IMAGES
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540

IMAGING RADAR
Proceedings of the 11th Space Surveillance Workshop, volume 1
[AD-A265120] p 531 N94-13358

IMAGING SPECTROMETERS
Spectral analysis for automated exploration and sample acquisition
[NASA-CR-194095] p 545 N94-13189
Imaging Fourier transform spectrometer
[DE93-017193] p 651 N94-14416

IMAGING TECHNIQUES
Low energy neutral atom imaging techniques
[DE93-012744] p 779 N94-12950
Automated crack identification for cement paste
[AD-A265753] p 665 N94-13042
HYMOSS signal processing for pushbroom spectral imaging
[NASA-CR-191341] p 620 N94-13125
The development of the TIMAX project: A hard x ray imaging telescope
[INPE-5474-TDI/505] p 829 N94-13245
Imaging microscopy with x ray lasers at Lawrence Livermore National Laboratory
[DE93-013419] p 655 N94-13258
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Advances in low energy neutral atom imaging techniques
[DE93-012745] p 782 N94-13492
Operational test of the airborne data acquisition system: SADA, the Bara Bonita experiment
[INPE-5451-NTC/305] p 685 N94-13610
The 1 to 5 micron imaging of deeply embedded young stellar objects p 831 N94-13657
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826
Development of a computer vision system to supplement the active tactile sensing capability in a structured environment
[DSIS-93-00072] p 764 N94-13844
Current distribution tomography for determination of internal current density distributions
[DE93-015463] p 604 N94-13899
High-resolution Z-contrast imaging and hole concentration mapping of YBCO thin films
[DE93-015803] p 808 N94-13930
Stochastic performance modeling and evaluation of obstacle detectability with imaging range sensors
[NASA-CR-194510] p 605 N94-13946
An acoustic charge transport imager for high definition television applications
[NASA-CR-194518] p 650 N94-14029
Study of speckle reduction when using a CO2 waveguide laser close to its threshold state
[DSIS-93-00250] p 657 N94-14067
Droplet-turbulence interactions in sprays exposed to supercritical environmental conditions
[NASA-CR-194408] p 638 N94-14308
Terrestrial magnetospheric imaging: Numerical modeling of low energy neutral atoms
[DE93-014561] p 717 N94-14328
Data analysis for GOPEX image frames p 610 N94-14388
Supervised classification of remotely sensed images
[DLR-FB-92-07] p 700 N94-14428
The first data from the MACHO experiment
[DE93-014423] p 840 N94-14467
Measurements of edge fluctuations by phase contrast imaging on DIII-D
[DE93-014018] p 802 N94-14579
Quantitative luminescence imaging system
[DE93-015691] p 793 N94-14702
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
[RAE-TM-AERO/PROP-21] p 509 N94-14706
Depths from focusing and defocusing
[AD-A266644] p 735 N94-14797
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865
Optimization study of x ray laser coherence in Ni-like Ta
[DE93-016419] p 660 N94-14888

IMMUNE SYSTEMS
Cellular track model for study of heavy ion beams
[NASA-TP-3351] p 732 N94-13714
Cellular responses to low-gravity: Pilot studies on suborbital rockets and orbiting spacecraft
[NASA-CR-194402] p 729 N94-14494

IMPACT DAMAGE
Modeling the impact behavior of AD85 ceramic under multi-axial loading
[AD-A265877] p 576 N94-12932
Comparison of analytic Whipple bumper shield ballistic limits with CTH simulations
[DE93-015126] p 539 N94-13006
Simulation of orbital debris impacts on bumper shields
[DE93-013773] p 540 N94-13398
Secondary impact hazard assessment
[NASA-CR-188261] p 543 N94-14483

IMPACT LOADS
Modeling the impact behavior of AD85 ceramic under multi-axial loading
[AD-A265877] p 576 N94-12932

IMPACT MELTS
Impact melting and vaporization in planetary regoliths p 843 N94-14299

IMPACT PREDICTION
Differential Sensitivity Theory applied to the MESA code for high pressure interactions
[DE93-016460] p 676 N94-14591

IMPACT RESISTANCE
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972

IMPACT STRENGTH
An experimental investigation into the damage resistance and compression-after-impact strength of T800H/3900-2
[LTR-ST-1909] p 675 N94-13945

IMPACT TESTS
Recovery of materials impacted at high velocity
[DE93-014150] p 576 N94-12885
The 3-D massively parallel impact simulations using PCTH
[DE93-011593] p 670 N94-12908
Experimental technique to simulate orbital-debris impact on space shields at impact velocities over 10 km/s
[DE93-011619] p 539 N94-12909
A general contact detection algorithm for finite element analysis
[DE93-012846] p 742 N94-12956
Isolation of a piezoresistive accelerometer used in high acceleration tests
[DE93-013764] p 649 N94-13395
Evaluation for rheological constitutive relations, using the indentation technique p 775 N94-13627
Fatigue and residual strength characteristics of fiber metal laminates subjected to incidental damage
[LR-708] p 674 N94-13803
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972
Materials/structures testing p 506 N94-14164
Secondary impact hazard assessment
[NASA-CR-188261] p 543 N94-14483

IMPEDANCE
Effect of microstructure on passive film formation and breakdown on Al alloys
[AD-A265339] p 569 N94-13050
A new formulation of longitudinal coherent instabilities
[DE93-014288] p 789 N94-13220
Generalized impedance control of a redundant manipulator p 661 N94-13575
Scattering by a groove in an impedance plane
[NASA-CR-193362] p 602 N94-13720
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
Design and control of a macro-micro robot for precise force applications p 682 N94-14651

IMPELLERS
Numerical simulations of unsteady flows in turbomachines p 633 N94-13569

IMPINGEMENT
A multiphase model for shock-induced flow in low density foam
[DE93-013767] p 632 N94-13397
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

IMPLOSIONS
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814
Advanced magnetic flux compression generator development issues: A comparison of coaxial and disk generators
[DE93-014025] p 794 N94-12849
Shock-free acceleration of laser driven targets
[DE93-008050] p 655 N94-13387
Review of the Procyon explosive pulsed power system
[DE93-016562] p 802 N94-14532
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

IMPURITIES
Proceedings of the Workshop on Applications of Synchrotron Radiation to Trace Impurity Analysis for Advanced Silicon Processing
[DE93-013389] p 805 N94-13020

Performance effects of coal-derived contaminants on the carbonate fuel cell
[DE93-013801] p 703 N94-13693
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments
[NASA-TP-3368] p 813 N94-14409
Direct determination of alpha particle transport coefficients
[DE93-013488] p 787 N94-14691
Investigations of low-temperature neutron embrittlement of ferritic steels
[DE93-015460] p 573 N94-14700

IN SITU MEASUREMENT
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
[AD-A265106] p 790 N94-12863
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511

INCLUSIONS
An investigation of the role of second phase particles in the design of ultra high strength steels of improved toughness
[AD-A266774] p 573 N94-14786

INCOHERENT SCATTERING
High spatial resolution x ray microanalysis: Comparison of experiment and incoherent scattering calculations
[DE93-011685] p 648 N94-13044

INCOMPRESSIBLE FLOW
A multiple-scale turbulence model for incompressible flow
[NASA-TM-106113] p 631 N94-13385
On the theory of the decaying developed turbulence with spontaneous parity violation
[DE93-623190] p 632 N94-13511
Studies of turbulent shear flows and their control
[NASA-CR-194114] p 635 N94-13676
A control volume finite element method for three-dimensional, incompressible, viscous fluid flow
[ISBN-0-315-72019-0] p 635 N94-13683
Preconditioning and the limit to the incompressible flow equations
[NASA-CR-191500] p 769 N94-13717
Canonical forms of multidimensional steady inviscid flows
[NASA-CR-191488] p 769 N94-13722
Evolution of disturbances in stagnation point flow
[NASA-CR-191516] p 636 N94-13724
Least-squares finite element solutions for three-dimensional backward-facing step flow
[NASA-TM-106353] p 770 N94-14407
An adaptive projection method for the incompressible Euler equations
[DE93-016428] p 639 N94-14434
A finite volume method for computation of viscous flow in complex configurations p 640 N94-14607
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
[NASA-TM-106351] p 771 N94-14731
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738
A study of the fine scale motions of incompressible time-developing mixing layers p 644 N94-14751

INCOMPRESSIBLE FLUIDS
Study of possible mechanisms of instability due to heat transfer
[INPE-5448-TDI/494] p 628 N94-12966
Studies of turbulent shear flows and their control
[NASA-CR-194114] p 635 N94-13676

INCONEL (TRADEMARK)
Interfacial precipitation, segregation and deformation in alloy 600: Implications on primary-side IGSCC
[DE93-013161] p 568 N94-13035
Tensile properties of LE-7 engine material with welded joint
[NAL-TR-1188] p 570 N94-13460

INDENTATION
A process for evaluation of mechanical behavior of surface films
[W-1/92] p 579 N94-14007
Computational diagnostics for detecting phase transitions during nanoindentation
[DE93-016536] p 813 N94-14439

INDEPENDENT VARIABLES
Extremal polygon containment problems and other issues in parametric searching
[ITN-93-85214] p 771 N94-14506

INDEXES (DOCUMENTATION)
VIEWCACHE: An incremental pointer-base access method for distributed databases. Part 1: The universal index system design document. Part 2: The universal index system low-level design document. Part 3: User's guide. Part 4: Reference manual. Part 5: UIMS test suite
[NASA-CR-191788] p 822 N94-13126
Publications of the Jet Propulsion Laboratory: 1990 and 1991
[NASA-CR-193287] p 823 N94-13461
Toxic Substances Control Act (TSCA) chemical substances inventory: Revised inventory synonym and preferred name file, Jan. 1993 documentation
[PB93-155166] p 710 N94-14508

INDIA
NASA/DOD Aerospace Knowledge Diffusion Research Project. Report 18: A comparison of the technical communication practices of aerospace engineers and scientists in India and the United States
[NASA-TM-109006] p 821 N94-13057

INDIUM
Thermal conductance of pressed metallic contacts augmented with Indium foil or Apiezon-N (tm) grease at liquid helium temperatures
[NASA-TM-108779] p 776 N94-14027

INDIUM ANTIMONIDES
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344

INDIUM PHOSPHIDES
Annealing study of main electron irradiation-induced defects (H4 and H5) in P-InP using DLTS technique
[DE93-623204] p 806 N94-13213
Activities of the Basic Sciences Branch
[DE93-010012] p 851 N94-14455

INDONESIAN SPACE PROGRAM
Some potentials of the Indonesian region for Earth observation p 692 N94-14237

INDUCTANCE
Development of UHF spark-switched L-C Oscillators
[DE93-015019] p 623 N94-13892
Mutual inductance between partially wound tori and a bifilar conductor
[ETN-93-94388] p 624 N94-13998
Multi-output flyback converter with ultrafast current protection
[CNES-NT-133] p 625 N94-14138

INDUCTION MOTORS
Design and application of electromechanical actuators for deep space missions
[NASA-CR-194145] p 663 N94-14134
Early detection of insulation failure in electric motors
[PB93-198208] p 626 N94-14686

INDUSTRIAL ENERGY
Fourteenth National Industrial Energy Technology Conference: Proceedings
[DE93-016698] p 710 N94-14516

INDUSTRIAL MANAGEMENT
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
The power of cross-functional teams in driving total quality p 666 N94-13159
Pollution prevention through total quality
[DE93-013814] p 707 N94-13390

INDUSTRIAL PLANTS
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Enterprise integration: A tool's perspective
[DE93-015651] p 755 N94-14528

INDUSTRIAL WASTES
Photocatalysis for the treatment of waste water: Applications involving the removal of metals
[DE93-011669] p 561 N94-12841
A review of the global emissions, transport, and effects of heavy metals in the environment
[DE93-013507] p 706 N94-12937
Pollution prevention through total quality
[DE93-013814] p 707 N94-13390

INDUSTRIES
Photovoltaics: Program overview, fiscal year 1992
[DE93-000055] p 701 N94-12914
A review of the global emissions, transport, and effects of heavy metals in the environment
[DE93-013507] p 706 N94-12937
ARTI Refrigerant Database
[DE93-014774] p 595 N94-13021
Pollution prevention through total quality
[DE93-013814] p 707 N94-13390
Scientists, engineers, and technicians in nonmanufacturing industries: 1990. Detailed statistical tables
[NSF-92-334] p 820 N94-14499
Promotion of geothermal energy development in 1991
[DE93-799061] p 705 N94-14679

INELASTIC COLLISIONS
Many-body corrections in XAFS
[DE93-011002] p 563 N94-13478
High energy hadron-hadron collisions
[DE93-015584] p 784 N94-13927

INELASTIC SCATTERING
Many-body corrections in XAFS
[DE93-011002] p 563 N94-13478
Resonant x ray Raman scattering from atoms and molecules
[DE93-015158] p 784 N94-13896

INEQUALITIES
On the geometry of external spectral factors and the Riccati inequality
[CWI-BS-R9227] p 770 N94-14002

INERTIAL CONFINEMENT FUSION
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017
Inertial confinement fusion program
[DE93-013372] p 796 N94-13047
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

INERTIAL NAVIGATION
Helicopter precision approach capability using the Global Positioning System
[NASA-CR-194037] p 513 N94-13957
Some frequency and damping measurements of laminated beryllium beams
[DE93-015909] p 676 N94-14530
Performance evaluation of the honeywell GG1308 miniature ring laser gyroscope
[AD-A266694] p 653 N94-14782

INERTIAL UPPER STAGE
STS-30 Magellan IUS/EVA training in WETF
[NASA-TM-109300] p 737 N94-13601

INFERENCE
Distributional inferences for a location parameter
[W-9219] p 774 N94-14545

INFILTRATION
Polymer infiltration studies
[NASA-CR-194521] p 582 N94-14539

INFLATABLE STRUCTURES
Research on inflatable structure for space use p 530 N94-13275
Materials and structures p 546 N94-14835

INFORMATION
Information requirements of self-managing teams
[DE93-010319] p 824 N94-14048

INFORMATION DISSEMINATION

NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 36: Technical uncertainty as a correlate of information use by US industry-affiliated aerospace engineers and scientists
[NASA-TM-109328] p 825 N94-14486
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 39: The role of computer networks in aerospace engineering
[NASA-TM-109331] p 825 N94-14487
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 37: The impact of political control on technical communications: A comparative study of Russian and US aerospace engineers and scientists
[NASA-TM-109329] p 826 N94-14488
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 38: Computer Mediated Communication (CMC) and the communication of technical information in aerospace
[NASA-TM-109330] p 826 N94-14489
INFRARED ABSORPTION
Infrared absorption spectroscopy and chemical kinetics of free radicals
[DE93-015078] p 562 N94-13004
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
Electrical and optical properties of multiple quantum well structures and their applications to infrared detectors
[FFI-92/7012] p 809 N94-14010
INFRARED ASTRONOMY
Physical properties of gas disks around shell stars with and without dust
[NASA-CR-193655] p 835 N94-13239
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648
The origin of the far-infrared emission from galactic molecular clouds p 848 N94-13654
The 1 to 5 micron imaging of deeply embedded young stellar objects p 831 N94-13657
The next century astrophysics program p 546 N94-14832
INFRARED DETECTORS
Proceedings of the 11th Space Surveillance Workshop, volume 1
[AD-A265120] p 531 N94-13358
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703
High frame rate thermal imager for hypersonic wind tunnel applications
[ONERA-NT-1992-12] p 650 N94-14009
Electrical and optical properties of multiple quantum well structures and their applications to infrared detectors
[FFI-92/7012] p 809 N94-14010
INFRARED IMAGERY
Reduction and analysis of seasons 15 and 16 (1991 - 1992) Pioneer Venus radio occultation data and correlative studies with observations of the near-infrared emission of Venus
[NASA-CR-194128] p 841 N94-13083
Development of a portable multispectral thermal infrared camera
[NASA-CR-191340] p 648 N94-13176
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648
Experimental measurement of local heat transfer coefficients over discrete roughened plates using infrared thermography p 635 N94-13652
The 1 to 5 micron imaging of deeply embedded young stellar objects p 831 N94-13657
Study of speckle reduction when using a CO2 waveguide laser close to its threshold state
[DSIS-93-00250] p 657 N94-14067
INFRARED INSPECTION
Measuring methods for CFRP laminates' bending and torsion rigidities characteristics p 529 N94-13272
INFRARED INSTRUMENTS
Development of a portable multispectral thermal infrared camera
[NASA-CR-191340] p 648 N94-13176
Imaging Fourier transform spectrometer
[DE93-017193] p 651 N94-14416
INFRARED LASERS
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415
INFRARED PHOTOMETRY
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591
INFRARED RADIATION
Infrared transmission and path radiance through dust and fog
[AD-A265825] p 791 N94-12979
A fast frame rate 512 x 512 CCD digital camera system
[DE93-013048] p 653 N94-14792
INFRARED RADIOMETERS
Methods for calibration/validation of AVNIR p 689 N94-14216
Future TRMM follow-on mission p 691 N94-14228
INFRARED REFLECTION
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465
INFRARED SOURCES (ASTRONOMY)
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648
The origin of the far-infrared emission from galactic molecular clouds p 848 N94-13654
INFRARED SPECTRA
The infrared solar spectrum
[COMMUNICATIONS-SER-B-159] p 844 N94-13502
Optical properties of CO2 ice and CO2 snow in the ultraviolet, visible, and infrared
[NASA-CR-194110] p 686 N94-14081
Spectroscopic method and data reduction algorithm for laser long-path absorption measurements using RIS p 689 N94-14218
Kinetics of photodeposition of superconducting films
[DE93-015511] p 812 N94-14348
Imaging Fourier transform spectrometer
[DE93-017193] p 651 N94-14416
A sum-rule of luminescence spectrum
[ITN-93-85223] p 814 N94-14559
INFRARED SPECTROMETERS
EOS workstation
[NASA-CR-191326] p 736 N94-13132
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816
Overview of the ILAS operational data processing system p 690 N94-14220
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525
INFRARED SPECTROSCOPY
Infrared spectroscopy of organic free radicals related to combustion processes
[DE93-017086] p 562 N94-13222
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816
Spectroscopic method and data reduction algorithm for laser long-path absorption measurements using RIS p 689 N94-14218
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794
INGOTS
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
[DE93-014335] p 806 N94-13150
Formation of deoxidization products in iron ingot by the addition of Al, Si, and/or Mn (M-5) p 587 N94-13737
INJECTION MOLDING
Effect of stabilization on the recycling of polyolefins in blow moulding
[IMI-93RT-42400-1477-G] p 596 N94-13684

An experimental study on the effect of die geometry on swell and sag in the parison extrusion stage
[IMI-93RT-42400-1476-G] p 597 N94-14070

INJURIES
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972

INLET AIRFRAME CONFIGURATIONS
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
Propulsion integration p 508 N94-14174

INLET PRESSURE
Rotordynamic and leakage characteristics of a 4-stage brush seal
[AD-A266012] p 660 N94-12988

INORGANIC COMPOUNDS
Amorphous sol-gel insulating films
[DE93-012859] p 576 N94-12866

INPUT
Kalman filter input estimation
[NAL-TR-1182] p 649 N94-13456
Implementation and experimentation with a motion planning system
[ITN-93-85213] p 755 N94-14505

INPUT/OUTPUT ROUTINES
Beyond core: Making parallel computer I/O practical
[DE93-012347] p 758 N94-12878
VMEC30 SUN device drivers: User's manual
[DSIS-93-00349] p 752 N94-14052

INSERTION LOSS
MMIC packaging technology development
[NASA-CR-194183] p 621 N94-13336
Insertion loss and noise-temperature contribution of high-temperature superconducting bandpass filters centered at 2.3 and 8.45 GHz p 608 N94-14376

INSOLATION
Field of solar collectors: Effect of shadowing on the optimal field design
[ITN-93-85197] p 702 N94-13570

INSPECTION
VISART: Artificial vision for industrial use. A comprehensive system
[INPE-5379-TDI/474] p 665 N94-12941
Rapid intelligent inspection process definition for dimensional measurement in advanced manufacturing
[DE93-011271] p 748 N94-13480
The development of inspection and repair methods for the C-17 aft cargo door
[LR-704] p 499 N94-13904

INSTALLING
ORGBUG: A Windows-based combinatorial geometry debugger
[DE93-016640] p 755 N94-14515

INSTRUCTION SETS (COMPUTERS)
Test report for single event effects of the 80386DX microprocessor
[NASA-CR-194509] p 741 N94-13943

INSTRUCTORS
Lecture notes on software process improvement
[AD-A265200] p 744 N94-13049
Taecannautics: Sharing the dream
[NASA-TM-109309] p 818 N94-13619

INSTRUMENT APPROACH
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323

INSTRUMENT COMPENSATION
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
[EOC-92-01-0007] p 687 N94-14091
Calibration and in-house validation results of JERS-1 data p 687 N94-14092
Results from ERS-1 and JERS-1 SAR calibration experiments and data analysis p 688 N94-14210
Methods for calibration/validation of AVNIR p 689 N94-14216

INSTRUMENT ERRORS
Estimation of aircraft aerodynamic derivatives with the Total Least Squares Method
[NAL-TR-1150] p 502 N94-13392
Position error determination for the speedometer and altimeter of the NAL QSTOL experimental aircraft ASKA
[NAL-TR-1144] p 517 N94-13451

INSTRUMENT FLIGHT RULES
A perspective on the FAA approval process: Integrating rotorcraft displays, controls and workload p 521 N94-13298

INTAKE SYSTEMS
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874

INTEGERS
Solving integer programs from dependence and synchronization problems
[AD-A265702] p 767 N94-13284

INTEGRAL EQUATIONS
Newton iterative methods for large scale nonlinear systems
[DE93-015357] p 767 N94-13025
Computer code for scattering from impedance bodies of revolution. Part 3: Surface impedance with s and phi variation. Analytical and numerical results
[NASA-CR-193396] p 599 N94-13264
Evaluation for rheological constitutive relations, using the indentation technique p 775 N94-13627

INTEGRALS
Maximum likelihood estimation for constrained or missing data models
[AD-A266563] p 773 N94-13585

INTEGRATED CIRCUITS
Processing, fabrication and demonstration of HTS integrated microwave circuits
[AD-A265789] p 619 N94-12892
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969
Analysis and characterizations of planar transmission structures and components for superconducting and monolithic integrated circuits
[NASA-CR-193675] p 619 N94-13026
MMIC packaging technology development
[NASA-CR-194183] p 621 N94-13336
Plasma-etching science meets technology in the MDL
[DE93-012086] p 800 N94-13908
Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805
Electrochemical planarization for microelectronic circuits
[DE93-017214] p 627 N94-14870

INTEGRATED OPTICS
Energy and technology review, March 1993
[DE93-013941] p 849 N94-13019
Integrated optics technology transfer
[DSIS-93-00179] p 792 N94-13868

INTERACTING GALAXIES
Was 49: Mirror for a hidden Seyfert 1 galaxy
[NASA-CR-194537] p 840 N94-14685

INTERACTIONS
Tidal interactions in the Earth Moon system
[COMMUNICATIONS-SER-B-160] p 837 N94-13503

INTERATOMIC FORCES
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
[DE93-013421] p 806 N94-13136
Ploughing on gold using a Scanning Tunneling Microscope
[DE93-012632] p 812 N94-14365

INTERCALATION
A quartz crystal microbalance study of lithium insertion and removal into evaporated films MO(y) (M = Mo, Fe, and V)
[DSIS-93-00649] p 810 N94-14203

INTERFACIAL TENSION
Pinching solutions of slender cylindrical jets
[NASA-CR-191482] p 630 N94-13114
Thermodynamic status of static and dynamic contact angles
[ISBN-0-315-73844-8] p 817 N94-13554
Drop dynamics in space and interference with acoustic field (M-15) p 588 N94-13747
Study of bubble behavior in weightlessness (effects of thermal gradient and acoustic stationary wave) (M-16) p 589 N94-13748
Marangoni effect induced convection in material processing under microgravity (M-18) p 589 N94-13750
A study of thin liquid sheet flows
[NASA-TM-106323] p 642 N94-14732

INTERFEROMETERS
Polarization effects in optical fiber current sensors based on Sagnac interferometers with 3 by 3 couplers
[DE93-012665] p 792 N94-14367

INTERFEROMETRY
Confocal profilometer with nanometric vertical resolution
[DE93-622698] p 653 N94-12857
Solid state laser systems for space application
[NASA-CR-194133] p 656 N94-13420
Interferometric investigation methods of plasma spatial characteristics on stellarators and tokamaks in submillimeter region
[DE93-621606] p 798 N94-13507
Images constructed from computed flow fields
[NASA-CR-194397] p 650 N94-13814
Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
Advanced ballistic range technology
[NASA-CR-194396] p 532 N94-14068
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540

INTERGALACTIC MEDIA
The reionization of the intergalactic medium p 838 N94-13651

INTERGRANULAR CORROSION
Interfacial precipitation, segregation and deformation in alloy 600: Implications on primary-side IGSCC
[DE93-013161] p 568 N94-13035
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels
[DE93-011602] p 572 N94-14058

INTERMEDIATE FREQUENCIES
Performance results of a digital test signal generator p 609 N94-14382

INTERMETALLICS
Fracture behavior of vanadium/vanadium silicide in-situ composites
[DE93-013422] p 556 N94-13389

INTERMOLECULAR FORCES
Marangoni effect induced convection in material processing under microgravity (M-18) p 589 N94-13750

INTERNAL COMBUSTION ENGINES
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803

INTERNAL ENERGY
Equation of state for detonation products
[DE93-012671] p 583 N94-12921

INTERNAL PRESSURE
Autofrettage: Stress distribution under load and retained stresses after depressurization. A modified plane-strain case
[AD-A266320] p 671 N94-13579

INTERNATIONAL COOPERATION
Where no flag has gone before: Political and technical aspects of placing a flag on the Moon
[NASA-CR-188251] p 827 N94-12800
The North Atlantic Regional Experiment (NARE)
[DE93-010126] p 706 N94-13054
The design of chain links and slings
[NPL-DMM(A)-94] p 662 N94-13808
Asia-Pacific ISY conference, volume 1
[NASDA-CM-199-1] p 532 N94-14098
Minutes of the Sixth CEOS Plenary Meeting
[NASA-TM-108252] p 542 N94-14112
European space for exclusively peaceful purposes
[ESA-BR-86] p 851 N94-14137

INTERNATIONAL LAW
Planetary protection implementation on future Mars lander missions
[NASA-CP-3216] p 841 N94-13183
The international regulation of air transport: Changing regimes and price effects
[ISBN-0-315-55958-6] p 511 N94-13543
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459

INTERNATIONAL RELATIONS
Where no flag has gone before: Political and technical aspects of placing a flag on the Moon
[NASA-CR-188251] p 827 N94-12800

INTERNATIONAL SPACE YEAR
Asia-Pacific ISY conference, volume 1
[NASDA-CM-199-1] p 532 N94-14098
Asia-Pacific ISY Conference, volume 2
[NASDA-CM-199-VOL-2] p 688 N94-14209
Image processing and analysis of airborne POLDER data p 689 N94-14219
Future TRMM follow-on mission p 691 N94-14228
Outline of ISY sea surface temperature data sets p 696 N94-14261
Outline of ISY Kuroshio observation experiment p 697 N94-14268
Joint experiments using ETS-5 p 618 N94-14284

INTERORBITAL TRAJECTORIES
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538

INTERPLANETARY MAGNETIC FIELDS
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
[INPE-5445-TDI/491] p 835 N94-13174
Evolution of the interplanetary magnetic field
[DE93-012631] p 836 N94-13262
Variations common to the interplanetary magnetic field, the zonal atmospheric circulation and the Earth's rotation
[COMMUNICATIONS-SER-B-157] p 837 N94-13504

INTERPLANETARY SPACECRAFT
Electric propulsion system technology
[NASA-CR-194100] p 549 N94-13055

INTERPLANETARY TRAJECTORIES
Optimizing interplanetary trajectories with deep space maneuvers
[NASA-CR-4546] p 532 N94-14851
INTERPOLATION
Evaluation of beta-spline interpolation in digital terrain models
[INPE-5475-TDI/506] p 684 N94-13364
A rational interpolation method to compute frequency response p 681 N94-14644
INTERPROCESSOR COMMUNICATION
Three, four, five, six or the complexity of scheduling with communication delays
[CWI-BS-R9229] p 751 N94-14004
Adaptive Signal Processing Testbed: VME-based DSP board market survey
[DSIS-93-00274] p 605 N94-14015
EWTEST signal excision testbed: System evaluation
[DSIS-93-00346] p 607 N94-14065
On the solution of a class of graph problems by parallel algorithms
[LAAS-92514] p 756 N94-14712
Toward a verifiable approach to the design of concurrent computations
[DE93-012908] p 756 N94-14844
INTERSECTIONS
Calculating intersections of surfaces in screen space
[NASA-CR-191498] p 745 N94-13185
INTERSTELLAR EXTINCTION
UV extinction properties of carina nebular dust
[NASA-CR-193424] p 835 N94-13233
INTERSTELLAR GAS
Physical properties of gas disks around shell stars with and without dust
[NASA-CR-193655] p 835 N94-13239
The reionization of the intergalactic medium p 838 N94-13651
Analysis of the IUE spectra of the strongly interacting binary beta Lyrae
[NASA-CR-194118] p 833 N94-14493
INTERSTELLAR MATTER
The distance to the high velocity clouds of neutral hydrogen
[NASA-CR-194343] p 838 N94-13716
Sites of fine-scale electron density turbulence in the interstellar medium
[NASA-CR-193708] p 839 N94-13864
INTERSTELLAR SPACE
The beta(+) decay and cosmic-ray half-life of Mn-54
[DE93-013913] p 848 N94-13695
INTERSTITIALS
Lattice site of helium implanted in Si and diamond
[DE93-015365] p 805 N94-13012
INTERVERTEBRAL DISKS
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
INTRAVENOUS PROCEDURES
In-flight demonstration of the Space Station Freedom Health Maintenance Facility fluid therapy system (E300/E05) p 595 N94-13775
INTRUSION
Hypersonic flow field measurements: Intrusive p 507 N94-14166
INVARIANCE
The electric field of a current-carrying conductor
[DE93-626637] p 617 N94-14892
INVENTORIES
Toxic Substances Control Act (TSCA) chemical substances inventory: Revised inventory synonym and preferred name file, Jan. 1993 documentation
[PB93-155166] p 710 N94-14508
INVERSE KINEMATICS
Generalized impedance control of a redundant manipulator p 661 N94-13575
Inverse dynamics: Simultaneous trajectory tracking and vibration reduction with distributed actuators p 678 N94-14624
Non-recursive augmented Lagrangian algorithms for the forward and inverse dynamics of constrained flexible multibodies p 679 N94-14633
Design and control of a macro-micro robot for precise force applications p 682 N94-14651
INVERSE SCATTERING
Mathematical algorithms for multidimensional inverse scattering problems in inhomogeneous medium
[AD-A266440] p 749 N94-13702
INVERSIONS
Synthesis inversion of atmospheric CO2 using the GISS tracer transport model
[CSIRO-TP-29] p 709 N94-14095
INVISCID FLOW
Integration of viscous effects into inviscid computational methods
[NASA-CR-193677] p 629 N94-13007
Three-Dimensional Boundary-Layer program (BL3D) for swept subsonic or supersonic wings with application to laminar flow control
[NASA-CR-4531] p 629 N94-13073
Pinching solutions of slender cylindrical jets
[NASA-CR-191482] p 630 N94-13114
Numerical simulations of unsteady flows in turbomachines p 633 N94-13569
Canonical forms of multidimensional steady inviscid flows
[NASA-CR-191488] p 769 N94-13722
Evolution of disturbances in stagnation point flow
[NASA-CR-191516] p 636 N94-13724
On the secondary instability of the most dangerous Goertler vortex
[NASA-CR-191504] p 636 N94-13785
The spectral viscosity method applied to simulation of waves in a stratified atmosphere
[FFI-92/7047] p 637 N94-14040
Hypersonic flow phenomenology p 505 N94-14155
Extrapolation of ground test data to flight p 507 N94-14170
An adaptive projection method for the incompressible Euler equations
[DE93-016428] p 639 N94-14434
Linear instability of curved free shear layers
[NASA-TM-106290] p 642 N94-14729
Analytical description of the breakup of liquid jets in air
[NASA-CR-191503] p 647 N94-14849
IO
The propagation characteristics and instability properties of low-frequency electromagnetic waves in the Io plasma torus p 601 N94-13650
IODINE
Multiplicity spectrometry on neutron filtered beams
[DE93-617529] p 790 N94-14843
ION ACOUSTIC WAVES
Anomalous transport due to the ion acoustic instability in tokamaks
[PPL-129] p 800 N94-13852
ION BEAMS
EBIT Trapping Program
[DE93-014422] p 788 N94-13208
Nuclear fusion of protons with ions of boron
[DE93-014284] p 781 N94-13219
Design for low beam loss in accelerators for intense neutron source applications
[DE93-014557] p 789 N94-13327
Metastable enhancement of C(+) and O(+) capture reactions
[DE93-015075] p 807 N94-13373
Cellular track model for study of heavy ion beams
[NASA-TP-3351] p 732 N94-13714
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349
The evolution of tensor polarization
[DE93-017209] p 790 N94-14897
ION CURRENTS
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
[ITN-93-85222] p 566 N94-14558
ION CYCLOTRON RADIATION
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
Ion cyclotron heating experiments and plans for the Advanced Toroidal Facility (ATF)
[DE93-012965] p 795 N94-13033
Effect on antenna structure of high power RF during plasma operation
[DE93-013278] p 797 N94-13144
The multi-ion, multi-event test of ion cyclotron resonance heating
[NASA-CR-194134] p 789 N94-13419
Folded waveguide designs for tokamaks
[DE93-013274] p 798 N94-13577
The propagation characteristics and instability properties of low-frequency electromagnetic waves in the Io plasma torus p 601 N94-13650
Direct electron heating and current drive with fast waves in D3-D
[DE93-013028] p 801 N94-14293
Design of the ion cyclotron system for TPX
[DE93-012961] p 803 N94-14770
ION ENGINES
Electric propulsion system technology
[NASA-CR-194100] p 549 N94-13055
Electric propulsion system technology
[NASA-CR-194099] p 549 N94-13068
Derated ion thruster development status
[NASA-TM-106292] p 553 N94-14726
ION EXCHANGING
Canonical correlation of waste glass compositions and durability, including pH
[DE93-012754] p 578 N94-13493
Modeling surface area to volume effects on borosilicate glass dissolution
[DE93-011891] p 581 N94-14432
ION IMPACT
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
[DE93-013506] p 782 N94-13485
ION IMPLANTATION
Lattice site of helium implanted in Si and diamond
[DE93-015365] p 805 N94-13012
About the influence of inert gas ion implantation on metal corrosion stability
[DE93-620574] p 569 N94-13360
ION IRRADIATION
Ion assisted sputter deposition of Mo-Si multilayers
[DE93-013830] p 583 N94-14693
ION MOTION
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738
ION PLATING
Ion assisted sputter deposition of Mo-Si multilayers
[DE93-013830] p 583 N94-14693
ION PROPULSION
Electric propulsion system technology
[NASA-CR-194100] p 549 N94-13055
Electric propulsion system technology
[NASA-CR-194099] p 549 N94-13068
Plasma contactor technology for Space Station Freedom
[NASA-TM-106291] p 553 N94-14725
Derated ion thruster development status
[NASA-TM-106292] p 553 N94-14726
ION SOURCES
Novel oxygen atom source for material degradation studies
[NASA-CR-191323] p 562 N94-13115
ION TEMPERATURE
Semi-local kinetic analysis of the toroidal ion temperature gradient mode
[PPL-130] p 800 N94-13851
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
[DE93-015474] p 802 N94-14583
IONIC COLLISIONS
Measurements of transverse energy and forward energy in high-energy nuclear collisions
[DE93-012755] p 788 N94-12817
Measurements of scattering processes in negative ion-atom collisions
[DE93-013863] p 779 N94-12940
Neutral strange particle production at the AGS
[DE93-014044] p 780 N94-13098
Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826
The theory of relativistic heavy ion collisions
[DE93-015934] p 784 N94-13952
IONIC CRYSTALS
The Lindemann criterion of melting for pure and mixed ionic crystals
[ITN-93-85210] p 814 N94-14554
IONIC MOBILITY
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
[ITN-93-85222] p 566 N94-14558
IONIZATION
Low energy neutral atom imaging techniques
[DE93-012744] p 779 N94-12950
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
Infrared spectroscopy of organic free radicals related to combustion processes
[DE93-017086] p 562 N94-13222
A search for strong-field direct two electron ionization using coincidence spectroscopy
[DE93-013435] p 781 N94-13241
IONIZATION CROSS SECTIONS
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
[DE93-014129] p 784 N94-14140
IONIZING RADIATION
Measurements of optical properties of waveshifting optical fiber for liquid scintillator hadron calorimetry
[DE93-012606] p 791 N94-13482
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574

IONOSPHERIC ELECTRON DENSITY
Ionospheric calibration for single frequency altimeter measurements
[NASA-CR-194282] p 716 N94-14049
IONOSPHERIC PROPAGATION
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
[DE93-015084] p 612 N94-14512
IONS
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Spatial variability of throughfall chemistry in a tropical rainforest (Central Amazonia, Brazil)
[INPE-5431-PRE/1765] p 720 N94-13429
Advances in low energy neutral atom imaging techniques
[DE93-012745] p 782 N94-13492
Synthesis of organic ligands for f-element separations
[DE93-012915] p 554 N94-14290
High-order harmonic generation with short-pulse lasers
[DE93-016532] p 659 N94-14594
IRIDIUM
Stability of reference masses 1: Evidence for posible variations in the mass of reference kilograms arising from mercury contamination
[NPL-DMM(A)-86] p 708 N94-13667
IRON
Multiphase equation of state for iron
[DE93-013956] p 568 N94-12977
The x ray dichroism experiments using circular polarization
[DE93-013195] p 568 N94-13036
Formation of deoxidization products in iron ingot by the addition of Al, Si, and/or Mn (M-5) p 587 N94-13737
Laboratory simulations of lunar darkening processes p 843 N94-14301
The state of Fe in the lunar regolith and its relationship to the spectral reflectance properties of the moon p 843 N94-14303
IRON ALLOYS
Propulsion simulator for magnetically-suspended wind tunnel models
[NASA-CR-189560] p 527 N94-13127
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
IRON OXIDES
A quartz crystal microbalance study of lithium insertion and removal into evaporated films MO(y) (M = Mo, Fe, and V)
[DSIS-93-00649] p 810 N94-14203
IRRADIANCE
Nimbus-7 Earth radiation budget calibration history. Part 1: The solar channels
[NASA-RP-1316] p 844 N94-13963
Volume 14: The first SeaWiFS intercalibration round-robin experiment, SIRREX-1, July 1992
[NASA-TM-104566] p 725 N94-14090
IRRADIATION
Novel oxygen atom source for material degradation studies
[NASA-CR-191323] p 562 N94-13115
Molecular dynamics simulation of electronically excited polyatomic molecules
[DE93-623045] p 781 N94-13225
Heavy section steel irradiation experiment
[DE93-015517] p 573 N94-14537
IRREGULARITIES
Estimation of critical values and vibration characteristics on supersonic delta wings. Part 2: Locally-stationary time series analysis of nonstationary random responses
[NAL-TR-1179] p 502 N94-13345
IRRIGATION
Climatic change due to land surface alterations
[INPE-5495-PRE/1786] p 721 N94-13672
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424
ISENTROPE
Equation of state for detonation products
[DE93-012671] p 583 N94-12921
ISENTROPIC PROCESSES
A three-dimensional supersonic turbulent boundary layer generated by an isentropic compression p 503 N94-13556
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
[RAE-TM-AERO/PROP-21] p 509 N94-14706
ISING MODEL
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
ISOLATION
Isolation of a piezoresistive accelerometer used in high acceleration tests
[DE93-013764] p 649 N94-13395
Catalytic arene hydrogenation using early transition metal hydride compounds
[DE93-015500] p 573 N94-14402
A high voltage dielectrically isolated smart power technology based on silicon direct bonding
[LAAS-92492] p 626 N94-14698
ISOMERS
Comparative ignition of hexane and octane isomers in a shock tube
[DE93-016535] p 566 N94-14869
ISOPROPYL ALCOHOL
Alternate cleaning methods for LCCAs
[KCP-613-5045] p 624 N94-13937
ISOTHERMAL FLOW
BOAST 2 for the IBM 3090 and RISC 6000
[DE93-000138] p 638 N94-14351
ISOTOPE SEPARATION
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
ISOTOPIC SPIN
Isospin flip as a relativistic effect: NN interactions
[CEBAF-PR-89-023] p 786 N94-14552
ISOTROPIC TURBULENCE
Interacting scales and energy transfer in isotropic turbulence
[NASA-CR-191477] p 630 N94-13133
On the theory of the decaying developed turbulence with spontaneous parity violation
[DE93-623190] p 632 N94-13511
The structure of intense vorticity in homogeneous isotropic turbulence p 643 N94-14747
On the local nature of the energy cascade p 643 N94-14748
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749
Isotropy of small scale turbulence p 644 N94-14752
LES versus DNS: A comparative study p 644 N94-14753
Evolution of the shock front and turbulence structures in the shock/turbulence interaction p 645 N94-14761
Stochastic modeling of turbulent reacting flows p 647 N94-14768
ISOTROPY
Isotropy of small scale turbulence p 644 N94-14752
ITERATIVE SOLUTION
Newton iterative methods for large scale nonlinear systems
[DE93-015357] p 767 N94-13025
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343
Elastic-plastic mixed-iterative finite element analysis: Implementation and performance assessment
[NASA-TM-106164] p 675 N94-13919
Hybrid S(sub N)/Monte Carlo research and results
[DE93-012677] p 773 N94-14178
Theory for iterative solution of large dynamical systems using parallel computation
[TKK-MAT-A304] p 760 N94-14187
Computational mechanics and supercomputing at LLNL
[DE93-016453] p 754 N94-14435
Large spatial, temporal, and algorithmic adaptivity for implicit nonlinear finite element analysis
[DE93-016438] p 771 N94-14589
On a convergence of iterative Newton's scheme
[DE93-626604] p 772 N94-14886
IUE
NASA images 11
[NASA-TM-109287] p 842 N94-13626

J

J INTEGRAL
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
JAHN-TELLER EFFECT
Dynamic Jahn-Teller effect: Calculation of fine structure spectrum, isotope shift and Zeeman behavior at deep center Ni2+ in CdS
[ETN-93-94394] p 815 N94-14705
JAPAN
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334
JAPANESE SPACE PROGRAM
Access to Japanese aerospace-related scientific and technical information: The NASA Aerospace Database
[NASA-TM-109413] p 822 N94-13105
Space transportation systems and space activities in the 21st century p 537 N94-14274
JAPANESE SPACECRAFT
A concept on on-orbit experiments of deployable structures utilizing JEM/HOPE p 531 N94-13279
Arc-heating tests of thermal protection system materials for the H-2 rocket fairing
[NAL-TR-1181] p 551 N94-13455
Tensile properties of LE-7 engine material with welded joint
[NAL-TR-1188] p 570 N94-13460
Study on improvement of flammability, odor and offgassing tests for materials
[NASDA-CNT-930009] p 563 N94-13471
HOPE real time flight operations analyses for return to earth phase, part B
[NASDA-CNT-930011] p 535 N94-13599
HOPE conceptual design in FY 1991
[NASDA-CNT-930017] p 535 N94-13600
Orbit determination error analysis based on the requirements of ADEOS mission
[NASDA-CNT-930008] p 532 N94-13644
HOPE real time flight operations analyses for return to earth phase, part A
[NASDA-CNT-930010-PT-A] p 535 N94-13645
Conceptual design on H-2 Orbiting Plane (HOPE)
[NASDA-CNT-930018] p 535 N94-13656
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
[EOC-92-01-0007] p 687 N94-14091
Calibration and in-house validation results of JERS-1 data p 687 N94-14092
Earth observation experiment data analysis p 687 N94-14093
ADEOS project p 687 N94-14094
The conceptual study on future space transportation systems. Part A: Conceptual study of flyback booster
[NASDA-CNT-930013] p 536 N94-14099
The concept study of the space transportation system HOPE in FY 1991
[NASDA-CNT-930016] p 536 N94-14100
Asia-Pacific ISY Conference, volume 2
[NASDA-CM-199-VOL-2] p 688 N94-14209
Results from ERS-1 and JERS-1 SAR calibration experiments and data analysis p 688 N94-14210
Geologic application of JERS-1 SAR data p 688 N94-14211
Research and development of space transportation systems in ISAS p 537 N94-14277
Contributions of winged re-entry vehicle to space activities p 537 N94-14278
Mission scenario of HOPE p 537 N94-14279
The status of the HOPE concept study p 537 N94-14280
Spaceplane program at NAL: System concept and related technology issues p 537 N94-14281
JET AIRCRAFT NOISE
An experimental assessment of the use of ground-level microphones to measure the fly-over noise of jet-engined aircraft
[NPL-RSA(EXT)-0039] p 777 N94-13885
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
[NASA-TM-106364] p 508 N94-14208
JET ENGINES
Rotor stator CGI
[NASA-TM-109313] p 518 N94-13608
JET EXHAUST
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
JET FLOW
Pinching solutions of slender cylindrical jets
[NASA-CR-191482] p 630 N94-13114
Analytical description of the breakup of liquid jets in air
[NASA-CR-191503] p 647 N94-14849
JET IMPINGEMENT
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Experimental determination of droplets local mean diameter of a sprag from impinging jets
[INPE-5469-TDI/500] p 631 N94-13365
Low altitude plume impingement handbook
[NASA-CR-194193] p 643 N94-14741
JET LAG
Circadian rhythms during simulation of the D2-spaceflight
[DLR-FB-92-27] p 733 N94-14043

JET MIXING FLOW
An experimental investigation of mixing enhancement in a simulated scramjet combustor by use of swirling jets
[NASA-TM-109246] p 518 N94-13190
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
[NASA-TM-106364] p 508 N94-14208
JET PROPULSION
A technique for direct measurement of skin friction in supersonic combustion flow p 503 N94-13555
JOINED WINGS
Low-speed wind tunnel tests on four types of joined-wing aircraft models
[NAL-TR-1167] p 501 N94-13340
Low-speed wind tunnel tests on a joined-wing aircraft model with various upper-fin
[NAL-TR-1169] p 501 N94-13341
JOINTS (JUNCTIONS)
Flex-gear electrical power transmission
[NASA-CR-194422] p 661 N94-13445
Problems and opportunities in microwave joining of ceramics
[DE93-014998] p 579 N94-13888
Canadian Target Assembly (CTA) to Airborne Support Equipment (ASE) vibration test report
[IME-AMT-TR-001] p 663 N94-14195
JOSEPHSON JUNCTIONS
Measurements on two-dimensional arrays of mesoscopic Josephson junctions
[AD-A265129] p 807 N94-13359
Theoretical SIS mixer research
[AD-A266323] p 807 N94-13580
An x ray detector using superconducting aluminum tunnel junctions
[DE93-015103] p 811 N94-14332
JUNCTION DIODES
Changes in electrical device characteristics during the formation of dislocations in situ in the TEM
[DE93-013910] p 808 N94-13694
AlGaAs diode laser blue shift resulting from fast neutron irradiation
[AD-A266642] p 659 N94-14681

K

K-EPSILON TURBULENCE MODEL
Turbulence modeling of free shear layers for high-performance aircraft
[NASA-CR-193659] p 520 N94-12799
A solution algorithm for the prediction of compressible laminar and turbulent shear flows p 634 N94-13635
Numerical simulation of velocity-coupled combustion response of solid rocket propellants p 585 N94-14490
Response of a supersonic boundary layer to a compression corner p 645 N94-14759
KALMAN FILTERS
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343
Attitude determination of stratospheric balloons using Kalman filters
[INPE-5498-TDI/513] p 649 N94-13366
Kalman filter input estimation
[NAL-TR-1182] p 649 N94-13456
Kalman filter based architectures for interference excision
[DSIS-93-00034] p 603 N94-13818
A comparison of recursive least squares and Kalman filtering excisors for swept tone interference
[DSIS-93-00362] p 606 N94-14054
KAONS
HIJET with AGS physics and N(sup *)'s
[DE93-014022] p 780 N94-13097
Tests of non-local interferences in kaon physics at asymmetric phi-factories
[DE93-013905] p 787 N94-14857
KAPTON (TRADEMARK)
Surface characterization of LDEF materials
[NASA-CR-194519] p 543 N94-14683
KELVIN-HELMHOLTZ INSTABILITY
Pinching solutions of slender cylindrical jets
[NASA-CR-191482] p 630 N94-13114
Linear instability of curved free shear layers
[NASA-TM-106290] p 642 N94-14729
KEROSENE
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
[NAL-TR-1177] p 548 N94-12945
KINEMATICS
Kinematics and constraints associated with swashplate blade pitch control
[NASA-TM-102265] p 520 N94-12820
Dynamics and design of nonholonomic robotic mechanical systems
[ISBN-0-315-72009-3] p 662 N94-13597
KINETIC ENERGY
The space-time and energy parameters of deuterium braking by the central collision with atoms
[DE93-624144] p 788 N94-14881
KINETICS
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
Measurements of crystal growth kinetics at extreme deviations from equilibrium
[DE93-014526] p 815 N94-14798
KNOWLEDGE BASED SYSTEMS
JTEC Panel report on knowledge-based systems in Japan
[PB93-170124] p 820 N94-12801
Knowledge-based oceanographic image compression
[AD-A265752] p 821 N94-13041
A path-oriented matrix-based knowledge representation system
[NASA-CR-4539] p 744 N94-13065
Software synthesis using generic architectures
[NASA-CR-194201] p 745 N94-13355
Architecture-driven reuse of code in KASE
[NASA-CR-194200] p 745 N94-13356
The KASE approach to domain-specific software systems p 745 N94-13357
Software design by reusing architectures
[NASA-CR-194151] p 747 N94-13443
Knowledge-based processing for aircraft flight control
[NASA-CR-194074] p 526 N94-13469
A knowledge-based model for the integration of remote sensing into a mineral exploration program
[ISBN-0-315-58982-5] p 685 N94-13523
Activities of Institute for Information Technology
[CNR-35024] p 824 N94-14069
Knowledge based systems: From process control to policy analysis
[DE93-014582] p 765 N94-14117
An integrated knowledge system for the Space Shuttle hazardous gas detection system
[NASA-CR-194533] p 536 N94-14310
KNOWLEDGE BASES (ARTIFICIAL INTELLIGENCE)
A path-oriented matrix-based knowledge representation system
[NASA-CR-4539] p 744 N94-13065
Thermal Expert System (TEXSYS): Systems autonomy demonstration project, volume 2. Results
[NASA-TM-102877] p 538 N94-13989
An expert system class library for Audition
[IME-MET-TR-008] p 824 N94-14196
KNOWLEDGE REPRESENTATION
A path-oriented matrix-based knowledge representation system
[NASA-CR-4539] p 744 N94-13065
An expert system for integrated structural analysis and design optimization for aerospace structures
[NASA-CR-194225] p 673 N94-13673
KOLMOGOROV THEORY
Interacting scales and energy transfer in isotropic turbulence
[NASA-CR-191477] p 630 N94-13133
On the theory of the decaying developed turbulence with spontaneous parity violation
[DE93-623190] p 632 N94-13511
Coherent Doppler lidar signal covariance including wind shear and wind turbulence
[NASA-CR-194492] p 721 N94-13723
The structure of intense vorticity in homogeneous isotropic turbulence p 643 N94-14747
Triad interactions in the dissipation range p 644 N94-14750
KONDO EFFECT
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
KRAMERS-KRONIG FORMULA
Direct submillimeter absorptivity measurements on epitaxial Ba(1-x)K(x)BiO3 films at 2K
[DE93-013904] p 815 N94-14699
KRYPTON
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
KRYPTON FLUORIDE LASERS
Inertial confinement fusion program
[DE93-013372] p 796 N94-13047

L

LABORATORIES
Photovoltaics: Contract lists, fiscal year 1992
[DE93-000093] p 701 N94-12902
Preliminary design features of the RASCAL: A NASA /Army rotorcraft in-flight simulator p 526 N94-13325
Publications of the Jet Propulsion Laboratory: 1990 and 1991
[NASA-CR-193287] p 823 N94-13461
Activities of the University of Saskatchewan, Plasma Physics Laboratory
[CTN-93-60831] p 798 N94-13518
A perspective on AVS in an engineering sciences environment
[DE93-015011] p 596 N94-13889
Quality assurance for environmental chemistry, 1991, volume 1
[DE93-011791] p 709 N94-14020
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Uniform user and group IDs on a large network
[DE93-013047] p 760 N94-14315
LABORATORY EQUIPMENT
Student's works and power supplies in electronic circuit laboratory p 627 N94-13434
Plasma-etching science meets technology in the MDL
[DE93-012086] p 800 N94-13908
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
LAGRANGE COORDINATES
A new Lagrangian method for three-dimensional steady supersonic flows
[NASA-TM-106068] p 510 N94-14847
LAGRANGIAN FUNCTION
Electric charge quantization
[DE93-622901] p 778 N94-12845
Electromagnetic deflection of spinning particles
[DE93-622866] p 778 N94-12858
Non-recursive augmented Lagrangian algorithms for the forward and inverse dynamics of constrained flexible multibodies p 679 N94-14633
On the local nature of the energy cascade p 643 N94-14748
LAKES
Snow cover models in operational watershed forecasting
[DE93-778332] p 718 N94-12837
Educational module for the Higher Agricultural Education. Part 2: Eutrophication observed by remote sensing: An educational approach to water quality monitoring
[BCRS-92-11B] p 818 N94-14462
LAMINAR BOUNDARY LAYER
Three-Dimensional Boundary-Layer program (BL3D) for swept subsonic or supersonic wings with application to laminar flow control
[NASA-CR-4531] p 629 N94-13073
LAMINAR FLOW
Transition prediction and control in subsonic flow over a hump
[NASA-CR-4543] p 629 N94-13066
The transient behavior of a boundary layer exposed to uniform suction
[ITN-93-85205] p 630 N94-13197
A solution algorithm for the prediction of compressible laminar and turbulent shear flows p 634 N94-13635
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers
[AD-A266543] p 504 N94-13705
CNSFV code development, virtual zone Navier-Stokes computations of oscillating control surfaces and computational support of the laminar flow supersonic wind tunnel
[NASA-CR-194259] p 504 N94-14030
The structure of laminar flow in a three-dimensional driven cavity p 640 N94-14601
An implicit finite volume nodal point scheme for the solution of two-dimensional compressible Navier-Stokes equations p 640 N94-14603
Navier-Stokes simulation of transonic vortex flow over a delta wing p 640 N94-14606
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
DNS and modeling of the interaction between turbulent premixed flames and walls p 646 N94-14763
Development of experimental demonstration processes for laminar-turbulent flow states at wing profiles in free flight
[ILR-MITT-280(1993)] p 510 N94-14800
LAMINAR FLOW AIRFOILS
SRISTI: The NAL method for the design and analysis of Natural Laminar Flow (NLF) airfoils p 516 N94-14615

LAMINATES
Micromechanical modeling of laminated composites with interfaces and woven composites using the boundary element method
[NASA-TM-106280] p 670 N94-13053
Measuring methods for CFRP laminates' bending and torsion rigidities characteristics p 529 N94-13272
Inelastic deformation mechanisms in SCS-6/Ti 15-3 MMC lamina under compression
[NASA-CR-191170] p 555 N94-13378
Shear buckling of fiber metal laminates: Comparison between orthotropic and anisotropic plate models using finite element method
[LTR-ST-1934] p 671 N94-13565
Finite element analysis of composite plates by use of modified complementary energy principle
p 672 N94-13596
Fatigue and residual strength characteristics of fiber metal laminates subjected to incidental damage
[LR-708] p 674 N94-13803
Optimal synthesis of hot composite laminates with interphase layers
[NASA-TM-106326] p 557 N94-14042
Probabilistic micromechanics for high-temperature composites
[NASA-CR-191150] p 676 N94-14408
Polymer infiltration studies
[NASA-CR-194521] p 582 N94-14539
Buckling analysis of laminated thin shells in a hot environment
[NASA-TM-106302] p 683 N94-14776

LAND
Seasonal change of the land-surface temperature over Asian Continent derived from GAC data on NOAA-11 AVHRR p 691 N94-14232

LAND MANAGEMENT
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486
Application of satellite remote sensing technology in disaster mitigation: A case study of Bangladesh
p 692 N94-14238
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Soil erosion mapping using remote sensing and GIS techniques p 692 N94-14240
Detecting land cover changes in Chiang-Mai area in Thailand p 693 N94-14241
Land evaluation for agricultural productivity in North-East Thailand using LANDSAT TM data and geographic information p 693 N94-14242
Satellite remote sensing for disaster mitigation
p 693 N94-14244
A concept for the world environment and disaster observation system p 693 N94-14245
A tentative plan on China and Asian-Pacific satellite system for disaster reduction p 693 N94-14247
Development of a remote sensing geographic information system for land cover changes and assessment of risk due to natural and man made hazards covering the area of the inner delta of the Yellow River
p 694 N94-14249
Multi-source national forest inventory of Finland
p 694 N94-14254
Global assessment of human activities
p 695 N94-14255
The Swedish ISY contribution p 695 N94-14256
Vegetation mapping of Indo-China Peninsula using MOS-1 MESSR and NOAA AVHRR p 695 N94-14257
Remote sensing for monitoring tropical moist forests in the Indo-Chinese region p 695 N94-14258
Estimation of vegetation damage due to ash fall in Mt. Pinatubo area using MOS-1 data p 695 N94-14259
Mangrove afforestation monitoring using remote sensing p 695 N94-14260

LAND MOBILE SATELLITE SERVICE
Contribution towards a draft revision of recommendations 681: Propagation data required for the design of Earth-space land mobile telecommunications systems p 614 N94-14666
Characterisation of the LMS propagation channel at L- and S-bands: Narrowband experimental data and channel modelling p 615 N94-14669
Results of multiband (L, S, Ku band) propagation measurements and model for high elevation angle land mobile satellite channel p 615 N94-14670

LAND USE
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486
The role of human activity and land use change in atmospheric chemistry and air quality
[DE93-011871] p 709 N94-14022
Activities report of the Netherlands Remote Sensing Board
[ETN-93-93880] p 686 N94-14073
Integration of remotely sensed data and cadastral ownership boundaries for land inventory purposes
[BCRS-92-16] p 687 N94-14127
Pattern and Process in Landscape Ecology: Eighth Annual US Landscape Ecology Symposium
[DE93-014032] p 711 N94-14859

LANDAU-GINZBURG EQUATIONS
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339

LANDFILLS
Integrated, flexible, and rapid geophysical surveying
[DE93-009989] p 712 N94-12906

LANDFORMS
The nature and origin of periodically spaced tectonic features on Mars
[NASA-CR-193821] p 842 N94-13199

LANDING AIDS
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703

LANDING SIMULATION
Visual cueing aids for rotorcraft landings
p 524 N94-13313
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322

LANDSAT 5
Net radiation mapping of mountainous terrain using Landsat-5 thematic mapper imagery and digital terrain data
[ISBN-0-315-57755-X] p 685 N94-13475

LANGEVIN FORMULA
Stochastic dynamics: Crossover from 1/f(sup 3) to flicker noise
[DE93-622862] p 772 N94-12896
Multiplicative noise: Applications in cosmology and field theory
[DE93-016624] p 840 N94-14536

LANGUAGE PROGRAMMING
Programming languages made in Italy
[REPT-93-002] p 750 N94-13805
EVES: An overview
[DSIS-93-00238] p 752 N94-14088

LANGUAGES
Reconsideration of the autonomous view of language
p 618 N94-13441

LAPLACE EQUATION
Torsion problem of elastostatics: An application of boundary element method and relation with conformal mapping
[DSIS-92-03794] p 674 N94-13833
Mutual inductance between partially wound tori and a bifilar conductor
[ETN-93-94388] p 624 N94-13998

LAPLACE TRANSFORMATION
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
[DE93-010408] p 637 N94-14053

LARGE SCALE INTEGRATION
Electrochemical planarization for microelectronic circuits
[DE93-017214] p 627 N94-14870

LARGE SPACE STRUCTURES
Relegation for decentralized control
[AD-A265720] p 819 N94-13059
Methods for evaluating the predictive accuracy of structural dynamic models
[NASA-CR-191337] p 671 N94-13124
The Second Workshop on Deployment and Assembly Experiment of Large Space Structure on Orbit
[NASDA-CON-930003] p 529 N94-13268
Structural design of hexa-link truss deployable antenna p 529 N94-13269
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270
Development of modular cable mesh deployable antenna p 530 N94-13274
Research on inflatable structure for space use
p 530 N94-13275
Helical truss beam development for large space structure p 530 N94-13276
Application of intelligently adaptable structure and robot to large space structure p 530 N94-13277
A concept on on-orbit experiments of deployable structures utilizing JEM/HOPE p 531 N94-13279
Movement of deployable truss p 531 N94-13280
Development and application of one dimensional deployable truss p 531 N94-13281
Study of a one-dimensional deployable structure employing telescopic members p 531 N94-13282
The study on large space structure assembly technology: The study on deployable truss structure, part 1
[NASDA-TMR-930002] p 541 N94-13658
The study on large space structure assembly technology: The study on deployable truss structure, part 2 and 3
[NASDA-TMR-930003-PT-2-3] p 541 N94-13659
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
[NASA-SP-7085(05)] p 543 N94-14411
Proceedings of the Fifth NASA/NSF/DOD Workshop on Aerospace Computational Control
[NASA-CR-194515] p 677 N94-14618
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630
An application of the IMC software to controller design for the JPL LSCL Experiment Facility
p 681 N94-14645
Computational issues in optimal tuning and placement of passive dampers p 681 N94-14647
Control structural interaction testbed: A model for multiple flexible body verification p 544 N94-14649
A program for the investigation of the Multibody Modeling, Verification, and Control Laboratory
p 682 N94-14652

LASER ABLATION
Shock-free acceleration of laser driven targets
[DE93-008050] p 655 N94-13387
Measurement of penetration depth lambda(T) in YBa2Cu3O(7-delta) thin film
[DE93-014587] p 810 N94-14122
Formation of textured YBCO films by laser ablation
[DE93-013131] p 581 N94-14319
Kinetics of photodeposition of superconducting films
[DE93-015511] p 812 N94-14348
Effects of depositon rate on Bi2Sr2CaCu2O(8+x) and Bi2Sr(1.6)La(0.4)CuO(6+x) epitaxial thin film growth by pulsed-laser ablation
[DE93-015797] p 812 N94-14362
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415

LASER APPLICATIONS
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Single event effects and laser simulation studies
[NASA-CR-194506] p 657 N94-13812
Miniature mechanism assembly
[DE93-015595] p 624 N94-13928
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
The Livermore x ray laser program
[DE93-014118] p 658 N94-14152
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-006] p 558 N94-14573
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-005] p 559 N94-14575
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
[RAE-TM-AERO/PROP-21] p 509 N94-14706
Laser lithography by photon scanning tunneling microscopy
[DE93-015962] p 660 N94-14863
Optimization study of x ray laser coherence in Ni-like Ta
[DE93-016419] p 660 N94-14888

LASER BEAMS
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
Theoretical investigation of scattering by homogeneous or coated dielectric spheres illuminated with a steady state or pulsed laser beam p 657 N94-13624
The interaction of intense femtosecond laser pulses with solid targets
[DE93-014415] p 658 N94-14114
Telescope pointing for GOPEX p 610 N94-14389
GOPEX at the Starfire Optical Range
p 611 N94-14392
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437

Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473
Small scale adaptive optics experiment systems engineering
[NASA-CR-194419] p 793 N94-14548
Kinetic simulations of ultra-intense laser plasma interactions
[DE93-014419] p 802 N94-14564

LASER CAVITIES
Characteristics of semiconductor lasers with optical feedback
[ISBN-0-315-55435-5] p 656 N94-13522
Horizontal-cavity surface-emitting lasers, superluminescent LEDs, and amplifiers, and parabolic gain unstable resonator semiconductor lasers
p 656 N94-13573
The standing wave FEL/TBA: Realistic cavity geometry and energy extraction
[DE93-016972] p 659 N94-14520

LASER DAMAGE
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
[DE93-013853] p 655 N94-13243
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling
[DE93-014655] p 580 N94-14124

LASER DOPPLER VELOCIMETERS
An experimental study of a turbulent boundary layer in the trailing edge region of a curculation-control airfoil
[NASA-CR-194522] p 508 N94-14541

LASER DRILLING
Recent results from material processing studies on new generation lasers
[DE93-013841] p 653 N94-12898
Emitter Wrap-Through solar cell
[DE93-014996] p 703 N94-13886

LASER FUSION
Shock-free acceleration of laser driven targets
[DE93-008050] p 655 N94-13387

LASER GYROSCOPES
Performance evaluation of the honeywell GG1308 miniature ring laser gyroscope
[AD-A266694] p 653 N94-14782

LASER HEATING
High temperature electromagnetic characterization of thermal protection system tile materials
[NASA-CR-189687] p 578 N94-13431
Excimer laser surface processing of titanium
[DE93-012633] p 570 N94-13512

LASER INDUCED FLUORESCENCE
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
[AD-A265106] p 790 N94-12863
Gathering and exchange information on atmospheric chemistry and polluted atmospheres
[DE93-009940] p 705 N94-12869
Direct probing of chromatography columns by laser-induced fluorescence
[DE93-015208] p 654 N94-13022

LASER MATERIALS
Optical and physical properties of the LiSrAlF6:Cr laser crystal
[DE93-014657] p 808 N94-13881
Laser and spectroscopic properties of Yb-doped apatite crystals
[DE93-014656] p 810 N94-14125
Independent adjustment of the higher order frequency dependent phase in chirped pulse amplification systems
[DE93-017106] p 625 N94-14522

LASER MICROSCOPY
The x ray lasers as sources for x ray microscopy
[DE93-013420] p 655 N94-13259

LASER MODE LOCKING
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194527] p 659 N94-14576

LASER MODES
Characteristics of semiconductor lasers with optical feedback
[ISBN-0-315-55435-5] p 656 N94-13522
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473

LASER OUTPUTS
Three dimensional time-dependent hydrodynamic and propagation modeling of x ray laser emission
[DE93-012575] p 654 N94-12962
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
Optical and physical properties of the LiSrAlF6:Cr laser crystal
[DE93-014657] p 808 N94-13881
GOPEX laser transmission and monitoring systems
p 611 N94-14391
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473
The standing wave FEL/TBA: Realistic cavity geometry and energy extraction
[DE93-016972] p 659 N94-14520
Experimental measurements of selenium x-ray laser spectral line profiles
[DE93-016543] p 659 N94-14595
Optimization study of x ray laser coherence in Ni-like Ta
[DE93-016419] p 660 N94-14888

LASER PLASMA INTERACTIONS
Three dimensional time-dependent hydrodynamic and propagation modeling of x ray laser emission
[DE93-012575] p 654 N94-12962
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
[DE93-014418] p 797 N94-13207
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
Oscillator-amplifier experiments in neon-like yttrium
[DE93-012577] p 657 N94-13976
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415
Kinetic simulations of ultra-intense laser plasma interactions
[DE93-014419] p 802 N94-14564

LASER PLASMAS
Two temperature modeling and experimental measurements of laser sustained hydrogen plasmas
[AD-A265750] p 796 N94-13039
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342
Brillouin scattering from fluctuations produced by stimulated Raman scattering
[DE93-016531] p 792 N94-14438
Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805
Time resolved measurement of electron temperatures of exploding foil x ray laser plasmas
[DE93-017161] p 803 N94-14894

LASER POWER BEAMING
Small scale adaptive optics experiment systems engineering
[NASA-CR-194419] p 793 N94-14548
Laser power beaming system analyses
[NASA-CR-193840] p 660 N94-14904

LASER PROPULSION
Two temperature modeling and experimental measurements of laser sustained hydrogen plasmas
[AD-A265750] p 796 N94-13039

LASER PUMPING
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017
Numerical simulations of Nd:YAG laser amplifiers
[FFI/RAPPORT-92/7028] p 657 N94-13970
Laser and spectroscopic properties of Yb-doped apatite crystals
[DE93-014656] p 810 N94-14125
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437

LASER RANGE FINDERS
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
The BIRIS server: Integration of a three-dimensional range sensor into a harmony-based realtime architecture
[ERB-1036] p 765 N94-14201
The determination of crustal motions using laser ranging to Lageos-2 and Lageos-1
[NASA-CR-193787] p 717 N94-14306

LASER SPECTROSCOPY
Linear and nonlinear spectroscopic probing of solute interactions with chemically modified silica surface
[DE93-014648] p 562 N94-13001
Direct probing of chromatography columns by laser-induced fluorescence
[DE93-015208] p 654 N94-13022
Nonlinear laser spectroscopy studies of semiconductor heterostructures
[AD-A265728] p 805 N94-13037
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Lawrence Berkeley Laboratory Chemical Sciences Division
[DE93-015260] p 851 N94-14401
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465

LASER STABILITY
Horizontal-cavity surface-emitting lasers, superluminescent LEDs, and amplifiers, and parabolic gain unstable resonator semiconductor lasers
p 656 N94-13573

LASER TARGET INTERACTIONS
The optical constants and spectral specular reflectivity of Highly Oriented Pyrolytic Graphite (HOPG)
[DE93-011894] p 790 N94-12865
Shock-free acceleration of laser driven targets
[DE93-008050] p 655 N94-13387
The interaction of intense femtosecond laser pulses with solid targets
[DE93-014415] p 658 N94-14114

LASER TARGETS
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017
Shock-free acceleration of laser driven targets
[DE93-008050] p 655 N94-13387
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
The interaction of intense femtosecond laser pulses with solid targets
[DE93-014415] p 658 N94-14114
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415
Impedance-power effects on plasma polymer surface finish using a helical resonator discharge
[DE93-016454] p 803 N94-14590
Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

LASER WELDING
The feasibility of producing aluminum-lithium structures for cryogenic tankage applications by laser beam welding
[NASA-CR-191527] p 595 N94-14026
Welding technologies as applied to nuclear manufacturing
[DE93-010924] p 664 N94-14565

LASING
Oscillator-amplifier experiments in neon-like yttrium
[DE93-012577] p 657 N94-13976
Microchannel cooled heatsinks for high average power laser diode arrays
[DE93-016533] p 658 N94-14442
AlGaAs diode laser blue shift resulting from fast neutron irradiation
[AD-A266642] p 659 N94-14681

LATE STARS
X ray observations of late-type stars using the ROSAT all-sky survey
[NASA-CR-193716] p 832 N94-14146

LATENT HEAT
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788
Boundary layer structure over areas of heterogeneous heat fluxes
[DE93-007887] p 715 N94-13912

LATERAL CONTROL
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities
p 522 N94-13300
Rolling moment control in the NAL 10 cm x 10 cm magnetic suspension and balance system
[NAL-TR-1164] p 526 N94-13347

LATITUDE
Solar radiation on Mars: Stationary photovoltaic array
[NASA-TM-106321] p 626 N94-14730

LAUE METHOD
On the neutron EDM search in the Laue diffraction by the crystal without a centre of symmetry
[DE93-622971] p 804 N94-12828
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483

LAUNCH VEHICLES
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot transonic wind tunnel, volume 2
[NASA-CR-185697] p 534 N94-12965
Electrical Actuation Technology Bridging
[NASA-CP-3213] p 551 N94-13417
Arc-heating tests of thermal protection system materials for the H-2 rocket fairing
[NAL-TR-1181] p 551 N94-13455
Tensile properties of LE-7 engine material with welded joint
[NAL-TR-1188] p 570 N94-13460
HOPE real time flight operations analyses for return to earth phase, part B
[NASDA-CNT-930011] p 535 N94-13599
HOPE real time flight operations analyses for return to earth phase, part A
[NASDA-CNT-930010-PT-A] p 535 N94-13645
LAUNCHERS
HL-20 personnel launch system
[NASA-TM-109292] p 504 N94-13632
LEACHING
Canonical correlation of waste glass compositions and durability, including pH
[DE93-012754] p 578 N94-13493
Relationship between borosilicate glass composition, structure, and durability test response (SRS)
[DE93-013578] p 581 N94-14343
LEAD ALLOYS
Thermosolutal convection and macrosegregation in dendritic alloys
[NASA-CR-194039] p 567 N94-12825
LEAD TELLURIDES
Growth experiment of narrow band-gap semiconductor PbSnTe single crystals in space (M-1)
p 586 N94-13733
Growth of PbSnTe single crystal by traveling-zone method in low gravity (M-2) p 586 N94-13734
LEAD ZIRCONATE TITANATES
Superconductivity devices: Commercial use of space
[NASA-CR-194163] p 625 N94-14324
LEADING EDGES
Numerical study of the effects of icing on viscous flow over wings
[NASA-CR-193306] p 500 N94-13180
Low-speed wind tunnel tests on four types of joined-wing aircraft models
[NAL-TR-1167] p 501 N94-13340
Numerical simulation of dynamic stall of NACA0012 airfoil oscillating near static stall angle using the Navier-Stokes equations
[DE93-767970] p 505 N94-14061
LEAKAGE
STS-55 pad abort: Engine 2011 oxidizer preburner augmented spark igniter check valve leak
[NASA-CR-193830] p 533 N94-12806
Rotordynamic and leakage characteristics of a 4-stage brush seal
[AD-A266012] p 660 N94-12988
A survey and analysis of experimental hydrogen sensors
[NASA-TM-106300] p 648 N94-13135
LEARNING
Modelling robotic systems with DADS
p 678 N94-14625
LEAST SQUARES METHOD
Estimation of aircraft aerodynamic derivatives with the Total Least Squares Method
[NAL-TR-1150] p 502 N94-13392
A comparison of recursive least squares and Kalman filtering excisors for swept tone interference
[DSIS-93-00362] p 606 N94-14054
Least-squares finite element solutions for three-dimensional backward-facing step flow
[NASA-TM-106353] p 770 N94-14407
Removing noise from discontinuous data
[ITN-93-85211] p 826 N94-14555
LECTURES
Lecture notes on software process improvement
[AD-A265200] p 744 N94-13049
LEDGES
Simulation studies for surfaces and materials strength
[NASA-CR-193305] p 671 N94-13179
LEGENDRE FUNCTIONS
The Chebyshev-Legendre method: Implementing Legendre methods on Chebyshev points
[NASA-CR-191497] p 769 N94-13725
LEIDENFROST PHENOMENON
An analytical investigation of transient effects on rewetting of heated thin flat plates
[NASA-TM-106120] p 628 N94-12968
LENGTH
Solid state laser systems for space application
[NASA-CR-194133] p 656 N94-13420
LENS DESIGN
Integrated optics technology transfer
[DSIS-93-00179] p 792 N94-13868
LENSES
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483
LEPTONS
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
Charged scalar particles and (tau) leptonic decay
[DE93-622969] p 779 N94-12882
A search for scalar leptoquarks in D0
[DE93-012780] p 779 N94-12954
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
Comparing the Z(sup 0) mass and inclusive widths to the standard electroweak theory
[PREPRINT-731] p 787 N94-14721
LEVITATION MELTING
Stabilized electromagnetic levitator
[NASA-CR-194261] p 586 N94-12805
LIAPUNOV FUNCTIONS
Construction of the Courant-Snyder invariants for the non-linear equations of motion under presence of the linear coupling
[DE93-017565] p 788 N94-14872
LIBRARIES
Satellite technology for environmental monitoring in developing countries p 692 N94-14236
Public census data on CD-ROM at Lawrence Berkeley Laboratory
[DE93-015273] p 825 N94-14433
LIE GROUPS
Gauging the octonion algebra
[DE93-622864] p 775 N94-12843
Soliton equations and self-dual gauge fields
[DE93-626620] p 818 N94-14887
LIFE (DURABILITY)
A hot dynamic seal rig for measuring hypersonic engine seal durability and flow performance
[NASA-TM-106294] p 664 N94-14727
LIFE CYCLE COSTS
Chip-level testability requirements guidelines
[AD-A262583] p 619 N94-12967
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502
LIFE SCIENCES
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379)
[NASA-SP-7011(379)] p 733 N94-14412
Cellular responses to low-gravity: Pilot studies on suborbital rockets and orbiting spacecraft
[NASA-CR-194402] p 729 N94-14494
LIFE SUPPORT SYSTEMS
Medical evaluations on the KC-135 1991 flight report summary
[NASA-TM-104755] p 731 N94-12832
Life support and habitability manual, volume 1
[ESA-PSS-03-406-ISSUE-1-VOL] p 737 N94-13901
Life support and habitability manual, volume 2
[ESA-PSS-03-406-ISSUE-1-VOL] p 738 N94-13902
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379)
[NASA-SP-7011(379)] p 733 N94-14412
LIFT
Experimental studies of vortex flaps and vortex plates. Part 1: 0.53 m span 60 deg delta wing
[DE93-767969] p 505 N94-14059
Numerical simulation of dynamic stall of NACA0012 airfoil oscillating near static stall angle using the Navier-Stokes equations
[DE93-767970] p 505 N94-14061
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322
LIFTING BODIES
HL-20 personnel launch system
[NASA-TM-109292] p 504 N94-13632
LIFTING REENTRY VEHICLES
HL-20 personnel launch system
[NASA-TM-109292] p 504 N94-13632
LIGANDS
Synthesis and properties of novel cluster phases
[DE93-017056] p 577 N94-13072
Thermochemistry of transition metal clusters
[DE93-016201] p 571 N94-13977
Synthesis of organic ligands for f-element separations
[DE93-012915] p 554 N94-14290
LIGHT (VISIBLE RADIATION)
The Large Area Pulsed Solar Simulator (LAPSS)
[NASA-CR-194507] p 703 N94-13940
Photovoltaic advanced research and development project: Solar radiation research
[DE92-016430] p 704 N94-14350
LIGHT AMPLIFIERS
Horizontal-cavity surface-emitting lasers, superluminescent LEDs, and amplifiers, and parabolic gain unstable resonator semiconductor lasers
p 656 N94-13573
LIGHT CURVE
The soft x ray transient Cen X-4 in quiescence
[NASA-CR-194033] p 833 N94-14406
Analysis of the IUE spectra of the strongly interacting binary beta Lyrae
[NASA-CR-194118] p 833 N94-14493
LIGHT EMISSION
Studies of gas in cooling flow clusters
[NASA-CR-193597] p 628 N94-12959
Fabrication of AlGaAs/GaAs-light-emitting devices by selective MOCVD using dialkylmetalchloride
p 627 N94-13433
LIGHT EMITTING DIODES
Horizontal-cavity surface-emitting lasers, superluminescent LEDs, and amplifiers, and parabolic gain unstable resonator semiconductor lasers
p 656 N94-13573
LIGHT GAS GUNS
Experimental technique to simulate orbital-debris impact on space shields at impact velocities over 10 km/s
[DE93-011619] p 539 N94-12909
Calibration of a magnetic induction system for measurement of hypervelocities
[DE93-013949] p 652 N94-14578
LIGHT IONS
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349
LIGHT SCATTERING
Experimental determination of droplets local mean diameter of a sprag from impinging jets
[INPE-5469-TDI/500] p 631 N94-13365
Image processing and analysis of airborne POLDER data p 689 N94-14219
Brillouin scattering from fluctuations produced by stimulated Raman scattering
[DE93-016531] p 792 N94-14438
Image reconstruction for x ray holographic microscopy
[DE93-013094] p 653 N94-14772
LIGHT SOURCES
Fundamentals and techniques of nonimaging optics
[DE93-013145] p 791 N94-13015
Applications of the Advanced Light Source to problems in the earth, soil, and environmental sciences
[DE93-015258] p 710 N94-14477
Validation of an inexpensive illuminant for aeromedical color vision screening
[DOT/FAA/AM-93/16] p 736 N94-14854
LIGHT TRANSMISSION
Gathering and exchange information on atmospheric chemistry and polluted atmospheres
[DE93-009940] p 705 N94-12869
Optical propagation through atmospheric turbulence. Model analysis of anisoplanatism and application to adaptive optics
[ONERA-P-1992-4] p 716 N94-14192
LIGHT TRANSPORT AIRCRAFT
SRISTI: The NAL method for the design and analysis of Natural Laminar Flow (NLF) airfoils
p 516 N94-14615
LIGHT WATER
Nuclear thermal propulsion engine based on particle bed reactor using light water steam as a propellant
[DE93-014336] p 552 N94-14111
LIGHT WATER REACTORS
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels
[DE93-011602] p 572 N94-14058
LIGHTNING
Lightning simulation and determination of expected striking points
[ITN-93-85202] p 719 N94-13188
LINE SHAPE
Experimental measurements of selenium x-ray laser spectral line profiles
[DE93-016543] p 659 N94-14595
LINE SPECTRA
Studies of gas in cooling flow clusters
[NASA-CR-193597] p 628 N94-12959
Basic research in solar physics
[NASA-CR-193632] p 844 N94-13234
The infrared solar spectrum
[COMMUNICATIONS-SER-B-159] p 844 N94-13502
Submillimeter, millimeter, and microwave spectral line catalogue, revision 3
[NASA-CR-194501] p 602 N94-13813

Emission line variability in active galactic nuclei
[ITN-93-85209] p 849 N94-14553

LINEAR ACCELERATORS
Evolution of high-repetition-rate induction accelerators through advancements in switching
[DE93-012599] p 654 N94-12963
Beam halo formation from space-charge dominated beams in uniform focusing channels
[DE93-014458] p 789 N94-13209
Design for low beam loss in accelerators for intense neutron source applications
[DE93-014557] p 789 N94-13327
Beam halo in high-intensity beams
[DE93-014565] p 789 N94-13328
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
The standing wave FEL/TBA: Realistic cavity geometry and energy extraction
[DE93-016972] p 659 N94-14520

LINEAR ENERGY TRANSFER (LET)
Single event effects and laser simulation studies
[NASA-CR-194506] p 657 N94-13812
Single Event Upset (SEU) testing of semiconductor components at the McMaster Accelerator Laboratory
[DSIS-93-00071] p 623 N94-13834

LINEAR EQUATIONS
Formally biorthogonal polynomials and a look-ahead Levinson algorithm for general Toeplitz systems
[NASA-CR-194297] p 748 N94-13586

LINEAR PROGRAMMING
Gate assignment using linear programming
[LR-698] p 775 N94-13987

LINEAR QUADRATIC REGULATOR
Active control of acoustic pressure fields using smart material technologies
[NASA-CR-191480] p 768 N94-13354
Robust synthesis of discrete-time multivariable control systems with induced delays p 662 N94-13642

LINEAR SYSTEMS
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343
Decentralized control of uncertain systems via sensitivity models
[DE93-012963] p 766 N94-14568
Simulation of linear mechanical systems p 680 N94-14641
Optimization-based controller design for rotorcraft p 527 N94-14642
A rational interpolation method to compute frequency response p 681 N94-14644
A new treatment of periodic systems with applications to helicopter rotor blade dynamics
[AD-A266770] p 510 N94-14784

LINKAGES
The design of chain links and slings
[NPL-DMM(A)-94] p 662 N94-13808

LIPIDS
Biodiesel/aquatic species project report, FY 1992
[DE93-010024] p 709 N94-14087
Structures and shear response of lipid monolayers
[DE93-015076] p 730 N94-14802

LIQUEFACTION
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184
Ionic conductivity of alkali halides and their mixtures near liquid-solid phase transition
[ITN-93-85222] p 566 N94-14558

LIQUEFIED GASES
Statistical mechanical theory of liquid entropy
[DE93-016524] p 817 N94-14593

LIQUID ALLOYS
Solidification of eutectic system alloys in space (M-19) p 589 N94-13751

LIQUID ATOMIZATION
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803

LIQUID BEARINGS
Cryogenic fluid film bearing tester development study
[NASA-CR-192586] p 660 N94-12791

LIQUID CHROMATOGRAPHY
Linear and nonlinear spectroscopic probing of solute interactions with chemically modified silica surface
[DE93-014648] p 562 N94-13001
Direct probing of chromatography columns by laser-induced fluorescence
[DE93-015208] p 654 N94-13022
Reactor studies of metal ions associated with chromatographic silica
[AD-A266675] p 573 N94-14779

LIQUID COOLING
Test apparatus for ITER blanket cooling water distribution design
[DE93-753157] p 795 N94-12944

LIQUID CRYSTALS
Colorimetric qualification of shear sensitive liquid crystal coatings
[NASA-CR-194126] p 806 N94-13291
A continuum theory for liquid crystals describing different degrees of orientational order
[ETN-93-94392] p 807 N94-13590
Suppression of bright objects using a spatial light modulator when imaging with CCD- and image intensified cameras
[FFI-93/7008] p 650 N94-13665
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
[ITN-93-85218] p 816 N94-14826

LIQUID FLOW
Stability of oscillatory two phase Couette flow
[NASA-CR-191501] p 636 N94-13817
Microchannel cooled heatsinks for high average power laser diode arrays
[DE93-016533] p 658 N94-14442
A study of thin liquid sheet flows
[NASA-TM-106323] p 642 N94-14732

LIQUID FUELS
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
[DE93-014962] p 583 N94-13002
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
[DE93-010025] p 584 N94-14089

LIQUID HELIUM
Three-stage linear, split-Stirling cryocooler for 1 to 2K magnetic cold stage
[NASA-CR-4538] p 776 N94-13897

LIQUID HELIUM 2
Sloshing dynamics on rotating helium dewar tank
[NASA-CR-194403] p 637 N94-13959

LIQUID HYDROGEN
CFM technologies for space transportation: Multipurpose hydrogen testbed system definition and tank procurement
[NASA-CR-194355] p 539 N94-12827
Semiempirical fragmentation models on galactic cosmic ray transport calculations with hydrogen target
[NASA-TP-3350] p 847 N94-13263

LIQUID INJECTION
Analysis of gas turbine engines using water and oxygen injection to achieve high Mach numbers and high thrust
[NASA-TM-106270] p 518 N94-13143

LIQUID METALS
Diffusion in liquid state and solidification of binary system (M-7) p 587 N94-13739
Liquid metal drop ejection
[NASA-CR-193718] p 572 N94-14133
Statistical mechanical theory of liquid entropy
[DE93-016524] p 817 N94-14593

LIQUID OXYGEN
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
[NAL-TR-1177] p 548 N94-12945

LIQUID PHASE EPITAXY
Liquid phase epitaxy of gallium arsenide: A review
[DE93-622212] p 804 N94-12893

LIQUID PHASE SINTERING
Study on the mechanism of liquid phase sintering (M-12) p 588 N94-13744

LIQUID PHASES
Multiphase equation of state for iron
[DE93-013956] p 568 N94-12977
Growth of samarskite crystal under microgravity conditions (M-20) p 590 N94-13752

LIQUID PROPELLANT ROCKET ENGINES
Energy and technology review, March 1993
[DE93-013941] p 849 N94-13019
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685

LIQUID ROCKET PROPELLANTS
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
Nuclear thermal propulsion engine based on particle bed reactor using light water steam as a propellant
[DE93-014336] p 552 N94-14111

LIQUID SLOSHING
Sloshing dynamics on rotating helium dewar tank
[NASA-CR-194403] p 637 N94-13959

LIQUID SURFACES
Capillary surfaces in a wedge: Differing contact angles
[DE93-013903] p 631 N94-13244

LIQUID-GAS MIXTURES
Studies of momentum and energy transfer across wavy gas-liquid interfaces
[AD-A266432] p 635 N94-13699

LIQUID-SOLID INTERFACES
An analytical investigation of transient effects on rewetting of heated thin flat plates
[NASA-TM-106120] p 628 N94-12968
Thermodynamic status of static and dynamic contact angles
[ISBN-0-315-73844-8] p 817 N94-13554
Immiscible phase incorporation during directional solidification of hypermonotectics
[NASA-CR-194412] p 565 N94-14480

LIQUID-VAPOR INTERFACES
Studies of momentum and energy transfer across wavy gas-liquid interfaces
[AD-A266432] p 635 N94-13699
Sloshing dynamics on rotating helium dewar tank
[NASA-CR-194403] p 637 N94-13959

LIQUIDS
Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
[PB93-198851] p 652 N94-14687

LISP (PROGRAMMING LANGUAGE)
Common lisp framework
[AD-A265878] p 742 N94-12933

LITHIUM
Calculation of electron-lithium scattering using the coupled-channel optical method
[DE93-623049] p 806 N94-13226
A quartz crystal microbalance study of lithium insertion and removal into evaporated films MO(y) (M = Mo, Fe, and V)
[DSIS-93-00649] p 810 N94-14203

LITHIUM ALLOYS
Preparation and characterization of rapidly solidified Al-Li alloys
[ISBN-0-315-58948-5] p 569 N94-13367

LITHIUM HYDRIDES
Generation of neutronic thermal data in support of space nuclear propulsion
[DE93-013148] p 549 N94-13034

LITHIUM NIOBATES
Implementation of manufacturing techniques for planar, single mode waveguides on lithium niobate
[DSIS-93-00101] p 792 N94-13845
Liquid metal drop ejection
[NASA-CR-193718] p 572 N94-14133

LITHOGRAPHY
Design and testing of planar magnetic micromotors fabricated by deep x ray lithography and electroplating
[DE93-012856] p 618 N94-12821
Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805
Laser lithography by photon scanning tunneling microscopy
[DE93-015962] p 660 N94-14863

LITHOSPHERE
Regional tectonic analysis of Venus as part of the Pioneer Venus guest investigator project
[NASA-CR-194079] p 842 N94-13561

LIVER
A characterization of carboxylesterases in rat and guinea pig: Their heterogeneity and role in detoxication of organophosphorus compounds
[NDRE-PUBL-93-1001] p 730 N94-14852

LOAD TESTS
A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
[ARL-RR-6-PT-2] p 670 N94-12928

LOADS (FORCES)
Structural design/margin assessment
[NASA-TP-3410] p 669 N94-12831
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
Autofrettage: Stress distribution under load and retained stresses after depressurization. A modified plane-strain case
[AD-A266320] p 671 N94-13579
An 8-node axisymmetric acoustic finite element for non-axisymmetric fluid-structure interaction analysis
[FFA-TN-1993-03] p 673 N94-13689
Nonlinear wave forces on large ocean structures
[AD-A266820] p 683 N94-14902

LOCAL THERMODYNAMIC EQUILIBRIUM
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

LOGIC PROGRAMMING
Completing fault models for abductive diagnosis
[DE93-003832] p 761 N94-12859
Efficient dynamic optimization of logic programs
[NASA-TM-109251] p 761 N94-12889
LOGISTICS MANAGEMENT
Decision support for material planners
[ISBN-9-03-860201-4] p 819 N94-14449
LONG DURATION EXPOSURE FACILITY
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
[NASA-CR-193647] p 575 N94-12789
STS-32 mission highlights resource tape
[NASA-TM-109291] p 531 N94-13631
Partial analysis of LDEF experiment A-0114
[NASA-CR-193826] p 564 N94-14025
Surface characterization of LDEF materials
[NASA-CR-194519] p 543 N94-14683
LONG DURATION SPACE FLIGHT
Recycling in space
[NASA-TM-109307] p 737 N94-13615
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961
Physical countermeasures for long-term manned space flights
[ESA-SP-1160] p 733 N94-14860
LONG TERM EFFECTS
Surface characterization of LDEF materials
[NASA-CR-194519] p 543 N94-14683
LOOP ANTENNAS
Direct electron heating and current drive with fast waves in D3-D
[DE93-013028] p 801 N94-14293
LOOPS
Analysis and effects of the number of nests of DO loops during vector supercomputing
[NAL-TR-1146] p 748 N94-13453
LORAN C
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563
LOSSES
Recent study of beam stability in the PSR
[DE93-014473] p 780 N94-13173
LOSSY MEDIA
Utilization of boundary element method for extraction of frequency dependent conductivity parameters of lossy intra-chip transmission lines
[ETN-93-94385] p 771 N94-14807
LOW ALTITUDE
Low altitude plume impingement handbook
[NASA-CR-194193] p 643 N94-14741
LOW CARBON STEELS
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
LOW CONCENTRATIONS
Reduction of Pu(6) with hydrogen peroxide: Effects of plutonium, peroxide, and iron concentrations and of reaction time
[DE93-013598] p 564 N94-13487
LOW CURRENTS
Low-current traveling wave tube for use in the microwave power module
[NASA-TP-3344] p 620 N94-13110
LOW DENSITY MATERIALS
Fabrication of very-low-density, high-stiffness carbon fiber/aluminum hybridized composite with ultra-low density and high stiffness (M-11) p 588 N94-13743
LOW FREQUENCIES
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
1/f noise and oxide traps in MOSFETs
[DE93-007581] p 619 N94-12942
The propagation characteristics and instability properties of low-frequency electromagnetic waves in the Io plasma torus p 601 N94-13650
LOW FREQUENCY BANDS
ALFIS: Astronomical Low Frequency Interferometry Satellites. A feasibility study
[LR-699] p 542 N94-13988
LOW NOISE
Flex-gear electrical power transmission
[NASA-CR-194422] p 661 N94-13445
Position error determination for the speedometer and altimeter of the NAL QSTOL experimental aircraft ASKA
[NAL-TR-1144] p 517 N94-13451
LOW PASS FILTERS
Spatially-varying IIR filter banks for image coding
[NASA-CR-193727] p 619 N94-12897
LOW PRESSURE
Low pressure storage of natural gas on activated carbon
[DE93-014053] p 660 N94-12851
NASA metrology and calibration, 1993
[NASA-TM-109280] p 597 N94-14410
LOW REYNOLDS NUMBER
Least-squares finite element solutions for three-dimensional backward-facing step flow
[NASA-TM-106353] p 770 N94-14407
LOW SPEED
Low-speed wind tunnel tests on four types of joined-wing aircraft models
[NAL-TR-1167] p 501 N94-13340
LOW SPEED WIND TUNNELS
A guide to the DRA 13 ft x 9 ft Low Speed Wind Tunnel Facility
[AD-A267739] p 528 N94-14876
LOW TEMPERATURE
Low temperature metal-organic chemical vapor deposition growth processes for high efficiency solar cells
[DE92-010562] p 702 N94-13386
A microstructural approach to fatigue crack processes in poly crystalline BCC materials
[DE93-016666] p 812 N94-14354
LOW THRUST
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
LOW THRUST PROPULSION
Low thrust space propulsion
[NASA-TM-109286] p 552 N94-13625
LOWER ATMOSPHERE
Atmospheric turbulence and diffusion research
[DE93-011842] p 718 N94-14425
LOWER BODY NEGATIVE PRESSURE
Health monitoring of Japanese payload specialist: Autonomic nervous and cardiovascular responses under reduced gravity condition (L-0) p 591 N94-13757
Countermeasure for reducing post-flight orthostatic intolerance: Lower Body Negative Pressure (LBNP) experiment E140 p 594 N94-13772
LUBRICANT TESTS
A vacuum four-ball tribometer to evaluate liquid lubricants for space applications
[NASA-TM-106264] p 575 N94-12842
Dry film lubricant evaluation
[DE93-013114] p 578 N94-13118
Surface analysis of bearings
[AD-A266800] p 661 N94-13122
LUBRICANTS
Surface analysis of bearings
[AD-A266800] p 661 N94-13122
Miscibility of lubricants with refrigerants, phase 1
[DE93-014766-PHASE-1] p 596 N94-13407
Canadian Target Assembly (CTA) to Airborne Support Equipment (ASE) vibration test report
[IME-AMT-TR-001] p 663 N94-14195
Compatibility of refrigerants and lubricants with motor materials
[DE93-014768] p 583 N94-14801
LUBRICATING OILS
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126
LUMINESCENCE
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698
A sum-rule of luminescence spectrum
[ITN-93-85223] p 814 N94-14559
LUMINOSITY
The evidence for clumpy accretion in the Herbig Ae star HR 5999
[NASA-TM-108257] p 828 N94-12915
A search for scalar leptoquarks in D0
[DE93-012780] p 779 N94-12954
Inclusive single muons at DO
[DE93-012779] p 783 N94-13494
The origin of the far-infrared emission from galactic molecular clouds p 848 N94-13654
LUMINOUS INTENSITY
Photocatalysis for the treatment of waste water: Applications involving the removal of metals
[DE93-011669] p 561 N94-12841
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097
LUNAR BASES
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars
[NASA-TP-3312] p 846 N94-12875
LUNAR COMPOSITION
Deposition of impact-generated vapors in the lunar regolith p 843 N94-14302
LUNAR ENVIRONMENT
Laboratory simulations of lunar darkening processes p 843 N94-14301
LUNAR EXPLORATION
The studies on lunar and planetary exploration and utilization: The study on lunar resources utilization
[NASDA-CNT-930014] p 842 N94-13655
LUNAR GEOLOGY
Laboratory simulations of lunar darkening processes p 843 N94-14301
Deposition of impact-generated vapors in the lunar regolith p 843 N94-14302
The state of Fe in the lunar regolith and its relationship to the spectral reflectance properties of the moon p 843 N94-14303
LUNAR LANDING
Where no flag has gone before: Political and technical aspects of placing a flag on the Moon
[NASA-CR-188251] p 827 N94-12800
LUNAR RESOURCES
The studies on lunar and planetary exploration and utilization: The study on lunar resources utilization
[NASDA-CNT-930014] p 842 N94-13655
LUNAR ROCKS
The state of Fe in the lunar regolith and its relationship to the spectral reflectance properties of the moon p 843 N94-14303
LUNAR ROVING VEHICLES
Asynchronous transfer mode link performance over ground networks p 610 N94-14385
LUNAR SEISMOGRAPHS
Meteoroid environment near the Earth-Moon system
[NASA-CR-193670] p 835 N94-13203
LUNAR SHADOW
Angular resolution studies of the CYGNUS array using the shadows of the Sun and Moon
[DE93-012723] p 846 N94-12946
LUNAR SOIL
Deposition of impact-generated vapors in the lunar regolith p 843 N94-14302
The state of Fe in the lunar regolith and its relationship to the spectral reflectance properties of the moon p 843 N94-14303
LUNAR SURFACE
The studies on lunar and planetary exploration and utilization: The study on lunar resources utilization
[NASDA-CNT-930014] p 842 N94-13655
Laboratory simulations of lunar darkening processes p 843 N94-14301
LUNGS
Flow limitation and flutter in membrane walled collapsible tubes: A model for expiratory wheezing
[ISBN-0-315-73875-8] p 635 N94-13662
A characterization of carboxylesterases in rat and guinea pig: Their heterogeneity and role in detoxication of organophosphorus compounds
[NDRE-PUBL-93-1001] p 730 N94-14852
LYMPHOCYTES
Cellular responses to low-gravity: Pilot studies on suborbital rockets and orbiting spacecraft
[NASA-CR-194402] p 729 N94-14494
LYRA CONSTELLATION
Analysis of the IUE spectra of the strongly interacting binary beta Lyrae
[NASA-CR-194118] p 833 N94-14493

M

MACH NUMBER
Improved aeroprediction code. Part 1: Summary of new methods and comparison with experiment
[AD-A266015] p 500 N94-12989
A time-accurate numerical method for chemically reacting flows at all Mach numbers p 500 N94-13198
Numerical simulations and experiments on physics of high Mach number shockwave: Turbulent flow interactions
[DE93-013424] p 631 N94-13249
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
A solution algorithm for the prediction of compressible laminar and turbulent shear flows p 634 N94-13635
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers
[AD-A266543] p 504 N94-13705
MACHINE LEARNING
Efficient dynamic optimization of logic programs
[NASA-TM-109251] p 761 N94-12889
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969
Obstacle detection by recognizing binary expansion patterns
[NASA-CR-194415] p 514 N94-14495

MACHINERY
Transcript of workshop on machinery health monitoring
[IME-MET-TR-005] p 733 N94-13847
Machinery dynamics activities in Canadian industries
[IME-MET-TR-006] p 663 N94-14147
MACHINING
Machining aspects of nickel-phosphorus coatings
[DE93-013037] p 580 N94-14311
Computational diagnostics for detecting phase transitions during nanoindentation
[DE93-016536] p 813 N94-14439
Machining and grinding: High rate deformation in practice
[DE93-010718] p 664 N94-14457
MAGELLAN PROJECT (NASA)
STS-30 Magellan IUS/EVA training in WETF
[NASA-TM-109300] p 737 N94-13601
MAGELLANIC CLOUDS
The first data from the MACHO experiment
[DE93-014423] p 840 N94-14467
MAGNESIUM
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
[AD-A266547] p 556 N94-13583
MAGNESIUM FLUORIDES
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
MAGNETIC ANOMALIES
Aeromagnetic work in the Lincoln Sea: 1991 survey
[DSIS-93-00308] p 715 N94-13830
Dynamical model for the distribution of geomagnetically trapped anomalous-component ions
[ATR-91(9558)-6] p 784 N94-13936
MAGNETIC BEARINGS
Cryogenic fluid film bearing tester development study
[NASA-CR-192586] p 660 N94-12791
MAGNETIC CIRCUITS
Advanced electric motor technology flux mapping
[NASA-CR-193824] p 621 N94-13186
MAGNETIC DIPOLES
Neptune high-latitude emission: Dependence of angle on frequency
[NASA-CR-193280] p 848 N94-13476
MAGNETIC EFFECTS
Multiwavelength observations of unidentified high energy gamma ray sources
[NASA-CR-194536] p 840 N94-14688
MAGNETIC ENERGY STORAGE
Technology assessments of advanced energy storage systems for electric and hybrid vehicles
[DE93-014395] p 701 N94-12913
MAGNETIC FIELD CONFIGURATIONS
Theory of field-reversed configurations
[DE93-015611] p 794 N94-12862
Evolution of the interplanetary magnetic field
[DE93-012631] p 836 N94-13262
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
Current distribution tomography for determination of internal current density distributions
[DE93-015463] p 604 N94-13899
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024
MAGNETIC FIELD RECONNECTION
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
[INPE-5445-TDI/491] p 835 N94-13174
MAGNETIC FIELDS
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
Investigation of dynamics of plasma fluxes generated by the quasi-stationary plasma accelerator P-50
[DE93-621665] p 794 N94-12854
Plasma diffusion through multidipole magnetic fields
[INPE-5460-PRE/1768] p 795 N94-12901
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
[DE93-014418] p 797 N94-13207
Evolution of the interplanetary magnetic field
[DE93-012631] p 836 N94-13262
Neptune high-latitude emission: Dependence of angle on frequency
[NASA-CR-193280] p 848 N94-13476
The geometric phase in quantum physics
[DE93-011121] p 817 N94-13479
ADP study of gamma-ray bursts
[NASA-CR-194311] p 848 N94-13708
Casting of superconducting composite materials (M-4)
p 586 N94-13736
Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826
Mutual inductance between partially wound tori and a bifilar conductor
[ETN-93-94388] p 624 N94-13998
Multi-bunch beam-break-up studies for a SWFEL/TBA
[DE93-016973] p 658 N94-14414
Interactions among convection, magnetic fields and p-mode oscillations in the sun
[NASA-CR-194477] p 845 N94-14479
Kinetic simulations of ultra-intense laser plasma interactions
[DE93-014419] p 802 N94-14564
Theory of the negative magnetoresistance in magnetic metallic multilayers
[DE93-013912] p 776 N94-14584
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738
Construction of the Courant-Snyder invariants for the non-linear equations of motion under presence of the linear coupling
[DE93-017565] p 788 N94-14872
MAGNETIC FLUX
Advanced magnetic flux compression generator development issues: A comparison of coaxial and disk generators
[DE93-014025] p 794 N94-12849
The study of structure-processing-property relations in copper oxide based high (Tc) superconductors
[DE93-015066] p 804 N94-13003
Instability heating of the HDZP
[DE93-012641] p 798 N94-13513
Review of the Procyon explosive pulsed power system
[DE93-016562] p 802 N94-14532
MAGNETIC INDUCTION
Simultaneous solution for core magnetic field and fluid flow beneath an electrically conducting mantle
[NASA-TM-4536] p 716 N94-13960
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
[DE93-015080] p 717 N94-14294
Calibration of a magnetic induction system for measurement of hypervelocities
[DE93-013949] p 652 N94-14578
MAGNETIC LEVITATION VEHICLES
Compendium of executive summaries from the maglev system concept definition
[PB93-154938/GAR] p 661 N94-13285
MAGNETIC MEASUREMENT
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
[DE93-015080] p 717 N94-14294
Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
[PB93-198851] p 652 N94-14687
A high-precision direct current measuring device over a kiloampere range
[DE93-626409] p 627 N94-14885
MAGNETIC MOMENTS
Canted magnetic moments at the Gd(0001) surface
[DE93-014327] p 805 N94-13102
The geometric phase in quantum physics
[DE93-011121] p 817 N94-13479
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
MAGNETIC PERMEABILITY
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
A high-precision direct current measuring device over a kiloampere range
[DE93-626409] p 627 N94-14885
MAGNETIC PROPERTIES
The 1990 Western Pacific Geophysics meeting
[NASA-CR-193456] p 712 N94-13334
Spin polarized photoemission studies of interfacial and thin film magnetism
[DE93-014326] p 580 N94-14142
Magnetic interactions and disorder - phase transitions in dilute spin-glasses and high temperature superconductors
[ITN-93-65217] p 815 N94-14825
MAGNETIC RESONANCE
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
MAGNETIC STARS
ROSAT guest investigator program (AO-1). On a search for coronal x ray emissions from white dwarfs
[NASA-CR-193654] p 835 N94-13171
MAGNETIC STORMS
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
[INPE-5445-TDI/491] p 835 N94-13174
MAGNETIC SURVEYS
Application of transient airborne electromagnetic and ground resistivity methods to geological mapping in tropical terrains
[ISBN-0-315-57172-1] p 685 N94-13542
Aeromagnetic work in the Lincoln Sea: 1991 survey
[DSIS-93-00308] p 715 N94-13830
MAGNETIC SUSPENSION
Propulsion simulator for magnetically-suspended wind tunnel models
[NASA-CR-189560] p 527 N94-13127
A superconducting large-angle magnetic suspension
[NASA-CR-189735] p 596 N94-13141
Compendium of executive summaries from the maglev system concept definition
[PB93-154938/GAR] p 661 N94-13285
Rolling moment control in the NAL 10 cm x 10 cm magnetic suspension and balance system
[NAL-TR-1164] p 526 N94-13347
MAGNETIC SWITCHING
Evolution of high-repetition-rate induction accelerators through advancements in switching
[DE93-012599] p 654 N94-12963
MAGNETIZATION
Theory of the negative magnetoresistance in magnetic metallic multilayers
[DE93-013912] p 776 N94-14584
MAGNETOHYDRODYNAMIC FLOW
The role of ionospheric plasma in the magnetosphere
[NASA-CR-194404] p 716 N94-13967
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342
Review of the Procyon explosive pulsed power system
[DE93-016562] p 802 N94-14532
MAGNETOHYDRODYNAMIC GENERATORS
Advanced magnetic flux compression generator development issues: A comparison of coaxial and disk generators
[DE93-014025] p 794 N94-12849
Heat and seed recovery technology project
[DE93-009203] p 800 N94-13913
MAGNETOHYDRODYNAMIC STABILITY
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814
Theory of field-reversed configurations
[DE93-015611] p 794 N94-12862
Plasma diffusion through multidipole magnetic fields
[INPE-5460-PRE/1768] p 795 N94-12901
Equilibrium reconstruction of the q-profile in tokamaks from motional Stark effect data
[DE93-015815] p 796 N94-13046
Investigation of plasma instabilities in the Polar cusp
[NASA-CR-194283] p 796 N94-13084
Recent study of beam stability in the PSR
[DE93-014473] p 780 N94-13173
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
Instability heating of the HDZP
[DE93-012641] p 798 N94-13513
Nonlinear evolution of tearing modes in inhomogeneous plasmas
[PPL-133] p 798 N94-13564
The propagation characteristics and instability properties of low-frequency electromagnetic waves in the Io plasma torus p 601 N94-13650
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
Small scale magnetic islands in collisionless plasmas
[PPL-131] p 799 N94-13836
Semi-local kinetic analysis of the toroidal ion temperature gradient mode
[PPL-130] p 800 N94-13851
Anomalous transport due to the ion acoustic instability in tokamaks
[PPL-129] p 800 N94-13852
Numerical Studies of Collisionless Current Layers
[NASA-CR-194337] p 800 N94-13854
On MHD mode equations in toroidal plasmas
[PPL-139] p 800 N94-13877
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024
Anomalous transport due to small scale electromagnetic and large scale electrostatic modes in tokamaks
[PPL-140] p 801 N94-14206
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
[DE93-015474] p 802 N94-14583
Anomalous ion transport and feedback control
[DE93-018324] p 803 N94-14874

MAGNETOHYDRODYNAMIC TURBULENCE
On energy transport equations for turbulent magnetized plasma
[PPL-135] p 800 N94-13850
MAGNETOHYDRODYNAMIC WAVES
Comment of parameter excitation of Alfven and Heliicon waves in a magnetoactive compensated semiconductor by microwave radiation
[DE93-623203] p 806 N94-13228
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738
MAGNETOHYDRODYNAMICS
MHD shocks in coronal mass ejections
[NASA-CR-193418] p 828 N94-12970
Magnetic fusion computing: A personal retrospective view
[DE93-014147] p 797 N94-13217
Heat and seed recovery technology project
[DE93-009203] p 800 N94-13913
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738
MAGNETOPAUSE
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
The interplanetary origins and the main-phase development of moderate geomagnetic storms (1978 - 1979)
[INPE-5445-TDI/491] p 835 N94-13174
Terrestrial magnetospheric imaging: Numerical modeling of low energy neutral atoms
[DE93-014561] p 717 N94-14328
MAGNETOPLASMADYNAMICS
Electric propulsion system technology
[NASA-CR-194099] p 549 N94-13068
Low power pulsed MPD thruster system analysis and applications
[NASA-CR-191187] p 550 N94-13415
MAGNETORESISTIVITY
Theory of the negative magnetoresistance in magnetic metallic multilayers
[DE93-013912] p 776 N94-14584
MAGNETOSHEATH
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
MAGNETRON SPUTTERING
Ion assisted sputter deposition of Mo-Si multilayers
[DE93-013830] p 583 N94-14693
MAGNETS
Calibration of a magnetic induction system for measurement of hypervelocities
[DE93-013949] p 652 N94-14578
MAGNONS
Hydrodynamic asymptotics of Green functions in magnetics with spontaneously broken symmetry
[DE93-621349] p 767 N94-13223
MAINTENANCE
Activities of Hawker Siddeley Canada Inc.
[CTN-93-60865] p 849 N94-13505
Transcript of workshop on machinery health monitoring
[IME-MET-TR-005] p 733 N94-13847
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502
MAINTENANCE TRAINING
Human factors in aviation maintenance: Phase 3, volume 1
[DOT/FAA/AM-93/15] p 738 N94-14023
MAN ENVIRONMENT INTERACTIONS
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969
Summary of conclusions and recommendations from a visibility science workshop
[DE93-012770] p 710 N94-14523
MAN MACHINE SYSTEMS
Flight crew interface aspects of forward-looking airborne windshear detection systems
[NASA-CR-191437] p 516 N94-12829
Cognitive engineering in aerospace application: Pilot interaction with cockpit automation
[NASA-CR-177617] p 510 N94-13247
Compatibility of information and mode of control: The case for natural control systems p 523 N94-13307
Future developments of the NLR research flight simulator
[NLR-TP-92143-U] p 528 N94-13498
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379)
[NASA-SP-7011(379)] p 733 N94-14412
MAN-COMPUTER INTERFACE
Common lisp framework
[AD-A265878] p 742 N94-12933
Advanced display object selection methods for enhancing user-computer productivity
[AD-A265806] p 743 N94-12974
Collection and analysis of dialogue protocols for the question-answering facility of the entity-relationship modeling advisor
[ERB-1032] p 740 N94-13546
Programming the multimodal interface
[DE93-013084] p 748 N94-13576
Functional categories for future flight deck designs
[NASA-TM-109005] p 517 N94-13710
SCAILET: An intelligent assistant for satellite ground terminal operations
[NASA-TM-105879] p 538 N94-13918
Intelligent environment for interpretation tasks of remotely sensed images
[INPE-5466-PRE/1774] p 687 N94-14082
Payload/GSE/data system interface: Users guide for the VPF (Vertical Processing Facility)
[NASA-CR-194385] p 532 N94-14148
Eye-gaze and intent: Application in 3D interface control
[DE93-015210] p 738 N94-14335
An overview of parallel scientific visualization
[DE93-017105] p 755 N94-14521
MANAGEMENT
Discovery management workshop
[NASA-TM-108244] p 531 N94-14080
MANAGEMENT INFORMATION SYSTEMS
Making the connection between information modeling and implementation
[DE93-011588] p 820 N94-12907
Building the repositories to serve --- Superconducting Super Collider information system
[DE93-014100] p 821 N94-12983
Knowledge base technology for CT-DIMS: Report 1
[DE93-013118] p 743 N94-13014
Program/project management resource lists
[NASA-TM-109268] p 822 N94-13107
MANAGEMENT METHODS
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Conference presentations
[NASA-CR-194514] p 665 N94-13153
Measuring quality progress p 666 N94-13154
Defining the performance gap: Conducting a self-assessment p 666 N94-13155
What's the bottom line payback for TQM? p 666 N94-13156
Partnership with the customer p 666 N94-13157
Strategic planning as a focus for continuous improvement. A case study p 666 N94-13158
The power of cross-functional teams in driving total quality p 666 N94-13159
Kennedy Space Center's NASA/Contractor Team-Centered Total Quality Management Seminar: Results, methods, and lessons learned p 667 N94-13162
Here's the beef: A case study in organizational transformation p 667 N94-13163
NASA Johnson Space Center: Total quality partnership p 668 N94-13165
The Eighth Annual NASA/Contractors Conference and 1991 National Symposium on Quality and Productivity: Extending the boundaries of total quality management
[NASA-TM-109276] p 669 N94-14321
MANAGEMENT PLANNING
Strategic planning as a focus for continuous improvement. A case study p 666 N94-13158
Building a quality culture in the Office of Space Flight: Approach, lessons learned and implications for the future p 667 N94-13164
Creating a strategic plan for configuration management using computer aided software engineering (CASE) tools
[DE93-013663] p 746 N94-13394
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486
Space and Earth sciences, computer systems, and scientific data analysis support, volume 1
[NASA-CR-194535] p 741 N94-13788
Fourteenth National Industrial Energy Technology Conference: Proceedings
[DE93-016698] p 710 N94-14516
MANAGEMENT SYSTEMS
Measuring quality progress p 666 N94-13154
Teamwork for Oversight of Processes and Systems (TOPS). Implementation guide for TOPS version 2.0, 10 August 1992 p 668 N94-13167
Quality assurance for environmental chemistry, 1991, volume 1
[DE93-011791] p 709 N94-14020
MANEUVERABILITY
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301
In-flight simulation of high agility through active control: Taming complexity by design p 523 N94-13306
MANGANESE ISOTOPES
The beta(+) decay and cosmic-ray half-life of Mn-54
[DE93-013913] p 848 N94-13695
MANIPULATORS
Roller-gear drives for robotic manipulators design, fabrication and test
[NASA-CR-194248] p 660 N94-12802
Force reflecting hand controller for manipulator teleoperation
[NASA-CR-191345] p 661 N94-13129
Control algorithm implementation for a redundant degree of freedom manipulator
[NASA-CR-191339] p 762 N94-13131
Robot-task compliance: The energy criterion
[ITN-93-85196] p 763 N94-13568
Generalized impedance control of a redundant manipulator p 661 N94-13575
Decentralized control of uncertain systems via sensitivity models
[DE93-012963] p 766 N94-14568
Modelling robotic systems with DADS p 678 N94-14625
Parallel methods for dynamic simulation of multiple manipulator systems p 680 N94-14637
MANNED MARS MISSIONS
Design, qualification and operation of nuclear rockets for safe Mars missions
[DE93-010792] p 549 N94-12996
Mirror fusion propulsion system: A performance comparison with alternate propulsion systems for the manned Mars Mission
[NASA-TM-109248] p 550 N94-13147
Optimizing interplanetary trajectories with deep space maneuvers
[NASA-CR-4546] p 532 N94-14851
MANNED SPACE FLIGHT
Development of a nonazeotropic heat pump for crew hygiene water heating
[NASA-CR-194189] p 737 N94-13674
Life support and habitability manual, volume 1
[ESA-PSS-03-406-ISSUE-1-VOL] p 737 N94-13901
Life support and habitability manual, volume 2
[ESA-PSS-03-406-ISSUE-1-VOL] p 738 N94-13902
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961
My experiences in manned space flight p 698 N94-14276
The problem of traveling in outer space: The rocket motor
[NASA-TT-10002] p 552 N94-14463
Physical countermeasures for long-term manned space flights
[ESA-SP-1160] p 733 N94-14860
MANNED SPACECRAFT
Development of an advanced spacecraft tandem mass spectrometer
[NASA-CR-194195] p 545 N94-13953
MANUAL CONTROL
Evaluation of two cockpit display concepts for civil tiltrotor instrument operations on steep approaches p 517 N94-13323
Simulator study of uncoupled control functions. Use of manual pointing modes when aiming at ground targets and oncoming airborne target
[FFA-TN-1992-18] p 528 N94-13588
Manual control in space research on perceptual-motor functions under zero gravity conditions (L-10) p 593 N94-13767
MANUALS
Environmental awareness
[DE93-014192] p 707 N94-13218
Manual on the global data-processing system. Volume 1: (Annex 4 to the WMO regulations) global aspects (1992 edition)
[WMO-485-VOL-1] p 721 N94-13686
Life support and habitability manual, volume 1
[ESA-PSS-03-406-ISSUE-1-VOL] p 737 N94-13901
Life support and habitability manual, volume 2
[ESA-PSS-03-406-ISSUE-1-VOL] p 738 N94-13902
National use of the groups 7wwW1W2 and 960ww for ground stations
[KNMI-PUBL-181] p 722 N94-13926
Manual on the global data-processing system. Volume 2: Regional aspects (1992 edition)
[WMO-485-VOL-2] p 722 N94-14071
Oak Ridge Environmental Information System (ORIES) site workstation information packet for OREIS 6.2
[DE93-010761] p 825 N94-14458
A guide to the DRA 13 ft x 9 ft Low Speed Wind Tunnel Facility
[AD-A267739] p 528 N94-14876

MANUFACTURING
Photovoltaics: Contract lists, fiscal year 1992
[DE93-000093] p 701 N94-12902
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Knowledge base technology for CT-DIMS: Report 1
[DE93-013118] p 743 N94-13014
Rigid-flexible printed wiring boards
[DE93-013938] p 620 N94-13094
Pollution prevention through total quality
[DE93-013814] p 707 N94-13390
Rapid intelligent inspection process definition for dimensional measurement in advanced manufacturing
[DE93-011271] p 748 N94-13480
Activities of Hawker Siddeley Canada Inc.
[CTN-93-60865] p 849 N94-13505
Cesium iodide (CsI) crystal manufacture
[DE93-012146] p 808 N94-13973
Continuous roll-to-roll a-Si photovoltaic manufacturing technology
[DE93-010006] p 704 N94-14109
Knowledge based systems: From process control to policy analysis
[DE93-014582] p 765 N94-14117
Welding technologies as applied to nuclear manufacturing
[DE93-010924] p 664 N94-14565
MANY BODY PROBLEM
Many-body corrections in XAFS
[DE93-011002] p 563 N94-13478
MAPPING
Quantitative mapping of pore fraction variations in silicon nitride using an ultrasonic contact scan technique
[NASA-TP-3377] p 665 N94-13056
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
[NASA-CR-193646] p 512 N94-13238
MARANGONI CONVECTION
Marangoni effect induced convection in material processing under microgravity (M-18)
p 589 N94-13750
Contributions to numerical solution of Navier-Stokes equations in two and three dimensional flows
[ETN-93-94395] p 647 N94-14816
MARINE BIOLOGY
Remote sensing of aquatic system
[INPE-5271-PRP/159] p 684 N94-13426
Nonlinear relationships between particulate absorption and chlorophyll: Detritus or pigment packaging?
[AD-A266806] p 731 N94-14899
MARINE ENVIRONMENTS
Remote sensing of aquatic system
[INPE-5271-PRP/159] p 684 N94-13426
MARINE METEOROLOGY
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
[DE93-007884] p 709 N94-13911
MARINE TECHNOLOGY
Coastal scour problems and methods for prediction of maximum scour
[AD-A266658] p 726 N94-14775
MARKET RESEARCH
Photovoltaics: Program overview, fiscal year 1992
[DE93-000055] p 701 N94-12914
MARKOV CHAINS
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502
MARKOV PROCESSES
Stochastic scheduling games with Markov decision arrival processes
[CWI-BS-R9231] p 773 N94-14005
The effects of internal fluctuations on a class of nonequilibrium statistical field theories
[DE93-016620] p 774 N94-14441
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502
MARS (PLANET)
MARS Mission research center
[NASA-CR-194034] p 841 N94-13088
Solar radiation on Mars: Stationary photovoltaic array
[NASA-TM-106321] p 626 N94-14730
MARS ATMOSPHERE
Optical properties of CO2 ice and CO2 snow in the ultraviolet, visible, and infrared
[NASA-CR-194110] p 686 N94-14081
MARS LANDING
Planetary protection implementation on future Mars lander missions
[NASA-CP-3216] p 841 N94-13183
MARS PHOTOGRAPHS
Rover imaging system for the Mars rover/sample return mission
[NASA-CR-193413] p 649 N94-13464
MARS PROBES
Exploring Mars
[NASA-TM-109306] p 842 N94-13613
MARS SURFACE
The nature and origin of periodically spaced tectonic features on Mars
[NASA-CR-193821] p 842 N94-13199
Martian sedimentary deposits
[NASA-CR-193266] p 842 N94-13855
A widget based operations simulator for a planetary camera: A model for the high resolution stereo camera on Mars 94
[DLR-FB-92-30] p 651 N94-14044
Optical properties of CO2 ice and CO2 snow in the ultraviolet, visible, and infrared
[NASA-CR-194110] p 686 N94-14081
MASS
Stability of reference masses 1: Evidence for posiible variations in the mass of reference kilograms arising from mercury contamination
[NPL-DMM(A)-86] p 708 N94-13667
MASS SPECTROMETERS
Development of an advanced spacecraft tandem mass spectrometer
[NASA-CR-194195] p 545 N94-13953
MASS SPECTROSCOPY
EBIT Trapping Program
[DE93-014422] p 788 N94-13208
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
Low temperature metal-organic chemical vapor deposition growth processes for high efficiency solar cells
[DE92-010562] p 702 N94-13386
Construction and test of a facility for photon-stimulated field description using excimer laser and time of flight
[ETN-93-94386] p 657 N94-13996
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415
MASS TRANSFER
Research on chemical vapor deposition processes for advanced ceramic coatings
[NASA-CR-193613] p 577 N94-13089
The corrosion behavior of 8001 Al under heat-transfer conditions in an aqueous loop system
[DE93-013450] p 569 N94-13242
Destruction of waste energetic materials using base hydrolysis
[DE93-012738] p 584 N94-13491
Studies of momentum and energy transfer across wavy gas-liquid interfaces
[AD-A266432] p 635 N94-13699
Wind mass and energy deposition
[DE93-013345] p 839 N94-14341
MASSIVE STARS
A photometric study of massive x-ray binaries
[ITN-93-85207] p 829 N94-13231
Charge-exchange reactions and weak interaction rates for Type 2 supernovae
[DE93-015104] p 783 N94-13893
MASSIVELY PARALLEL PROCESSORS
The 3-D massively parallel impact simulations using PCTH
[DE93-011593] p 670 N94-12908
A network evaluation and analysis tool
[DE93-012647] p 758 N94-12917
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Advanced computers and simulation
[DE93-014354] p 740 N94-13286
A data distributed parallel algorithm for ray-traced volume rendering
[NASA-CR-191520] p 749 N94-13721
Efficient, massively parallel eigenvalue computation
[NASA-CR-194289] p 760 N94-13921
VFGEN: A parallel volume fraction generator for hydrocodes
[DE93-011673] p 752 N94-14019
Hybrid S(sub N)/Monte Carlo research and results
[DE93-012677] p 773 N94-14178
An efficient parallel algorithm for matrix-vector multiplication
[DE93-015125] p 754 N94-14399
An overview of parallel scientific visualization
[DE93-017105] p 755 N94-14521
MATCHING
Screening of solar cells
[NASA-TM-106298] p 620 N94-13134
MATERIALS HANDLING
Hydrogen peroxide safety issues
[DE93-013895] p 565 N94-14346
MATERIALS SCIENCE
Recovery of materials impacted at high velocity
[DE93-014150] p 576 N94-12885
Nonlinear analysis, scientific computation, and continuum mechanics applied to the science of materials
[AD-A266641] p 817 N94-14680
MATERIALS TESTS
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871
Flight service evaluation of composite components on the Bell helicopter model 206L
[NASA-CR-191499] p 555 N94-13267
Effect of thermal processing practices on the properties of superplastic Al-Li alloys
[NASA-CR-4548] p 574 N94-14850
Atomic research
[NASA-CR-193843] p 788 N94-14905
MATHEMATICAL LOGIC
Rare attributes in finite universe: Hypotheses testing specification and exact randomized upper confidence bounds
[DE93-012783] p 775 N94-12955
MATHEMATICAL MODELS
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
The 24 GHz measurements of 2.2 lambda conical horn antennas illuminating a conducting sheet
[NASA-TM-109002] p 598 N94-12811
Venus gravity
[NASA-CR-194077] p 841 N94-12823
Thermosolutal convection and macrosegregation in dendritic alloys
[NASA-CR-194039] p 567 N94-12825
Artificial intelligence support for scientific model-building
[NASA-TM-109252] p 761 N94-12890
An analytical investigation of transient effects on rewetting of heated thin flat plates
[NASA-TM-106120] p 628 N94-12968
Tree reconstruction from partial orders
[DE93-009841] p 743 N94-12991
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers
[NASA-CR-191510] p 629 N94-13074
The three-dimensional flow past a rapidly rotating circular cylinder
[NASA-CR-191512] p 630 N94-13075
A coherent flame model of premixed turbulent combustion in a counterflow geometry
[CUED/A-THERMO/TR.60] p 562 N94-13085
Dynamics of adaptive structures: Design through simulations
[NASA-CR-193724] p 540 N94-13112
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions
[NASA-CR-193672] p 706 N94-13170
Lightning simulation and determination of expected striking points
[ITN-93-85202] p 719 N94-13188
Radiative transfer in the dynamic atmospheres of Mira-type variables
[NASA-CR-193324] p 829 N94-13287
A model for rotorcraft flying qualities studies
p 523 N94-13308
The development and potential of inverse simulation for the quantitative assessment of helicopter handling qualities p 523 N94-13311
An analytic modeling and system identification study of rotor/fuselage dynamics at hover p 524 N94-13312
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343
Neptune high-latitude emission: Dependence of angle on frequency
[NASA-CR-193280] p 848 N94-13476
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
[DE93-013506] p 782 N94-13485
Tidal interactions in the Earth Moon system
[COMMUNICATIONS-SER-B-160] p 837 N94-13503
A knowledge-based model for the integration of remote sensing into a mineral exploration program
[ISBN-0-315-58982-5] p 685 N94-13523
Analytical framework for modeling scale-related variabilities in remote sensing p 685 N94-13592
A stochastic model for behavior analysis of fiber-reinforced quasi-brittle materials
p 672 N94-13594

Passage-averaged approximation of turbomachinery flows using vorticity-potential method
[ISBN-0-315-72716-0] p 634 N94-13598
Minimal modeling of the bimodality of extratropical atmospheric planetary waves p 713 N94-13622
Evaluation for rheological constitutive relations, using the indentation technique p 775 N94-13627
Develop research plan for use of atlas data
[NASA-CR-194338] p 714 N94-13709
Theoretical molecular studies of astrophysical interest
[NASA-CR-193300] p 838 N94-13781
Event-driven simulation in SELMON: An overview of EDSE
[NASA-CR-194505] p 749 N94-13784
Antenna pattern control using impedance surfaces
[NASA-CR-194517] p 602 N94-13799
A review of robust detection
[DSIS-93-00400] p 603 N94-13829
Modelling of the temperature distribution in a copper roll for the design of a system of cooled rolls adapted to vertical strip casting
[IMI-93RT-21200-1436-G] p 557 N94-13866
Stochastic performance modeling and evaluation of obstacle detectability with imaging range sensors
[NASA-CR-194510] p 605 N94-13946
Wind erosion in semiarid landscapes: Predictive models and remote sensing methods for the influence of vegetation
[NASA-CR-194029] p 715 N94-13956
Sloshing dynamics on rotating helium dewar tank
[NASA-CR-194403] p 637 N94-13959
Simultaneous solution for core magnetic field and fluid flow beneath an electrically conducting mantle
[NASA-TM-4536] p 716 N94-13960
The role of ionospheric plasma in the magnetosphere
[NASA-CR-194404] p 716 N94-13967
Computer program for thermal and transport properties of parahydrogen from 20 to 10,000 K
[NASA-TP-3378] p 552 N94-14102
A performance prediction model for a fault-tolerant computer during recovery and restoration
[NASA-CR-194490] p 741 N94-14136
Computational techniques and capabilities
p 506 N94-14162
Integration of remote sensing and mathematical modelling in disaster mitigation p 692 N94-14239
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
Three-dimensional modeling of diesel engine intake flow, combustion and emissions-2
[NASA-CR-191189] p 519 N94-14448
A conduction model for the vacuum arc remelting process
[NPL-DMM(A)-98] p 639 N94-14464
The motion of a conical shaped liner driven by explosive load
[ITN-93-85215] p 585 N94-14507
Atmospheric acoustic modeling
[DE93-016727] p 718 N94-14518
Scattering calculations and confining interactions
[NASA-CR-194242] p 786 N94-14549
Long duration measurements of fading on a low elevation angle, 11-GHz satellite path p 613 N94-14661
A database for propagation models
p 614 N94-14665
Contribution towards a draft revision of recommendations 681: Propagation data required for the design of Earth-space land mobile telecommunications systems p 614 N94-14666
Characterisation of the LMS propagation channel at L- and S-bands: Narrowband experimental data and channel modelling p 615 N94-14669
ACTS propagation experiment discussion: Ka-band propagation measurements using the ACTS propagation terminal and the CSU-CHILL and Space Communications Technology Center Florida propagation program
p 616 N94-14678
Nonlinear analysis, scientific computation, and continuum mechanics applied to the science of materials
[AD-A266641] p 817 N94-14680
A study of thin liquid sheet flows
[NASA-TM-106323] p 642 N94-14732
Robust non convex optimization algorithms: Codes and numerical simulation of large scale
[ETN-93-94354] p 756 N94-14813
Optical systems integrated modeling
p 547 N94-14837
Double inlet pulse tube cryocooler theory
[AD-A266832] p 597 N94-14877
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

MATHEMATICAL PROGRAMMING

The 8th Workshop on the Mathematical Foundations of Programming Semantics
[AD-A266436] p 749 N94-13700
Mathematical optimization: A tool for aircraft design
[MBB-LME-251-S-PUB-0492] p 751 N94-14006

MATHEMATICS

Workshop for coordinating South Carolina's pre-college systemic initiatives in science and mathematics
[DE93-012263] p 818 N94-13216

MATRICES (MATHEMATICS)

Tree reconstruction from partial orders
[DE93-009841] p 743 N94-12991
A path-oriented matrix-based knowledge representation system
[NASA-CR-4539] p 744 N94-13065
Codes from an N-dimensional torus simplicially or cellularly decomposed p 747 N94-13438
Formally biorthogonal polynomials and a look-ahead Levinson algorithm for general Toeplitz systems
[NASA-CR-194297] p 748 N94-13586
Stochastic realization of finite-valued processes and primes in the positive matrices
[CWI-BS-R9222] p 773 N94-13677
Efficient, massively parallel eigenvalue computation
[NASA-CR-194289] p 760 N94-13921
On the differential structure of matrix-valued rational inner functions
[CWI-BS-R9228] p 770 N94-14003
An efficient parallel algorithm for matrix-vector multiplication
[DE93-015125] p 754 N94-14399
The use of linked lists in the simulation of controller-structure interaction p 679 N94-14630
Parallel O(log n) algorithms for open- and closed-chain rigid multibody systems based on a new mass matrix factorization technique p 679 N94-14636
Splines, contours and SVD subroutines
[DE93-016088] p 757 N94-14866

MATRIX MATERIALS

Ceramic matrix composites by microwave assisted CVI
[DE93-012640] p 576 N94-12916
Graphite fiber textile preform/copper matrix composites
[NASA-CR-193797] p 558 N94-14050

MATRIX METHODS

Development of time-dependent orthotropic constitutive law of a thermoplastic composite material
p 556 N94-13595

MAXIMUM ENTROPY METHOD

Maximum entropy spectral analysis of the geological time series of the oxygen isotope record from deep-sea cores
[INPE-5465-PRE/1773] p 725 N94-13728
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177

MAXIMUM LIKELIHOOD ESTIMATES

Cancellation of multipath for monopulse radars
[ITN-93-85191] p 600 N94-13538
Maximum likelihood estimation for constrained or missing data models
[AD-A266563] p 773 N94-13585
Enhanced decoding for the Galileo S-band mission
p 609 N94-14380
Supervised classification of remotely sensed images
[DLR-FB-92-07] p 700 N94-14428
Robust estimators and tests in one-sample location problem with particular consideration on modified maximum likelihood process
[ETN-93-94391] p 774 N94-14703
Generalized smooth models
[DE93-013045] p 756 N94-14864

MEAN FREE PATH

Variance reduction unique to coupled electron/photon Monte Carlo transport
[DE93-014999] p 782 N94-13409

MEASURE AND INTEGRATION

An adaptive projection method for the incompressible Euler equations
[DE93-016428] p 639 N94-14434

MEASUREMENT

A measurement and evaluation process model applied to software engineering environments
[INPE-5345-PUD/048] p 746 N94-13428

MEASURING INSTRUMENTS

Phobos/Harp post launch support
[NASA-CR-193676] p 540 N94-13109
Perspective on the National Aero-Space Plane Program instrumentation development
[NASA-TM-4505] p 516 N94-13256
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343
DATAA: Data acquisition made easy
[DE93-014683] p 823 N94-13406
The 3D pneumatic and 2D dynamic probes: Their development and subsequent use in a transonic fan
[RAE-TM-AERO/PROP-22] p 653 N94-14827
A high-precision direct current measuring device over a kiloampere range
[DE93-626409] p 627 N94-14885

MECHANICAL DRIVES

Roller-gear drives for robotic manipulators design, fabrication and test
[NASA-CR-194248] p 660 N94-12802
Development of a high-speed mechanical drive system for oscillating an annular blade row in the bending mode
[NAL-TR-1170] p 502 N94-13342

MECHANICAL ENGINEERING

Machinery dynamics activities in Canadian industries
[IME-MET-TR-006] p 663 N94-14147

MECHANICAL IMPEDANCE

Computer code for scattering from impedance bodies of revolution. Part 3: Surface impedance with s and phi variation. Analytical and numerical results
[NASA-CR-193396] p 599 N94-13264

MECHANICAL PROPERTIES

Simulation studies for surfaces and materials strength
[NASA-CR-193305] p 671 N94-13179
Measurements on two-dimensional arrays of mesoscopic Josephson junctions
[AD-A265129] p 807 N94-13359
Measurement of strain in individual phases of composites before, during, and after mechanical loading
[DE93-014585] p 558 N94-14119
Dynamic mechanical deformation of a SiC(sub p)/Al-Li (8090) composite
[DE93-014586] p 558 N94-14121
Physical and structural properties of a sputtered zirconia-yttria layer used as a thermal resistance
[ONERA-NT-1992-10] p 810 N94-14193
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
Machining and grinding: High rate deformation in practice
[DE93-010718] p 664 N94-14457
The structure and mechanical properties of Ru-Cu and Ru-Ti nanolayer composites
[DE93-014453] p 558 N94-14469
Microstructural influences on the mechanical properties of solder
[DE93-015044] p 573 N94-14474
Structures and shear response of lipid monolayers
[DE93-015076] p 730 N94-14802
Yield properties of tungsten and tungsten heavy alloys
[AD-A266833] p 575 N94-14878

MECHANICAL SHOCK

Development of test techniques to simulate high-frequency mechanical shock on weapon components
[KCP-613-4998] p 675 N94-13907

MEDIAN (STATISTICS)

Robust estimators and tests in one-sample location problem with particular consideration on modified maximum likelihood process
[ETN-93-94391] p 774 N94-14703

MEDICAL EQUIPMENT

Medical evaluations on the KC-135 1991 flight report summary
[NASA-TM-104755] p 731 N94-12832

MEDICAL SCIENCE

Clinical physiology of bed rest
[NASA-TM-104010] p 727 N94-13447
Thyroid alterations in porcine after prolonged exposure to cold or heat
[AD-A266840] p 733 N94-14879

MEDICAL SERVICES

In-flight demonstration of the Space Station Freedom Health Maintenance Facility fluid therapy system (E300/E05) p 595 N94-13775

MEDICINE

Science, technology, and the federal government: National goals for a new era p 827 N94-14115

MELT SPINNING

Preparation and characterization of rapidly solidified Al-Li alloys
[ISBN-0-315-58948-5] p 569 N94-13367

MELTING

Incomplete melting of the Au(100) surface
[DE93-623192] p 569 N94-13227
High temperature behavior of glass (M-8)
p 587 N94-13740
Microwave hybrid heating of alumina filaments
[DE93-012642] p 581 N94-14327
Statistical mechanical theory of liquid entropy
[DE93-016524] p 817 N94-14593

MELTS (CRYSTAL GROWTH)

Growth experiment of narrow band-gap semiconductor PbSnTe single crystals in space (M-1)
p 586 N94-13733
Growth of Si spherical crystals and the surface oxidation (M-9) p 587 N94-13741

Crystal growth of compound semiconductors in a low-gravity environment (InGaAs crystals) (M-22)
p 590 N94-13754
Containerless processing of undercooled melts
[NASA-CR-194350] p 572 N94-14123

MEMBRANE STRUCTURES
Evaluation for membrane components of water recycling system
[NAL-TM-646] p 737 N94-13388

MEMBRANES
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586
Primary and secondary electrical space power based on advanced PEM systems
[DE93-012643] p 553 N94-14689
Structures and shear response of lipid monolayers
[DE93-015076] p 730 N94-14802

MEMORY (COMPUTERS)
Beyond core: Making parallel computer I/O practical
[DE93-012347] p 758 N94-12878
The KSR1: Experimentation and modeling of poststore
[DE93-012539] p 759 N94-13470
Hashing and rehashing in emulated shared memory
[CWI-CS-R9240] p 740 N94-13525
The National Storage Laboratory: A collaborative research project
[DE93-015099] p 760 N94-14475
Execution methods, and parallel virtual machines for distributed implementation of the LCS parallel programming language
[LAAS-93032] p 761 N94-14716

MENTAL PERFORMANCE
Work/rest schedules and performance of S-3 aviators during fleet exercise
[AD-A265807] p 734 N94-12975
Work/rest schedules and performance of F/A-18 aviators during Fleet Exercise 1992
[AD-A265826] p 735 N94-12982
Selection of behavioral tasks and development of software for evaluation of rhesus monkey behavior during spaceflight
[NASA-CR-194176] p 728 N94-13865
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744

MERCURY (METAL)
Stability of reference masses 1: Evidence for posiible variations in the mass of reference kilograms arising from mercury contamination
[NPL-DMM(A)-86] p 708 N94-13667

MERGING ROUTINES
Paradigms for very fast parallel algorithms
[ITN-93-85212] p 755 N94-14556

MESON RESONANCE
Further study of the X(1910) meson
[DE93-621443] p 782 N94-13362

MESON-NUCLEON INTERACTIONS
Dynamics of pion-nucleus systems
[DE93-014449] p 785 N94-14468

MESONS
Aspects of symmetry violation
[DE93-011003] p 779 N94-12997
Further study of the X(1910) meson
[DE93-621443] p 782 N94-13362
The off shell (rho)-(omega) mixing in the QCD sum rules
[DE93-014845] p 786 N94-14527
Early baryon and meson spectroscopy culminating in the discovery of the Omega minus SU(3) and quarks
[DE93-014321] p 787 N94-14580
Tests of non-local interferences in kaon physics at asymmetric phi-factories
[DE93-013905] p 787 N94-14857

MESOSCALE PHENOMENA
Circulation model experiments of the Gulf Stream using satellite-derived fields
[AD-A266067] p 725 N94-12990
Effects of surface thermal forcing on stratified flow past an isolated obstacle p 633 N94-13553
Numerical simulation and parameterization of orographic gravity waves p 713 N94-13647
Regional climatology sensitivity studies
[DE93-010712] p 722 N94-14057

MESSAGE PROCESSING
Fail-safe PVM: A portable package for distributed programming with transparent recovery
[AD-A266594] p 749 N94-13779
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744

MESSAGES
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744
Toward a verifiable approach to the design of concurrent computations
[DE93-012908] p 756 N94-14844

METABOLISM
Clinical physiology of bed rest
[NASA-TM-104010] p 727 N94-13447
Endocrine and metabolic changes in payload specialist (L-1) p 591 N94-13758
Metabolic rate measurements comparing supine with upright upper-body exercises
[NASA-CR-4549] p 729 N94-14028
Cellular responses to low-gravity: Pilot studies on suborbital rockets and orbiting spacecraft
[NASA-CR-194402] p 729 N94-14494

METAL COATINGS
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
[NASA-CR-193647] p 575 N94-12789
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
[DE93-013853] p 655 N94-13243
Laser CO2 beam transmission through hollow metallic waveguide coated by a thin internal dielectric layer
[ITN-93-85201] p 656 N94-13571
Metastability of yttrium-oxides
[DE93-016548] p 813 N94-14440
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-006] p 558 N94-14573
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574
Materials and structures p 546 N94-14835

METAL CRYSTALS
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
[DE93-013421] p 806 N94-13136
Growth experiment of organic metal crystal in low gravity (M-21) p 590 N94-13753

METAL FATIGUE
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A265627] p 568 N94-12993
Role of microstructure on fatigue durability of aluminum aircraft alloys
[AD-A266350] p 571 N94-13697
Fatigue design curves for 6061-T6 aluminum
[DE93-011849] p 571 N94-14021

METAL FIBERS
Elastic-plastic finite element analyses of an unidirectional, 9 vol percent tungsten fiber reinforced copper matrix composite
[NASA-TM-106304] p 559 N94-14719

METAL FILMS
The x ray dichroism experiments using circular polarization
[DE93-013195] p 568 N94-13036
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
[DE93-013770] p 812 N94-14345

METAL FOILS
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814
Stripping efficiencies for 277 MeV/amu gold beam on copper foils
[DE93-014306] p 569 N94-13221
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
[DE93-013506] p 782 N94-13485
Thermal conductance of pressed metallic contacts augmented with Indium foil or Apiezon-N (tm) grease at liquid helium temperatures
[NASA-TM-108779] p 776 N94-14027

METAL HYDRIDES
Materials compatibility of hydride storage materials with austenitic stainless steels
[DE93-013688] p 703 N94-13691
Catalytic arene hydrogenation using early transition metal hydride compounds
[DE93-015500] p 573 N94-14402

METAL IONS
Thermochemistry of transition metal clusters
[DE93-016201] p 571 N94-13977
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194527] p 659 N94-14576
Reactor studies of metal ions associated with chromatographic silica
[AD-A266675] p 573 N94-14779

METAL MATRIX COMPOSITES
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871
NDE of titanium alloy MMC rings for gas turbine engines
[NASA-TM-106188] p 555 N94-13138
An advanced test technique to quantify thermomechanical fatigue damage accumulation in composite materials
[NASA-CR-191147] p 555 N94-13139
Inelastic deformation mechanisms in SCS-6/Ti 15-3 MMC lamina under compression
[NASA-CR-191170] p 555 N94-13378
Inhibiting corrosion in Gr/Al and Gr/Mg metal matrix composites using nonequilibrium alloying techniques
[AD-A266547] p 556 N94-13583
Evaluation for rheological constitutive relations, using the indentation technique p 775 N94-13627
Modified carbon for improved corrosion resistance
[AD-D015741] p 556 N94-13663
UK interlaboratory tensile tests on Al alloy/SiC particulate metal matrix composites
[NPL-DMM(A)-77] p 570 N94-13666
Preparation of particle-dispersion alloys (M-6)
p 587 N94-13738
Fabrication of very-low-density, high-stiffness carbon fiber/aluminum hybridized composite with ultra-low density and high stiffness (M-11) p 588 N94-13743
Fatigue and residual strength characteristics of fiber metal laminates subjected to incidental damage
[LR-708] p 674 N94-13803
Modelling of the temperature distribution in a copper roll for the design of a system of cooled rolls adapted to vertical strip casting
[IMI-93RT-21200-1436-G] p 557 N94-13866
Hierarchical nonlinear behavior of hot composite structures
[NASA-TM-106229] p 676 N94-14041
Optimal synthesis of hot composite laminates with interphase layers
[NASA-TM-106326] p 557 N94-14042
Elastic-plastic finite element analyses of an unidirectional, 9 vol percent tungsten fiber reinforced copper matrix composite
[NASA-TM-106304] p 559 N94-14719
Thermomechanical and isothermal fatigue behavior of a (90)sub 8 titanium matrix composite
[NASA-CR-191196] p 560 N94-14822
Thermoelastic response of metal matrix composites with large-diameter fibers subjected to thermal gradients
[NASA-TM-106344] p 560 N94-14823

METAL OXIDE SEMICONDUCTORS
1/f noise and oxide traps in MOSFETs
[DE93-007581] p 619 N94-12942
Molecular simulator: A basic tool for submicron MOS processes development
[LAAS-92484] p 814 N94-14697
Design and optimization of high voltage lateral DMOS devices using RESURF technology
[LAAS-92511] p 626 N94-14711

METAL OXIDES
Kinetics of photodeposition of superconducting films
[DE93-015511] p 812 N94-14348

METAL PARTICLES
The effect of crystal tilt on high resolution micrographs of small metal particles
[DE93-013915] p 574 N94-14795

METAL PLATES
Experimental technique to simulate orbital-debris impact on space shields at impact velocities over 10 km/s
[DE93-011619] p 539 N94-12909
Development of test techniques to simulate high-frequency mechanical shock on weapon components
[KCP-613-4998] p 675 N94-13907
High counting rate resistive-plate chamber
[DE93-014928] p 651 N94-14452
Heavy section steel irradiation experiment
[DE93-015517] p 573 N94-14537

METAL POWDER
Study on the mechanism of liquid phase sintering (M-12) p 588 N94-13744
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184

METAL PROPELLANTS
Combustion-induced crack/debond propagation in solid propellants p 584 N94-13560

METAL SURFACES
Incomplete melting of the Au(100) surface
[DE93-623192] p 569 N94-13227
About the influence of inert gas ion implantation on metal corrosion stability
[DE93-620574] p 569 N94-13360
Surfaces and interfaces of ceramics and metals
[DE93-014959] p 578 N94-13408
Excimer laser surface processing of titanium
[DE93-012633] p 570 N94-13512
Materials compatibility of hydride storage materials with austenitic stainless steels
[DE93-013688] p 703 N94-13691
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525
Quantum state resolved desorption of CO from solid surfaces
[DE93-016876] p 814 N94-14597
METAL VAPOR LASERS
Recent results from material processing studies on new generation lasers
[DE93-013841] p 653 N94-12898
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
[DE93-013853] p 655 N94-13243
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
METAL VAPORS
Gas-evaporation in low-gravity field (cogelation mechanism of metal vapors) (M-14) p 588 N94-13746
METAL-GAS SYSTEMS
First-principles studies of phase stability and the structural and dynamical properties of hydrogen-metal systems
[DE93-016129] p 570 N94-13374
METAL-METAL BONDING
A high voltage dielectrically isolated smart power technology based on silicon direct bonding
[LAAS-92492] p 626 N94-14698
METALLICITY
On inhomogeneous halo collapse and the globular cluster metallicity gradient
[DE93-013090] p 834 N94-13011
METALLIZING
Electrochemical planarization for microelectronic circuits
[DE93-017214] p 627 N94-14870
METALLOGRAPHY
Estimation of strain in 1-kW primary containment vessels by microstructural examination
[DE93-013053] p 573 N94-14316
METALORGANIC CHEMICAL VAPOR DEPOSITION
Low temperature metal-organic chemical vapor deposition growth processes for high efficiency solar cells
[DE92-010562] p 702 N94-13386
Fabrication of AlGaAs/GaAs-light-emitting devices by selective MOCVD using dialkylmetalchloride p 627 N94-13433
METALS
Structure stability and spectroscopy of metal clusters
[DE93-016142] p 567 N94-12836
A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
[ARL-RR-6-PT-2] p 670 N94-12928
Metal-semiconductor, composite radiation detectors
[DE93-013313] p 619 N94-12994
Boundary stability under nonequilibrium conditions
[DE93-016259] p 809 N94-13980
Machining and grinding: High rate deformation in practice
[DE93-010718] p 664 N94-14457
The effect of crystal tilt on high resolution micrographs of small metal particles
[DE93-013915] p 574 N94-14795
METASTABLE STATE
Metastable enhancement of C(+) and O(+) capture reactions
[DE93-015075] p 807 N94-13373
Metastability of yttrium-oxides
[DE93-016548] p 813 N94-14440
METEOROID CONCENTRATION
Meteoroid environment near the Earth-Moon system
[NASA-CR-193670] p 835 N94-13203
METEOROID PROTECTION
Comparison of analytic Whipple bumper shield ballistic limits with CTH simulations
[DE93-015126] p 539 N94-13006
BALLIST: A computer program to empirically predict the bumper thickness required to prevent perforation of the Space Station by orbital debris
[NASA-CR-193825] p 543 N94-14120
METEOROID SHOWERS
Meteoroid environment near the Earth-Moon system
[NASA-CR-193670] p 835 N94-13203
METEOROIDS
Meteor forward scatter studies
[DSIS-93-00382] p 602 N94-13801
METEOROLOGICAL BALLOONS
Attitude determination of stratospheric balloons using Kalman filters
[INPE-5498-TDI/513] p 649 N94-13366
METEOROLOGICAL PARAMETERS
Bibliography of urban climate in tropical/subtropical areas, 1981-1991
[WCASP-25] p 718 N94-12918
The role of clouds and oceans in global greenhouse warming
[DE93-016206] p 706 N94-13079
Study on TRMM data utilization for meteorology
[NASDA-CNT-930007] p 721 N94-13643
National use of the groups 7wwW1W2 and 960ww for ground stations
[KNMI-PUBL-181] p 722 N94-13926
METEOROLOGICAL RADAR
Preliminary meteorological results for 1992 West Coast Scotland Experiment
[DE93-014677] p 720 N94-13404
Remote identification of rain and hail with a polarization diversity radar
[ISBN-0-315-55623-4] p 720 N94-13516
TRMM precipitation radar algorithm p 690 N94-14224
Estimate of sampling errors of TRMM rainfall observation by using radar-AMeDAS composite data p 690 N94-14225
Multiparameter airborne rain radar development for TRMM validation and TRMM-follow-on study p 690 N94-14226
Future TRMM follow-on mission p 691 N94-14228
METEOROLOGICAL SERVICES
Weather forecasting support for AASE-2
[NASA-CR-194342] p 721 N94-13675
METEOROLOGY
Optimization and eigenvalue computation with application to meteorology and oceanography
[DE93-015310] p 744 N94-13024
Preliminary meteorological results for 1992 West Coast Scotland Experiment
[DE93-014677] p 720 N94-13404
Evaluation of infrared sensors for autonomous landing guidance
[AD-A266450] p 513 N94-13703
Activities report of the Netherlands Remote Sensing Board
[ETN-93-93880] p 686 N94-14073
CCI working group on climate data and its rapporteurs
[WCDMP-21] p 723 N94-14118
METHANE
Conversion of light hydrocarbon gases to metal carbides for production of liquid fuels and chemicals
[DE93-014962] p 583 N94-13002
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
METHOD OF CHARACTERISTICS
Method of characteristics design of a supersonic wind tunnel nozzle with square cross-section, supplement 3
[NASA-CR-194359] p 527 N94-12824
METHOD OF MOMENTS
Antenna pattern control using impedance surfaces
[NASA-CR-194517] p 602 N94-13799
METHYL ALCOHOL
Biofuels for transportation: The road from research to the marketplace
[DE93-000091] p 585 N94-14454
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
METHYL COMPOUNDS
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375
METRIC SPACE
On the foundations of final semantics: Non-standard sets, metric spaces, partial orders
[CWI-CS-R9241] p 768 N94-13526
METROLOGY
Activities report of the National Electrotechnical Institute Galileo Ferraris
[ETN-93-94224] p 627 N94-14812
Investigation of Zerodur material processing
[NASA-CR-193842] p 793 N94-14903
MICHELSON INTERFEROMETERS
IMG: Interferometric monitor for greenhouse gases p 689 N94-14217
MICROANALYSIS
Procedures for analysis of debris relative to Space Shuttle systems
[NASA-TM-109190] p 534 N94-12900
High spatial resolution x ray microanalysis: Comparison of experiment and incoherent scattering calculations
[DE93-011685] p 648 N94-13044
Microstructural evolution of NARloy-Z at elevated temperatures
[NASA-TM-108419] p 571 N94-13715
MICROBALANCES
A quartz crystal microbalance study of lithium insertion and removal into evaporated films MO(y) (M = Mo, Fe, and V)
[DSIS-93-00649] p 810 N94-14203
MICROBIOLOGY
Chaos and microbial systems
[DE93-016814] p 730 N94-14596
MICROBURSTS (METEOROLOGY)
Optimal lateral escape maneuvers for microburst encounters during final approach
[LR-691] p 511 N94-13534
MICROCHANNEL PLATES
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
[DE93-012592] p 789 N94-14460
MICROCHANNELS
Microchannel cooled heatsinks for high average power laser diode arrays
[DE93-016533] p 658 N94-14442
MICROCRACKS
Modeling the impact behavior of AD85 ceramic under multi-axial loading
[AD-A265877] p 576 N94-12932
Automated crack identification for cement paste
[AD-A265753] p 665 N94-13042
A stochastic model for behavior analysis of fiber-reinforced quasi-brittle materials p 672 N94-13594
Micromechanical damage theories for brittle solids with interacting microcracks
[AD-A266348] p 673 N94-13778
MICROCRYSTALS
Boundary stability under nonequilibrium conditions
[DE93-016259] p 809 N94-13980
MICROELECTRONICS
Solderability of surface mount devices
[AD-A265751] p 620 N94-13040
Mongoose ASIC microcontroller programming guide
[NASA-RP-1319] p 623 N94-13871
An ultra-compact processor module based on the R3000
[DE93-012549] p 625 N94-14427
Microwave interconnection
[DE93-016580] p 625 N94-14533
Electrochemical planarization for microelectronic circuits
[DE93-017214] p 627 N94-14870
MICROGRAVITY
Monoclonal antibodies directed against surface molecules of multicell spheroids
[NASA-CR-193560] p 727 N94-12795
Medical evaluations on the KC-135 1991 flight report summary
[NASA-TM-104755] p 731 N94-12832
Reduce fluid experiment system flight data from IML-1
[NASA-CR-193835] p 804 N94-12873
Advanced protein crystal growth programmatic sensitivity study
[NASA-CR-193827] p 804 N94-12934
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Capillary surfaces in a wedge: Differing contact angles
[DE93-013903] p 631 N94-13244
Temperature dependence of diffusivities, preliminary definition phase
[NASA-CR-192613] p 648 N94-13326
Crystal growth of ZnSe and related ternary compound semiconductors by physical vapor transport
[NASA-CR-193834] p 807 N94-13444
Thermal gravitational modelling and scaling of two-phase heat transport systems: Similarity considerations and useful equations predictions versus experimental results
[NLR-TP-91477-U] p 632 N94-13533
STS-30 Magellan IUS/EVA training in WETF
[NASA-TM-109300] p 737 N94-13601
Spacelab J experiment descriptions
[NASA-TM-4517] p 586 N94-13732
Growth experiment of narrow band-gap semiconductor PbSnTe single crystals in space (M-1) p 586 N94-13733
Growth of PbSnTe single crystal by traveling-zone method in low gravity (M-2) p 586 N94-13734

Growth of semiconductor compound single crystal InSb by floating zone method (M-3) p 586 N94-13735
Casting of superconducting composite materials (M-4) p 586 N94-13736
Formation of deoxidization products in iron ingot by the addition of Al, Si, and/or Mn (M-5) p 587 N94-13737
Preparation of particle-dispersion alloys (M-6) p 587 N94-13738
Diffusion in liquid state and solidification of binary system (M-7) p 587 N94-13739
High temperature behavior of glass (M-8) p 587 N94-13740
Growth of Si spherical crystals and the surface oxidation (M-9) p 587 N94-13741
Study on solidification of immisible alloys (M-10) p 588 N94-13742
Fabrication of very-low-density, high-stiffness carbon fiber/aluminum hybridized composite with ultra-low density and high stiffness (M-11) p 588 N94-13743
Study on the mechanism of liquid phase sintering (M-12) p 588 N94-13744
Fabrication of Si-As-Te ternary amorphous semiconductor in the microgravity environment (M-13) p 588 N94-13745
Gas-evaporation in low-gravity field (cogelation mechanism of metal vapors) (M-14) p 588 N94-13746
Drop dynamics in space and interference with acoustic field (M-15) p 588 N94-13747
Study of bubble behavior in weightlessness (effects of thermal gradient and acoustic stationary wave) (M-16) p 589 N94-13748
Preparation of optical materials used in non-visible region (M-17) p 589 N94-13749
Marangoni effect induced convection in material processing under microgravity (M-18) p 589 N94-13750
Solidification of eutectic system alloys in space (M-19) p 589 N94-13751
Growth of samarskite crystal under microgravity conditions (M-20) p 590 N94-13752
Growth experiment of organic metal crystal in low gravity (M-21) p 590 N94-13753
Crystal growth of compound semiconductors in a low-gravity environment (InGaAs crystals) (M-22) p 590 N94-13754
Microgravity acceleration measurement environment characterization p 590 N94-13755
Protein crystal growth p 591 N94-13756
Health monitoring of Japanese payload specialist: Autonomic nervous and cardiovascular responses under reduced gravity condition (L-0) p 591 N94-13757
Neurophysiological study on visuo-vestibular control of posture and movement in fish during adaptation to weightlessness p 591 N94-13759
Separation of biogenic materials by electrophoresis under zero gravity (L-3) p 592 N94-13760
Comparative measurement of visual stability in Earth and cosmic space (L-4) p 592 N94-13761
Crystal growth of enzymes in low gravity (L-5) p 592 N94-13762
Studies on the effects of microgravity on the ultrastructure and functions of cultured mammalian cells (L-6) p 592 N94-13763
Gravity, chromosomes, and organized development in aseptically cultured plant cells p 592 N94-13764
Effect of low gravity on calcium metabolism and bone formation (L-7) p 593 N94-13765
Manual control in space research on perceptual-motor functions under zero gravity conditions (L-10) p 593 N94-13767
Study on the biological effect of cosmic radiation and the development of radiation protection technology (L-11) p 593 N94-13768
Amphibian fertilization and development in microgravity p 594 N94-13770
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
Countermeasure for reducing post-flight orthostatic intolerance: Lower Body Negative Pressure (LBNP) experiment E140 p 594 N94-13772
Bone culture research p 595 N94-13773
Autogenic feedback training experiment: A preventative method for space motion sickness p 595 N94-13774
In-flight demonstration of the Space Station Freedom Health Maintenance Facility fluid therapy system (E300/E05) p 595 N94-13775
Renal function alterations during skeletal muscle disuse in simulated microgravity [NASA-CR-194258] p 733 N94-13824
The influence of a microgravity environment on the dendritic morphology during directional solidification of hypoeutectic Al-Si alloys [NASA-CR-194139] p 571 N94-13891
Sloshing dynamics on rotating helium dewar tank [NASA-CR-194403] p 637 N94-13959
Cellular responses to low-gravity: Pilot studies on suborbital rockets and orbiting spacecraft [NASA-CR-194402] p 729 N94-14494

MICROGRAVITY APPLICATIONS
Stabilized electromagnetic levitator [NASA-CR-194261] p 586 N94-12805
Reduce fluid experiment system flight data from IML-1 [NASA-CR-193835] p 804 N94-12873

MICROHARDNESS
Fracture behavior of vanadium/vanadium silicide in-situ composites [DE93-013422] p 556 N94-13389

MICROMECHANICS
Micromechanical strength effects in shock compression of solids [DE93-014425] p 670 N94-12887
A stochastic model for behavior analysis of fiber-reinforced quasi-brittle materials p 672 N94-13594
Micromechanical damage theories for brittle solids with interacting microcracks [AD-A266348] p 673 N94-13778
Hierarchical nonlinear behavior of hot composite structures [NASA-TM-106229] p 676 N94-14041
Probabilistic micromechanics for high-temperature composites [NASA-CR-191150] p 676 N94-14408
Elastic-plastic finite element analyses of an unidirectional, 9 vol percent tungsten fiber reinforced copper matrix composite [NASA-TM-106304] p 559 N94-14719
Thermoelastic response of metal matrix composites with large-diameter fibers subjected to thermal gradients [NASA-TM-106344] p 560 N94-14823

MICROMETEOROIDS
Interactions between spacecraft and their environments [NASA-TM-106115] p 541 N94-13917
Secondary impact hazard assessment [NASA-CR-188261] p 543 N94-14483

MICROMETEOROLOGY
The footprint area influencing a high-volume air sampler [DE93-013947] p 706 N94-13095
Atmospheric turbulence and diffusion research [DE93-011842] p 718 N94-14425

MICROMOTORS
Design and testing of planar magnetic micromotors fabricated by deep x ray lithography and electroplating [DE93-012856] p 618 N94-12821

MICROORGANISMS
Biodiesel/aquatic species project report, FY 1992 [DE93-010024] p 709 N94-14087

MICROPOROSITY
Amorphous sol-gel insulating films [DE93-012859] p 576 N94-12866
Quantitative mapping of pore fraction variations in silicon nitride using an ultrasonic contact scan technique [NASA-TP-3377] p 665 N94-13056

MICROPROCESSORS
The KSR1: Experimentation and modeling of poststore [DE93-012539] p 759 N94-13470
Mongoose ASIC microcontroller programming guide [NASA-RP-1319] p 623 N94-13871
Test report for single event effects of the 80386DX microprocessor [NASA-CR-194509] p 741 N94-13943
Adaptive Signal Processing Testbed: VME-based DSP board market survey [DSIS-93-00274] p 605 N94-14015
An ultra-compact processor module based on the R3000 [DE93-012549] p 625 N94-14427

MICROSCOPES
A Fourier transform microscope for x ray and/or gamma ray imaging [AD-D015742] p 791 N94-13664

MICROSCOPY
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials [DE93-014335] p 806 N94-13150
Imaging micrcscopy with x ray lasers at Lawrence Livermore National Laboratory [DE93-013419] p 655 N94-13258
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling [DE93-014655] p 580 N94-14124
Image reconstruction for x ray holographic microscopy [DE93-013094] p 653 N94-14772

MICROSTRIP ANTENNAS
Analysis of microstrip patch antennas with nonzero surface resistance [NASA-TP-3362] p 604 N94-13916

MICROSTRIP TRANSMISSION LINES
Analysis and characterizations of planar transmission structures and components for superconducting and monolithic integrated circuits [NASA-CR-193675] p 619 N94-13026

MICROSTRUCTURE
Amorphous sol-gel insulating films [DE93-012859] p 576 N94-12866
Deposition of crystalline boron thick layers from gas phase [DE93-620499] p 576 N94-12867
Recovery of materials impacted at high velocity [DE93-014150] p 576 N94-12885
Role of microstructure on fatigue durability of aluminum aircraft alloys [AD-A265627] p 568 N94-12993
Gas atomized Er3Ni powder for cryocooler applications [DE93-011564] p 568 N94-13000
Effect of microstructure on passive film formation and breakdown on Al alloys [AD-A265339] p 569 N94-13050
Transport properties of disordered porous media from the microstructure [DE93-016065] p 806 N94-13152
Fracture behavior of vanadium/vanadium silicide in-situ composites [DE93-013422] p 556 N94-13389
Tensile properties of LE-7 engine material with welded joint [NAL-TR-1188] p 570 N94-13460
Excimer laser surface processing of titanium [DE93-012633] p 570 N94-13512
Processing and mechanical properties of silicon carbide platelet reinforced alumina composites p 556 N94-13557
Role of microstructure on fatigue durability of aluminum aircraft alloys [AD-A266350] p 571 N94-13697
Microstructural evolution of NARloy-Z at elevated temperatures [NASA-TM-108419] p 571 N94-13715
The microstructural response of near gamma-TiAl+W to heat treatment [DSIS-93-00237] p 571 N94-13840
The influence of a microgravity environment on the dendritic morphology during directional solidification of hypoeutectic Al-Si alloys [NASA-CR-194139] p 571 N94-13891
High-resolution Z-contrast imaging and hole concentration mapping of YBCO thin films [DE93-015803] p 808 N94-13930
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels [DE93-011602] p 572 N94-14058
Physical and structural properties of a sputtered zirconia-yttria layer used as a thermal resistance [ONERA-NT-1992-10] p 810 N94-14193
Theory of the electronic and structural properties of solid state oxides [DE93-016051] p 811 N94-14296
Estimation of strain in 1-kW primary containment vessels by microstructural examination [DE93-013053] p 573 N94-14316
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films [DE93-013770] p 812 N94-14345
A microstructural approach to fatigue crack processes in poly crystalline BCC materials [DE93-016666] p 812 N94-14354
Pore-size-distribution of cationic polyacrylamide hydrogels [DE93-015218] p 581 N94-14400
Room temperature degradation of YBa2Cu3O(7-x) superconductors in varying relative humidity environments [NASA-TP-3368] p 813 N94-14409
Theoretical studies of breakdown in random media [DE93-018107] p 558 N94-14418
Computational diagnostics for detecting phase transitions during nanoindentation [DE93-016536] p 813 N94-14439
Microstructural influences on the mechanical properties of solder [DE93-015044] p 573 N94-14474
Processing and testing of high toughness silicon nitride ceramics [NASA-CR-191190] p 582 N94-14543
Current titles --- National Center for Electron Microscopy [DE93-015859] p 851 N94-14587
Solution chemistry optimization of sol-gel processed PZT thin films [DE93-013776] p 814 N94-14695

Molecular simulator: A basic tool for submicron MOS processes development
[LAAS-92484] p 814 N94-14697
An investigation of the role of second phase particles in the design of ultra high strength steels of improved toughness
[AD-A266774] p 573 N94-14786
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794
Microstructural origins and modeling of intergranular crack initiation in an Al-Li-Cu-Mg-(Zr) alloy
[ISAL-91-0012] p 574 N94-14814
Influence of heat treatment on microstructure of Ti-35wt Al prepared by elemental powder metallurgy
[GKSS/92/E/27] p 574 N94-14821
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
[ITN-93-85218] p 816 N94-14826

MICROWAVE ABSORPTION
H2S data reduction
[NASA-CR-193389] p 617 N94-14743

MICROWAVE AMPLIFIERS
Microwave generation for magnetic fusion energy applications
[DE93-013864] p 654 N94-13058

MICROWAVE ANTENNAS
Enhanced decoding for the Galileo S-band mission
p 609 N94-14380

MICROWAVE CIRCUITS
Processing, fabrication and demonstration of HTS integrated microwave circuits
[AD-A265789] p 619 N94-12892
A millimeter-wave tunneladder TWT
[NASA-CR-182183] p 620 N94-13106
MMIC packaging technology development
[NASA-CR-194183] p 621 N94-13336
Electrical noise in microwave field effect and bipolar transistors
[LAAS-93042] p 616 N94-14717

MICROWAVE EMISSION
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
[INPE-5444-TDI/490] p 720 N94-13614
Comparative study of x ray and microwave emissions during solar flares
[NASA-CR-194532] p 845 N94-14577

MICROWAVE EQUIPMENT
Microwave interconnection
[DE93-016580] p 625 N94-14533

MICROWAVE FREQUENCIES
Hard x ray/microwave spectroscopy of solar flares
[NASA-CR-194399] p 844 N94-13958

MICROWAVE LANDING SYSTEMS
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
[NAL-TR-1175] p 513 N94-13344

MICROWAVE POWER BEAMING
Low-current traveling wave tube for use in the microwave power module
[NASA-TP-3344] p 620 N94-13110

MICROWAVE RADIOMETERS
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite
[INPE-5444-TDI/490] p 720 N94-13614
Phase aligner for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
[NASA-TM-4518] p 623 N94-13878
Future TRMM follow-on mission p 691 N94-14228
Radiometric observations of atmospheric attenuation at 20.6 and 31.65 GHz: The Wave Propagation Laboratory data base p 613 N94-14660

MICROWAVE REFLECTOMETERS
The MRIS feasibility study
[NASA-TM-107763] p 597 N94-12804
Scattering of reflectometer signals from rippled surfaces
[PPL-138] p 602 N94-13802

MICROWAVE RESONANCE
Measurement electronics of industrial microwave resonator sensors
[TKK-S-RAD-S194] p 625 N94-14096

MICROWAVE SCATTERING
Scattering of reflectometer signals from rippled surfaces
[PPL-138] p 602 N94-13802

MICROWAVE SENSORS
Measurement electronics of industrial microwave resonator sensors
[TKK-S-RAD-S194] p 625 N94-14096
ERS-1 system
[ESA-SP-1146] p 699 N94-14353

MICROWAVE SOUNDING
DMSP F11 SSM/T-2 calibration and validation
[AD-A265817] p 719 N94-12978
Water-vapour, total water and rainrate from passive microwave satellite data over ocean
[DLR-FB-92-37] p 723 N94-14189

MICROWAVE SPECTRA
Submillimeter, millimeter, and microwave spectral line catalogue, revision 3
[NASA-CR-194501] p 602 N94-13813

MICROWAVES
Ceramic matrix composites by microwave assisted CVI
[DE93-012640] p 576 N94-12916
Search for extraterrestrial intelligence/high resolution microwave survey team member
[NASA-CR-194177] p 739 N94-13086
Comment of parameter excitation of Alfven and Heliicon waves in a magnetoactive compensated semiconductor by microwave radiation
[DE93-623203] p 806 N94-13228
Problems and opportunities in microwave joining of ceramics
[DE93-014998] p 579 N94-13888
Microwave hybrid heating of alumina filaments
[DE93-012642] p 581 N94-14327
Microwave sintering of large alumina bodies
[DE93-012752] p 581 N94-14340
Microwave interconnection
[DE93-016580] p 625 N94-14533

MIDDLE ATMOSPHERE
Electrodynamics of the middle atmosphere: Superpressure balloon program
[NASA-CR-193671] p 712 N94-13293
A rocket-borne lidar for studies of the middle atmosphere
[FFI/RAPPORT-92/7034] p 715 N94-13949
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969

MIE SCATTERING
Bridging the gap between the Rayleigh and Thomson limits for various convex bodies
[DSIS-93-00613] p 607 N94-14204

MILITARY HELICOPTERS
ADS-33C related handling qualities research performed using the NRC Bell 205 airborne simulator
p 521 N94-13295
MIL-H-8501B: Application to shipboard terminal operations p 521 N94-13296
Some lessons learned in three years with ADS-33C --- rotorcraft handling qualities specification
p 521 N94-13299
Investigation of the effects of bandwidth and time delay on helicopter roll-axis handling qualities
p 522 N94-13300
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
Design and pilot evaluation of the RAH-66 Comanche Core AFCS p 525 N94-13321
Design and pilot evaluation of the RAH-66 Comanche selectable control modes p 525 N94-13322
An analysis of helicopter attrition using a low level combat simulation
[DSIS-93-00282] p 515 N94-13839
HELSCAM V2.0: Development and application guide
[DSIS-93-00137] p 515 N94-13867

MILITARY TECHNOLOGY
Solderability of surface mount devices
[AD-A265751] p 620 N94-13040
Knowledge-based oceanographic image compression
[AD-A265752] p 821 N94-13041

MILLIMETER WAVES
A millimeter-wave tunneladder TWT
[NASA-CR-182183] p 620 N94-13106
Long-pulse operation of a gyrotron with beam/RF separation
[DE93-015007] p 649 N94-13410
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648
Submillimeter, millimeter, and microwave spectral line catalogue, revision 3
[NASA-CR-194501] p 602 N94-13813

MIMD (COMPUTERS)
Parallelizing Timed Petri Net simulations
[NASA-CR-194278] p 758 N94-12938
Parallel implementation of an algorithm for Delaunay triangulation
[NASA-TM-103951] p 740 N94-12973
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
An overview of parallel scientific visualization
[DE93-017105] p 755 N94-14521
On the solution of a class of graph problems by parallel algorithms
[LAAS-92514] p 756 N94-14712
Identification of continuous-time dynamical systems: Neural network based algorithms and parallel implementation
[DE93-014427] p 766 N94-14737

MIMO (CONTROL SYSTEMS)
Transmission zeros of spacecraft attitude control system
[NAL-TR-1166] p 540 N94-13339
Control system design for flexible structures using data models p 527 N94-14646

MINERAL EXPLORATION
A knowledge-based model for the integration of remote sensing into a mineral exploration program
[ISBN-0-315-58982-5] p 685 N94-13523

MINERALOGY
Spectral analysis for automated exploration and sample acquisition
[NASA-CR-194095] p 545 N94-13189

MINIATURIZATION
Performance evaluation of the honeywell GG1308 miniature ring laser gyroscope
[AD-A266694] p 653 N94-14782

MINORITY CARRIERS
Intrinsic and interfacial recombination in OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As heterostructures
[DE93-009844] p 809 N94-14083
Multicrystalline silicon solar cells: Gettering optimization and characterization
[DE93-015001] p 705 N94-14861

MIRROR FUSION
Mirror fusion propulsion system: A performance comparison with alternate propulsion systems for the manned Mars Mission
[NASA-TM-109248] p 550 N94-13147

MIRRORS
Project proposal for partial computational physics support for Survivability of Coatings program
[DE93-013788] p 576 N94-12939
Reflective coatings for solar applications
[DE93-010026] p 702 N94-13381
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
Laser-damage susceptibility of nodular defects in dielectric mirror coatings: AFM measurements and electric-field modeling
[DE93-014655] p 580 N94-14124
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525
Fabrication p 546 N94-14834

MISSILE CONTROL
Test/analysis correlation and model updating of the STARS 1 and 2 missile systems
[DE93-013774] p 748 N94-13578

MISSILE DESIGN
Test/analysis correlation and model updating of the STARS 1 and 2 missile systems
[DE93-013774] p 748 N94-13578

MISSILE LAUNCHERS
Test/analysis correlation and model updating of the STARS 1 and 2 missile systems
[DE93-013774] p 748 N94-13578

MISSILE SYSTEMS
Test/analysis correlation and model updating of the STARS 1 and 2 missile systems
[DE93-013774] p 748 N94-13578

MISSILES
Test/analysis correlation and model updating of the STARS 1 and 2 missile systems
[DE93-013774] p 748 N94-13578
Electromagnetic wave test p 508 N94-14173

MISSION PLANNING
MARS Mission research center
[NASA-CR-194034] p 841 N94-13088
Present status of JEM utilization projects
p 530 N94-13273
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
[EOC-92-01-0007] p 687 N94-14091
Earth observation experiment data analysis
p 687 N94-14093
ADEOS project p 687 N94-14094
Asia-Pacific ISY conference, volume 1
[NASDA-CM-199-1] p 532 N94-14098
European space for exclusively peaceful purposes
[ESA-BR-86] p 851 N94-14137
TRMM system overview and status in the United States p 690 N94-14221
TRMM Project in Japan: Overview and status
p 690 N94-14222
Future TRMM follow-on mission p 691 N94-14228
Space transportation systems within ESA programmes: Current status and perspectives p 537 N94-14275
Mission scenario of HOPE p 537 N94-14279

Primary and secondary electrical space power based on advanced PEM systems
[DE93-012643] p 553 N94-14689

MIXED CRYSTALS
The Lindemann criterion of melting for pure and mixed ionic crystals
[ITN-93-85210] p 814 N94-14554

MIXING CIRCUITS
Theoretical SIS mixer research
[AD-A266323] p 807 N94-13580

MIXING LAYERS (FLUIDS)
A multiple-scale turbulence model for incompressible flow
[NASA-TM-106113] p 631 N94-13385
Modeling and simulation of transport and combustion phenomena in a supersonic mixing layer
[ONERA-NT-1992-11] p 565 N94-14194
Linear instability of curved free shear layers
[NASA-TM-106290] p 642 N94-14729
A study of the fine scale motions of incompressible time-developing mixing layers p 644 N94-14751
Behavior of streamwise rib vortices in a three-dimensional mixing layer p 644 N94-14754
Direct simulation of polymer drag reduction in free shear flows and vortex dipoles p 644 N94-14755
Investigation of the dilatational dissipation in compressible homogeneous shear flow p 645 N94-14758

MOBILE COMMUNICATION SYSTEMS
Trellis coding with Continuous Phase Modulation (CPM) for satellite-based land-mobile communications
[NASA-CR-191325] p 604 N94-13909
Opening remarks: Current and future activities p 612 N94-14655
Propagation issues for emerging mobile and portable communications: A systems perspective p 614 N94-14667
Propagation considerations in the American Mobile Satellite system design p 614 N94-14668
Tree attenuation at 20 GHz: Foliage effects p 615 N94-14672

MODAL RESPONSE
System identification for Space Station Freedom using observer/Kalman filter Markov parameters
[NASA-CR-191521] p 539 N94-12976
A component modes projection and assembly model reduction methodology for articulated, multi-flexible body structures p 677 N94-14622

MODEL REFERENCE ADAPTIVE CONTROL
Control algorithm implementation for a redundant degree of freedom manipulator
[NASA-CR-191339] p 762 N94-13131

MODELS
An experimental study of tether reel system: A laboratory model
[NAL-TR-1176T] p 539 N94-12943

MODERATORS
Generation of neutronic thermal data in support of space nuclear propulsion
[DE93-013148] p 549 N94-13034

MODULATION
Modulational stability of periodic solutions of the Kuramoto-Sivaskinsky equation
[NASA-CR-191502] p 628 N94-12888

MODULATORS
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529

MODULES
On-line upgrade of program modules using AdaPT
[NASA-CR-194331] p 754 N94-14472

MODULUS OF ELASTICITY
An advanced test technique to quantify thermomechanical fatigue damage accumulation in composite materials
[NASA-CR-191147] p 555 N94-13139
Micromechanical damage theories for brittle solids with interacting microcracks
[AD-A266348] p 673 N94-13778
Optical and physical properties of the LiSrAlF6:Cr laser crystal
[DE93-014657] p 808 N94-13881
Shock compression and quasielastic release in tantalum
[DE93-014566] p 811 N94-14329

MOIRE FRINGES
A Fourier transform microscope for x ray and/or gamma ray imaging
[AD-D015742] p 791 N94-13664

MOISTURE
Moisture meter evaluation
[DE93-016581] p 652 N94-14534

MOISTURE CONTENT
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788
Moisture meter evaluation
[DE93-016581] p 652 N94-14534

MOISTURE METERS
Moisture meter evaluation
[DE93-016581] p 652 N94-14534

MOLECULAR BEAM EPITAXY
Intrinsic and interfacial recombination in OMVPE- and MBE-prepared GaAs/Al(x)Ga(1-x)As heterostructures
[DE93-009844] p 809 N94-14083
Evolving surface cusps during strained-layer epitaxy
[DE93-015430] p 813 N94-14478

MOLECULAR BEAMS
Lawrence Berkeley Laboratory Chemical Sciences Division
[DE93-015260] p 851 N94-14401

MOLECULAR BIOLOGY
Solitons and 1/f noise in molecular chains
[DE93-622898] p 778 N94-12879
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698

MOLECULAR CHAINS
Theoretical treatment of the bulk and surface properties of fluids containing long, flexible molecules
[DE93-015560] p 575 N94-12861
Solitons and 1/f noise in molecular chains
[DE93-622898] p 778 N94-12879
Computer simulations for the adsorption of polymers onto surfaces
[DE93-016667] p 577 N94-13070

MOLECULAR CLOUDS
UV extinction properties of carina nebular dust
[NASA-CR-193424] p 835 N94-13233
Analysis of interstellar cloud structure based on IRAS images
[NASA-CR-194341] p 836 N94-13332
Search for x ray emitting young stars outside of massive molecular clouds
[NASA-CR-193609] p 830 N94-13462
The origin of the far-infrared emission from galactic molecular clouds p 848 N94-13654
Analysis of the IUE spectra of the strongly interacting binary beta Lyrae
[NASA-CR-194118] p 833 N94-14493

MOLECULAR COLLISIONS
Theoretical molecular studies of astrophysical interest
[NASA-CR-193300] p 838 N94-13781
Lawrence Berkeley Laboratory Chemical Sciences Division
[DE93-015260] p 851 N94-14401

MOLECULAR ELECTRONICS
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778

MOLECULAR EXCITATION
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
Molecular dynamics simulation of electronically excited polyatomic molecules
[DE93-623045] p 781 N94-13225
Theoretical molecular studies of astrophysical interest
[NASA-CR-193300] p 838 N94-13781
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
Structure and stability of microvoids in A-Si:H
[DE93-016625] p 813 N94-14413

MOLECULAR GASES
Resonant x ray Raman scattering from atoms and molecules
[DE93-015158] p 784 N94-13896
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778

MOLECULAR INTERACTIONS
Molecular solvent-dynamical effects on activated electron-transfer kinetics: How important is solvent friction?
[AD-A265886] p 779 N94-12894
Theory, modeling, and simulation
[DE93-015607] p 755 N94-14571

MOLECULAR ORBITALS
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778

MOLECULAR PHYSICS
Experimental and theoretical study of inhomogeneous electron transfer in betaine: Comparisons of measured and predicted spectral dynamics
[AD-A265703] p 780 N94-13051
Phase transition in polymer blends and structure of ionomers and copolymers
[DE93-016256] p 579 N94-13978
Computational diagnostics for detecting phase transitions during nanoindentation
[DE93-016536] p 813 N94-14439

MOLECULAR RELAXATION
Vibrational relaxation in hypersonic flow fields
[NASA-TP-3367] p 776 N94-14733

MOLECULAR SPECTROSCOPY
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
The infrared solar spectrum
[COMMUNICATIONS-SER-B-159] p 844 N94-13502

MOLECULAR STRUCTURE
Resonant x ray Raman scattering from atoms and molecules
[DE93-015158] p 784 N94-13896
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
Theory, modeling, and simulation
[DE93-015607] p 755 N94-14571
CarbBank: A structural and bibliographic database for complex carbohydrates
[DE93-015582] p 827 N94-14803

MOLECULAR THEORY
Theory, modeling, and simulation
[DE93-015607] p 755 N94-14571

MOLECULAR WEIGHT
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
[AD-A265827] p 577 N94-12985

MOLECULES
Ultrafast photoinduced electron transfer reactions in supramolecular arrays: Studies of electronic coupling and solvation
[DE93-012910] p 782 N94-13484
Selective excitation, relaxation, and energy channeling in molecular systems
[DE93-018819] p 785 N94-14420

MOLTEN SALT ELECTROLYTES
Carbonate fuel cell endurance: Hardware corrosion and electrolyte management status
[DE93-013800] p 701 N94-13093

MOLYBDENUM
Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805

MOLYBDENUM DISULFIDES
Dry film lubricant evaluation
[DE93-013114] p 578 N94-13118
Applications of surface science to solid lubricants
[SMC-TR-93-24] p 579 N94-13903

MOLYBDENUM OXIDES
A quartz crystal microbalance study of lithium insertion and removal into evaporated films MO(y) (M = Mo, Fe, and V)
[DSIS-93-00649] p 810 N94-14203

MOMENT DISTRIBUTION
Techniques for estimating Space Station aerodynamic characteristics
[NASA-CR-193394] p 541 N94-13955

MOMENTUM
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
[DE93-624179] p 617 N94-14883

MOMENTUM THEORY
Dynamics of adaptive structures: Design through simulations
[NASA-CR-193724] p 540 N94-13112
Pinching solutions of slender cylindrical jets
[NASA-CR-191482] p 630 N94-13114

MOMENTUM TRANSFER
High freestream turbulence effects on the transport of heat and momentum p 633 N94-13559
Studies of momentum and energy transfer across wavy gas-liquid interfaces
[AD-A266432] p 635 N94-13699
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
[DE93-015474] p 802 N94-14583
On transport of energy, momentum, orbital angular momentum and self-angular momentum of electromagnetic wave in dispersal media
[DE93-624179] p 617 N94-14883

MONATOMIC GASES
Measurements of scattering processes in negative ion-atom collisions
[DE93-013863] p 779 N94-12940
Calculation of hypersonic shock structure using flux-split algorithms
[NASA-CR-194296] p 504 N94-13607

MONITORS
A high-precision direct current measuring device over a kiloampere range
[DE93-626409] p 627 N94-14885

MONKEYS
Selection of behavioral tasks and development of software for evaluation of rhesus monkey behavior during spaceflight
[NASA-CR-194176] p 728 N94-13865
MONOMERS
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
[AD-A265832] p 577 N94-12986
Poling of thin polymer films in electro optic applications
[AD-A266562] p 579 N94-13584
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
[ITN-93-85218] p 816 N94-14826
MONOPULSE RADAR
Cancellation of multipath for monopulse radars
[ITN-93-85191] p 600 N94-13538
MONOTECTIC ALLOYS
Study on solidification of immisible alloys (M-10)
p 588 N94-13742
Immiscible phase incorporation during directional solidification of hypermonotectics
[NASA-CR-194412] p 565 N94-14480
MONTE CARLO METHOD
A new method to assess Monte Carlo convergence
[DE93-012667] p 772 N94-12919
Parallelizing Timed Petri Net simulations
[NASA-CR-194278] p 758 N94-12938
HIJET with AGS physics and N(sup *)'s
[DE93-014022] p 780 N94-13097
GRO: Black hole models for gamma ray bursts
[NASA-CR-193244] p 829 N94-13178
Beta/gamma test problems for ITS
[DE93-013522] p 781 N94-13349
Variance reduction unique to coupled electron/photon Monte Carlo transport
[DE93-014999] p 782 N94-13409
Maximum likelihood estimation for constrained or missing data models
[AD-A266563] p 773 N94-13585
Determining the solar-flare photospheric scale height from SMM gamma-ray measurements
[NASA-CR-194084] p 844 N94-13671
ADP study of gamma-ray bursts
[NASA-CR-194311] p 848 N94-13708
Distributed processor Monte Carlo: MCNP results on a 16-node IBM cluster
[DE93-012639] p 752 N94-14176
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
Hybrid S(sub N)/Monte Carlo research and results
[DE93-012677] p 773 N94-14178
Monte Carlo simulation of the OCP freezing transition
[DE93-013039] p 811 N94-14313
Deconvolution for positive signals
[DE93-013044] p 773 N94-14314
Development and application of the automated Monte Carlo biasing procedure in SAS4
[DE93-015205] p 774 N94-14334
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
Robust estimators and tests in one-sample location problem with particular consideration on modified maximum likelihood process
[ETN-93-94391] p 774 N94-14703
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804
MOON
Tidal interactions in the Earth Moon system
[COMMUNICATIONS-SER-B-160] p 837 N94-13503
The studies on lunar and planetary exploration and utilization: The study on lunar resources utilization
[NASDA-CNT-930014] p 842 N94-13655
Extrapolation of space weathering processes to other small solar system bodies p 843 N94-14300
MORPHOLOGY
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418
Formation of deoxidization products in iron ingot by the addition of Al, Si, and/or Mn (M-5) p 587 N94-13737
Ion assisted sputter deposition of Mo-Si multilayers
[DE93-013830] p 583 N94-14693
MOTION PERCEPTION
Bayesian estimation of motion fields from image sequences
[ISBN-0-315-57212-4] p 772 N94-13540
Comparative measurement of visual stability in Earth and cosmic space (L-4) p 592 N94-13761
MOTION SICKNESS
Health monitoring of Japanese payload specialist: Autonomic nervous and cardiovascular responses under reduced gravity condition (L-0) p 591 N94-13757
Neurophysiological study on visuo-vestibular control of posture and movement in fish during adaptation to weightlessness p 591 N94-13759
Comparative measurement of visual stability in Earth and cosmic space (L-4) p 592 N94-13761
Autogenic feedback training experiment: A preventative method for space motion sickness p 595 N94-13774
Psychophysiological investigations of the biomedical problems of manned spaceflight
[NASA-CR-194107] p 732 N94-13782
MOTION SIMULATION
Vertical motion simulator familiarization guide
[NASA-TM-103923] p 527 N94-13008
Computational Control Workstation: Users' perspectives p 681 N94-14648
MOTION SIMULATORS
Future developments of the NLR research flight simulator
[NLR-TP-92143-U] p 528 N94-13498
MOUNTAINS
Net radiation mapping of mountainous terrain using Landsat-5 thematic mapper imagery and digital terrain data
[ISBN-0-315-57755-X] p 685 N94-13475
MULTIGRID METHODS
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
Development of a general purpose multigrid accelerated Navier-Stokes solver p 641 N94-14613
Development of an explicit multiblock/multigrid flow solver for viscous flows in complex geometries
[NASA-TM-106356] p 642 N94-14728
MULTILAYER INSULATION
CFM technologies for space transportation: Multipurpose hydrogen testbed system definition and tank procurement
[NASA-CR-194355] p 539 N94-12827
MULTIMEDIA
Programming the multimodal interface
[DE93-013084] p 748 N94-13576
Hypertext Compiling Tools (HCT): Developing model based applications with standard hypertext systems
[REPT-92-049] p 750 N94-13822
MULTIMISSION MODULAR SPACECRAFT
NASA experiences in the Goddard MMS
[NASA-TM-109290] p 819 N94-13629
MULTIPATH TRANSMISSION
Cancellation of multipath for monopulse radars
[ITN-93-85191] p 600 N94-13538
MUSIC and maximum likelihood using a refined propagation model: Performance comparison for radar low-angle tracking
[DREO-RN-1122] p 603 N94-13832
Portable multipath measurement system
[DSIS-93-00177] p 603 N94-13843
Results of multiband (L, S, Ku band) propagation measurements and model for high elevation angle land mobile satellite channel p 615 N94-14670
Coverage aspects of a single frequency network designed for digital audio broadcasting
[BBC-RD-1993/3] p 616 N94-14742
MULTIPHASE FLOW
A multiphase model for shock-induced flow in low density foam
[DE93-013767] p 632 N94-13397
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342
MULTIPHOTON ABSORPTION
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
A search for strong-field direct two electron ionization using coincidence spectroscopy
[DE93-013435] p 781 N94-13241
MULTIPLE BEAM INTERVAL SCANNERS
An initial study of using the 34-m antenna for lunar mission support p 611 N94-14396
MULTIPLEXING
HYMOSS signal processing for pushbroom spectral imaging
[NASA-CR-191341] p 620 N94-13125
MULTIPLICATION
An efficient parallel algorithm for matrix-vector multiplication
[DE93-015125] p 754 N94-14399
MULTIPROCESSING (COMPUTERS)
High speed packet switching
[NASA-CR-191334] p 759 N94-13177
Simulator for heterogeneous dataflow architectures
[NASA-CR-191545] p 622 N94-13797
A performance prediction model for a fault-tolerant computer during recovery and restoration
[NASA-CR-194490] p 741 N94-14136
Distributed processor Monte Carlo: MCNP results on a 16-node IBM cluster
[DE93-012639] p 752 N94-14176
Nonrecursive formulations of multibody dynamics and concurrent multiprocessing p 679 N94-14632
On the solution of a class of graph problems by parallel algorithms
[LAAS-92514] p 756 N94-14712
MULTISENSOR APPLICATIONS
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Reasoning with uncertain and incomplete information in aerospace applications
[NLR-TP-91366-U] p 763 N94-13529
Computer vision and sensor fusion for detecting buried objects
[DE93-012605] p 700 N94-14566
MULTISPECTRAL BAND CAMERAS
Development of a portable multispectral thermal infrared camera
[NASA-CR-191340] p 648 N94-13176
MULTIVARIABLE CONTROL
Rotorcraft flying qualities improvement using advanced control p 522 N94-13303
Robust synthesis of discrete-time multivariable control systems with induced delays p 662 N94-13642
Self-tuning control techniques for multivariable systems
[INPE-5449-TDI/495] p 765 N94-14084
MUON SPIN ROTATION
Muon spin relaxation studies of heavy fermion superconductors
[DE93-014576] p 815 N94-14773
MUONS
Detection of hot muonic hydrogen atoms emitted in vacuum using x-rays
[DE93-010253] p 778 N94-12860
Double semi-leptonic charm decay in HELIOS-I 450 GeV/c p-Be data
[DE93-013493] p 781 N94-13348
Study of electroweak interactions
[DE93-015067] p 782 N94-13412
Inclusive single muons at DO
[DE93-012779] p 783 N94-13494
Effects of additional isoscalar vector bosons in e(sup +)e)(sup -)(yields)ff-bar processes at the TRISTAN and LEP energies
[DE93-621451] p 783 N94-13506
The (mu)(+) yields e(+)gamma
[DE93-012750] p 785 N94-14181
Rare muon processes
[DE93-012646] p 785 N94-14366
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
[DE93-017154] p 790 N94-14893
MUSCLES
Magnetic resonance imaging after exposure to microgravity p 594 N94-13771
MUSCULOSKELETAL SYSTEM
Body/cushion contact stress analysis during sitting
[ITN-93-85204] p 736 N94-13229
Effect of low gravity on calcium metabolism and bone formation (L-7) p 593 N94-13765
Renal function alterations during skeletal muscle disuse in simulated microgravity
[NASA-CR-194258] p 733 N94-13824
MUSIC
Study of computer system as a musical instrument
p 747 N94-13439
MUTATIONS
Evolution of catalytic RNA in the laboratory
[NASA-CR-194124] p 727 N94-13210
MYOGLOBIN
Quasi-elastic neutron scattering studies of protein dynamics
[DE93-015074] p 782 N94-13414

N

N-TYPE SEMICONDUCTORS
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344
NAP-OF-THE-EARTH NAVIGATION
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays
p 524 N94-13315

NASA PROGRAMS
National atmospheric sciences program, fiscal years 1987-1990
[NSF-92-16] p 711 N94-12794
Technology Applications Team: Applications of aerospace technology
[NASA-CR-194362] p 828 N94-13104
Program/project management resource lists
[NASA-TM-109268] p 822 N94-13107
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Conference presentations
[NASA-CR-194514] p 665 N94-13153
Strategic planning as a focus for continuous improvement. A case study p 666 N94-13158
Building a quality culture in the Office of Space Flight: Approach, lessons learned and implications for the future p 667 N94-13164
NASA Johnson Space Center: Total quality partnership p 668 N94-13165
Shared visions: Partnership of Rockwell International and NASA Cost Effectiveness Enhancements (CEE) for the space shuttle system integration program p 668 N94-13166
NASA/contractor partnership on the second TDRSS ground terminal program: Breaking barriers p 668 N94-13168
Government/contractor partnerships for continuous improvement. A Goddard Space Flight Center example p 669 N94-13169
User observations on information sharing (corporate knowledge and lessons learned)
[NASA-TM-104781] p 819 N94-13400
NASA aerospace database subject scope: An overview
[NASA-SP-7107] p 823 N94-13401
Goddard Space Flight Center robotics demo
[NASA-TM-109302] p 662 N94-13604
Highlights, 1981
[NASA-TM-109305] p 850 N94-13612
NASA experiences in the Goddard MMS
[NASA-TM-109290] p 819 N94-13629
The Eighth Annual NASA/Contractors Conference and 1991 National Symposium on Quality and Productivity: Extending the boundaries of total quality management
[NASA-TM-109276] p 669 N94-14321
NASA Space Engineering Research Center for VLSI systems design
[NASA-CR-194035] p 625 N94-14325

NASA SPACE PROGRAMS
Access to Japanese aerospace-related scientific and technical information: The NASA Aerospace Database
[NASA-TM-109413] p 822 N94-13105
Highlights, 1981
[NASA-TM-109305] p 850 N94-13612
Research and technologhy highlights, 1992
[NASA-TM-4452] p 850 N94-13962

NATIONAL AEROSPACE PLANE PROGRAM
Perspective on the National Aero-Space Plane Program instrumentation development
[NASA-TM-4505] p 516 N94-13256
Trajectory optimization for the national aerospace plane
[NASA-CR-194146] p 516 N94-14104

NATIONAL AIRSPACE SYSTEM
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563

NATIONAL PARKS
Multisensor remote sensing data and GIS techniques for monitoring preservation areas: A case study
[INPE-5317-PRE/1714] p 688 N94-14131

NATURAL GAS
Low pressure storage of natural gas on activated carbon
[DE93-014053] p 660 N94-12851
Overview: Gas hydrate geology and geography
[DE93-014043] p 688 N94-14151
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586

NAVIER-STOKES EQUATION
Turbulence modeling of free shear layers for high-performance aircraft
[NASA-CR-193659] p 520 N94-12799
Numerical simulation of hypersonic flow for the design of the H-2 orbiting plane (HOPE), part 3
[NAL-TR-1168-PT-3] p 499 N94-12948
Integration of viscous effects into inviscid computational methods
[NASA-CR-193677] p 629 N94-13007
Two-dimensional Navier-Stokes heat transfer analysis for rough turbine blades
[NASA-TM-106008] p 629 N94-13027
Averaging techniques for steady and unsteady calculations of a transonic fan stage
[NASA-TM-106231] p 499 N94-13108
Analysis of the Harrier forebody/inlet design using computational techniques
[NASA-CR-193616] p 503 N94-13463
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
Passage-averaged approximation of turbomachinery flows using vorticity-potential method
[ISBN-0-315-72716-0] p 634 N94-13598
A computational study of the base region flow field for the M865 projectile
[ARL-TR-109] p 504 N94-13795
CNSFV code development, virtual zone Navier-Stokes computations of oscillating control surfaces and computational support of the laminar flow supersonic wind tunnel
[NASA-CR-194259] p 504 N94-14030
Multigrid solution of internal flows using unstructured solution adaptive meshes
[NASA-CR-194233] p 638 N94-14356
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
A vertex-based finite-volume algorithm for the Navier-Stokes equations p 639 N94-14599
The structure of laminar flow in a three-dimensional driven cavity p 640 N94-14601
An implicit finite volume nodal point scheme for the solution of two-dimensional compressible Navier-Stokes equations p 640 N94-14603
Navier-Stokes simulation of transonic vortex flow over a delta wing p 640 N94-14606
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
Hypersonic viscous flow computations p 510 N94-14612
Development of a general purpose multigrid accelerated Navier-Stokes solver p 641 N94-14613
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
[NASA-TM-106351] p 771 N94-14731
Low altitude plume impingement handbook
[NASA-CR-194193] p 643 N94-14741
DNS and modeling of the interaction between turbulent premixed flames and walls p 646 N94-14763
Contributions to numerical solution of Navier-Stokes equations in two and three dimensional flows
[ETN-93-94395] p 647 N94-14816
Analytical description of the breakup of liquid jets in air
[NASA-CR-191503] p 647 N94-14849
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

NAVIGATION AIDS
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
[NAL-TR-1175] p 513 N94-13344
Some frequency and damping measurements of laminated beryllium beams
[DE93-015909] p 676 N94-14530

NAVIGATION INSTRUMENTS
Flight evaluations of approach/landing navigation sensor systems: Summary of 1990 flight experiments
[NAL-TR-1175] p 513 N94-13344
Performance evaluation tests of the GPS/DGPS navigation system installed in the NAL Dornier 228: Preliminary ground test results
[NAL-TM-649] p 513 N94-13346

NEAR INFRARED RADIATION
A near-infrared faint galaxy survey: Evolution and the cosmological geometry from K band photometry p 830 N94-13591
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648
The 1 to 5 micron imaging of deeply embedded young stellar objects p 831 N94-13657

NECK (ANATOMY)
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972

NEGATIVE IONS
Measurements of scattering processes in negative ion-atom collisions
[DE93-013863] p 779 N94-12940

NEODYMIUM LASERS
Numerical simulations of Nd:YAG laser amplifiers
[FFI/RAPPORT-92/7028] p 657 N94-13970
The interaction of intense femtosecond laser pulses with solid targets
[DE93-014415] p 658 N94-14114

NEON
High-order harmonic generation with short-pulse lasers
[DE93-016532] p 659 N94-14594

NEPTUNE (PLANET)
Neptune high-latitude emission: Dependence of angle on frequency
[NASA-CR-193280] p 848 N94-13476

NERVOUS SYSTEM
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969

NETWORK ANALYSIS
A network evaluation and analysis tool
[DE93-012647] p 758 N94-12917
Proceedings of the 11th Space Surveillance Workshop, volume 1
[AD-A265120] p 531 N94-13358

NETWORK CONTROL
Communications and control for electric power systems
[NASA-CR-194503] p 622 N94-13811

NEURAL NETS
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969
Adaptive Transfer Function Networks
[DE93-014344] p 745 N94-13151
A review and analysis of neural networks for classification of remotely sensed multispectral imagery
[NASA-CR-194291] p 763 N94-13603
ANNS: An X Window based version of the AFIT neural network simulator
[AD-A266540] p 764 N94-13704
Satellite imagery and exogenous data integration by neural network in automation land-cover classification
[INPE-5480-PRE/1778] p 686 N94-13729
Nonlinear aspects of data integration for land-cover classification in a neural network environment
[INPE-5479-PRE/1778] p 686 N94-13789
Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
Communications and control for electric power systems: Power flow classification for static security assessment
[NASA-CR-194512] p 624 N94-13948
Feature discovery on segmented objects in SAR imagery using self-organizing neural networks
[DE93-010685] p 686 N94-14056
Identification and interpretation of patterns in rocket engine data
[NASA-CR-194534] p 552 N94-14309
Obstacle detection by recognizing binary expansion patterns
[NASA-CR-194415] p 514 N94-14495
Computer vision and sensor fusion for detecting buried objects
[DE93-012605] p 700 N94-14566
A neural-network approach to robotic control p 679 N94-14634
Retrieval properties of neural networks with infinitely many marked patterns
[PREPRINT-729] p 766 N94-14718
Speaker independent recognition of isolated words using vector quantization and neural networks
[ETN-93-94390] p 616 N94-14724
Identification of continuous-time dynamical systems: Neural network based algorithms and parallel implementation
[DE93-014427] p 766 N94-14737
Mathematic methods and algorithms for real-time applications
[AD-A266776] p 771 N94-14789
Determining neural network connectivity using evolutionary programming
[AD-A266853] p 766 N94-14882

NEURONS
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969

NEUROPHYSIOLOGY
Neurophysiological study on visuo-vestibular control of posture and movement in fish during adaptation to weightlessness p 591 N94-13759
Feature discovery on segmented objects in SAR imagery using self-organizing neural networks
[DE93-010685] p 686 N94-14056

NEUROSPORA
A circadian rhythm of conidiation in Neurospora crassa (L-12) p 593 N94-13769

NEUTRAL ATOMS
Low energy neutral atom imaging techniques
[DE93-012744] p 779 N94-12950
Advances in low energy neutral atom imaging techniques
[DE93-012745] p 782 N94-13492

Energetic neutral atoms: Imaging the magnetospheric ring current
[NASA-CR-194339] p 715 N94-13826
Terrestrial magnetospheric imaging: Numerical modeling of low energy neutral atoms
[DE93-014561] p 717 N94-14328
Kinetics of photodeposition of superconducting films
[DE93-015511] p 812 N94-14348

NEUTRAL BEAMS
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (IDNB) Experiment
[DE93-014144] p 797 N94-13100

NEUTRAL CURRENTS
The electric field of a current-carrying conductor
[DE93-626637] p 617 N94-14892

NEUTRAL GASES
The distance to the high velocity clouds of neutral hydrogen
[NASA-CR-194343] p 838 N94-13716
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349

NEUTRAL PARTICLES
Neutral strange particle production at the AGS
[DE93-014044] p 780 N94-13098
Measurement of H zero excited states produced by foil stripping of 800-MeV H(-) ions
[DE93-014391] p 788 N94-13103
Advances in low energy neutral atom imaging techniques
[DE93-012745] p 782 N94-13492
Hybrid S(sub N)/Monte Carlo research and results
[DE93-012677] p 773 N94-14178
Terrestrial magnetospheric imaging: Numerical modeling of low energy neutral atoms
[DE93-014561] p 717 N94-14328

NEUTRINOS
Charged scalar particles and (tau) leptonic decay
[DE93-622969] p 779 N94-12882
A program of correlated observations using the EGRET instrument on GRO and the IMB neutrino detector
[NASA-CR-194367] p 783 N94-13856
Are there atmospheric neutrino oscillations?
[DE93-015550] p 783 N94-13890
Angular correlations in neutron beta decay
[DE93-014349] p 785 N94-14466

NEUTRON ABSORBERS
Generation of neutronic thermal data in support of space nuclear propulsion
[DE93-013148] p 549 N94-13034

NEUTRON ACTIVATION ANALYSIS
Fine-powder Al2O3 and SiO2 for preparation of multielement standards for rare-earth elements analysis
[DE93-625118] p 567 N94-14884

NEUTRON BEAMS
Measurement of the Fe-56(n,p)Mn-56, Al-27(n,p)Mg-27 and Al-27(n,alpha)Na-24 cross sections at 16.0, 17.0 and 18.3 MeV
[NPL-RSA(EXT)-38] p 783 N94-13883
Multiplicity spectrometry on neutron filtered beams
[DE93-617529] p 790 N94-14843

NEUTRON DECAY
Angular correlations in neutron beta decay
[DE93-014349] p 785 N94-14466

NEUTRON DIFFRACTION
Measurement of residual strain in composites by means of time-of-flight neutron diffraction
[DE93-012939] p 555 N94-13248
Quasi-elastic neutron scattering studies of protein dynamics
[DE93-015074] p 782 N94-13414
Measurement of strain in individual phases of composites before, during, and after mechanical loading
[DE93-014585] p 558 N94-14119
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421

NEUTRON EMISSION
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804

NEUTRON IRRADIATION
AlGaAs diode laser blue shift resulting from fast neutron irradiation
[AD-A266642] p 659 N94-14681
Investigations of low-temperature neutron embrittlement of ferritic steels
[DE93-015460] p 573 N94-14700

NEUTRON SCATTERING
Generation of neutronic thermal data in support of space nuclear propulsion
[DE93-013148] p 549 N94-13034
Quasi-elastic neutron scattering studies of protein dynamics
[DE93-015074] p 782 N94-13414
The use of polarised neutron reflection for unique density profile determination in thin films
[PB93-187136] p 579 N94-13783
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
Small-angle scattering, contrast variation and the study of complex composite materials: A study of the structure of carbon black
[DE93-012707] p 559 N94-14690

NEUTRON SOURCES
Design for low beam loss in accelerators for intense neutron source applications
[DE93-014557] p 789 N94-13327
Beam halo in high-intensity beams
[DE93-014565] p 789 N94-13328
INGDB-90. The International Neutron Nuclear Data Base for geophysics applications
[DE93-624095] p 827 N94-14880

NEUTRON SPECTROMETERS
Multiplicity spectrometry on neutron filtered beams
[DE93-617529] p 790 N94-14843

NEUTRON STARS
A photometric study of massive x-ray binaries
[ITN-93-85207] p 829 N94-13231

NEUTRONS
On the neutron EDM search in the Laue diffraction by the crystal without a centre of symmetry
[DE93-622971] p 804 N94-12828
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
The status of cold fusion
[DE93-012731] p 802 N94-14567
Multiplicity spectrometry on neutron filtered beams
[DE93-617529] p 790 N94-14843
INGDB-90. The International Neutron Nuclear Data Base for geophysics applications
[DE93-624095] p 827 N94-14880

NEWTON METHODS
Newton iterative methods for large scale nonlinear systems
[DE93-015357] p 767 N94-13025
Calculation of the required sensor accuracy to obtain a specified state estimation accuracy
[NAL-TR-1173] p 649 N94-13343
On a convergence of iterative Newton's scheme
[DE93-626604] p 772 N94-14886

NEWTON-RAPHSON METHOD
Evaluation of the Shuttle remote manipulator
[NASA-CR-194351] p 662 N94-13800

NICKEL
Quantum state resolved desorption of CO from solid surfaces
[DE93-016876] p 814 N94-14597
Optimization study of x ray laser coherence in Ni-like Ta
[DE93-016419] p 660 N94-14888

NICKEL ALLOYS
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574

NICKEL COATINGS
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-005] p 559 N94-14575
Insoluble coatings for Stirling engine heat pipe condenser surfaces
[NASA-CR-191188] p 554 N94-14771

NICKEL HYDROGEN BATTERIES
NASA handbook for nickel-hydrogen batteries
[NASA-RP-1314] p 550 N94-13265

NIOBIUM
Atomic structure of the 310 twin in niobium: Theoretical predictions and comparison with experimental observation
[DE93-013421] p 806 N94-13136

NITINOL ALLOYS
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706

NITRATES
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097

NITRATION
Study of chemical reactions under the influence of ultrasound
[DE93-016458] p 778 N94-14867

NITRIC ACID
Reduction of Pu(6) with hydrogen peroxide: Effects of plutonium, peroxide, and iron concentrations and of reaction time
[DE93-013598] p 564 N94-13487
Study of chemical reactions under the influence of ultrasound
[DE93-016458] p 778 N94-14867

NITRO COMPOUNDS
Synthesis and characterization of 1,4-dinitroglycoluril (DINGU)
[DE93-014111] p 584 N94-13099
Study of chemical reactions under the influence of ultrasound
[DE93-016458] p 778 N94-14867

NITROGEN
Characterization of 1:1 random copolymers obtained from 6-, 7-, 11-, and 12-carbon amino acids
[AD-A265827] p 577 N94-12985
Modeling of the partitioning of reactive odd nitrogen in the lower stratosphere using aircraft measurements of NOy, NO, and other trace species
[NASA-CR-194305] p 714 N94-13707

NITROGEN COMPOUNDS
Importance of sprays for long range transport of harmful substances in the troposphere
[MITT-81] p 711 N94-14723

NITROGEN DIOXIDE
The mobile lidar system ARGOS for spatial resolution remote measuring of gaseous air pollutants
[GKSS/92/E/26] p 617 N94-14820

NITROGEN OXIDES
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area
[DE93-012852] p 708 N94-13495
IMG: Interferometric monitor for greenhouse gases
p 689 N94-14217
Summary of conclusions and recommendations from a visibility science workshop
[DE93-012770] p 710 N94-14523

NITROGENATION
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698

NITROGLYCERIN
Closed-chamber analysis of M5 propellant lot RAD-64597
[AD-A266321] p 585 N94-14145

NOAA SATELLITES
An algorithm for the remote sensing of fog using satellite-data and additional information
[DLR-FB-92-23] p 688 N94-14135

NOBLE METALS
Spin polarized photoemission studies of interfacial and thin film magnetism
[DE93-014326] p 580 N94-14142

NOISE INTENSITY
1/f noise and oxide traps in MOSFETs
[DE93-007581] p 619 N94-12942
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961
Underwater hearing: A review
[ISVR-TR-212] p 777 N94-14130

NOISE MEASUREMENT
An experimental assessment of the use of ground-level microphones to measure the fly-over noise of jet-engined aircraft
[NPL-RSA(EXT)-0039] p 777 N94-13885
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961

NOISE REDUCTION
An analog clustering network from a biological model
[AD-A265637] p 762 N94-12969
Active control of acoustic pressure fields using smart material technologies
[NASA-CR-191480] p 768 N94-13354
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874
Study on the possibilities to apply spectrumindex
[VTT-PUBS-109] p 777 N94-14034
Noise levels from a model turbofan engine with simulated noise control measures applied
[NASA-TM-106318] p 518 N94-14036
Study of speckle reduction when using a CO2 waveguide laser close to its threshold state
[DSIS-93-00250] p 657 N94-14067
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
[NASA-TM-106364] p 508 N94-14208
Active control of fan-generated plane wave noise
[NASA-TM-109008] p 777 N94-14481
Removing noise from discontinuous data
[ITN-93-85211] p 826 N94-14555

NOISE SPECTRA
1/f noise and oxide traps in MOSFETs
[DE93-007581] p 619 N94-12942
NOISE TEMPERATURE
Insertion loss and noise-temperature contribution of high-temperature superconducting bandpass filters centered at 2.3 and 8.45 GHz p 608 N94-14376
NOISE TOLERANCE
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961
NONADIABATIC CONDITIONS
The geometric phase in quantum physics
[DE93-011121] p 817 N94-13479
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
[ITN-93-85224] p 659 N94-14547
NONDESTRUCTIVE TESTS
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
[DE93-012942] p 577 N94-13032
Quantitative mapping of pore fraction variations in silicon nitride using an ultrasonic contact scan technique
[NASA-TP-3377] p 665 N94-13056
NDE of titanium alloy MMC rings for gas turbine engines
[NASA-TM-106188] p 555 N94-13138
Structural investigation of a damaged GRP/foam sandwich composite using x ray computed tomography p 669 N94-13857
The development of inspection and repair methods for the C-17 aft cargo door
[LR-704] p 499 N94-13904
High frame rate thermal imager for hypersonic wind tunnel applications
[ONERA-NT-1992-12] p 650 N94-14009
Enhanced NDE systems
[NASA-CR-192603] p 669 N94-14101
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-006] p 558 N94-14573
Study of deferred acoustic emission in carbon epoxy composites
[ISAL-91-0078] p 560 N94-14815
NONEQUILIBRIUM CONDITIONS
Boundary stability under nonequilibrium conditions
[DE93-016259] p 809 N94-13980
Characterization of flow fields in hypersonic ground test facilities p 505 N94-14157
NONEQUILIBRIUM FLOW
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
NONEQUILIBRIUM THERMODYNAMICS
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
NONHOLONOMIC EQUATIONS
Dynamics and design of nonholonomic robotic mechanical systems
[ISBN-0-315-72009-3] p 662 N94-13597
NONINTRUSIVE MEASUREMENT
Hypersonic flow-field measurements: Nonintrusive p 507 N94-14167
NONLINEAR EQUATIONS
Open boundary conditions for incompletely parabolic systems
[FFI/RAPPORT-92/7029] p 770 N94-13971
Multiplicative noise: Applications in cosmology and field theory
[DE93-016624] p 840 N94-14536
Large spatial, temporal, and algorithmic adaptivity for implicit nonlinear finite element analysis
[DE93-016438] p 771 N94-14589
Construction of the Courant-Snyder invariants for the non-linear equations of motion under presence of the linear coupling
[DE93-017565] p 788 N94-14872
On a convergence of iterative Newton's scheme
[DE93-626604] p 772 N94-14886
NONLINEAR OPTICS
Nonlinear laser spectroscopy studies of semiconductor heterostructures
[AD-A265728] p 805 N94-13037
Beam halo formation from space-charge dominated beams in uniform focusing channels
[DE93-014458] p 789 N94-13209
Poling of thin polymer films in electro optic applications
[AD-A266562] p 579 N94-13584
NONLINEAR PROGRAMMING
Boundary formulations for nonlinear design sensitivity analysis p 672 N94-13669
NONLINEAR SYSTEMS
Modulational stability of periodic solutions of the Kuramoto-Sivaskinsky equation
[NASA-CR-191502] p 628 N94-12888
Newton iterative methods for large scale nonlinear systems
[DE93-015357] p 767 N94-13025
Relegation for decentralized control
[AD-A265720] p 819 N94-13059
Stability of subharmonics and escape phenomena in the twin-well potential duffing system p 775 N94-13235
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory p 556 N94-13558
Nonlinear aspects of data integration for land-cover classification in a neural network environment
[INPE-5479-PRE/1778] p 686 N94-13789
Multi-dimensional high order essentially non-oscillatory finite difference methods in generalized coordinates
[NASA-CR-194031] p 770 N94-14429
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
Chaos and microbial systems
[DE93-016814] p 730 N94-14596
Identification of continuous-time dynamical systems: Neural network based algorithms and parallel implementation
[DE93-014427] p 766 N94-14737
A new treatment of periodic systems with applications to helicopter rotor blade dynamics
[AD-A266770] p 510 N94-14784
NONLINEARITY
A general contact detection algorithm for finite element analysis
[DE93-012846] p 742 N94-12956
Linear and nonlinear spectroscopic probing of solute interactions with chemically modified silica surface
[DE93-014648] p 562 N94-13001
Beam halo formation from space-charge dominated beams in uniform focusing channels
[DE93-014458] p 789 N94-13209
Brillouin scattering from fluctuations produced by stimulated Raman scattering
[DE93-016531] p 792 N94-14438
Kinetic simulations of ultra-intense laser plasma interactions
[DE93-014419] p 802 N94-14564
Stress stiffening and approximate equations in flexible multibody dynamics p 677 N94-14620
Nonrecursive formulations of multibody dynamics and concurrent multiprocessing p 679 N94-14632
Nonlinear analysis, scientific computation, and continuum mechanics applied to the science of materials
[AD-A266641] p 817 N94-14680
NONUNIFORM PLASMAS
Parametric instabilities in large nonuniform laser plasmas
[DE93-013184] p 797 N94-13393
NONUNIFORMITY
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
[DE93-013958] p 601 N94-13696
Machining and grinding: High rate deformation in practice
[DE93-010718] p 664 N94-14457
NORMAL DENSITY FUNCTIONS
A new method to assess Monte Carlo convergence
[DE93-012667] p 772 N94-12919
NORMAL SHOCK WAVES
An experimental investigation of shock wave/vortex interaction p 634 N94-13574
NORTHERN SKY
Search for continuous and single day emission from ultra-high-energy sources
[DE93-012724] p 846 N94-12947
NOTCHES
A computer program to calculate growth rates for cracks at notches in regions of residual stress
[RAE-TM-MAT/STR-1207] p 683 N94-14818
NOVAE
The spectroscopic evolution of novae in the bulge of M31 and a search for their possible origin in the M31 globular cluster system p 831 N94-13668
NOZZLE DESIGN
Method of characteristics design of a supersonic wind tunnel nozzle with square cross-section, supplement 3
[NASA-CR-194359] p 527 N94-12824
Propulsion integration p 508 N94-14174
Qualification test of the Ross Double Planetary Mixer
[NASA-CR-192600] p 652 N94-14497
NOZZLE FLOW
An experimental investigation of the redistribution of gas stream total temperature in a high turning angle transonic planar cascade
[ISBN-0-315-60791-2] p 502 N94-13369
Chemical reactions in scramjet engines: Reduced kinetic models for ignition, combustion and nozzle flow
[NAL-TR-1184] p 563 N94-13458
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682
NOZZLE GEOMETRY
Mixing noise reduction for rectangular supersonic jets by nozzle shaping and induced screech mixing
[NASA-TM-106364] p 508 N94-14208
NUCLEAR ASTROPHYSICS
Research in theoretical nuclear physics
[DE93-015096] p 839 N94-14330
NUCLEAR BINDING ENERGY
Simulation studies for surfaces and materials strength
[NASA-CR-193305] p 671 N94-13179
Thermochemistry of transition metal clusters
[DE93-016201] p 571 N94-13977
Spin polarized photoemission studies of interfacial and thin film magnetism
[DE93-014326] p 580 N94-14142
NUCLEAR ENERGY
JPRS report: Science and technology. Central Eurasia: Engineering and equipment
[JPRS-UEQ-93-006] p 776 N94-14431
NUCLEAR ENGINE FOR ROCKET VEHICLES
Nuclear propulsion systems engineering
[DE93-010791] p 548 N94-12870
NUCLEAR EXPLOSIONS
Atmospheric acoustic modeling
[DE93-016727] p 718 N94-14518
NUCLEAR FISSION
A modular gas-cooled cermet reactor system for planetary base power
[DE93-013672] p 550 N94-13351
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804
NUCLEAR FUELS
Review of nuclear thermal propulsion carbide reactor fuel corrosion and exhibit
[DE93-016605] p 585 N94-14535
Space reactor fuel element testing in upgraded TREAT
[DE93-012524] p 554 N94-14806
NUCLEAR FUSION
Microwave generation for magnetic fusion energy applications
[DE93-013864] p 654 N94-13058
Nuclear fusion of protons with ions of boron
[DE93-014284] p 781 N94-13219
Long-pulse operation of a gyrotron with beam/RF separation
[DE93-015007] p 649 N94-13410
The status of cold fusion
[DE93-012731] p 802 N94-14567
NUCLEAR INTERACTIONS
Measurements of transverse energy and forward energy in high-energy nuclear collisions
[DE93-012755] p 788 N94-12817
HIJET with AGS physics and N(sup *)'s
[DE93-014022] p 780 N94-13097
Scattering calculations and confining interactions
[NASA-CR-194242] p 786 N94-14549
NUCLEAR MAGNETIC RESONANCE
Development of nondestructive evaluation methods and prediction of effects of flaws on the fracture behavior of structural ceramics
[DE93-012942] p 577 N94-13032
Transport properties of disordered porous media from the microstructure
[DE93-016065] p 806 N94-13152
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794
NUCLEAR PHYSICS
Advanced computers and simulation
[DE93-014354] p 740 N94-13286
Research in theoretical nuclear physics
[DE93-015096] p 839 N94-14330
Some tools of the trade we've developed for our cross-section calculations
[DE93-013835] p 786 N94-14569
NUCLEAR POWER PLANTS
A data base for aging of structural materials
[DE93-009714] p 824 N94-13915
Computational problems with the binomial failure rate model and incomplete common cause failure reliability data
[DE93-014346] p 669 N94-14143
NUCLEAR PROPULSION
Nuclear propulsion systems engineering
[DE93-010791] p 548 N94-12870

MCNP benchmark analyses of critical experiments for the Space Nuclear Thermal Propulsion program
[DE93-014046] p 548 N94-12981
Design, qualification and operation of nuclear rockets for safe Mars missions
[DE93-010792] p 549 N94-12996
Generation of neutronic thermal data in support of space nuclear propulsion
[DE93-013148] p 549 N94-13034
Gas core nuclear thermal rocket engine research and development in the former USSR
[DE93-012165] p 552 N94-14013
Computer program for thermal and transport properties of parahydrogen from 20 to 10,000 K
[NASA-TP-3378] p 552 N94-14102
Nuclear thermal propulsion engine based on particle bed reactor using light water steam as a propellant
[DE93-014336] p 552 N94-14111
Review of nuclear thermal propulsion carbide reactor fuel corrosion and exhibit
[DE93-016605] p 585 N94-14535
Space reactor fuel element testing in upgraded TREAT
[DE93-012524] p 554 N94-14806

NUCLEAR REACTIONS
Semiempirical fragmentation models on galactic cosmic ray transport calculations with hydrogen target
[NASA-TP-3350] p 847 N94-13263
The theory of relativistic heavy ion collisions
[DE93-015934] p 784 N94-13952
Angular correlations in neutron beta decay
[DE93-014349] p 785 N94-14466
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
Some tools of the trade we've developed for our cross-section calculations
[DE93-013835] p 786 N94-14569
Multiplicity spectrometry on neutron filtered beams
[DE93-617529] p 790 N94-14843
INGDB-90. The International Neutron Nuclear Data Base for geophysics applications
[DE93-624095] p 827 N94-14880

NUCLEAR REACTORS
The corrosion behavior of 8001 Al under heat-transfer conditions in an aqueous loop system
[DE93-013450] p 569 N94-13242
A modular gas-cooled cermet reactor system for planetary base power
[DE93-013672] p 550 N94-13351
Fatigue design curves for 6061-T6 aluminum
[DE93-011849] p 571 N94-14021
Estimation of strain in 1-kW primary containment vessels by microstructural examination
[DE93-013053] p 573 N94-14316
Welding technologies as applied to nuclear manufacturing
[DE93-010924] p 664 N94-14565

NUCLEAR ROCKET ENGINES
Gas core nuclear thermal rocket engine research and development in the former USSR
[DE93-012165] p 552 N94-14013
Space reactor fuel element testing in upgraded TREAT
[DE93-012524] p 554 N94-14806

NUCLEAR SCATTERING
Medium energy hadron-nucleus scattering in the 1/N expansion formalism
[DE93-622957] p 778 N94-12848

NUCLEAR STRUCTURE
Research in theoretical nuclear physics
[DE93-015096] p 839 N94-14330
Dynamics of pion-nucleus systems
[DE93-014449] p 785 N94-14468

NUCLEAR WEAPONS
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292

NUCLEATION
A parameterization of cloud droplet nucleation
[DE93-007998] p 718 N94-12903
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
[DE93-007884] p 709 N94-13911
Optimization of the processing parameters of high temperature superconducting glass-ceramics: Center Director's discretionary fund final report
[NASA-TM-108421] p 808 N94-13938
Containerless processing of undercooled melts
[NASA-CR-194350] p 572 N94-14123
Multiplicative noise: Applications in cosmology and field theory
[DE93-016624] p 840 N94-14536
Characterization of diamond film growth in a combustion flame
[AD-A266659] p 816 N94-14839

NUCLEI (NUCLEAR PHYSICS)
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211

NUCLEON-NUCLEON INTERACTIONS
HIJET with AGS physics and N(sup *)'s
[DE93-014022] p 780 N94-13097
Resonances in the Sigma NN system
[DE93-014353] p 785 N94-14144
The off shell (rho)-(omega) mixing in the QCD sum rules
[DE93-014845] p 786 N94-14527
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550
Theoretical antideuteron-nucleus absorptive cross sections p 786 N94-14551
Isospin flip as a relativistic effect: NN interactions
[CEBAF-PR-89-023] p 786 N94-14552
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804

NUCLEON-NUCLEON SCATTERING
No-lost theorem for parity violating nucleon-nucleon scattering experiments
[DE93-012737] p 779 N94-12949
Theoretical antideuteron-nucleus absorptive cross sections p 786 N94-14551
Isospin flip as a relativistic effect: NN interactions
[CEBAF-PR-89-023] p 786 N94-14552

NUCLEONS
Measuring strangeness in the nucleon
[DE93-014861] p 785 N94-14471
Isospin flip as a relativistic effect: NN interactions
[CEBAF-PR-89-023] p 786 N94-14552
On the statistical theory of the even-even nucleons levels' density
[DE93-623990] p 788 N94-14875

NULL HYPOTHESIS
Rare attributes in finite universe: Hypotheses testing specification and exact randomized upper confidence bounds
[DE93-012783] p 775 N94-12955

NUMBER THEORY
Mathematics and string theory
[DE93-017903] p 817 N94-14417

NUMERICAL ANALYSIS
MHD shocks in coronal mass ejections
[NASA-CR-193418] p 828 N94-12970
Combustor technology for future small gas turbine aircraft
[NASA-TM-106312] p 517 N94-13142
Magnetic fusion computing: A personal retrospective view
[DE93-014147] p 797 N94-13217
A probabilistic method for the buckling assessment of stiffened composite shells
[NASA-TM-106286] p 671 N94-13379
Numerical simulation and parameterization of orographic gravity waves p 713 N94-13647
Mathematical algorithms for multidimensional inverse scattering problems in inhomogeneous medium
[AD-A266440] p 749 N94-13702
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers
[AD-A266543] p 504 N94-13705
High order hybrid numerical simulations of two dimensional detonation waves
[NASA-CR-191506] p 769 N94-13792
The numerical simulation of the collapse process of axially compressed cylindrical shells with measured imperfections
[LR-705] p 674 N94-13905
Numerical simulations of Nd:YAG laser amplifiers
[FFI/RAPPORT-92/7028] p 657 N94-13970

NUMERICAL CONTROL
An experimental study of tether reel system: A laboratory model
[NAL-TR-1176T] p 539 N94-12943
Data fusion for adaptive control in manufacturing: Impact on engineering information models
[DE93-011555] p 743 N94-12999
Inertial confinement fusion program
[DE93-013372] p 796 N94-13047
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (IDNB) Experiment
[DE93-014144] p 797 N94-13100
DATAA: Data acquisition made easy
[DE93-014683] p 823 N94-13406
Knowledge based systems: From process control to policy analysis
[DE93-014582] p 765 N94-14117
Eye-gaze and intent: Application in 3D interface control
[DE93-015210] p 738 N94-14335
Laser beam control and diagnostic systems for the copper-pumped dye laser system at Lawrence Livermore National Laboratory
[DE93-016529] p 658 N94-14437
A fast frame rate 512 x 512 CCD digital camera system
[DE93-013048] p 653 N94-14792
Performance seeking control: Program overview and future directions
[NASA-TM-4531] p 519 N94-14855

NUMERICAL FLOW VISUALIZATION
High speed transition prediction
[NASA-CR-194125] p 502 N94-13422
Rotor stator CGI
[NASA-TM-109313] p 518 N94-13608
Numerical simulation of steady three-dimensional flows in axial turbomachinery bladerows p 634 N94-13630
Analysis of reacting flowfields in low-thrust rocket engines and plumes p 552 N94-14491
Simulation of hypersonic, reacting flow around reentry bodies: Comparisons of numerical and experimental results
[MBB-LME-211-S-PUB-507] p 509 N94-14710

NUMERICAL STABILITY
Modulational stability of periodic solutions of the Kuramoto-Sivaskinsky equation
[NASA-CR-191502] p 628 N94-12888
Stability of subharmonics and escape phenomena in the twin-well potential duffing system p 775 N94-13235

NUMERICAL WEATHER FORECASTING
The nocturnal wind maximum: An interactive forecast method
[KNMI-TR-142] p 722 N94-13985
Precipitation verification LAM
[KNMI-TR-143] p 722 N94-13991
Adaptation of humidity-cloud cover relations in the LAM
[KNMI-TR-144] p 722 N94-13992
A verification of the Euroguidance: A guidance forecast for transportation and tourism
[KNMI-TR-145] p 722 N94-13993

NUTRITIONAL REQUIREMENTS
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097

O

OBJECT PROGRAMS
A distributed, visual object system using aggregation objects with a local namespace
[IME-MET-TR-007] p 764 N94-13860
Reviews of computing technology: Object-oriented technology
[DE93-014740] p 754 N94-14470

OBJECT-ORIENTED PROGRAMMING
Object-oriented productivity metrics p 667 N94-13161
Programming languages made in Italy
[REPT-93-002] p 750 N94-13805
A distributed, visual object system using aggregation objects with a local namespace
[IME-MET-TR-007] p 764 N94-13860
The OOA technique in information systems
[REPT-72-92] p 823 N94-13863
Efficient, massively parallel eigenvalue computation
[NASA-CR-194289] p 760 N94-13921
Discrete event simulation using object-oriented programming: Application to manufacturing
[ERB-1037] p 753 N94-14200
Reviews of computing technology: Object-oriented technology
[DE93-014740] p 754 N94-14470

OBLIQUE SHOCK WAVES
An experimental investigation of shock wave/vortex interaction p 634 N94-13574

OBSERVATORIES
Search for ultra-high-energy radiation from gamma-ray bursts
[DE93-012721] p 847 N94-12964

OBSTACLE AVOIDANCE
Obstacle detection by recognizing binary expansion patterns
[NASA-CR-194415] p 514 N94-14495

OCEAN CURRENTS
Circulation model experiments of the Gulf Stream using satellite-derived fields
[AD-A266067] p 725 N94-12990
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119

Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384
Tidal interactions in the Earth Moon system
[COMMUNICATIONS-SER-B-160] p 837 N94-13503
Radar imaging of sub-mesoscale ocean phenomena
[AD-A266339] p 725 N94-13581
On the space-time ocean current variability and its effects on the length-of-day
[ISBN-0-315-59510-8] p 726 N94-14205
On the sea truth data of the Kuroshio meander and cold eddy movement p 696 N94-14266
Tracking of change of a warm-core ring structure p 696 N94-14267
Outline of ISY Kuroshio observation experiment p 697 N94-14268
Warm streamers extended from Warm Core Rings (WCR's) and their role on fish migration and fishing ground formation p 697 N94-14270

OCEAN DATA ACQUISITIONS SYSTEMS
Buoy experiments to obtain the sea-truth data for OCTS/NSCAT, part 1
[NASDA-CNT-930005-PT-1] p 725 N94-13653
Phase aligner for the Electronically Scanned Thinned Array Radiometer (ESTAR) instrument
[NASA-TM-4518] p 623 N94-13878
ERS-1 system
[ESA-SP-1146] p 699 N94-14353

OCEAN DYNAMICS
Circulation model experiments of the Gulf Stream using satellite-derived fields
[AD-A266067] p 725 N94-12990
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119
Integration of space and in-situ observations to study atmosphere, ocean and land processes
[NASA-CR-194495] p 683 N94-14500
Nonlinear wave forces on large ocean structures
[AD-A266820] p 683 N94-14902

OCEAN MODELS
Circulation model experiments of the Gulf Stream using satellite-derived fields
[AD-A266067] p 725 N94-12990
Radar imaging of sub-mesoscale ocean phenomena
[AD-A266339] p 725 N94-13581

OCEAN SURFACE
DMSP F11 SSM/T-2 calibration and validation
[AD-A265817] p 719 N94-12978
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
[NASA-CR-193646] p 512 N94-13238
Radar imaging of sub-mesoscale ocean phenomena
[AD-A266339] p 725 N94-13581
Artificial oil pollution detection and wave observation in the sea adjacent to Japan by ERS-1 SAR p 688 N94-14212
Image processing and analysis of airborne POLDER data p 689 N94-14219
Outline of ISY sea surface temperature data sets p 696 N94-14261
Integration of SST data sets using MOS-1 satellite data: For validation and monitoring p 696 N94-14262
Geophysical validation of ATSR sea surface temperatures p 696 N94-14263
Accuracy validation test of estimated sea surface temperature by satellite data p 696 N94-14264
Sea surface effect on the sea surface temperature estimation by satellite data p 696 N94-14265
On the sea truth data of the Kuroshio meander and cold eddy movement p 696 N94-14266
Tracking of change of a warm-core ring structure p 696 N94-14267
Outline of ISY Kuroshio observation experiment p 697 N94-14268
Warm streamers extended from Warm Core Rings (WCR's) and their role on fish migration and fishing ground formation p 697 N94-14270

OCEANOGRAPHY
Ocean acoustic processing: A model-based approach
[DE93-011902] p 725 N94-12876
Optimization and eigenvalue computation with application to meteorology and oceanography
[DE93-015310] p 744 N94-13024
Knowledge-based oceanographic image compression
[AD-A265752] p 821 N94-13041
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119
Activities report of the Netherlands Remote Sensing Board
[ETN-93-93880] p 686 N94-14073
Volume 14: The first SeaWiFS intercalibration round-robin experiment, SIRREX-1, July 1992
[NASA-TM-104566] p 725 N94-14090

OCEANS
The role of clouds and oceans in global greenhouse warming
[DE93-016206] p 706 N94-13079
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
[NASA-CR-193646] p 512 N94-13238
Ocean uptake of carbon dioxide
[DE93-012967] p 707 N94-13384

OCTANE
Comparative ignition of hexane and octane isomers in a shock tube
[DE93-016535] p 566 N94-14869

ODORS
Study on improvement of flammability, odor and offgassing tests for materials
[NASDA-CNT-930009] p 563 N94-13471

OFFGASSING
Study on improvement of flammability, odor and offgassing tests for materials
[NASDA-CNT-930009] p 563 N94-13471

OFFSHORE PLATFORMS
Nonlinear wave forces on large ocean structures
[AD-A266820] p 683 N94-14902

OHMIC DISSIPATION
Ohmic heating of composite candidate graphite-fiber/coating combinations
[NASA-TM-4491] p 554 N94-12871

OIL POLLUTION
Artificial oil pollution detection and wave observation in the sea adjacent to Japan by ERS-1 SAR p 688 N94-14212

OIL RECOVERY
BOAST 2 for the IBM 3090 and RISC 6000
[DE93-000138] p 638 N94-14351

OIL SLICKS
Artificial oil pollution detection and wave observation in the sea adjacent to Japan by ERS-1 SAR p 688 N94-14212

OLIGOMERS
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
[AD-A265832] p 577 N94-12986
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778

ON-LINE SYSTEMS
Transition of building energy consumption using multi-input, single-output dynamic model
[VTT-PUBS-116] p 597 N94-14055
On-line upgrade of program modules using AdaPT
[NASA-CR-194331] p 754 N94-14472
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511

ONBOARD DATA PROCESSING
ALFIS: Astronomical Low Frequency Interferometry Satellites. A feasibility study
[LR-699] p 542 N94-13988

OPACITY
H2S data reduction
[NASA-CR-193389] p 617 N94-14743

OPEN CLUSTERS
UV extinction properties of carina nebular dust
[NASA-CR-193424] p 835 N94-13233
Photometry and spectroscopy in the open cluster Alpha Persei, 2
[NASA-CR-193397] p 833 N94-14358

OPERATING COSTS
Robot-task compliance: The energy criterion
[ITN-93-85196] p 763 N94-13568
Optimal maintenance policies of a Markovian system
[ITN-93-85216] p 774 N94-14502

OPERATIONS RESEARCH
Gate assignment using linear programming
[LR-698] p 775 N94-13987

OPERATORS (MATHEMATICS)
On some results by Fuhrmann on Hankel operators
[CWI-BS-R9224] p 764 N94-13999
On relations between Schmidt pairs arising in robust control
[CWI-BS-R9225] p 764 N94-14000
On the Schmidt pairs of multivariable Hankel operators and robust control
[CWI-BS-R9226] p 765 N94-14001

OPTICAL BISTABILITY
Characteristics of semiconductor lasers with optical feedback
[ISBN-0-315-55435-5] p 656 N94-13522

OPTICAL COMMUNICATION
Development of an on-board aircraft optical fiber data bus system
[NAL-TR-1163] p 514 N94-13338
An overview of the Galileo Optical Experiment (GOPEX) p 610 N94-14386
Galileo Optical Experiment (GOPEX) optical train: Design and validation at the Table Mountain Facility p 610 N94-14390
GOPEX laser transmission and monitoring systems p 611 N94-14391
GOPEX at the Starfire Optical Range p 611 N94-14392

OPTICAL CONTROL
Executive summary p 545 N94-14831
Wavefront sensing, control, and pointing p 546 N94-14833

OPTICAL DATA PROCESSING
Development of an on-board aircraft optical fiber data bus system
[NAL-TR-1163] p 514 N94-13338
High speed all-optical networks
[NASA-CR-194384] p 791 N94-13682

OPTICAL EQUIPMENT
Fabrication of AlGaAs/GaAs-light-emitting devices by selective MOCVD using dialkylmetalchloride p 627 N94-13433
Optical degradation issues for XUV projection lithography systems
[DE93-012658] p 626 N94-14805
Optical testing p 547 N94-14836
Optical systems integrated modeling p 547 N94-14837
Advanced optical instruments technology p 547 N94-14838

OPTICAL FIBERS
Development of an on-board aircraft optical fiber data bus system
[NAL-TR-1163] p 514 N94-13338
Optical fiber sensors for materials and structures characterization
[NASA-CR-194090] p 791 N94-13353
Measurements of optical properties of waveshifting optical fiber for liquid scintillator hadron calorimetry
[DE93-012606] p 791 N94-13482
Liquid and gas evanescent wave spectroscopy via tunabie lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529
Optical fibre Fabry-Perot interferometers for calorimetric heat transfer gauges
[RAE-TM-AERO/PROP-20] p 653 N94-14701

OPTICAL FILTERS
Advanced optical instruments technology p 547 N94-14838

OPTICAL FLOW (IMAGE ANALYSIS)
Compatibility of information and mode of control: The case for natural control systems p 523 N94-13307

OPTICAL HETERODYNING
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473

OPTICAL MATERIALS
Effect of microstructure on passive film formation and breakdown on Al alloys
[AD-A265339] p 569 N94-13050
Optical fiber sensors for materials and structures characterization
[NASA-CR-194090] p 791 N94-13353
Reflective coatings for solar applications
[DE93-010026] p 702 N94-13381
Barium fluoride research and development at Lawrence Livermore National Laboratory
[DE93-014682] p 807 N94-13405
Preparation of optical materials used in non-visible region (M-17) p 589 N94-13749
Workshop Proceedings: Optical Systems Technology for Space Astrophysics in the 21st Century, volume 3
[NASA-CR-194102] p 545 N94-14830
Executive summary p 545 N94-14831
Materials and structures p 546 N94-14835
Advanced optical instruments technology p 547 N94-14838
Investigation of Zerodur material processing
[NASA-CR-193842] p 793 N94-14903

OPTICAL MEASUREMENT
Adaptive control of interface by temperature and interface profile feedback in transparent multi-zone crystal growth furnace
[NASA-CR-194140] p 762 N94-13253
Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682
Executive summary p 545 N94-14831

OPTICAL MEASURING INSTRUMENTS
Recent flight-test results of optical airdata techniques
[NASA-TM-4504] p 517 N94-13791

Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992
[EOC-92-01-0007] p 687 N94-14091
Calibration and in-house validation results of JERS-1 data p 687 N94-14092
Earth observation experiment data analysis p 687 N94-14093
ADEOS project p 687 N94-14094
Spectroscopic method and data reduction algorithm for laser long-path absorption measurements using RIS p 689 N94-14218
Image processing and analysis of airborne POLDER data p 689 N94-14219
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
[RAE-TM-AERO/PROP-21] p 509 N94-14706
Workshop Proceedings: Optical Systems Technology for Space Astrophysics in the 21st Century, volume 3
[NASA-CR-194102] p 545 N94-14830
Executive summary p 545 N94-14831
Optical testing p 547 N94-14836

OPTICAL MICROSCOPES
Two dimensional measurement and evaluation of point images at microscope objectives
[ETN-93-94397] p 793 N94-14856

OPTICAL POLARIZATION
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232

OPTICAL PROPERTIES
Measurements of optical properties of waveshifting optical fiber for liquid scintillator hadron calorimetry
[DE93-012606] p 791 N94-13482
Optical and physical properties of the LiSrAlF6:Cr laser crystal
[DE93-014657] p 808 N94-13881
Optimization of transparent and reflecting electrodes for amorphous silicon solar cells
[DE93-010009] p 704 N94-14110
Laser and spectroscopic properties of Yb-doped apatite crystals
[DE93-014656] p 810 N94-14125
Theory of the electronic and structural properties of solid state oxides
[DE93-016051] p 811 N94-14296
Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies
[NASA-CR-194417] p 842 N94-14298
Impact of shorter wavelengths on optical quality for laws
[NASA-CR-193433] p 792 N94-14473
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550
Theoretical antideuteron-nucleus absorptive cross sections p 786 N94-14551

OPTICAL PUMPING
The Livermore x ray laser program
[DE93-014118] p 658 N94-14152

OPTICAL RADAR
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Coherent Doppler lidar signal covariance including wind shear and wind turbulence
[NASA-CR-194492] p 721 N94-13723
A rocket-borne lidar for studies of the middle atmosphere
[FFI/RAPPORT-92/7034] p 715 N94-13949
Signal and reference wavelengths for the elimination of SO2 cross sensitivity in remote measurements of tropospheric ozone with lidar
[GKSS/92/E/24] p 617 N94-14819
The mobile lidar system ARGOS for spatial resolution remote measuring of gaseous air pollutants
[GKSS/92/E/26] p 617 N94-14820

OPTICAL REFLECTION
Determination of the surface cleanliness of metals by FT-IR spectroscopy
[DE93-013252] p 565 N94-14525

OPTICAL RESONATORS
Horizontal-cavity surface-emitting lasers, superluminescent LEDs, and amplifiers, and parabolic gain unstable resonator semiconductor lasers p 656 N94-13573
Theoretical investigation of scattering by homogeneous or coated dielectric spheres illuminated with a steady state or pulsed laser beam p 657 N94-13624

OPTICAL THICKNESS
The effects of anthropogenic aerosols on optical thickness and particle size of clouds. Part 1: Retrieval algorithm p 691 N94-14230
Earth radiation budget, cloud, and aerosol parameters derived from AVHRR and TOVS measurements p 691 N94-14233
Solar radiation on Mars: Stationary photovoltaic array
[NASA-TM-106321] p 626 N94-14730

OPTICAL TRACKING
DMSP F11 SSM/T-2 calibration and validation
[AD-A265817] p 719 N94-12978
Three dimensional tracking of four point planar patterns using corners
[ISBN-0-315-52149-X] p 791 N94-13490
Electromagnetic wave test p 508 N94-14173

OPTICAL WAVEGUIDES
Implementation of manufacturing techniques for planar, single mode waveguides on lithium niobate
[DSIS-93-00101] p 792 N94-13845
Integrated optics technology transfer
[DSIS-93-00179] p 792 N94-13868
Liquid and gas evanescent wave spectroscopy via tunable lasers and silver halide fibers
[ITN-93-85226] p 565 N94-14465
Manufacturing and examination of integrated optical waveguide components in silicon
[ETN-93-94393] p 793 N94-14704

OPTIMAL CONTROL
Active control of acoustic pressure fields using smart material technologies
[NASA-CR-191480] p 768 N94-13354
Optimal lateral escape maneuvers for microburst encounters during final approach
[LR-691] p 511 N94-13534
On some results by Fuhrmann on Hankel operators
[CWI-BS-R9224] p 764 N94-13999
On relations between Schmidt pairs arising in robust control
[CWI-BS-R9225] p 764 N94-14000
On the Schmidt pairs of multivariable Hankel operators and robust control
[CWI-BS-R9226] p 765 N94-14001
Development of an hp-version finite element method for computational optimal control
[NASA-CR-194149] p 766 N94-14444
Decentralized control of uncertain systems via sensitivity models
[DE93-012963] p 766 N94-14568
Analysis, approximation, and computation of a coupled solid/fluid temperature control problem
[NASA-TM-106351] p 771 N94-14731
Functional differential equations with piecewise continuous argument
[AD-A266660] p 772 N94-14840
Performance seeking control: Program overview and future directions
[NASA-TM-4531] p 519 N94-14855

OPTIMIZATION
Efficient dynamic optimization of logic programs
[NASA-TM-109251] p 761 N94-12889
Tree reconstruction from partial orders
[DE93-009841] p 743 N94-12991
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers
[NASA-CR-191510] p 629 N94-13074
Multidisciplinary design techniques applied to conceptual aerospace vehicle design
[NASA-CR-194409] p 515 N94-13618
An expert system for integrated structural analysis and design optimization for aerospace structures
[NASA-CR-194225] p 673 N94-13673
Fast parallel string prefix-matching
[AD-A267758] p 760 N94-13924
Mathematical optimization: A tool for aircraft design
[MBB-LME-251-S-PUB-0492] p 751 N94-14006
VFGEN: A parallel volume fraction generator for hydrocodes
[DE93-011673] p 752 N94-14019
Optimal synthesis of hot composite laminates with interphase layers
[NASA-TM-106326] p 557 N94-14042
Development of an hp-version finite element method for computational optimal control
[NASA-CR-194149] p 766 N94-14444
Paradigms for very fast parallel algorithms
[ITN-93-85212] p 755 N94-14556
Computational issues in optimal tuning and placement of passive dampers p 681 N94-14647

OPTOELECTRONIC DEVICES
Activities of Institute for Microstructural Sciences
[NRC-32815] p 810 N94-14198
Activities of Institute for Microstructural Sciences
[CNR-32815] p 810 N94-14199
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529

ORBIT CALCULATION
Investigation for improving Global Positioning System (GPS) orbits using a discrete sequential estimator and stochastic models of selected physical processes
[NASA-CR-194167] p 512 N94-13082
Error analysis of real time and post processed or bit determination of GFO using GPS tracking
[NASA-CR-193646] p 512 N94-13238
Improved treatment of global positioning system force parameters in precise orbit determination applications p 514 N94-14371
Failure modes of reduced-order orbit determination filters and their remedies p 532 N94-14373

ORBIT TRANSFER VEHICLES
Low power pulsed MPD thruster system analysis and applications
[NASA-CR-191187] p 550 N94-13415
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538

ORBITAL ASSEMBLY
The Second Workshop on Deployment and Assembly Experiment of Large Space Structure on Orbit
[NASDA-CON-930003] p 529 N94-13268
Structural design of hexa-link truss deployable antenna p 529 N94-13269
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270
Development of modular cable mesh deployable antenna p 530 N94-13274
Research on inflatable structure for space use p 530 N94-13275
Helical truss beam development for large space structure p 530 N94-13276
Application of intelligently adaptable structure and robot to large space structure p 530 N94-13277
Trial manufacture model and in-space verification method of deployable antenna p 530 N94-13278
Development and application of one dimensional deployable truss p 531 N94-13281
The study on large space structure assembly technology: The study on deployable truss structure, part 1
[NASDA-TMR-930002] p 541 N94-13658
The study on large space structure assembly technology: The study on deployable truss structure, part 2 and 3
[NASDA-TMR-930003-PT-2-3] p 541 N94-13659
Large space structures and systems in the space station era: A bibliography with indexes (supplement 05)
[NASA-SP-7085(05)] p 543 N94-14411

ORBITAL MANEUVERS
Guidance law development for aeroassisted transfer vehicles using matched asymptotic expansions
[NASA-CR-194523] p 508 N94-14538

ORBITAL POSITION ESTIMATION
Orbit determination error analysis based on the requirements of ADEOS mission
[NASDA-CNT-930008] p 532 N94-13644

ORBITAL RENDEZVOUS
STS-32 mission highlights resource tape
[NASA-TM-109291] p 531 N94-13631

ORDER-DISORDER TRANSFORMATIONS
Effect of pressure on order and stability in alloys: The case of Al-Ge
[DE93-013842] p 567 N94-12899
Transport properties of disordered porous media from the microstructure
[DE93-016065] p 806 N94-13152

ORGANIC COMPOUNDS
Integrated, flexible, and rapid geophysical surveying
[DE93-009989] p 712 N94-12906
Biomass production chamber air analysis of wheat study (BWT931)
[NASA-CR-194092] p 737 N94-13712
Development of an advanced spacecraft tandem mass spectrometer
[NASA-CR-194195] p 545 N94-13953
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511

ORGANIC PHOSPHORUS COMPOUNDS
A characterization of carboxylesterases in rat and guinea pig: Their heterogeneity and role in detoxication of organophosphorus compounds
[NDRE-PUBL-93-1001] p 730 N94-14852

ORGANIC SUPERCONDUCTORS
The de Haas-van Alphen studies and Fermi surface properties of organic superconductors (ET)2X
[DE93-015157] p 623 N94-13925

ORGANIZATIONS
Here's the beef: A case study in organizational transformation p 667 N94-13163

ORGANOMETALLIC COMPOUNDS
Anchoring strategies for bimetallic species in zeolites
[DE93-015622] p 567 N94-12834

Growth experiment of organic metal crystal in low gravity (M-21) p 590 N94-13753
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344

OROGRAPHY
Numerical simulation and parameterization of orographic gravity waves p 713 N94-13647

ORR-SOMMERFELD EQUATIONS
Stability of spatially developing boundary layers p 640 N94-14605

ORTHOGONALITY
On a difference equation for generalizations of Charlier polynomials
[REPT-92-101] p 770 N94-14150
A hydrogen atom in the curved space: Orthogonality of radial wave functions with respect to the critical momentum
[DE93-626623] p 788 N94-14891

ORTHONORMAL FUNCTIONS
Mathematic methods and algorithms for real-time applications
[AD-A266776] p 771 N94-14789

ORTHOTROPIC PLATES
Measuring methods for CFRP laminates' bending and torsion rigidities characteristics p 529 N94-13272

ORTHOTROPIC SHELLS
On the orthotropicity assumption and discontinuity conditions of conical shells
[LR-703] p 673 N94-13787

OSCILLATING FLOW
Study of possible mechanisms of instability due to heat transfer
[INPE-5448-TDI/494] p 628 N94-12966
Stability of oscillatory two phase Couette flow
[NASA-CR-191501] p 636 N94-13817

OSCILLATIONS
Are there atmospheric neutrino oscillations?
[DE93-015550] p 783 N94-13890
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456

OSCILLATOR STRENGTHS
The International Colloquium on Atomic Spectra and Oscillator Strengths for Astrophysical and Laboratory Plasmas
[NASA-TM-109255] p 849 N94-13376

OSCILLATORS
Predicted performance of a dc beam driven FEM oscillator designed for fusion applications at 200-250 GHz
[DE93-013414] p 655 N94-13145
Development of UHF spark-switched L-C Oscillators
[DE93-015019] p 623 N94-13892
Investigation of an aeroelastic oscillator: Analysis of one-degree-of-freedom galloping with combined translational and torsional effects
[LR-707] p 527 N94-13906

OUTGASSING
BAKEOUT: A computer program for predicting diffusive outgassing from stainless steel
[DE93-012613] p 573 N94-14364

OUTPUT
Implementation and experimentation with a motion planning system
[ITN-93-85213] p 755 N94-14505

OVERVOLTAGE
Induced voltages at air gaps due to electromagnetic field caused by direct and indirect lightning strokes
[ITN-93-85203] p 599 N94-13237

OXIDATION
Absorption and damage thresholds of low defect density hafnia deposited with activated oxygen
[DE93-013853] p 655 N94-13243
Reduction of Pu(6) with hydrogen peroxide: Effects of plutonium, peroxide, and iron concentrations and of reaction time
[DE93-013598] p 564 N94-13487
Growth of Si spherical crystals and the surface oxidation (M-9) p 587 N94-13741
Homogeneous-hetergeneous combustion: Thermal and chemical coupling
[DE93-016050] p 565 N94-14403
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510
Molecular simulator: A basic tool for submicron MOS processes development
[LAAS-92484] p 814 N94-14697
Study of chemical reactions under the influence of ultrasound
[DE93-016458] p 778 N94-14867

OXIDATION RESISTANCE
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812

OXIDATION-REDUCTION REACTIONS
Photocatalysis for the treatment of waste water: Applications involving the removal of metals
[DE93-011669] p 561 N94-12841
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778

OXIDE FILMS
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
[NASA-CR-193647] p 575 N94-12789
Metastability of yttrium-oxides
[DE93-016548] p 813 N94-14440

OXIDES
Experimental and kinetic modeling of acid/base and redox reactions over oxide catalysts
[DE93-016203] p 563 N94-13375
Synthesis of organic ligands for f-element separations
[DE93-012915] p 554 N94-14290

OXYGEN
Preliminary results on the hydrological measurements in the Aegean Sea off Crete: Cruise, Georgia, 1989
[PREPRINT-736] p 725 N94-13500

OXYGEN ATOMS
Novel oxygen atom source for material degradation studies
[NASA-CR-191323] p 562 N94-13115
Atomic hydrogen and nitrogen distributions from atmosphere explorer measurements
[NASA-CR-194336] p 714 N94-13825
Atomic research
[NASA-CR-193843] p 788 N94-14905

OXYGEN CONSUMPTION
Variability of prediction of maximal oxygen concumption on the cycle ergometer using standard equations
[NASA-TP-3412] p 729 N94-14032

OXYGEN ISOTOPES
Maximum entropy spectral analysis of the geological time series of the oxygen isotope record from deep-sea cores
[INPE-5465-PRE/1773] p 725 N94-13728

OXYGEN PRODUCTION
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097

OZONE
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area
[DE93-012852] p 708 N94-13495
Arctic ozone expedition
[NASA-TM-109301] p 708 N94-13602
Develop research plan for use of atlas data
[NASA-CR-194338] p 714 N94-13709
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969
Effects of typhoon on TOMS data p 693 N94-14243
The role of the dynamics for the deviation of the total ozone from the long-term mean at the edge of the polar vortex p 694 N94-14250
The European Arctic ozone experiment: An investigation of Northern Hemisphere ozone depletion p 694 N94-14251
Space-based activities: SAM 2 and SAGE 2 p 694 N94-14252
New evidences supported the Wei hypothesis about the formation of the Antarctic ozone hole p 694 N94-14253
Signal and reference wavelengths for the elimination of SO2 cross sensitivity in remote measurements of tropospheric ozone with lidar
[GKSS/92/E/24] p 617 N94-14819
The mobile lidar system ARGOS for spatial resolution remote measuring of gaseous air pollutants
[GKSS/92/E/26] p 617 N94-14820

OZONE DEPLETION
Theoretical support for the Airborne Antarctic Ozone Experiment
[NASA-CR-193669] p 713 N94-13465
Airborne Arctic stratospheric expedition: Ozone
[NASA-TM-109312] p 515 N94-13606
Modeling of the partitioning of reactive odd nitrogen in the lower stratosphere using aircraft measurements of NOy, NO, and other trace species
[NASA-CR-194305] p 714 N94-13707
The role of the dynamics for the deviation of the total ozone from the long-term mean at the edge of the polar vortex p 694 N94-14250
The European Arctic ozone experiment: An investigation of Northern Hemisphere ozone depletion p 694 N94-14251
Space-based activities: SAM 2 and SAGE 2 p 694 N94-14252
New evidences supported the Wei hypothesis about the formation of the Antarctic ozone hole p 694 N94-14253
Long-range global warming impact of gaseous diffusion plant operation
[DE93-011686] p 710 N94-14459

P

P-N JUNCTIONS
Changes in electrical device characteristics during the formation of dislocations in situ in the TEM
[DE93-013910] p 808 N94-13694

P-TYPE SEMICONDUCTORS
Effects of growth conditions and substrate orientation on the properties of InSb
[DE93-013766] p 812 N94-14344

PACIFIC OCEAN
Linkage of anthropogenic aerosol to clouds and climate
[DE93-016434] p 719 N94-13080

PACKET SWITCHING
Technical support for digital systems technology development. Task order 1: ISP contention analysis and control
[NASA-CR-190758] p 537 N94-12809
Destination-directed, packet-switched architecture for a geostationary communications satellite network
[NASA-TP-3379] p 538 N94-13111
High speed packet switching
[NASA-CR-191334] p 759 N94-13177

PACKET TRANSMISSION
Characteristics of the amateur radio means of the Arsene satellite
[CNES-NT-131] p 605 N94-13950

PACKETS (COMMUNICATION)
Technical support for digital systems technology development. Task order 1: ISP contention analysis and control
[NASA-CR-190758] p 537 N94-12809
Mathematic methods and algorithms for real-time applications
[AD-A266776] p 771 N94-14789

PADE APPROXIMATION
A hybrid Pade-Galerkin technique for differential equations
[NASA-CR-191494] p 767 N94-13289

PAINTS
Study of novel conductive paints for solar cell electromagnetic fields
[DE93-015088] p 581 N94-14337

PAIR PRODUCTION
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
A search for scalar leptoquarks in D0
[DE93-012780] p 779 N94-12954
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
[DE93-017154] p 790 N94-14893

PALLADIUM ALLOYS
A survey and analysis of experimental hydrogen sensors
[NASA-TM-106300] p 648 N94-13135

PALLADIUM COMPOUNDS
Muon spin relaxation studies of heavy fermion superconductors
[DE93-014576] p 815 N94-14773

PANEL METHOD (FLUID DYNAMICS)
VSAERO analysis of a Piper Cub aircraft p 516 N94-14616
Panel codes for aerodynamic analysis at NAL p 510 N94-14617

PANELS
The feasibility of producing aluminum-lithium structures for cryogenic tankage applications by laser beam welding
[NASA-CR-191527] p 595 N94-14026

PANORAMIC CAMERAS
Rover imaging system for the Mars rover/sample return mission
[NASA-CR-193413] p 649 N94-13464

PARABOLIC ANTENNAS
Environmental projects. Volume 15: Environmental assessment: Proposed 1-megawatt radar transmitter at the Mars site
[NASA-CR-194098] p 598 N94-13090
Structural design of hexa-link truss deployable antenna p 529 N94-13269
Thermal distortion measurement of TETRUS type thermal test model of large deployable antenna for mobile communications satellite p 529 N94-13270

PARABOLIC DIFFERENTIAL EQUATIONS
Open boundary conditions for incompletely parabolic systems
[FFI/RAPPORT-92/7029] p 770 N94-13971
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
[DE93-010408] p 637 N94-14053
Computation of nonequilibrium flows using PNS equations p 641 N94-14610
PARABOLIC REFLECTORS
High-flux testing of heat pipes for point-focus solar collector systems
[DE93-011581] p 628 N94-12884
Environmental projects. Volume 15: Environmental assessment: Proposed 1-megawatt radar transmitter at the Mars site
[NASA-CR-194098] p 598 N94-13090
Development of UHF spark-switched L-C Oscillators
[DE93-015019] p 623 N94-13892
PARACHUTES
Parachute system design, analysis, and simulation tool
[DE93-013755] p 501 N94-13260
PARALLEL COMPUTERS
Turbulence modeling of free shear layers for high-performance aircraft
[NASA-CR-193659] p 520 N94-12799
Beyond core: Making parallel computer I/O practical
[DE93-012347] p 758 N94-12878
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers
[NASA-CR-191510] p 629 N94-13074
Adaptive Transfer Function Networks
[DE93-014344] p 745 N94-13151
Parametric binary dissection
[NASA-CR-191496] p 762 N94-13184
The NAS parallel benchmarks
[NASA-TM-103863] p 740 N94-13200
USRA/RIACS
[NASA-CR-194334] p 750 N94-13932
A design methodology for portable software on parallel computers
[NASA-CR-194181] p 752 N94-14139
Development of parallel processing at NAL: A retrospect p 641 N94-14614
PARALLEL PLATES
Stability of oscillatory two phase Couette flow
[NASA-CR-191501] p 636 N94-13817
High counting rate resistive-plate chamber
[DE93-014928] p 651 N94-14452
PARALLEL PROCESSING (COMPUTERS)
Beyond core: Making parallel computer I/O practical
[DE93-012347] p 758 N94-12878
The 3-D massively parallel impact simulations using PCTH
[DE93-011593] p 670 N94-12908
A network evaluation and analysis tool
[DE93-012647] p 758 N94-12917
Parallelizing Timed Petri Net simulations
[NASA-CR-194278] p 758 N94-12938
Parallel implementation of an algorithm for Delaunay triangulation
[NASA-TM-103951] p 740 N94-12973
An experimental regional scale climate simulation laboratory
[DE93-015935] p 719 N94-13119
Parametric binary dissection
[NASA-CR-191496] p 762 N94-13184
Implementation of ADI: Schemes on MIMD parallel computers
[NASA-CR-193720] p 759 N94-13204
Advanced computers and simulation
[DE93-014354] p 740 N94-13286
A data distributed parallel algorithm for ray-traced volume rendering
[NASA-CR-191520] p 749 N94-13721
Tomographic methods in flow diagnostics
[NASA-TM-106330] p 650 N94-13876
Efficient, massively parallel eigenvalue computation
[NASA-CR-194289] p 760 N94-13921
USRA/RIACS
[NASA-CR-194334] p 750 N94-13932
Three, four, five, six or the complexity of scheduling with communication delays
[CWI-BS-R9229] p 751 N94-14004
VFGEN: A parallel volume fraction generator for hydrocodes
[DE93-011673] p 752 N94-14019
Quantum Monte Carlo by message passing
[DE93-012645] p 760 N94-14177
Hybrid S(sub N)/Monte Carlo research and results
[DE93-012677] p 773 N94-14178
An efficient parallel algorithm for matrix-vector multiplication
[DE93-015125] p 754 N94-14399
An overview of parallel scientific visualization
[DE93-017105] p 755 N94-14521
Paradigms for very fast parallel algorithms
[ITN-93-85212] p 755 N94-14556
Development of parallel processing at NAL: A retrospect p 641 N94-14614
Parallel O(log n) algorithms for open- and closed-chain rigid multibody systems based on a new mass matrix factorization technique p 679 N94-14636
On the solution of a class of graph problems by parallel algorithms
[LAAS-92514] p 756 N94-14712
Identification of continuous-time dynamical systems: Neural network based algorithms and parallel implementation
[DE93-014427] p 766 N94-14737
The development of a scalable parallel 3-D CFD algorithm for turbomachinery
[NASA-CR-193604] p 664 N94-14848
PARALLEL PROGRAMMING
Calculating intersections of surfaces in screen space
[NASA-CR-191498] p 745 N94-13185
Hashing and rehashing in emulated shared memory
[CWI-CS-R9240] p 740 N94-13525
Fast parallel string prefix-matching
[AD-A267758] p 760 N94-13924
A design methodology for portable software on parallel computers
[NASA-CR-194181] p 752 N94-14139
Paradigms for very fast parallel algorithms
[ITN-93-85212] p 755 N94-14556
Execution methods, and parallel virtual machines for distributed implementation of the LCS parallel programming language
[LAAS-93032] p 761 N94-14716
PARAMETER IDENTIFICATION
Bounds on time delay estimation given unknown signal spectral parameters
[ITN-93-85194] p 601 N94-13566
Parameter identification of a model of the process of software development
[REPT-93-008] p 750 N94-13807
PARAMETERIZATION
A parameterization of cloud droplet nucleation
[DE93-007998] p 718 N94-12903
Extremal polygon containment problems and other issues in parametric searching
[ITN-93-85214] p 771 N94-14506
Scattering calculations and confining interactions
[NASA-CR-194242] p 786 N94-14549
On l(1): Optimal decentralized performance p 661 N94-14643
Search for subgrid scale parameterization by projection pursuit regression p 643 N94-14749
PARITY
No-lost theorem for parity violating nucleon-nucleon scattering experiments
[DE93-012737] p 779 N94-12949
On the theory of the decaying developed turbulence with spontaneous parity violation
[DE93-623190] p 632 N94-13511
Coherent excitation of autoionizing resonances by electron impact
[DE93-018169] p 785 N94-14419
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
PARTIAL DIFFERENTIAL EQUATIONS
Newton iterative methods for large scale nonlinear systems
[DE93-015357] p 767 N94-13025
Simplification-driven automated partial evaluation
[DE93-012890] p 768 N94-13391
Integrable system describing surfaces of non-constant curvature
[PREPRINT-734] p 768 N94-13499
PARTIAL PRESSURE
Binary homogeneous nucleation: Temperature and relative humidity fluctuations and non-linearity
[DE93-007884] p 709 N94-13911
PARTICLE ACCELERATION
Wake-field and space charge effects on high brightness beams calculations and measured results for the laser driven photoelectrons at BNL-ATF
[DE93-015787] p 659 N94-14572
PARTICLE ACCELERATOR TARGETS
Charged-particle evaluation methodology at Lawrence Livermore National Laboratory
[DE93-013429] p 781 N94-13251
Application of synchrotron radiation in chemical dynamics
[DE93-015040] p 563 N94-13411
Longitudinal beam dynamics for heavy ion fusion
[DE93-013850] p 789 N94-13727
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
[DE93-017154] p 790 N94-14893
E789 and P865: High-rate fixed-target studies of charm and beauty
[DE93-017223] p 788 N94-14898
PARTICLE ACCELERATORS
Stripping efficiencies for 277 MeV/amu gold beam on copper foils
[DE93-014306] p 569 N94-13221
Study of electroweak interactions
[DE93-015067] p 782 N94-13412
Characteristics of a high energy muon(+)muon(-) collider based on electro-production of muons
[DE93-017154] p 790 N94-14893
PARTICLE BEAMS
Stripping efficiencies for 277 MeV/amu gold beam on copper foils
[DE93-014306] p 569 N94-13221
Intra-blade quantitative transonic flow measurements at the DRA Pyestock Isentropic Light Piston Facility using PIV (Particle Image Velocimetry)
[RAE-TM-AERO/PROP-21] p 509 N94-14706
PARTICLE COLLISIONS
Measurements of transverse energy and forward energy in high-energy nuclear collisions
[DE93-012755] p 788 N94-12817
Low energy neutral atom imaging techniques
[DE93-012744] p 779 N94-12950
Kinetic studies following state-selective laser excitation
[DE93-012970] p 654 N94-13013
EBIT Trapping Program
[DE93-014422] p 788 N94-13208
Nuclear fusion of protons with ions of boron
[DE93-014284] p 781 N94-13219
Metastable enhancement of C(+) and O(+) capture reactions
[DE93-015075] p 807 N94-13373
Study of electroweak interactions
[DE93-015067] p 782 N94-13412
Electron emission resulting from fast ion impact on thin metal foils: Implications of these data for development of track structure models
[DE93-013506] p 782 N94-13485
Inclusive single muons at DO
[DE93-012779] p 783 N94-13494
High energy hadron-hadron collisions
[DE93-015584] p 784 N94-13927
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
Scattering calculations and confining interactions
[NASA-CR-194242] p 786 N94-14549
Theoretical antideuteron-nucleus absorptive cross sections p 786 N94-14551
PARTICLE DENSITY (CONCENTRATION)
Effects of depositon rate on Bi2Sr2CaCu2O(8+x) and Bi2Sr(1.6)La(0.4)CuO(6+x) epitaxial thin film growth by pulsed-laser ablation
[DE93-015797] p 812 N94-14362
PARTICLE DIFFUSION
Diffusion in liquid state and solidification of binary system (M-7) p 587 N94-13739
Turbulent particle dispersion in confined swirling flows
[DLR-FB-92-32] p 637 N94-14045
PARTICLE INTERACTIONS
Predicted performance of a dc beam driven FEM oscillator designed for fusion applications at 200-250 GHz
[DE93-013414] p 655 N94-13145
Beam halo formation from space-charge dominated beams in uniform focusing channels
[DE93-014458] p 789 N94-13209
Measuring strangeness in the nucleon
[DE93-014861] p 785 N94-14471
PARTICLE MASS
Comparing the Z(sup 0) mass and inclusive widths to the standard electroweak theory
[PREPRINT-731] p 787 N94-14721
PARTICLE MOTION
Stochastic dynamics: Crossover from 1/f(sup 3) to flicker noise
[DE93-622862] p 772 N94-12896
Kinetic simulations of ultra-intense laser plasma interactions and a novel method of generating odd harmonics
[DE93-014418] p 797 N94-13207
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
Stormtime transport of ring current and radiation belt ions
[NASA-CR-194416] p 714 N94-13793
PARTICLE PRODUCTION
Detection of hot muonic hydrogen atoms emitted in vacuum using x-rays
[DE93-010253] p 778 N94-12860
HIJET with AGS physics and N(sup *)'s
[DE93-014022] p 780 N94-13097

Neutral strange particle production at the AGS
[DE93-014044] p 780 N94-13098
Further study of the X(1910) meson
[DE93-621443] p 782 N94-13362
Study of electroweak interactions
[DE93-015067] p 782 N94-13412
Inclusive single muons at DO
[DE93-012779] p 783 N94-13494
Effects of additional isoscalar vector bosons in e(sup +)e)(sup -)(yields)ff-bar processes at the TRISTAN and LEP energies
[DE93-621451] p 783 N94-13506
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
E789 and P865: High-rate fixed-target studies of charm and beauty
[DE93-017223] p 788 N94-14898

PARTICLE SPIN
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
Electromagnetic deflection of spinning particles
[DE93-622866] p 778 N94-12858
Aspects of symmetry violation
[DE93-011003] p 779 N94-12997
Calculation of electron-lithium scattering using the coupled-channel optical method
[DE93-623049] p 806 N94-13226
Magnetic interactions and disorder - phase transitions in dilute spin-glasses and high temperature superconductors
[ITN-93-85217] p 815 N94-14825

PARTICLE THEORY
Electric charge quantization
[DE93-622901] p 778 N94-12845
Radiative corrections in the strongly interacting limit of the standard electroweak model
[DE93-013906] p 780 N94-13018
Comparing the Z(sup 0) mass and inclusive widths to the standard electroweak theory
[PREPRINT-731] p 787 N94-14721

PARTICLE TRACKS
EGS (underscore) windows 2: An enhanced graphical interface to EGS
[DE93-010447] p 746 N94-13382
Distributed processor Monte Carlo: MCNP results on a 16-node IBM cluster
[DE93-012639] p 752 N94-14176

PARTICLE TRAJECTORIES
Low energy neutral atom imaging techniques
[DE93-012744] p 779 N94-12950

PARTICLES
Bridging the gap between the Rayleigh and Thomson limits for various convex bodies
[DSIS-93-00613] p 607 N94-14204

PARTICULATES
Discussion of stress tensor nonuniqueness with application to nonuniform, particulate systems
[DE93-014352] p 816 N94-13206
Nonlinear relationships between particulate absorption and chlorophyll: Detritus or pigment packaging?
[AD-A266806] p 731 N94-14899

PARTITIONS (MATHEMATICS)
Parametric binary dissection
[NASA-CR-191496] p 762 N94-13184

PARTONS
Quark and gluon jets at CDF
[DE93-014919] p 783 N94-13884

PASSIVITY
Effect of microstructure on passive film formation and breakdown on Al alloys
[AD-A265339] p 569 N94-13050

PASTES
Automated crack identification for cement paste
[AD-A265753] p 665 N94-13042

PATTERN RECOGNITION
VISART: Artificial vision for industrial use. A comprehensive system
[INPE-5379-TDI/474] p 665 N94-12941
Feature extraction and classification algorithms for high dimensional data
[NASA-CR-194298] p 743 N94-13023
View generated database
[NASA-CR-191397] p 822 N94-13116
Design of partially supervised classifiers for multispectral image data
[NASA-CR-194299] p 823 N94-13192
Close range 3-D position sensing using stereo vision and point-of-correspondance through mathematical morphology
[ISBN-0-315-61012-3] p 763 N94-13515
A review and analysis of neural networks for classification of remotely sensed multispectral imagery
[NASA-CR-194291] p 763 N94-13603
Fast parallel string prefix-matching
[AD-A267758] p 760 N94-13924
Determination of position and orientation of rigid bodies from image segments
[FFI-92-4005] p 752 N94-14039
Feature discovery on segmented objects in SAR imagery using self-organizing neural networks
[DE93-010685] p 686 N94-14056
Identification and interpretation of patterns in rocket engine data
[NASA-CR-194534] p 552 N94-14309
Obstacle detection by recognizing binary expansion patterns
[NASA-CR-194415] p 514 N94-14495
Computer vision and sensor fusion for detecting buried objects
[DE93-012605] p 700 N94-14566
Retrieval properties of neural networks with infinitely many marked patterns
[PREPRINT-729] p 766 N94-14718
Speaker independent recognition of isolated words using vector quantization and neural networks
[ETN-93-94390] p 616 N94-14724

PAYLOADS
Temperature dependence of diffusivities, preliminary definition phase
[NASA-CR-192613] p 648 N94-13326
STS-53 Space Shuttle mission report
[NASA-CR-193101] p 535 N94-13934
Payload/GSE/data system interface: Users guide for the VPF (Vertical Processing Facility)
[NASA-CR-194385] p 532 N94-14148
ECS: Eighth year in orbit
[ESA-BR-82] p 543 N94-14352
STS-35 EVA payload training in WETF
[NASA-TM-109492] p 739 N94-14790

PEBBLE BED REACTORS
Nuclear thermal propulsion engine based on particle bed reactor using light water steam as a propellant
[DE93-014336] p 552 N94-14111

PEEK
Development of time-dependent orthotropic constitutive law of a thermoplastic composite material
p 556 N94-13595

PENETRATION
Measurement of penetration depth lambda(T) in YBa2Cu3O(7-delta) thin film
[DE93-014587] p 810 N94-14122
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503
The motion of a conical shaped liner driven by explosive load
[ITN-93-85215] p 585 N94-14507

PEPTIDES
Solitons and 1/f noise in molecular chains
[DE93-622898] p 778 N94-12879
The evolution of energy-transducing systems: Studies with archaebacteria
[NASA-CR-194130] p 728 N94-13562

PERCOLATION
Study of multicomponent diffusion and transport phenomena
[DE93-015095] p 804 N94-13005

PERFORMANCE
Defining the performance gap: Conducting a self-assessment p 666 N94-13155

PERFORMANCE PREDICTION
The identification of ability requirements and selection instruments for fighter pilot training
[AD-A266340] p 735 N94-13582
Stochastic performance modeling and evaluation of obstacle detectability with imaging range sensors
[NASA-CR-194510] p 605 N94-13946
A performance prediction model for a fault-tolerant computer during recovery and restoration
[NASA-CR-194490] p 741 N94-14136
Aeropropulsion test and evaluation methods
p 506 N94-14165

PERFORMANCE TESTS
Digital sound: The selection of critical programme material and preparation of recordings for CCIR tests on low bit-rate codecs
[BBC-RD-1993/1] p 598 N94-12925
Digital sound: Subjective tests on commentary-quality codecs
[BBC-RD-1993/2] p 598 N94-12926
Evaluation for membrane components of water recycling system
[NAL-TM-646] p 737 N94-13388
Arc-heating tests of thermal protection system materials for the H-2 rocket fairing
[NAL-TR-1181] p 551 N94-13455
Selection of behavioral tasks and development of software for evaluation of rhesus monkey behavior during spaceflight
[NASA-CR-194176] p 728 N94-13865
The Large Area Pulsed Solar Simulator (LAPSS)
[NASA-CR-194507] p 703 N94-13940
Stochastic performance modeling and evaluation of obstacle detectability with imaging range sensors
[NASA-CR-194510] p 605 N94-13946
Battery testing at Argonne National Laboratory
[DE93-011761] p 624 N94-14012
Aerodynamic and aerothermal facilities 2: Continuous flow high enthalpy facilities p 506 N94-14160
Aeropropulsion test and evaluation methods
p 506 N94-14165
Qualification test of the Ross Double Planetary Mixer
[NASA-CR-192600] p 652 N94-14497
Control structural interaction testbed: A model for multiple flexible body verification p 544 N94-14649
Performance evaluation of the honeywell GG1308 miniature ring laser gyroscope
[AD-A266694] p 653 N94-14782

PERIODIC VARIATIONS
Variations common to the interplanetary magnetic field, the zonal atmospheric circulation and the Earth's rotation
[COMMUNICATIONS-SER-B-157] p 837 N94-13504
Maximum entropy spectral analysis of the geological time series of the oxygen isotope record from deep-sea cores
[INPE-5465-PRE/1773] p 725 N94-13728
AMIP: Diagnostic subproject on the variability in the tropics: Synoptic to intraseasonal time scales
[DE93-009287] p 721 N94-13914
On the space-time ocean current variability and its effects on the length-of-day
[ISBN-0-315-59510-8] p 726 N94-14205
ROSAT observations of the binary Be-star/radio pulsar PSR1259-63
[NASA-CR-194394] p 832 N94-14357
Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531

PERMEABILITY
Transport properties of disordered porous media from the microstructure
[DE93-016065] p 806 N94-13152
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
[DE93-013958] p 601 N94-13696
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586

PERMITTIVITY
Locally non-uniform finite-difference time domain with application to stealth, crosstalk, and narrow apertures
[DE93-013958] p 601 N94-13696

PEROXIDES
Measurement of HO2 and other trace gases in the stratosphere using a high resolution far-infrared spectrometer at 28 km
[NASA-CR-194175] p 714 N94-13816

PERSONAL COMPUTERS
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (IDNB) Experiment
[DE93-014144] p 797 N94-13100
Mass market computers for software development
[ERB-1035] p 741 N94-13547
Development of an automated film-reading system for ballistic ranges
[NASA-CR-194398] p 650 N94-13815
PC viruses: How do they do that?
[DE93-012581] p 753 N94-14289
Some tools of the trade we've developed for our cross-section calculations
[DE93-013835] p 786 N94-14569
ASTEC and MODEL: Controls software development at Goddard Space Flight Center p 678 N94-14628

PERSONNEL
Building a quality culture in the Office of Space Flight: Approach, lessons learned and implications for the future p 667 N94-13164
Environmental awareness
[DE93-014192] p 707 N94-13218
Information requirements of self-managing teams
[DE93-010319] p 824 N94-14048

PERSONNEL DEVELOPMENT
Program/project management resource lists
[NASA-TM-109268] p 822 N94-13107

PERSONNEL MANAGEMENT
Information requirements of self-managing teams
[DE93-010319] p 824 N94-14048

PERSONNEL SELECTION
Readiness to perform testing: A critical analysis of the concept and current practices
[DOT/FAA/AM-93/13] p 732 N94-13193

PERTURBATION
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846

A classical instability for black strings and p-branes
[DE93-014577] p 839 N94-14116
PERTURBATION THEORY
Stability of subharmonics and escape phenomena in the twin-well potential duffing system p 775 N94-13235
A hybrid Pade-Galerkin technique for differential equations
[NASA-CR-191494] p 767 N94-13289
A classical instability for black strings and p-branes
[DE93-014577] p 839 N94-14116
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
PETRI NETS
Parallelizing Timed Petri Net simulations
[NASA-CR-194278] p 758 N94-12938
Simulator for heterogeneous dataflow architectures
[NASA-CR-191545] p 622 N94-13797
PETROLEUM PRODUCTS
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
[AD-A265106] p 790 N94-12863
PH
Promotion of geothermal energy development in 1991
[DE93-799058] p 701 N94-13215
Canonical correlation of waste glass compositions and durability, including pH
[DE93-012754] p 578 N94-13493
PHASE CONTRAST
Measurements of edge fluctuations by phase contrast imaging on DIII-D
[DE93-014018] p 802 N94-14579
PHASE CONTROL
Proceedings of the 11th Space Surveillance Workshop, volume 1
[AD-A265120] p 531 N94-13358
PHASE DIAGRAMS
Multiphase equation of state for iron
[DE93-013956] p 568 N94-12977
First-principles studies of phase stability and the structural and dynamical properties of hydrogen-metal systems
[DE93-016129] p 570 N94-13374
How to read a phase equilibrium diagram for high-temperature ceramics material as main object
[DE93-512333] p 582 N94-14513
Is K3C60 a line phase?
[DE93-016700] p 813 N94-14517
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
Influence of heat treatment on microstructure of Ti-35wt Al prepared by elemental powder metallurgy
[GKSS/92/E/27] p 574 N94-14821
PHASE ERROR
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
[DE93-015084] p 612 N94-14512
PHASE LOCKED SYSTEMS
Sea surface temperature forcing and phase locking of Nordeste precipitation
[DE93-011873] p 723 N94-14426
PHASE MODULATION
Trellis coding with Continuous Phase Modulation (CPM) for satellite-based land-mobile communications
[NASA-CR-191325] p 604 N94-13909
PHASE RULE
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
How to read a phase equilibrium diagram for high-temperature ceramics material as main object
[DE93-512333] p 582 N94-14513
PHASE SEPARATION (MATERIALS)
The Lindemann criterion of melting for pure and mixed ionic crystals
[ITN-93-85210] p 814 N94-14554
PHASE SHIFT
The MRIS feasibility study
[NASA-TM-107763] p 597 N94-12804
Non-scanned LADAR imaging and applications
[DE93-013772] p 655 N94-13261
Advanced ballistic range technology
[NASA-CR-194530] p 533 N94-14540
PHASE SHIFT KEYING
Envelope and instantaneous frequency estimation of narrowband modulated signals
[DREO-TN-92-3] p 605 N94-14033
Multiple-symbol differential detection of DPSK with frequency offset
[DREO-TN-92-5] p 606 N94-14063
PHASE STABILITY (MATERIALS)
Electronic structure and phase stability properties in ternary substitutional alloys
[DE93-013848] p 569 N94-13137
PHASE TRANSFORMATIONS
Recovery of materials impacted at high velocity
[DE93-014150] p 576 N94-12885
Effect of pressure on order and stability in alloys: The case of Al-Ge
[DE93-013842] p 567 N94-12899
First-principles studies of phase stability and the structural and dynamical properties of hydrogen-metal systems
[DE93-016129] p 570 N94-13374
The microstructural response of near gamma-TiAl+W to heat treatment
[DSIS-93-00237] p 571 N94-13840
Phase transition in polymer blends and structure of ionomers and copolymers
[DE93-016256] p 579 N94-13978
Monte Carlo simulation of the OCP freezing transition
[DE93-013039] p 811 N94-14313
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339
Workshop on Formation of Supermolecular Structures in Composite Fluid: Phase Rule and Dynamics
[DE93-782887] p 581 N94-14421
Computational diagnostics for detecting phase transitions during nanoindentation
[DE93-016536] p 813 N94-14439
Immiscible phase incorporation during directional solidification of hypermonotectics
[NASA-CR-194412] p 565 N94-14480
Statics and kinetics of phase transformations in bcc Fe-Cr
[DE93-013839] p 574 N94-14793
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
[ITN-93-85218] p 816 N94-14826
PHASED ARRAYS
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T.
[DE93-012964] p 607 N94-14291
Direct electron heating and current drive with fast waves in D3-D
[DE93-013028] p 801 N94-14293
Experimental instrumentation system for the Phased Array Mirror Extendible Large Aperture (PAMELA) test program
[NASA-CR-194421] p 705 N94-14430
PHENOLOGY
Analytical framework for modeling scale-related variabilities in remote sensing p 685 N94-13592
PHENOMENOLOGY
Nonlinear analysis, scientific computation, and continuum mechanics applied to the science of materials
[AD-A266641] p 817 N94-14680
PHILOSOPHY
Heidegger's thinking p 736 N94-13442
PHOSPHAZENE
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126
PHOSPHORUS
Machining aspects of nickel-phosphorus coatings
[DE93-013037] p 580 N94-14311
Multicrystalline silicon solar cells: Gettering optimization and characterization
[DE93-015001] p 705 N94-14861
PHOTOCATHODES
Gamma-insensitive optical focal plane array
[DE93-013100] p 792 N94-14317
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
[DE93-012592] p 789 N94-14460
PHOTOCHEMICAL REACTIONS
Infrared absorption spectroscopy and chemical kinetics of free radicals
[DE93-015078] p 562 N94-13004
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions
[NASA-CR-193672] p 706 N94-13170
Modeling of the partitioning of reactive odd nitrogen in the lower stratosphere using aircraft measurements of NOy, NO, and other trace species
[NASA-CR-194305] p 714 N94-13707
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
Lawrence Berkeley Laboratory Chemical Sciences Division
[DE93-015260] p 851 N94-14401
PHOTOCONDUCTIVITY
Electrical and optical properties of multiple quantum well structures and their applications to infrared detectors
[FFI-92/7012] p 809 N94-14010
PHOTODIODES
An acoustic charge transport imager for high definition television applications
[NASA-CR-194518] p 650 N94-14029
Vacuum ultraviolet instrumentation for solar irradiance and thermospheric airglow
[NASA-CR-194525] p 652 N94-14684
PHOTODISSOCIATION
Application of synchrotron radiation in chemical dynamics
[DE93-015040] p 563 N94-13411
Thermochemistry of transition metal clusters
[DE93-016201] p 571 N94-13977
Lawrence Berkeley Laboratory Chemical Sciences Division
[DE93-015260] p 851 N94-14401
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682
PHOTOELECTRIC EMISSION
Canted magnetic moments at the Gd(0001) surface
[DE93-014327] p 805 N94-13102
Spin polarized photoemission studies of interfacial and thin film magnetism
[DE93-014326] p 580 N94-14142
Effect of spontaneous decay of superconductor quasiparticles in the tunneling density of states
[DE93-012681] p 811 N94-14339
High-order harmonic generation with short-pulse lasers
[DE93-016532] p 659 N94-14594
PHOTOELECTROCHEMICAL DEVICES
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
[DE93-015068] p 563 N94-13413
PHOTOELECTROCHEMISTRY
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
[DE93-015068] p 563 N94-13413
PHOTOELECTRON SPECTROSCOPY
Analysis of samples of reflector materials which are multicoated and metal samples with oxide coatings which have been exposed the space environment in LDEF testing
[NASA-CR-193647] p 575 N94-12789
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
[DE93-015068] p 563 N94-13413
Applications of surface science to solid lubricants
[SMC-TR-93-24] p 579 N94-13903
Vacuum ultraviolet instrumentation for solar irradiance and thermospheric airglow
[NASA-CR-194525] p 652 N94-14684
PHOTOELECTRONS
Research in cosmic and gamma ray astrophysics: Cosmic physics portion
[NASA-CR-194127] p 847 N94-13211
Surface science instrumentation for the study of important catalytic and electrochemical interfaces
[DE93-015068] p 563 N94-13413
Many-body corrections in XAFS
[DE93-011002] p 563 N94-13478
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461
PHOTOEXCITATION
Ultrafast photoinduced electron transfer reactions in supramolecular arrays: Studies of electronic coupling and solvation
[DE93-012910] p 782 N94-13484
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983
The E2 N(yields)(Delta) transition from polarized Compton scattering
[DE93-012522] p 785 N94-14363
PHOTOGRAMMETRY
Photogrammetric methods for trajectory measurements
[NLR-TP-91166-U] p 650 N94-13527
Obtaining digital regional planning information from aerial pictures
[REPT-228] p 700 N94-14810
PHOTOGRAPHIC FILM
Development of an automated film-reading system for ballistic ranges
[NASA-CR-194398] p 650 N94-13815
PHOTOGRAPHY
Image motion photography
[DE93-013962] p 653 N94-14858
PHOTOINTERPRETATION
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land
[BCRS-92-13] p 684 N94-13123
PHOTOIONIZATION
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071

A search for strong-field direct two electron ionization using coincidence spectroscopy
[DE93-013435] p 781 N94-13241
The reionization of the intergalactic medium
p 838 N94-13651
Was 49: Mirror for a hidden Seyfert 1 galaxy
[NASA-CR-194537] p 840 N94-14685

PHOTOLITHOGRAPHY
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776

PHOTOLUMINESCENCE
Free-exciton recombination in GaAs
[DE93-009843] p 809 N94-14079

PHOTOLYSIS
Photocatalysis for the treatment of waste water: Applications involving the removal of metals
[DE93-011669] p 561 N94-12841
Application of synchrotron radiation in chemical dynamics
[DE93-015040] p 563 N94-13411
Thermochemistry of transition metal clusters
[DE93-016201] p 571 N94-13977

PHOTOMETERS
Barium fluoride research and development at Lawrence Livermore National Laboratory
[DE93-014682] p 807 N94-13405
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME
[NASA-CR-193832] p 553 N94-14682

PHOTOMETRY
Simulating the daylight performance of fenestration systems and spaces of arbitrary complexity: The IDC method
[DE93-015177] p 704 N94-14333
Activities report of the National Electrotechnical Institute Galileo Ferraris
[ETN-93-94224] p 627 N94-14812

PHOTOMICROGRAPHY
The effect of crystal tilt on high resolution micrographs of small metal particles
[DE93-013915] p 574 N94-14795

PHOTOMULTIPLIER TUBES
Calibration of the receiver channel for the GOPEX precursor experiments p 610 N94-14387
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
[DE93-012592] p 789 N94-14460

PHOTON-ELECTRON INTERACTION
Variance reduction unique to coupled electron/photon Monte Carlo transport
[DE93-014999] p 782 N94-13409
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
[ITN-93-85224] p 659 N94-14547

PHOTONICS
Energy and technology review, March 1993
[DE93-013941] p 849 N94-13019

PHOTONS
Metal-semiconductor, composite radiation detectors
[DE93-013313] p 619 N94-12994
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
EGS (underscore) windows 2: An enhanced graphical interface to EGS
[DE93-010447] p 746 N94-13382
Variance reduction unique to coupled electron/photon Monte Carlo transport
[DE93-014999] p 782 N94-13409
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483
ROSAT observations of the binary Be-star/radio pulsar PSR1259-63
[NASA-CR-194394] p 832 N94-14357
The E2 N(yields)(Delta) transition from polarized Compton scattering
[DE93-012522] p 785 N94-14363
Measurements of the spatial structure and directivity of 100 KeV photon sources in solar flares using PVO and ISEE-3 spacecraft
[NASA-CR-194080] p 845 N94-14492
Multiple Schroedinger cats from multilevel atoms
[DE93-013412] p 786 N94-14526
Laser lithography by photon scanning tunneling microscopy
[DE93-015962] p 660 N94-14863

PHOTONUCLEAR REACTIONS
Some tools of the trade we've developed for our cross-section calculations
[DE93-013835] p 786 N94-14569

PHOTOSYNTHESIS
Ultrafast photoinduced electron transfer reactions in supramolecular arrays: Studies of electronic coupling and solvation
[DE93-012910] p 782 N94-13484
Gordon Research Conference on Chronobiology, 1991
[AD-A266354] p 728 N94-13698
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097

PHOTOTHERMAL CONVERSION
High-flux testing of heat pipes for point-focus solar collector systems
[DE93-011581] p 628 N94-12884

PHOTOVOLTAIC CELLS
Photovoltaics: Contract lists, fiscal year 1992
[DE93-000093] p 701 N94-12902
Photovoltaics: Program overview, fiscal year 1992
[DE93-000055] p 701 N94-12914
A photovoltaic catenary-tent array for the Martian surface
[NASA-TM-106306] p 621 N94-13194
Activities of the Basic Sciences Branch
[DE93-010012] p 851 N94-14455

PHOTOVOLTAIC CONVERSION
The 1992 JSEE/JWEA Joint Conference
[DE93-793955] p 700 N94-12822
Photovoltaic Subcontract Program
[DE93-000092] p 700 N94-12868
Photovoltaics: Contract lists, fiscal year 1992
[DE93-000093] p 701 N94-12902
Photovoltaics: Program overview, fiscal year 1992
[DE93-000055] p 701 N94-12914
Low temperature metal-organic chemical vapor deposition growth processes for high efficiency solar cells
[DE92-010562] p 702 N94-13386
Photovoltaic advanced research and development project: Solar radiation research
[DE92-016430] p 704 N94-14350
Activities of the Basic Sciences Branch
[DE93-010012] p 851 N94-14455

PHYSICAL EXERCISE
Work/rest schedules and performance of F/A-18 aviators during Fleet Exercise 1992
[AD-A265826] p 735 N94-12982
Metabolic rate measurements comparing supine with upright upper-body exercises
[NASA-CR-4549] p 729 N94-14028
Variability of prediction of maximal oxygen concumption on the cycle ergometer using standard equations
[NASA-TP-3412] p 729 N94-14032

PHYSICAL FACTORS
Review of mathematical and physical basis of two-phase flow modeling
[KFK-4759] p 642 N94-14708

PHYSICAL FITNESS
Improving physical performance by chemical stimulation
[DSIS-92-03763] p 728 N94-13823

PHYSICAL PROPERTIES
Synthetic lubricants and high-performance functional fluids: Phosphazenes
[ARL-TR-45] p 580 N94-14126

PHYSICS
Event-driven simulation in SELMON: An overview of EDSE
[NASA-CR-194505] p 749 N94-13784
Generic results of the space physics community survey
[NASA-CR-194538] p 818 N94-13984

PHYSIOLOGICAL EFFECTS
Calcitonin control of calcium metabolism during weightlessness
[NASA-CR-193622] p 731 N94-12960
Physiological Anatomical Rodent Experiment (PARE).04 Feasibility Test 1
[NASA-CR-194423] p 728 N94-13473
The problem of the sonic boom for future high-speed transport aircraft
[ESA-TT-1286] p 776 N94-13692
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961
Variability of prediction of maximal oxygen concumption on the cycle ergometer using standard equations
[NASA-TP-3412] p 729 N94-14032
Physical countermeasures for long-term manned space flights
[ESA-SP-1160] p 733 N94-14860
Thyroid alterations in porcine after prolonged exposure to cold or heat
[AD-A266840] p 733 N94-14879

PHYSIOLOGICAL RESPONSES
Gender differences in endocrine responses to posture and 7 days of 6 deg head down bed rest
[NASA-TM-103991] p 731 N94-12972
Gravity as a probe for understanding pattern specification
[NASA-CR-194142] p 713 N94-13418
Clinical physiology of bed rest
[NASA-TM-104010] p 727 N94-13447
Physiological Anatomical Rodent Experiment (PARE).04 Feasibility Test 1
[NASA-CR-194423] p 728 N94-13473
Endocrine and metabolic changes in payload specialist (L-1) p 591 N94-13758
Manual control in space research on perceptual-motor functions under zero gravity conditions (L-10)
p 593 N94-13767
Psychophysiological investigations of the biomedical problems of manned spaceflight
[NASA-CR-194107] p 732 N94-13782
Renal function alterations during skeletal muscle disuse in simulated microgravity
[NASA-CR-194258] p 733 N94-13824
Thyroid alterations in porcine after prolonged exposure to cold or heat
[AD-A266840] p 733 N94-14879

PHYSIOLOGICAL TESTS
Validation of an inexpensive illuminant for aeromedical color vision screening
[DOT/FAA/AM-93/16] p 736 N94-14854

PHYSIOLOGY
Validated environmental and physiological data from the CELSS Breadboard Projects Biomass Production Chamber, BWT931 (Wheat cv. Yecora Rojo)
[NASA-TM-109272] p 738 N94-13979

PHYTOPLANKTON
Nonlinear relationships between particulate absorption and chlorophyll: Detritus or pigment packaging?
[AD-A266806] p 731 N94-14899

PIEZOELECTRIC CERAMICS
Active control of acoustic pressure fields using smart material technologies
[NASA-CR-191480] p 768 N94-13354
Experimental and analytical analysis of the response of a smart beam to rate feedback
[AD-A266544] p 557 N94-13706

PIEZOELECTRICITY
An acoustic charge transport imager for high definition television applications
[NASA-CR-194518] p 650 N94-14029

PILOT PERFORMANCE
Cognitive engineering in aerospace application: Pilot interaction with cockpit automation
[NASA-CR-177617] p 510 N94-13247
Piloting Vertical Flight Aircraft: A Conference on Flying Qualities and Human Factors
[NASA-CP-3220] p 521 N94-13294
A perspective on the FAA approval process: Integrating rotorcraft displays, controls and workload
p 521 N94-13298
Improvements in hover display dynamics for a combat helicopter p 523 N94-13310
Visual information for judging temporal range
p 524 N94-13314
Visual cueing considerations in Nap-of-the-Earth helicopter flight head-slaved helmet-mounted displays
p 524 N94-13315
Primary display latency criteria based on flying qualities and performance data p 525 N94-13318
Human factor implications of the Eurocopter AS332L-1 Super Puma cockpit p 525 N94-13319
Piloting considerations for terminal area operations of civil tiltwing and tiltrotor aircraft p 525 N94-13320
The identification of ability requirements and selection instruments for fighter pilot training
[AD-A266340] p 735 N94-13582
The influence of ATC message length and timing on pilot communication
[NASA-CR-177621] p 512 N94-14744
Validity of FAA-approved color vision tests for class 2 and class 3 aeromedical screening
[DOT/FAA/AM-93/17] p 735 N94-14846

PILOT SELECTION
The identification of ability requirements and selection instruments for fighter pilot training
[AD-A266340] p 735 N94-13582

PILOT TRAINING
Cognitive engineering in aerospace application: Pilot interaction with cockpit automation
[NASA-CR-177617] p 510 N94-13247
The identification of ability requirements and selection instruments for fighter pilot training
[AD-A266340] p 735 N94-13582
Determination of Loran-C/GPS human factors issues
[PB93-199693] p 514 N94-14563

PIONEER PROJECT
NASA images 11
[NASA-TM-109287] p 842 N94-13626

PIONS
Low energy response of the DO calorimeter and jet energy measurement
[DE93-013569] p 781 N94-13350

Dynamics of pion-nucleus systems
[DE93-014449] p 785 N94-14468

PIPE FLOW
Potential flow in in-line and staggered tube banks
[IME-CRE-TR-006] p 637 N94-13862

PIPELINES
Upgrading of raw natural gas using high-performance polymer membranes
[DE93-014041] p 566 N94-14586

PIPER AIRCRAFT
VSAERO analysis of a Piper Cub aircraft
p 516 N94-14616

PIPES (TUBES)
Potential flow in in-line and staggered tube banks
[IME-CRE-TR-006] p 637 N94-13862

PISTON ENGINES
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874

PISTONS
Double inlet pulse tube cryocooler theory
[AD-A266832] p 597 N94-14877

PITCHING MOMENTS
Numerical simulation of dynamic stall of NACA0012 airfoil oscillating near static stall angle using the Navier-Stokes equations
[DE93-767970] p 505 N94-14061

PITTING
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
[DE93-014335] p 806 N94-13150

PIXELS
Color image processing for flat panel visual display modeling
[NASA-CR-193660] p 790 N94-12797
Two dimensional measurement and evaluation of point images at microscope objectives
[ETN-93-94397] p 793 N94-14856

PLANE STRAIN
Autofrettage: Stress distribution under load and retained stresses after depressurization. A modified plane-strain case
[AD-A266320] p 671 N94-13579

PLANE WAVES
Computer code for scattering from impedance bodies of revolution. Part 3: Surface impedance with s and phi variation. Analytical and numerical results
[NASA-CR-193396] p 599 N94-13264
Active control of fan-generated plane wave noise
[NASA-TM-109008] p 777 N94-14481

PLANETARY BASES
A modular gas-cooled cermet reactor system for planetary base power
[DE93-013672] p 550 N94-13351

PLANETARY BOUNDARY LAYER
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424
Atmospheric turbulence and diffusion research
[DE93-011842] p 718 N94-14425

PLANETARY EVOLUTION
Regional tectonic analysis of Venus as part of the Pioneer Venus guest investigator project
[NASA-CR-194079] p 842 N94-13561
Organic Geochemical and tectonic evolution of the Midcontinent Rift system
[DE93-015093] p 717 N94-14338

PLANETARY GEOLOGY
Spectral analysis for automated exploration and sample acquisition
[NASA-CR-194095] p 545 N94-13189
The nature and origin of periodically spaced tectonic features on Mars
[NASA-CR-193821] p 842 N94-13199
Exploring Mars
[NASA-TM-109306] p 842 N94-13613
Martian sedimentary deposits
[NASA-CR-193266] p 842 N94-13855
Workshop on the Space Environment: The Effects on the Optical Properties of Airless Bodies
[NASA-CR-194417] p 842 N94-14298
Impact melting and vaporization in planetary regoliths
p 843 N94-14299
Extrapolation of space weathering processes to other small solar system bodies p 843 N94-14300

PLANETARY GRAVITATION
Venus gravity
[NASA-CR-194077] p 841 N94-12823

PLANETARY MANTLES
Regional tectonic analysis of Venus as part of the Pioneer Venus guest investigator project
[NASA-CR-194079] p 842 N94-13561

PLANETARY NEBULAE
A survey of compact planetary nebulae at radio wavelengths
[ISBN-0-315-61950-3] p 829 N94-13371

PLANETARY SURFACES
Spectral analysis for automated exploration and sample acquisition
[NASA-CR-194095] p 545 N94-13189
Impact melting and vaporization in planetary regoliths
p 843 N94-14299
Extrapolation of space weathering processes to other small solar system bodies p 843 N94-14300

PLANETARY SYSTEMS
Planetary system detection by POINTS
[NASA-CR-194361] p 545 N94-13067

PLANETARY TEMPERATURE
Regional tectonic analysis of Venus as part of the Pioneer Venus guest investigator project
[NASA-CR-194079] p 842 N94-13561

PLANETARY WAVES
Minimal modeling of the bimodality of extratropical atmospheric planetary waves p 713 N94-13622

PLANT DESIGN
Field of solar collectors: Effect of shadowing on the optimal field design
[ITN-93-85197] p 702 N94-13570
Knowledge based systems: From process control to policy analysis
[DE93-014582] p 765 N94-14117

PLANTING
Forest management for fixing and sequestering carbon
[DE93-013520] p 707 N94-13486

PLANTS (BOTANY)
Role of Ca(++)/calmodulin in the regulation of microtubules in higher plants
[DE93-015885] p 727 N94-12835
Gravity, chromosomes, and organized development in aseptically cultured plant cells p 592 N94-13764
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509

PLASMA ACCELERATION
Investigation of dynamics of plasma fluxes generated by the quasi-stationary plasma accelerator P-50
[DE93-621665] p 794 N94-12854

PLASMA ACCELERATORS
Investigation of dynamics of plasma fluxes generated by the quasi-stationary plasma accelerator P-50
[DE93-621665] p 794 N94-12854

PLASMA COMPOSITION
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Variation of divertor plasma parameters with divertor depth for H-mode discharges in D3-D
[DE93-015475] p 801 N94-14347
Direct determination of alpha particle transport coefficients
[DE93-013488] p 787 N94-14691

PLASMA COMPRESSION
On MHD mode equations in toroidal plasmas
[PPL-139] p 800 N94-13877

PLASMA CONTROL
Theory of field-reversed configurations
[DE93-015611] p 794 N94-12862
Growth curve analysis for plasma profiles using smoothing splines
[DE93-015741] p 795 N94-12984
Nonlinear evolution of tearing modes in inhomogeneous plasmas
[PPL-133] p 798 N94-13564
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
Experiments on the current rampdown phase in the STOR-M tokamak for AC operation
[PPL-132] p 799 N94-13835
Dependence of beta(tau) on plasma shape in D3-D
[DE93-015473] p 800 N94-13900
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024
Variation of divertor plasma parameters with divertor depth for H-mode discharges in D3-D
[DE93-015475] p 801 N94-14347
D3-D research operations
[DE93-016729] p 802 N94-14519
Review of the Procyon explosive pulsed power system
[DE93-016562] p 802 N94-14532
Active density control in DIII-D H-mode plasmas
[DE93-015477] p 802 N94-14570
Measurements of edge fluctuations by phase contrast imaging on DIII-D
[DE93-014018] p 802 N94-14579
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
[DE93-015474] p 802 N94-14583
Toward a quasi-linear closure for compressible turbulence
[DE93-017185] p 647 N94-14895

PLASMA CURRENTS
Studies of non-inductive current drive in the CDX-U tokamak p 799 N94-13680
Experiments on the current rampdown phase in the STOR-M tokamak for AC operation
[PPL-132] p 799 N94-13835
Numerical Studies of Collisionless Current Layers
[NASA-CR-194337] p 800 N94-13854
Active density control in DIII-D H-mode plasmas
[DE93-015477] p 802 N94-14570

PLASMA DENSITY
Excitation of coupled waves in plasma periodic structures by relativistic electron beam and acceleration of charged particles
[DE93-621657] p 794 N94-12853
Dimensionally similar discharges with central RF heating on the D3-D tokamak
[DE93-012776] p 795 N94-12953
Growth curve analysis for plasma profiles using smoothing splines
[DE93-015741] p 795 N94-12984
Active density control in DIII-D H-mode plasmas
[DE93-015477] p 802 N94-14570
Measurements of edge fluctuations by phase contrast imaging on DIII-D
[DE93-014018] p 802 N94-14579

PLASMA DIAGNOSTICS
Equilibrium reconstruction of the q-profile in tokamaks from motional Stark effect data
[DE93-015815] p 796 N94-13046
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (IDNB) Experiment
[DE93-014144] p 797 N94-13100
Interferometric investigation methods of plasma spatial characteristics on stellarators and tokamaks in submillimeter region
[DE93-621606] p 798 N94-13507
Plasma-etching science meets technology in the MDL
[DE93-012086] p 800 N94-13908
Measuring opacity of shock generated argon plasmas
[DE93-013038] p 801 N94-14312
D3-D research operations
[DE93-016729] p 802 N94-14519
Measurements of edge fluctuations by phase contrast imaging on DIII-D
[DE93-014018] p 802 N94-14579
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

PLASMA DIFFUSION
Plasma diffusion through multidipole magnetic fields
[INPE-5460-PRE/1768] p 795 N94-12901
The resonance broadening theory revisited
[PPL-134] p 798 N94-13563

PLASMA DRIFT
On energy transport equations for turbulent magnetized plasma
[PPL-135] p 800 N94-13850
Anomalous transport due to small scale electromagnetic and large scale electrostatic modes in tokamaks
[PPL-140] p 801 N94-14206

PLASMA DYNAMICS
Investigation of dynamics of plasma fluxes generated by the quasi-stationary plasma accelerator P-50
[DE93-621665] p 794 N94-12854
Electrodynamics of helical plasma structures
[DE93-620981] p 797 N94-13240
The resonance broadening theory revisited
[PPL-134] p 798 N94-13563
Nonlinear evolution of tearing modes in inhomogeneous plasmas
[PPL-133] p 798 N94-13564

PLASMA ENGINES
Electromagnetic propulsion for spacecraft
[NASA-CR-191186] p 551 N94-13416

PLASMA EQUILIBRIUM
Theory of field-reversed configurations
[DE93-015611] p 794 N94-12862
Stability and confinement properties of small-aspect-ratio tokamak
[INPE-5463-PRE/1771] p 801 N94-14024

PLASMA ETCHING
Plasma-etching science meets technology in the MDL
[DE93-012086] p 800 N94-13908

PLASMA FREQUENCIES
Investigation of plasma instabilities in the Polar cusp
[NASA-CR-194283] p 796 N94-13084
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342

PLASMA GUNS
Investigation of dynamics of plasma fluxes generated by the quasi-stationary plasma accelerator P-50
[DE93-621665] p 794 N94-12854

PLASMA HEATING
Dimensionally similar discharges with central RF heating on the D3-D tokamak
[DE93-012776] p 795 N94-12953
Evolution of high-repetition-rate induction accelerators through advancements in switching
[DE93-012599] p 654 N94-12963
Ion cyclotron heating experiments and plans for the Advanced Toroidal Facility (ATF)
[DE93-012965] p 795 N94-13033
Effect on antenna structure of high power RF during plasma operation
[DE93-013278] p 797 N94-13144
Predicted performance of a dc beam driven FEM oscillator designed for fusion applications at 200-250 GHz
[DE93-013414] p 655 N94-13145
Instability heating of the HDZP
[DE93-012641] p 798 N94-13513
Folded waveguide designs for tokamaks
[DE93-013274] p 798 N94-13577
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T.
[DE93-012964] p 607 N94-14291
D3-D research operations
[DE93-016729] p 802 N94-14519
Design of the ion cyclotron system for TPX
[DE93-012961] p 803 N94-14770

PLASMA INTERACTION EXPERIMENT
TROPIX: A solar electric propulsion flight experiment
[NASA-TM-106297] p 534 N94-13028
Laboratory simulation of spacecraft charging in the plasma wake region
[FFI-93-7007] p 542 N94-14107

PLASMA INTERACTIONS
Interactions between spacecraft and their environments
[NASA-TM-106115] p 541 N94-13917
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
[DE93-015084] p 612 N94-14512

PLASMA LAYERS
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
Variation of divertor plasma parameters with divertor depth for H-mode discharges in D3-D
[DE93-015475] p 801 N94-14347
D3-D research operations
[DE93-016729] p 802 N94-14519

PLASMA PHYSICS
Magnetic fusion computing: A personal retrospective view
[DE93-014147] p 797 N94-13217
Metastable enhancement of C(+) and O(+) capture reactions
[DE93-015075] p 807 N94-13373
The International Colloquium on Atomic Spectra and Oscillator Strengths for Astrophysical and Laboratory Plasmas
[NASA-TM-109255] p 849 N94-13376
Activities of the University of Saskatchewan, Plasma Physics Laboratory
[CTN-93-60831] p 798 N94-13518
The resonance broadening theory revisited
[PPL-134] p 798 N94-13563
Numerical Studies of Collisionless Current Layers
[NASA-CR-194337] p 800 N94-13854
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342
Physics of gas breakdown for ion beam transport in gas
[DE93-015646] p 801 N94-14349
Review of the Procyon explosive pulsed power system
[DE93-016562] p 802 N94-14532

PLASMA PINCH
Collisional effects of trapped electrons on the anomalous particle and thermal pinches
[PPL-128] p 800 N94-13853

PLASMA POTENTIALS
Plasma auto-biasing during Ohmic H-mode in the STOR-M tokamak
[PPL-136] p 799 N94-13849
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954

PLASMA PRESSURE
Nonlinear evolution of tearing modes in inhomogeneous plasmas
[PPL-133] p 798 N94-13564

PLASMA PROPULSION
Low power pulsed MPD thruster system analysis and applications
[NASA-CR-191187] p 550 N94-13415
Electromagnetic propulsion for spacecraft
[NASA-CR-191186] p 551 N94-13416
Plasma contactor technology for Space Station Freedom
[NASA-TM-106291] p 553 N94-14725

PLASMA RADIATION
Highly charged ions in hot, dense plasmas
[DE93-013348] p 795 N94-12995
Comparative study of x ray and microwave emissions during solar flares
[NASA-CR-194532] p 845 N94-14577
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

PLASMA SHEATHS
Plasma diffusion through multidipole magnetic fields
[INPE-5460-PRE/1768] p 795 N94-12901

PLASMA SPRAYING
Microstructural evolution of NARloy-Z at elevated temperatures
[NASA-TM-108419] p 571 N94-13715

PLASMA TEMPERATURE
Growth curve analysis for plasma profiles using smoothing splines
[DE93-015741] p 795 N94-12984
Two temperature modeling and experimental measurements of laser sustained hydrogen plasmas
[AD-A265750] p 796 N94-13039

PLASMA TURBULENCE
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
Plasma diffusion through multidipole magnetic fields
[INPE-5460-PRE/1768] p 795 N94-12901
Instability heating of the HDZP
[DE93-012641] p 798 N94-13513
The resonance broadening theory revisited
[PPL-134] p 798 N94-13563
Collisional effects of trapped electrons on the anomalous particle and thermal pinches
[PPL-128] p 800 N94-13853
The role of electric field shear stabilization of turbulence in the H-mode to VH-mode transition in D3-D
[DE93-015474] p 802 N94-14583

PLASMA WAVES
Excitation of coupled waves in plasma periodic structures by relativistic electron beam and acceleration of charged particles
[DE93-621657] p 794 N94-12853
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
ICE/ISEE plasma wave data analysis
[NASA-CR-194375] p 796 N94-13081
Investigations of transitions from order to chaos in dynamical systems
[DE93-014438] p 818 N94-14738

PLASMA-ELECTROMAGNETIC INTERACTION
Scattering of reflectometer signals from rippled surfaces
[PPL-138] p 602 N94-13802

PLASMA-PARTICLE INTERACTIONS
Excitation of coupled waves in plasma periodic structures by relativistic electron beam and acceleration of charged particles
[DE93-621657] p 794 N94-12853
Electrodynamics of helical plasma structures
[DE93-620981] p 797 N94-13240

PLASMAS (PHYSICS)
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814
A 3D gyrokinetic particle-in-cell simulation of fusion plasma microturbulence on parallel computers
[DE93-012503] p 794 N94-12846
Inertial Confinement Fusion
[DE93-013303] p 795 N94-13017
Comment of parameter excitation of Alfven and Heliicon waves in a magnetoactive compensated semiconductor by microwave radiation
[DE93-623203] p 806 N94-13228
On energy transport equations for turbulent magnetized plasma
[PPL-135] p 800 N94-13850
Dependence of beta(tau) on plasma shape in D3-D
[DE93-015473] p 800 N94-13900
Oscillator-amplifier experiments in neon-like yttrium
[DE93-012577] p 657 N94-13976
The interaction of intense femtosecond laser pulses with solid targets
[DE93-014415] p 658 N94-14114
Monte Carlo simulation of the OCP freezing transition
[DE93-013039] p 811 N94-14313
Variation of divertor plasma parameters with divertor depth for H-mode discharges in D3-D
[DE93-015475] p 801 N94-14347
Direct determination of alpha particle transport coefficients
[DE93-013488] p 787 N94-14691
Anomalous ion transport and feedback control
[DE93-018324] p 803 N94-14874

PLASMASPHERE
Studies on equatorial shock formation during plasmaspheric refilling
[NASA-CR-194392] p 715 N94-13954
The role of ionospheric plasma in the magnetosphere
[NASA-CR-194404] p 716 N94-13967

PLASTIC DEFORMATION
A benchmark bending test of a thick specimen, Part 1: Experiments
[ARL-RR-6-PT-1] p 670 N94-12927
A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
[ARL-RR-6-PT-2] p 670 N94-12928
Inelastic deformation mechanisms in SCS-6/Ti 15-3 MMC lamina under compression
[NASA-CR-191170] p 555 N94-13378
A stochastic model for behavior analysis of fiber-reinforced quasi-brittle materials
p 672 N94-13594
Non-uniqueness in dynamic rate-independent non-associated plasticity
[AD-A266342] p 769 N94-13731
Thermal gradient-induced deflection of a thick-walled cylinder with bending residual stresses
[AD-A266347] p 673 N94-13777
Ploughing on gold using a Scanning Tunneling Microscope
[DE93-012632] p 812 N94-14365
Elastic-plastic finite element analyses of an unidirectional, 9 vol percent tungsten fiber reinforced copper matrix composite
[NASA-TM-106304] p 559 N94-14719

PLASTIC FLOW
An experimental study on the effect of die geometry on swell and sag in the parison extrusion stage
[IMI-93RT-42400-1476-G] p 597 N94-14070

PLASTIC PROPERTIES
A benchmark bending test of a thick specimen, Part 1: Experiments
[ARL-RR-6-PT-1] p 670 N94-12927
A benchmark bending test of a thick specimen. Part 2: Surface displacement measurements
[ARL-RR-6-PT-2] p 670 N94-12928
Modeling the impact behavior of AD85 ceramic under multi-axial loading
[AD-A265877] p 576 N94-12932
Investigation of criteria for ductile fracture under fully-plastic conditions p 672 N94-13593
Non-uniqueness in dynamic rate-independent non-associated plasticity
[AD-A266342] p 769 N94-13731
Elastic-plastic finite element analyses of an unidirectional, 9 vol percent tungsten fiber reinforced copper matrix composite
[NASA-TM-106304] p 559 N94-14719

PLATE THEORY
Nonlinear vibrations of thick composite plates: Higher-order shear deformation plate theory
p 556 N94-13558
Finite element analysis of composite plates by use of modified complementary energy principle
p 672 N94-13596

PLATES
Experimental measurement of local heat transfer coefficients over discrete roughened plates using infrared thermography p 635 N94-13652

PLATES (STRUCTURAL MEMBERS)
Finite element analysis of composite plates by use of modified complementary energy principle
p 672 N94-13596
Probabilistic micromechanics for high-temperature composites
[NASA-CR-191150] p 676 N94-14408

PLATES (TECTONICS)
Regional tectonic analysis of Venus as part of the Pioneer Venus guest investigator project
[NASA-CR-194079] p 842 N94-13561

PLATINUM
Electrocatalysis issues in polymer electrolyte fuel cells
[DE93-014450] p 702 N94-13402

Stability of reference masses 1: Evidence for posiible variations in the mass of reference kilograms arising from mercury contamination
[NPL-DMM(A)-86] p 708 N94-13667
Photochemical dynamics of surface oriented molecules
[DE93-016289] p 784 N94-13983

PLOTTERS
FORTRAN graphics routines for the Macintosh
[DE93-013092] p 742 N94-12864

PLOTTING
FORTRAN graphics routines for the Macintosh
[DE93-013092] p 742 N94-12864

PLUMES
UV and IR laser ablation for inductively coupled plasma mass spectrometry
[DE93-017124] p 658 N94-14415

PLUTONIUM
Reduction of Pu(6) with hydrogen peroxide: Effects of plutonium, peroxide, and iron concentrations and of reaction time
[DE93-013598] p 564 N94-13487
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292

PLY ORIENTATION
Buckling analysis of laminated thin shells in a hot environment
[NASA-TM-106302] p 683 N94-14776

PNEUMATIC PROBES
The 3D pneumatic and 2D dynamic probes: Their development and subsequent use in a transonic fan
[RAE-TM-AERO/PROP-22] p 653 N94-14827

PODS (EXTERNAL STORES)
Spare parts analysis of the MK.32B-751 AAR pod
[DSIS-93-00737] p 774 N94-13549

POINT SOURCES
Search for UHE point-source emission over various time scales
[DE93-012718] p 846 N94-12922
Search for continuous and single day emission from ultra-high-energy sources
[DE93-012724] p 846 N94-12947

POINTING CONTROL SYSTEMS
Simulator study of uncoupled control functions. Use of manual pointing modes when aiming at ground targets and oncoming airborne target
[FFA-TN-1992-18] p 528 N94-13588
Telescope pointing for GOPEX p 610 N94-14389
Wavefront sensing, control, and pointing p 546 N94-14833

POISSON EQUATION
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
[ETN-93-94387] p 703 N94-13997
Implicit multi-fluid simulation of interpenetrating plasmas
[DE93-013351] p 801 N94-14342

POISSON RATIO
Quantitative mapping of pore fraction variations in silicon nitride using an ultrasonic contact scan technique
[NASA-TP-3377] p 665 N94-13056
Theory of the electronic and structural properties of solid state oxides
[DE93-016051] p 811 N94-14296

POLAR CAPS
The role of ionospheric plasma in the magnetosphere
[NASA-CR-194404] p 716 N94-13967

POLAR METEOROLOGY
Arctic ozone expedition
[NASA-TM-109301] p 708 N94-13602

POLAR ORBITS
Earth observation from low-inclination orbit as a necessary complement to polar missions p 694 N94-14248

POLARIMETERS
Measurement of the spin of a particle using undulator radiation
[DE93-014334] p 780 N94-13149

POLARIMETRY
Ionospheric effects on a wide-bandwidth, polarimetric, space-based, synthetic-aperture radar
[DE93-015084] p 612 N94-14512

POLARITY
Direct probing of chromatography columns by laser-induced fluorescence
[DE93-015208] p 654 N94-13022

POLARIZATION
Polarization and color transparency
[DE93-014319] p 780 N94-13101
Polarization and variability of active galaxies and quasars p 837 N94-13550

POLARIZATION (CHARGE SEPARATION)
Ultrafast photoinduced electron transfer reactions in supramolecular arrays: Studies of electronic coupling and solvation
[DE93-012910] p 782 N94-13484
Charge storage and switching phenomena with molecular assemblies of metal complexes
[AD-A266673] p 787 N94-14778

POLARIZATION (SPIN ALIGNMENT)
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
The evolution of tensor polarization
[DE93-017209] p 790 N94-14897

POLARIZATION (WAVES)
The E2 N(yields)(Delta) transition from polarized Compton scattering
[DE93-012522] p 785 N94-14363

POLARIZED ELECTROMAGNETIC RADIATION
Remote identification of rain and hail with a polarization diversity radar
[ISBN-0-315-55623-4] p 720 N94-13516

POLARIZED LIGHT
Polarization effects in optical fiber current sensors based on Sagnac interferometers with 3 by 3 couplers
[DE93-012665] p 792 N94-14367

POLARIZED RADIATION
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232

POLARONS
Small polaron conduction in Y2Ti2O7
[ITN-93-85221] p 814 N94-14557

POLICIES
Planetary protection implementation on future Mars lander missions
[NASA-CP-3216] p 841 N94-13183
An examination of utility emissions contributions to elevated ozone concentrations in the Chicago area
[DE93-012852] p 708 N94-13495
Preliminary nuclear safety assessment of the NEPST (Topaz 2) space reactor program
[DE93-012853] p 551 N94-13514
Science, technology, and the federal government: National goals for a new era p 827 N94-14115

POLISHING
Field emitter array RF amplifier development project. Phase 1: Cathode technology development
[AD-A266346] p 622 N94-13776

POLITICS
Where no flag has gone before: Political and technical aspects of placing a flag on the Moon
[NASA-CR-188251] p 827 N94-12800
NASA/DOD Aerospace Knowledge Diffusion Research Project. Paper 37: The impact of political control on technical communications: A comparative study of Russian and US aerospace engineers and scientists
[NASA-TM-109329] p 826 N94-14488

POLLUTION CONTROL
A review of the global emissions, transport, and effects of heavy metals in the environment
[DE93-013507] p 706 N94-12937
AQUIS: A PC-based source information manager
[DE93-012893] p 707 N94-13383
Pollution prevention through total quality
[DE93-013814] p 707 N94-13390

POLLUTION MONITORING
Laser-induced fluorescence over optical fibers for real time in situ measurement of petroleum hydrocarbons in seawater
[AD-A265106] p 790 N94-12863
Gathering and exchange information on atmospheric chemistry and polluted atmospheres
[DE93-009940] p 705 N94-12869
The North Atlantic Regional Experiment (NARE)
[DE93-010126] p 706 N94-13054
AQUIS: A PC-based source information manager
[DE93-012893] p 707 N94-13383
Spatial and temporal variability of precipitation and chemistry: Case studies from the frontal boundary study
[DE93-007883] p 708 N94-13910
Study of the consequences of the Chernobyl accident and technogenic activity in the Republic Belarus using aerospace methods p 693 N94-14246

POLLUTION TRANSPORT
The North Atlantic Regional Experiment (NARE)
[DE93-010126] p 706 N94-13054
Diagnostic studies of the HxOy-NxOy-O3 photochemical system using data from NASA GTE field expeditions
[NASA-CR-193672] p 706 N94-13170
Importance of sprays for long range transport of harmful substances in the troposphere
[MITT-81] p 711 N94-14723

POLYAMIDE RESINS
Highly fluorinated polymers
[NASA-CR-194147] p 579 N94-13964
Pore-size-distribution of cationic polyacrylamide hydrogels
[DE93-015218] p 581 N94-14400

POLYATOMIC MOLECULES
Molecular dynamics simulation of electronically excited polyatomic molecules
[DE93-623045] p 781 N94-13225
Selective excitation, relaxation, and energy channeling in molecular systems
[DE93-018819] p 785 N94-14420

POLYCARBONATES
Sequestering carbon dioxide in industrial polymers: Building materials for the 21st century
[DE93-016087] p 580 N94-14297

POLYCHLORINATED BIPHENYLS
Procurement and execution of PCB analyses: Customer-analyst interactions
[DE93-009964] p 566 N94-14694

POLYCRYSTALS
Photovoltaic Subcontract Program
[DE93-000092] p 700 N94-12868
Activities of the Basic Sciences Branch
[DE93-010012] p 851 N94-14455
Quenching and annealing effects on the specific heat of YBa2Cu3O(7-delta)
[DE93-016483] p 816 N94-14868

POLYESTERS
Highly fluorinated polymers
[NASA-CR-194147] p 579 N94-13964

POLYETHER RESINS
Highly fluorinated polymers
[NASA-CR-194147] p 579 N94-13964

POLYETHYLENES
Effect of stabilization on the recycling of polyolefins in blow moulding
[IMI-93RT-42400-1477-G] p 596 N94-13684

POLYGONS
Extremal polygon containment problems and other issues in parametric searching
[ITN-93-85214] p 771 N94-14506

POLYIMIDE RESINS
Research on radiation resistance properties of structural materials for space use p 529 N94-13271

POLYIMIDES
Research on radiation resistance properties of structural materials for space use p 529 N94-13271

POLYMER BLENDS
Phase transition in polymer blends and structure of ionomers and copolymers
[DE93-016256] p 579 N94-13978

POLYMER CHEMISTRY
Effect of stabilization on the recycling of polyolefins in blow moulding
[IMI-93RT-42400-1477-G] p 596 N94-13684
Office of Naval Research/DARPA publications: Composite materials with improved properties in compression
[AD-A265509] p 560 N94-14794

POLYMER MATRIX COMPOSITES
The Second Workshop on Deployment and Assembly Experiment of Large Space Structure on Orbit
[NASDA-CON-930003] p 529 N94-13268
Research on radiation resistance properties of structural materials for space use p 529 N94-13271
Characterization of composite materials for aerospace structures
[ESA-TT-1260] p 557 N94-13804

POLYMER PHYSICS
Theoretical treatment of the bulk and surface properties of fluids containing long, flexible molecules
[DE93-015560] p 575 N94-12861

POLYMERIC FILMS
Amorphous sol-gel insulating films
[DE93-012859] p 576 N94-12866
Poling of thin polymer films in electro optic applications
[AD-A266562] p 579 N94-13584
The use of polarised neutron reflection for unique density profile determination in thin films
[PB93-187136] p 579 N94-13783
Impedance-power effects on plasma polymer surface finish using a helical resonator discharge
[DE93-016454] p 803 N94-14590

POLYMERIZATION
Unexpectedly rapid hydrosilation polymerization of the diallyl derivative of bisphenol A and 2,6-diallylphenol
[AD-A265832] p 577 N94-12986
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184
Impedance-power effects on plasma polymer surface finish using a helical resonator discharge
[DE93-016454] p 803 N94-14590

POLYMERS
Electrocatalysis issues in polymer electrolyte fuel cells
[DE93-014450] p 702 N94-13402

Sequestering carbon dioxide in industrial polymers: Building materials for the 21st century
[DE93-016087] p 580 N94-14297
Direct simulation of polymer drag reduction in free shear flows and vortex dipoles p 644 N94-14755

POLYNOMIALS
Robust stability of diamond families of polynomials with complex coefficients
[NASA-CR-194132] p 768 N94-13421
Formally biorthogonal polynomials and a look-ahead Levinson algorithm for general Toeplitz systems
[NASA-CR-194297] p 748 N94-13586
The Chebyshev-Legendre method: Implementing Legendre methods on Chebyshev points
[NASA-CR-191497] p 769 N94-13725
Exploiting structure: Introduction and motivation
[NASA-CR-194199] p 750 N94-13828
On a difference equation for generalizations of Charlier polynomials
[REPT-92-101] p 770 N94-14150

POLYPROPYLENE
Effect of stabilization on the recycling of polyolefins in blow moulding
[IMI-93RT-42400-1477-G] p 596 N94-13684

POLYSACCHARIDES
CarbBank: A structural and bibliographic database for complex carbohydrates
[DE93-015582] p 827 N94-14803

POLYSILOXANES
Phases and phase transitions of polymeric liquid crystals: A high resolution x ray diffraction and light scattering study
[ITN-93-85218] p 816 N94-14826

POLYURETHANE RESINS
A multiphase model for shock-induced flow in low density foam
[DE93-013767] p 632 N94-13397

PONDEROMOTIVE FORCES
Adiabatic and non adiabatic effects in Free Electron Laser (FEL) non linear interactions
[ITN-93-85224] p 659 N94-14547

POPULATION THEORY
Chaos and microbial systems
[DE93-016814] p 730 N94-14596

POPULATIONS
Adaptively resizing populations: Algorithm, analysis, and first results
[NASA-CR-194277] p 742 N94-12808
Coherent excitation of autoionizing resonances by electron impact
[DE93-018169] p 785 N94-14419
Public census data on CD-ROM at Lawrence Berkeley Laboratory
[DE93-015273] p 825 N94-14433

POROSITY
Transport properties of disordered porous media from the microstructure
[DE93-016065] p 806 N94-13152
A multiphase model for shock-induced flow in low density foam
[DE93-013767] p 632 N94-13397
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
[DE93-010408] p 637 N94-14053
Pore-size-distribution of cationic polyacrylamide hydrogels
[DE93-015218] p 581 N94-14400

POROUS BOUNDARY LAYER CONTROL
The transient behavior of a boundary layer exposed to uniform suction
[ITN-93-85205] p 630 N94-13197

POROUS MATERIALS
Electrophoretic and electrolytic deposition of ceramic particles on porous substrates
[AD-A265141] p 575 N94-12812
Transport properties of disordered porous media from the microstructure
[DE93-016065] p 806 N94-13152
The method of Laplace Transform MultiQuadrics (LTMQ) for the solution of the groundwater flow equation
[DE93-010408] p 637 N94-14053
Theoretical studies of breakdown in random media
[DE93-018107] p 558 N94-14418

POROUS WALLS
Wall interference studies: Revisited
p 640 N94-14604

PORTABLE EQUIPMENT
Development of a portable multispectral thermal infrared camera
[NASA-CR-191340] p 648 N94-13176
Portable acoustic wave sensor systems for real-time monitoring of volatile organic compounds
[DE93-013753] p 582 N94-14511

POSITION (LOCATION)
Design and performance of an automated video-based laser beam alignment system
[DE93-012571] p 656 N94-13481
Simulated annealing for the problem of multiresource location on graph
[REPT-93-033] p 770 N94-13809
Computational issues in optimal tuning and placement of passive dampers p 681 N94-14647

POSITION ERRORS
Position error determination for the speedometer and altimeter of the NAL QSTOL experimental aircraft ASKA
[NAL-TR-1144] p 517 N94-13451
GPS satellite sky distribution: Impact on the propagation of some important errors in precise relative positioning
[ISBN-0-315-51838-3] p 513 N94-13541
Orbit determination error analysis based on the requirements of ADEOS mission
[NASDA-CNT-930008] p 532 N94-13644

POSITION SENSING
Performance evaluation tests of the GPS/DGPS navigation system installed in the NAL Dornier 228: Preliminary ground test results
[NAL-TM-649] p 513 N94-13346
Close range 3-D position sensing using stereo vision and point-of-correspondance through mathematical morphology
[ISBN-0-315-61012-3] p 763 N94-13515
Development of a tactile and vision integrated system, and object identification techniques for SPDM applications
[DSIS-93-00153] p 764 N94-13842

POSITIONING
GPS satellite sky distribution: Impact on the propagation of some important errors in precise relative positioning
[ISBN-0-315-51838-3] p 513 N94-13541

POSITIVE IONS
Role of Ca(++)/calmodulin in the regulation of microtubules in higher plants
[DE93-015885] p 727 N94-12835
Indirect processes in electron impact ionization of Kr(24+) and Kr(25+)
[DE93-014129] p 784 N94-14140

POSITRON ANNIHILATION
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483
Effects of additional isoscalar vector bosons in e(sup +)e)(sup -)(yields)ff-bar processes at the TRISTAN and LEP energies
[DE93-621451] p 783 N94-13506

POSITRONS
EGS (underscore) windows 2: An enhanced graphical interface to EGS
[DE93-010447] p 746 N94-13382
A positron annihilation radiation telescope using Laue diffraction in a crystal lens
[DE93-012905] p 848 N94-13483
Rare muon processes
[DE93-012646] p 785 N94-14366

POSTFLIGHT ANALYSIS
STS-53 Space Shuttle mission report
[NASA-CR-193101] p 535 N94-13934
STS-54 Space Shuttle mission report
[NASA-CR-194116] p 535 N94-13935

POSTMISSION ANALYSIS (SPACECRAFT)
STS-53 Space Shuttle mission report
[NASA-CR-193101] p 535 N94-13934
STS-54 Space Shuttle mission report
[NASA-CR-194116] p 535 N94-13935

POSTURE
Gender differences in endocrine responses to posture and 7 days of 6 deg head down bed rest
[NASA-TM-103991] p 731 N94-12972
Neurophysiological study on visuo-vestibular control of posture and movement in fish during adaptation to weightlessness p 591 N94-13759

POTASSIUM
Is K3C60 a line phase?
[DE93-016700] p 813 N94-14517

POTASSIUM SILICATES
Thermal history effects on electrical relaxation and conductivity for potassium silicate glass with low alkali concentrations
[NASA-TM-106324] p 583 N94-14845

POTENTIAL ENERGY
Incomplete melting of the Au(100) surface
[DE93-623192] p 569 N94-13227
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456

POTENTIAL FIELDS
The general gravitational potential field of a homogeneous cylinder rotating about its axis
[DE93-622853] p 775 N94-13508

POTENTIAL FLOW
A robust quasi-simultaneous interaction method for a full potential flow with a boundary layer with application to wing/body configurations
[NLR-TP-91397-U] p 503 N94-13531
Potential flow in in-line and staggered tube banks
[IME-CRE-TR-006] p 637 N94-13862

POWDER (PARTICLES)
Flamespreading in granular solid propellant: Design of an experiment
[AD-A266009] p 583 N94-12987
Gas atomized Er3Ni powder for cryocooler applications
[DE93-011564] p 568 N94-13000
Destruction of waste energetic materials using base hydrolysis
[DE93-012738] p 584 N94-13491
Measurement of strain in individual phases of composites before, during, and after mechanical loading
[DE93-014585] p 558 N94-14119
Reverse micelle synthesis of nanoscale metal containing catalysts
[DE93-012869] p 572 N94-14184
Polymer infiltration studies
[NASA-CR-194521] p 582 N94-14539
Shielded open-circuited sample holders for dielectric and magnetic measurements of liquids and powders
[PB93-198851] p 652 N94-14687
Fine-powder Al2O3 and SiO2 for preparation of multielement standards for rare-earth elements analysis
[DE93-625118] p 567 N94-14884

POWDER METALLURGY
Preparation of particle-dispersion alloys (M-6)
p 587 N94-13738
Study on the mechanism of liquid phase sintering (M-12) p 588 N94-13744
Gas-evaporation in low-gravity field (cogelation mechanism of metal vapors) (M-14) p 588 N94-13746

POWER AMPLIFIERS
Inertial confinement fusion program
[DE93-013372] p 796 N94-13047
Design and performance of the terawatt Cr:LiSrAlF6 laser system
[DE93-014678] p 657 N94-13882

POWER BEAMING
Two temperature modeling and experimental measurements of laser sustained hydrogen plasmas
[AD-A265750] p 796 N94-13039

POWER CONDITIONING
High flux heat exchanger
[AD-A266341] p 636 N94-13730

POWER CONVERTERS
Power converters for the 120 V bus supply control
[CNES-NT-134] p 622 N94-13552
Operation of high power converters in parallel
[NASA-CR-191096] p 622 N94-13786
Multi-output flyback converter with ultrafast current protection
[CNES-NT-133] p 625 N94-14138

POWER EFFICIENCY
Electromagnetic propulsion for spacecraft
[NASA-CR-191186] p 551 N94-13416

POWER SPECTRA
Maximum entropy spectral analysis of the geological time series of the oxygen isotope record from deep-sea cores
[INPE-5465-PRE/1773] p 725 N94-13728

POWER TRANSMISSION
Flex-gear electrical power transmission
[NASA-CR-194422] p 661 N94-13445
Communications and control for electric power systems: Power flow classification for static security assessment
[NASA-CR-194512] p 624 N94-13948

POWERED LIFT AIRCRAFT
Design criteria for integrated flight/propulsion control systems for STOVL fighter aircraft p 521 N94-13297
Numerical simulation of a powered-lift landing, tracking flow features using overset grids, and simulation of high lift devices on a fighter-lift-and-control wing
[NASA-CR-194260] p 527 N94-14322

PRASEODYMIUM
Synthesis of organic ligands for f-element separations
[DE93-012915] p 554 N94-14290

PRE-MAIN SEQUENCE STARS
The evidence for clumpy accretion in the Herbig Ae star HR 5999
[NASA-TM-108257] p 828 N94-12915
Search for x ray emitting young stars outside of massive molecular clouds
[NASA-CR-193609] p 830 N94-13462
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648

PREBURNERS
STS-55 pad abort: Engine 2011 oxidizer preburner augmented spark igniter check valve leak
[NASA-CR-193830] p 533 N94-12806

Simulation of preburner sprays, volume 1
[NASA-CR-193844] p 647 N94-14906
PRECIPITATES
Effect of microstructure on passive film formation and breakdown on Al alloys
[AD-A265339] p 569 N94-13050
PRECIPITATION (CHEMISTRY)
Interfacial precipitation, segregation and deformation in alloy 600: Implications on primary-side IGSCC
[DE93-013161] p 568 N94-13035
PRECIPITATION (METEOROLOGY)
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788
Precipitation verification LAM
[KNMI-TR-143] p 722 N94-13991
A verification of the Euroguidance: A guidance forecast for transportation and tourism
[KNMI-TR-145] p 722 N94-13993
Circulation and rainfall climatology of a 10-year (1979 - 1988) integration with the Goddard Laboratory for atmospheres general circulation model
[NASA-TM-104591] p 723 N94-14074
PRECIPITATION HARDENING
Microstructural mechanisms that enhance electromigration resistance in Al-Cu thin films
[DE93-013770] p 812 N94-14345
PRECONDITIONING
Topics on spatially high-order accurate methods and pre-conditioning for the Navier-Stokes equations with finite-rate chemistry p 633 N94-13572
Preconditioning and the limit to the incompressible flow equations
[NASA-CR-191500] p 769 N94-13717
PREDICATE LOGIC
A path-oriented matrix-based knowledge representation system
[NASA-CR-4539] p 744 N94-13065
PREDICTION ANALYSIS TECHNIQUES
A method of predicting quasi-steady aerodynamics for flutter analysis of high speed vehicles using steady CFD calculations
[NASA-TM-109009] p 514 N94-12850
Improved aeroprediction code. Part 1: Summary of new methods and comparison with experiment
[AD-A266015] p 500 N94-12989
Transition prediction and control in subsonic flow over a hump
[NASA-CR-4543] p 629 N94-13066
Research on chemical vapor deposition processes for advanced ceramic coatings
[NASA-CR-193613] p 577 N94-13089
Methods for evaluating the predictive accuracy of structural dynamic models
[NASA-CR-191337] p 671 N94-13124
Simulation of orbital debris impacts on bumper shields
[DE93-013773] p 540 N94-13398
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874
Transition of building energy consumption using multi-input, single-output dynamic model
[VTT-PUBS-116] p 597 N94-14055
Extrapolation of ground test data to flight p 507 N94-14170
Boundary-layer transition p 507 N94-14171
Electromagnetic wave test p 508 N94-14173
Nonlinear wave predictions in ceramics
[DE93-016516] p 582 N94-14436
Predicting the vibrations of a spinning inflated membrane
[DE93-010690] p 676 N94-14456
Long duration measurements of fading on a low elevation angle, 11-GHz satellite path p 613 N94-14661
Coastal scour problems and methods for prediction of maximum scour
[AD-A266658] p 726 N94-14775
Measurements of crystal growth kinetics at extreme deviations from equilibrium
[DE93-014526] p 815 N94-14798
A computer program to calculate growth rates for cracks at notches in regions of residual stress
[RAE-TM-MAT/STR-1207] p 683 N94-14818
PREDICTOR-CORRECTOR METHODS
Parallel methods for dynamic simulation of multiple manipulator systems p 680 N94-14637
PREFORMS
Optimization of the processing parameters of high temperature superconducting glass-ceramics: Center Director's discretionary fund final report
[NASA-TM-108421] p 808 N94-13938
Graphite fiber textile preform/copper matrix composites
[NASA-CR-193797] p 558 N94-14050
PREGNANCY
Physiological Anatomical Rodent Experiment (PARE) .04 Feasibility Test 1
[NASA-CR-194423] p 728 N94-13473
PREMIXED FLAMES
A coherent flame model of premixed turbulent combustion in a counterflow geometry
[CUED/A-THERMO/TR.60] p 562 N94-13085
DNS and modeling of the interaction between turbulent premixed flames and walls p 646 N94-14763
The evolution equation for the flame surface density in turbulent premixed combustion p 567 N94-14764
Numerical simulations of turbulent premixed H2/O2/N2 flames with complex chemistry p 567 N94-14765
PREPREGS
Polymer infiltration studies
[NASA-CR-194521] p 582 N94-14539
PREPROCESSING
Preprocessing data collected with the ACTS propagation terminal p 616 N94-14676
PRESSURE
Test and evaluation methods p 506 N94-14163
The motion of a conical shaped liner driven by explosive load
[ITN-93-85215] p 585 N94-14507
PRESSURE CHAMBERS
Combustion-induced crack/debond propagation in solid propellants p 584 N94-13560
PRESSURE DISTRIBUTION
Results of wind tunnel tests of an ASRM configured 0.03 scale Space Shuttle integrated vehicle model (47-OTS) in the AEDC 16-foot transonic wind tunnel, volume 2
[NASA-CR-185697] p 534 N94-12965
Exploratory study of in-plane streamline curvature effects on a turbulent boundary layer at a Mach number of 3
[NASA-CR-193673] p 501 N94-13292
Numerical simulations of unsteady flows in turbomachines p 633 N94-13569
Flow-field interference produced by an asymmetrical support strut
[IAR-AN-75] p 504 N94-14031
The motion of a conical shaped liner driven by explosive load
[ITN-93-85215] p 585 N94-14507
VSAERO analysis of a Piper Cub aircraft p 516 N94-14616
Vortex-induced disturbance field in a compressible shear layer p 645 N94-14760
PRESSURE EFFECTS
Effect of pressure on order and stability in alloys: The case of Al-Ge
[DE93-013842] p 567 N94-12899
A multiphase model for shock-induced flow in low density foam
[DE93-013767] p 632 N94-13397
PRESSURE GRADIENTS
Thermal gravitational modelling and scaling of two-phase heat transport systems: Similarity considerations and useful equations predictions versus experimental results
[NLR-TP-91477-U] p 632 N94-13533
A three-dimensional supersonic turbulent boundary layer generated by an isentropic compression p 503 N94-13556
Interaction of two glancing, crossing shock waves with a turbulent boundary-layer at various Mach numbers
[NASA-TM-103740] p 509 N94-14780
PRESSURE MEASUREMENT
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 1
[NASA-CR-167690] p 534 N94-12810
A wall interference assessment/correction system
[NASA-CR-194174] p 500 N94-13076
NASA metrology and calibration, 1993
[NASA-TM-109280] p 597 N94-14410
Interaction of two glancing, crossing shock waves with a turbulent boundary-layer at various Mach numbers
[NASA-TM-103740] p 509 N94-14780
PRESSURE RATIO
Rotordynamic and leakage characteristics of a 4-stage brush seal
[AD-A266012] p 660 N94-12988
A comparison of computational and experimental data for a subscale high speed propulsive nozzle at low mach numbers
[AD-A266543] p 504 N94-13705
PRESSURE REDUCTION
Autofrettage: Stress distribution under load and retained stresses after depressurization. A modified plane-strain case
[AD-A266320] p 671 N94-13579
PRESSURE SUITS
Evaluation of the Retrograde Inflation Anti-G Suit (RIAGS)
[AD-A265884] p 736 N94-12935
PRESSURE VESSELS
Autofrettage: Stress distribution under load and retained stresses after depressurization. A modified plane-strain case
[AD-A266320] p 671 N94-13579
Fatigue design curves for 6061-T6 aluminum
[DE93-011849] p 571 N94-14021
Estimation of strain in 1-kW primary containment vessels by microstructural examination
[DE93-013053] p 573 N94-14316
Heavy section steel irradiation experiment
[DE93-015517] p 573 N94-14537
PREVENTION
A tentative plan on China and Asian-Pacific satellite system for disaster reduction p 693 N94-14247
PRINTED CIRCUITS
Solderability of surface mount devices
[AD-A265751] p 620 N94-13040
Rigid-flexible printed wiring boards
[DE93-013938] p 620 N94-13094
PROBABILITY DENSITY FUNCTIONS
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
PROBABILITY DISTRIBUTION FUNCTIONS
Stochastic bounds for a polling system
[CWI-BS-R9230] p 765 N94-14361
Distributional inferences for a location parameter
[W-9219] p 774 N94-14545
PROBABILITY THEORY
Efficient dynamic optimization of logic programs
[NASA-TM-109251] p 761 N94-12889
Rare attributes in finite universe: Hypotheses testing specification and exact randomized upper confidence bounds
[DE93-012783] p 775 N94-12955
A probabilistic method for the buckling assessment of stiffened composite shells
[NASA-TM-106286] p 671 N94-13379
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples, volume 1
[NASA-CR-194498] p 542 N94-14076
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples. Volume 2: Software documentation
[NASA-CR-194499] p 542 N94-14077
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples. Volume 3: Structure and listing of programs
[NASA-CR-194500] p 542 N94-14078
Computational problems with the binomial failure rate model and incomplete common cause failure reliability data
[DE93-014346] p 669 N94-14143
A model for fuel fire duration and application to the B-1B bomber
[DE93-013000] p 512 N94-14292
Self organized criticality
[DE93-013182] p 773 N94-14320
Probabilistic micromechanics for high-temperature composites
[NASA-CR-191150] p 676 N94-14408
Distributional inferences for a location parameter
[W-9219] p 774 N94-14545
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 1: Methodology and applications
[NASA-CR-194496] p 519 N94-14841
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 2: Software documentation
[NASA-CR-194497] p 519 N94-14842
PROBLEM SOLVING
The effects of evaluation and production blocking on the performance of brainstorming groups
[AD-A265495] p 734 N94-12929
Application of symbolic and algebraic manipulation software in solving applied mechanics problems
[NASA-CR-4544] p 596 N94-13798
An experimental analysis of bottleneck-centered opportunistic scheduling
[AD-A266643] p 820 N94-14796
Generating knight's tours without backtracking from errors
[AD-A266807] p 772 N94-14900
PROCEDURES
Study on improvement of flammability, odor and offgassing tests for materials
[NASDA-CNT-930009] p 563 N94-13471
PROCESS CONTROL (INDUSTRY)
Pollution prevention through total quality
[DE93-013814] p 707 N94-13390
PROCUREMENT
Johnson Space Center procurement: Controls over payments to contractors should be strengthened
[AD-A265722] p 819 N94-13060

Procurement and execution of PCB analyses: Customer-analyst interactions
[DE93-009964] p 566 N94-14694

PRODUCT DEVELOPMENT
Rigid-flexible printed wiring boards
[DE93-013938] p 620 N94-13094
Molten carbonate fuel cell product development test environmental assessment/protection plan
[DE93-000288] p 702 N94-13380

PRODUCTION COSTS
Spacecraft COst REduction Team (SCORE): TQM/CI on a massive scale p 667 N94-13160
Status and future opportunities for conversion of synthesis gas to liquid energy fuels
[DE93-010025] p 584 N94-14089
Continuous roll-to-roll a-Si photovoltaic manufacturing technology
[DE93-010006] p 704 N94-14109

PRODUCTION ENGINEERING
Rigid-flexible printed wiring boards
[DE93-013938] p 620 N94-13094

PRODUCTION MANAGEMENT
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
The power of cross-functional teams in driving total quality p 666 N94-13159

PRODUCTION PLANNING
Miniature mechanism assembly
[DE93-015595] p 624 N94-13928
Decision support for material planners
[ISBN-9-03-860201-4] p 819 N94-14449

PRODUCTIVITY
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Conference presentations
[NASA-CR-194514] p 665 N94-13153
Measuring quality progress p 666 N94-13154
Object-oriented productivity metrics p 667 N94-13161
Miniature mechanism assembly
[DE93-015595] p 624 N94-13928
Land evaluation for agricultural productivity in North-East Thailand using LANDSAT TM data and geographic information p 693 N94-14242

PROFILOMETERS
Confocal profilometer with nanometric vertical resolution
[DE93-622698] p 653 N94-12857

PROGRAM VERIFICATION (COMPUTERS)
Demonstration and acceptance test plan for real-time excision software on the Adaptive Signal Processing Testbed
[DSIS-93-00275] p 751 N94-13990
EVES: An overview
[DSIS-93-00238] p 752 N94-14088
ORGBUG: A Windows-based combinatorial geometry debugger
[DE93-016640] p 755 N94-14515
Verification of critical software by statistical testing
[LAAS-93006] p 756 N94-14714
Toward a verifiable approach to the design of concurrent computations
[DE93-012908] p 756 N94-14844

PROGRAMMING ENVIRONMENTS
Common lisp framework
[AD-A265878] p 742 N94-12933
The KASE approach to domain-specific software systems p 745 N94-13357
A measurement and evaluation process model applied to software engineering environments
[INPE-5345-PUD/048] p 746 N94-13428
Caesy: A software tool for computer-aided engineering p 678 N94-14627

PROGRAMMING LANGUAGES
Simplification-driven automated partial evaluation
[DE93-012890] p 768 N94-13391
The 8th Workshop on the Mathematical Foundations of Programming Semantics
[AD-A266436] p 749 N94-13700
Execution methods, and parallel virtual machines for distributed implementation of the LCS parallel programming language
[LAAS-93032] p 761 N94-14716

PROJECT MANAGEMENT
Program/project management resource lists
[NASA-TM-109268] p 822 N94-13107
Spacecraft COst REduction Team (SCORE): TQM/CI on a massive scale p 667 N94-13160
NASA/contractor partnership on the second TDRSS ground terminal program: Breaking barriers p 668 N94-13168
Creating a strategic plan for configuration management using computer aided software engineering (CASE) tools
[DE93-013663] p 746 N94-13394
Information requirements of self-managing teams
[DE93-010319] p 824 N94-14048
Program operations plan
[DE93-012765] p 710 N94-14182
NREL solar radiation resource assessment project: Status and outlook
[DE93-010034] p 704 N94-14422
Advanced Communications Technology Satellite (ACTS) program: ACTS project update p 615 N94-14673

PROJECT PLANNING
The North Atlantic Regional Experiment (NARE)
[DE93-010126] p 706 N94-13054
Present status of JEM utilization projects p 530 N94-13273
Heat and seed recovery technology project
[DE93-009203] p 800 N94-13913
Program operations plan
[DE93-012765] p 710 N94-14182
Space transportation systems within ESA programmes: Current status and perspectives p 537 N94-14275

PROJECT SETI
Search for extraterrestrial intelligence/high resolution microwave survey team member
[NASA-CR-194177] p 739 N94-13086

PROJECTILES
A computational study of the base region flow field for the M865 projectile
[ARL-TR-109] p 504 N94-13795
Development of test techniques to simulate high-frequency mechanical shock on weapon components
[KCP-613-4998] p 675 N94-13907
Collisions and separations in 2D hydrodynamical code
[ITN-93-85225] p 639 N94-14503

PROLOG (PROGRAMMING LANGUAGE)
Computational Russian morphological generation on Prolog: Noun, pronoun, and adjective p 747 N94-13436
On the occur-check free PROLOG programs
[CWI-CS-R9238] p 748 N94-13524

PROPAGATION MODES
Combustion-induced crack/debond propagation in solid propellants p 584 N94-13560

PROPARGYL GROUPS
Infrared absorption spectroscopy and chemical kinetics of free radicals
[DE93-015078] p 562 N94-13004

PROPELLANT COMBUSTION
A computer model for liquid jet atomization in rocket thrust chambers
[NASA-CR-194194] p 627 N94-12803
Chemical reactions in scramjet engines: Reduced kinetic models for ignition, combustion and nozzle flow
[NAL-TR-1184] p 563 N94-13458
Numerical studies of spray combustion in liquid-fueled engines p 564 N94-13685
Closed-chamber analysis of M5 propellant lot RAD-64597
[AD-A266321] p 585 N94-14145
Droplet-turbulence interactions in sprays exposed to supercritical environmental conditions
[NASA-CR-194408] p 638 N94-14308

PROPELLANTS
Destruction of waste energetic materials using base hydrolysis
[DE93-012738] p 584 N94-13491

PROPELLERS
On the use of the method of matched asymptotic expansions in propeller aerodynamics and acoustics
[NLR-TP-91307-U] p 503 N94-13528

PROPULSION SYSTEM CONFIGURATIONS
Nuclear propulsion systems engineering
[DE93-010791] p 548 N94-12870
Mirror fusion propulsion system: A performance comparison with alternate propulsion systems for the manned Mars Mission
[NASA-TM-109248] p 550 N94-13147
Recent testing of 30 kW hydrogen arcjet thrusters
[NASA-TM-106214] p 551 N94-13430
Gas core nuclear thermal rocket engine research and development in the former USSR
[DE93-012165] p 552 N94-14013
Hypersonic propulsion characterization p 505 N94-14156
Aeropropulsion facilities p 506 N94-14161
Propulsion integration p 508 N94-14174
Active control of fan-generated plane wave noise
[NASA-TM-109008] p 777 N94-14481

PROPULSION SYSTEM PERFORMANCE
Nuclear propulsion systems engineering
[DE93-010791] p 548 N94-12870
Effects of hydrogen addition on combustion performance of a LOX/kerosene rocket
[NAL-TR-1177] p 548 N94-12945
Propulsion simulator for magnetically-suspended wind tunnel models
[NASA-CR-189560] p 527 N94-13127
Mirror fusion propulsion system: A performance comparison with alternate propulsion systems for the manned Mars Mission
[NASA-TM-109248] p 550 N94-13147
Electromagnetic propulsion for spacecraft
[NASA-CR-191186] p 551 N94-13416
Piston engine intake and exhaust system design
[ISVR-TR-222] p 663 N94-13874
Gas core nuclear thermal rocket engine research and development in the former USSR
[DE93-012165] p 552 N94-14013
Closed-chamber analysis of M5 propellant lot RAD-64597
[AD-A266321] p 585 N94-14145
Hypersonic propulsion characterization p 505 N94-14156
Aeropropulsion test and evaluation methods p 506 N94-14165
Hypersonic flight test. Part 1: Propulsion flight testing p 507 N94-14168

PROPULSIVE EFFICIENCY
Propulsion integration p 508 N94-14174

PROPYLENE
Surface characterization of LDEF materials
[NASA-CR-194519] p 543 N94-14683

PROSTHETIC DEVICES
New prosthetic devices
[NASA-TM-109304] p 737 N94-13611

PROTEASE
Cellular mechanism of turnover of the stress induced protein HSP 70
[AD-A265723] p 732 N94-13061

PROTECTION
An assessment of the potential for neck injury due to padding of aircraft interior walls for head impact protection
[DOT/FAA/AM-93/14] p 738 N94-13972

PROTECTIVE CLOTHING
Flammability of clothing, volume 2
[DSIS-93-00036-VOL-2] p 564 N94-13819
Review of test methods for material flammability
[DSIS-93-00480] p 564 N94-13942
Aerospace medicine and biology: A continuing bibliography with indexes (supplement 379)
[NASA-SP-7011(379)] p 733 N94-14412

PROTECTIVE COATINGS
High-temperature corrosion and protection of materials
[DE93-011072] p 568 N94-12998
Dry film lubricant evaluation
[DE93-013114] p 578 N94-13118
The effect of TiN coatings on the rolling contact fatique behavior of M50 bearing steel
[ARL-TR-40] p 662 N94-13794
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-006] p 558 N94-14573
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-005] p 559 N94-14575

PROTEIN CRYSTAL GROWTH
Breadboard activities for advanced protein crystal growth
[NASA-CR-193559] p 803 N94-12796
Advanced protein crystal growth programmatic sensitivity study
[NASA-CR-193827] p 804 N94-12934
Protein crystal growth p 591 N94-13756
Crystal growth of enzymes in low gravity (L-5) p 592 N94-13762

PROTEIN SYNTHESIS
Cellular mechanism of turnover of the stress induced protein HSP 70
[AD-A265723] p 732 N94-13061
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509

PROTEINS
Solitons and 1/f noise in molecular chains
[DE93-622898] p 778 N94-12879
Cellular mechanism of turnover of the stress induced protein HSP 70
[AD-A265723] p 732 N94-13061
Protein crystal growth p 591 N94-13756
Characterization of Spirulina biomass for CELSS diet potential
[NASA-CR-194123] p 729 N94-14097

The surface-located YopN protein is involved in calcium signal transduction in Yersinia pseudotuberculosis
[FOA-B-40416-4.4] p 729 N94-14128
Selective excitation, relaxation, and energy channeling in molecular systems
[DE93-018819] p 785 N94-14420
The first steps of chlorophyll synthesis: RNA involvement and regulation
[DE93-014398] p 730 N94-14509
Biomimetic methane oxidation
[DE93-013196] p 705 N94-14510

PROTOCOL (COMPUTERS)
Mobile host internetworking using IP loose source routing
[AD-A265713] p 759 N94-13052
On the end-to-end communication problem in unreliable networks
[ITN-93-85188] p 598 N94-13195
Kerberos: A UNIX-TCP/IP network authentication system
[DE93-011677] p 760 N94-14011
Overview of the Scalable Coherent Interface, IEEE STD 1596 (SCI)
[DE93-015247] p 761 N94-14476

PROTON BEAMS
Measurement of H zero excited states produced by foil stripping of 800-MeV H(-) ions
[DE93-014391] p 788 N94-13103
Recent study of beam stability in the PSR
[DE93-014473] p 780 N94-13173
Nuclear fusion of protons with ions of boron
[DE93-014284] p 781 N94-13219
Beam halo in high-intensity beams
[DE93-014565] p 789 N94-13328
Double semi-leptonic charm decay in HELIOS-I 450 GeV/c p-Be data
[DE93-013493] p 791 N94-13348
Proton-proton scattering contribution to emittance growth
[DE93-016090] p 787 N94-14588

PROTON ENERGY
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804

PROTON IRRADIATION
The 1.00 MeV proton radiation resistance studies of amorphous silicon-based alloy solar cells
p 703 N94-13639

PROTON SCATTERING
Medium energy hadron-nucleus scattering in the 1/N expansion formalism
[DE93-622957] p 778 N94-12848
Relativistic proton-nucleus scattering and one-boson-exchange models p 786 N94-14550
Proton-proton scattering contribution to emittance growth
[DE93-016090] p 787 N94-14588

PROTON-PROTON REACTIONS
Polarization and color transparency
[DE93-014319] p 780 N94-13101

PROTONS
Ion anisotropy driven waves in the Earth's magnetosheath and plasma depletion layer
[DE93-012751] p 712 N94-12952
Measurement of H zero excited states produced by foil stripping of 800-MeV H(-) ions
[DE93-014391] p 788 N94-13103
Measurement of the spin of a particle using undulator radiation
[DE93-014334] p 780 N94-13149
The E2 N(yields)(Delta) transition from polarized Compton scattering
[DE93-012522] p 785 N94-14363
Primary and secondary electrical space power based on advanced PEM systems
[DE93-012643] p 553 N94-14689
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804

PROTOPLANETS
Physical properties of gas disks around shell stars with and without dust
[NASA-CR-193655] p 835 N94-13239

PROTOSTARS
The physical and chemical evolution of protostellar disks. The growth of protostellar disks: Progress to date
[NASA-CR-194111] p 836 N94-13423
Millimeter and infrared studies of young stellar objects in dark cloud L1641 p 838 N94-13648
The 1 to 5 micron imaging of deeply embedded young stellar objects p 831 N94-13657

PROTOZOA
Chaos and microbial systems
[DE93-016814] p 730 N94-14596

PROTUBERANCES
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 1
[NASA-CR-167690] p 534 N94-12810
Results of experimental investigations to determine external tank protuberance loads using a 0.03-scale model of the Space Shuttle launch configuration (Model 47-OTS) in the NASA/ARC unitary plan wind tunnel, volume 2
[NASA-CR-167691] p 536 N94-14047

PROVING
A knowledge-based expert system to coordinate CAD/CAE with integration and test
[NASA-CR-191394] p 745 N94-13130
Methods for calibration/validation of AVNIR
p 689 N94-14216

PSEUDOPOTENTIALS
First-principles studies of phase stability and the structural and dynamical properties of hydrogen-metal systems
[DE93-016129] p 570 N94-13374

PSYCHOLOGICAL EFFECTS
An evaluation of noise and its effects on shuttle crewmembers during STS-50/USML-1
[NASA-TM-104775] p 735 N94-13961

PSYCHOLOGICAL TESTS
Work/rest schedules and performance of S-3 aviators during fleet exercise
[AD-A265807] p 734 N94-12975
Work/rest schedules and performance of F/A-18 aviators during Fleet Exercise 1992
[AD-A265826] p 735 N94-12982

PSYCHOLOGY
The effects of evaluation and production blocking on the performance of brainstorming groups
[AD-A265495] p 734 N94-12929

PSYCHOPHYSIOLOGY
Psychophysiological investigations of the biomedical problems of manned spaceflight
[NASA-CR-194107] p 732 N94-13782

PULSARS
Search for ultra-high energy emission from Geminga and five unidentified EGRET sources
[DE93-012717] p 846 N94-12816
High time resolution studies of binary x ray pulsars
[NASA-CR-194395] p 832 N94-13894
ROSAT observations of the binary Be-star/radio pulsar PSR1259-63
[NASA-CR-194394] p 832 N94-14357
Multiwavelength observations of unidentified high energy gamma ray sources
[NASA-CR-194536] p 840 N94-14688

PULSE COMMUNICATION
DSP software development environments for the Adaptive Signal Processing Testbed
[DSIS-93-00347] p 607 N94-14066
Space communications technology research in CRL
p 618 N94-14285
NTT's activities in satellite communications technology development p 618 N94-14286
Future outlook on international satellite communications in Asia Pacific region p 618 N94-14287
Technological development for broadcasting satellites in NHK Laboratories p 618 N94-14288

PULSE COMPRESSION
Lower bounds on time of arrival estimation of pulse compression waveforms
[ITN-93-85189] p 599 N94-13196
A combined analogue and digital pulse compression system using large time bandwidth product signals for use in synthetic aperture radar
[ISBN-0-315-54373-6] p 600 N94-13489
Design and performance of the terawatt Cr:LiSrAlF6 laser system
[DE93-014678] p 657 N94-13882
Independent adjustment of the higher order frequency dependent phase in chirped pulse amplification systems
[DE93-017106] p 625 N94-14522

PULSE DURATION
Design and performance of the terawatt Cr:LiSrAlF6 laser system
[DE93-014678] p 657 N94-13882
Tetravalent chromium (Cr(4+)) as laser-active ion for tunable solid-state lasers
[NASA-CR-194527] p 659 N94-14576

PULSE GENERATORS
A PC-PCL-based control system for the high-voltage pulsed-power operation of the Intense Diagnostic Neutral Beam (IDNB) Experiment
[DE93-014144] p 797 N94-13100
Review of the Procyon explosive pulsed power system
[DE93-016562] p 802 N94-14532
A high-precision direct current measuring device over a kiloampere range
[DE93-626409] p 627 N94-14885

PULSE RATE
Evolution of high-repetition-rate induction accelerators through advancements in switching
[DE93-012599] p 654 N94-12963

PULSED JET ENGINES
Low power pulsed MPD thruster system analysis and applications
[NASA-CR-191187] p 550 N94-13415

PULSED LASERS
Inertial confinement fusion program
[DE93-013372] p 796 N94-13047
New infrared photon absorption processes
[DE93-017017] p 780 N94-13071
Imaging microscopy with x ray lasers at Lawrence Livermore National Laboratory
[DE93-013419] p 655 N94-13258
Shock-free acceleration of laser driven targets
[DE93-008050] p 655 N94-13387
Excimer laser surface processing of titanium
[DE93-012633] p 570 N94-13512
Theoretical investigation of scattering by homogeneous or coated dielectric spheres illuminated with a steady state or pulsed laser beam p 657 N94-13624
Single event effects and laser simulation studies
[NASA-CR-194506] p 657 N94-13812
The interaction of intense femtosecond laser pulses with solid targets
[DE93-014415] p 658 N94-14114
A laser-based technique to continuously monitor metal aerosol emissions
[DE93-012836] p 710 N94-14183
Effects of depositon rate on Bi2Sr2CaCu2O(8+x) and Bi2Sr(1.6)La(0.4)CuO(6+x) epitaxial thin film growth by pulsed-laser ablation
[DE93-015797] p 812 N94-14362
Data analysis for GOPEX image frames
p 610 N94-14388
Independent adjustment of the higher order frequency dependent phase in chirped pulse amplification systems
[DE93-017106] p 625 N94-14522
High-order harmonic generation with short-pulse lasers
[DE93-016532] p 659 N94-14594
The 8 to 11 keV x ray sources for imaging and absorption experiments
[DE93-015973] p 803 N94-14865

PULSED RADIATION
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814
The Large Area Pulsed Solar Simulator (LAPSS)
[NASA-CR-194507] p 703 N94-13940

PURSUIT TRACKING
A piloted simulation investigation of the normal load factor and longitudinal thrust required for air-to-air acquisition and tracking p 522 N94-13301

PYROLYTIC GRAPHITE
The optical constants and spectral specular reflectivity of Highly Oriented Pyrolytic Graphite (HOPG)
[DE93-011894] p 790 N94-12865
Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531

PYROTECHNICS
Destruction of waste energetic materials using base hydrolysis
[DE93-012738] p 584 N94-13491

Q

Q FACTORS
H2S data reduction
[NASA-CR-193389] p 617 N94-14743

Q SWITCHED LASERS
Novel Co:MgF2 lidar for aerosol profiler
[NASA-CR-191525] p 654 N94-13091

QUADRATURES
A new formulation of longitudinal coherent instabilities
[DE93-014288] p 789 N94-13220
I/Q demodulation of radar signals with calibration and filtering
[DREO-RN-1119] p 606 N94-14064

QUALIFICATIONS
Design, qualification and operation of nuclear rockets for safe Mars missions
[DE93-010792] p 549 N94-12996

QUALITY
Digital sound: The selection of critical programme material and preparation of recordings for CCIR tests on low bit-rate codecs
[BBC-RD-1993/1] p 598 N94-12925
Digital sound: Subjective tests on commentary-quality codecs
[BBC-RD-1993/2] p 598 N94-12926

Ninth Annual NASA/Contractors Conference on Quality and Productivity. World Class Excellence: The Journey Continues. Keynote presentations
[NASA-CR-194513] p 665 N94-13148
QUALITY CONTROL
Project AIRSTREAM: Trace gas
[DE93-008849] p 706 N94-12904
Johnson Space Center procurement: Controls over payments to contractors should be strengthened
[AD-A265722] p 819 N94-13060
NASA Johnson Space Center: Total quality partnership p 668 N94-13165
Teamwork for Oversight of Processes and Systems (TOPS). Implementation guide for TOPS version 2.0, 10 August 1992 p 668 N94-13167
George M. Low Trophy: NASA's quality and excellence award. 1992 recipients: Honeywell Clearwater, IBM Houston
[NASA-TM-109265] p 669 N94-13396
The Large Area Pulsed Solar Simulator (LAPSS)
[NASA-CR-194507] p 703 N94-13940
Quality assurance for environmental chemistry, 1991, volume 1
[DE93-011791] p 709 N94-14020
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples, volume 1
[NASA-CR-194498] p 542 N94-14076
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples. Volume 2: Software documentation
[NASA-CR-194499] p 542 N94-14077
An improved approach for flight readiness certification: Methodology for failure risk assessment and application examples. Volume 3: Structure and listing of programs
[NASA-CR-194500] p 542 N94-14078
Knowledge based systems: From process control to policy analysis
[DE93-014582] p 765 N94-14117
Procurement and execution of PCB analyses: Customer-analyst interactions
[DE93-009964] p 566 N94-14694
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 1: Methodology and applications
[NASA-CR-194496] p 519 N94-14841
An improved approach for flight readiness certification: Probabilistic models for flaw propagation and turbine blade failure. Volume 2: Software documentation
[NASA-CR-194497] p 519 N94-14842
QUANTITATIVE ANALYSIS
Procedures for analysis of debris relative to Space Shuttle systems
[NASA-TM-109190] p 534 N94-12900
QUANTUM CHROMODYNAMICS
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
Polarization and color transparency
[DE93-014319] p 780 N94-13101
Quark and gluon jets at CDF
[DE93-014919] p 783 N94-13884
The theory of relativistic heavy ion collisions
[DE93-015934] p 784 N94-13952
Research in theoretical nuclear physics
[DE93-015096] p 839 N94-14330
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
The off shell (rho)-(omega) mixing in the QCD sum rules
[DE93-014845] p 786 N94-14527
QUANTUM EFFICIENCY
The 1.00 MeV proton radiation resistance studies of amorphous silicon-based alloy solar cells p 703 N94-13639
Numerical simulation and analysis of electrical and optical properties of Al(x)Ga(1-x)As / GaAs
[ETN-93-94387] p 703 N94-13997
Gamma-insensitive optical focal plane array
[DE93-013100] p 792 N94-14317
QUANTUM ELECTRODYNAMICS
Studies in quantum field theory
[DE93-017201] p 818 N94-14896
QUANTUM MECHANICS
Quaternions and the heuristic role of mathematical structures in physics
[DE93-622865] p 816 N94-12844
Electromagnetic deflection of spinning particles
[DE93-622866] p 778 N94-12858
The geometric phase in quantum physics
[DE93-011121] p 817 N94-13479
Selective excitation, relaxation, and energy channeling in molecular systems
[DE93-018819] p 785 N94-14420
Multiple Schroedinger cats from multilevel atoms
[DE93-013412] p 786 N94-14526
The fractional quantum Hall effect and the spherical shell model
[DE93-014553] p 818 N94-14740
Tests of non-local interferences in kaon physics at asymmetric phi-factories
[DE93-013905] p 787 N94-14857
Studies in quantum field theory
[DE93-017201] p 818 N94-14896
QUANTUM STATISTICS
On the statistical theory of the even-even nucleons levels' density
[DE93-623990] p 788 N94-14875
QUANTUM THEORY
Gauging the octonion algebra
[DE93-622864] p 775 N94-12843
Measurements on two-dimensional arrays of mesoscopic Josephson junctions
[AD-A265129] p 807 N94-13359
Dilaton quantum cosmology in two dimensions
[DE93-621377] p 836 N94-13361
Mathematics and string theory
[DE93-017903] p 817 N94-14417
Electronic states in systems of reduced dimensionality
[DE93-014440] p 815 N94-14739
Radiation perturbation theory in gravity and quantum universe as a hydrogen atom
[DE93-626621] p 849 N94-14889
Studies in quantum field theory
[DE93-017201] p 818 N94-14896
QUANTUM WELLS
Nonlinear laser spectroscopy studies of semiconductor heterostructures
[AD-A265728] p 805 N94-13037
Surfaces and interfaces of ceramics and metals
[DE93-014959] p 578 N94-13408
Electrical and optical properties of multiple quantum well structures and their applications to infrared detectors
[FFI-92/7012] p 809 N94-14010
Spin polarized photoemission studies of interfacial and thin film magnetism
[DE93-014326] p 580 N94-14142
QUARK MODELS
Measuring strangeness in the nucleon
[DE93-014861] p 785 N94-14471
QUARKS
Measurements of transverse energy and forward energy in high-energy nuclear collisions
[DE93-012755] p 788 N94-12817
Top quark polarization and T-odd spin correlations as tools for testing (non) Standard Model predictions
[DE93-622956] p 778 N94-12847
No-lost theorem for parity violating nucleon-nucleon scattering experiments
[DE93-012737] p 779 N94-12949
A search for scalar leptoquarks in D0
[DE93-012780] p 779 N94-12954
Inclusive single muons at DO
[DE93-012779] p 783 N94-13494
Quark and gluon jets at CDF
[DE93-014919] p 783 N94-13884
Top quark search: Results and prospects at Fermilab
[DE93-013016] p 786 N94-14524
Early baryon and meson spectroscopy culminating in the discovery of the Omega minus SU(3) and quarks
[DE93-014321] p 787 N94-14580
QUARTZ
Recovery of materials impacted at high velocity
[DE93-014150] p 576 N94-12885
Theory of the electronic and structural properties of solid state oxides
[DE93-016051] p 811 N94-14296
QUASARS
Polarization and variability of active galaxies and quasars p 837 N94-13550
The extent and content of low-ionization gas in galaxies p 837 N94-13551
A long-term space astrophysics research program: The evolution of the quasar continuum
[NASA-CR-193714] p 839 N94-14404
QUASI-STEADY STATES
Time resolved measurement of electron temperatures of exploding foil x ray laser plasmas
[DE93-017161] p 803 N94-14894
QUATERNIONS
Quaternions and the heuristic role of mathematical structures in physics
[DE93-622865] p 816 N94-12844
QUENCHING
Quenching and annealing effects on the specific heat of YBa2Cu3O(7-delta)
[DE93-016483] p 816 N94-14868
QUEUEING THEORY
Stochastic scheduling games with Markov decision arrival processes
[CWI-BS-R9231] p 773 N94-14005
Stochastic bounds for a polling system
[CWI-BS-R9230] p 765 N94-14361

R

R CORONAE BOREALIS STARS
Dust production in the envelopes of carbon stars: R Coronae Borealis
[ETN-93-94389] p 839 N94-14075
RADAR
Multiparameter airborne rain radar development for TRMM validation and TRMM-follow-on study p 690 N94-14226
RADAR CROSS SECTIONS
Scattering by a groove in an impedance plane
[NASA-CR-193362] p 602 N94-13720
Analysis of microstrip patch antennas with nonzero surface resistance
[NASA-TP-3362] p 604 N94-13916
RADAR DETECTION
Digital quadrature demodulation for radar ESM applications
[DREO-TN-92-10] p 603 N94-13838
Survey of subsurface geophysical exploration technologies adaptable to an airborne platform
[DE93-015080] p 717 N94-14294
RADAR IMAGERY
Preparations for and first results of the calibration and interpretation of ERS-1 SAR imagery over land
[BCRS-92-13] p 684 N94-13123
EOS workstation
[NASA-CR-191326] p 736 N94-13132
Radar imaging of sub-mesoscale ocean phenomena
[AD-A266339] p 725 N94-13581
Feature discovery on segmented objects in SAR imagery using self-organizing neural networks
[DE93-010685] p 686 N94-14056
An exact processing algorithm for wide beam spaceborne SAR data p 689 N94-14213
RADAR MEASUREMENT
Remote identification of rain and hail with a polarization diversity radar
[ISBN-0-315-55623-4] p 720 N94-13516
RADAR SCATTERING
Scattering by a groove in an impedance plane
[NASA-CR-193362] p 602 N94-13720
RADAR SIGNATURES
I/Q demodulation of radar signals with calibration and filtering
[DREO-RN-1119] p 606 N94-14064
RADAR TRACKING
Venus gravity
[NASA-CR-194077] p 841 N94-12823
Reasoning with uncertain and incomplete information in aerospace applications
[NLR-TP-91366-U] p 763 N94-13529
MUSIC and maximum likelihood using a refined propagation model: Performance comparison for radar low-angle tracking
[DREO-RN-1122] p 603 N94-13832
RADAR TRANSMISSION
MUSIC and maximum likelihood using a refined propagation model: Performance comparison for radar low-angle tracking
[DREO-RN-1122] p 603 N94-13832
RADIAL VELOCITY
Photometry and spectroscopy in the open cluster Alpha Persei, 2
[NASA-CR-193397] p 833 N94-14358
RADIANCE
Recent results from material processing studies on new generation lasers
[DE93-013841] p 653 N94-12898
Infrared transmission and path radiance through dust and fog
[AD-A265825] p 791 N94-12979
Volume 14: The first SeaWiFS intercalibration round-robin experiment, SIRREX-1, July 1992
[NASA-TM-104566] p 725 N94-14090
RADIANT COOLING
X ray emission from dynamical shock models in hot-star winds
[NASA-CR-194093] p 847 N94-13288
Recent testing of 30 kW hydrogen arcjet thrusters
[NASA-TM-106214] p 551 N94-13430
RADIANT FLUX DENSITY
The 1 to 5 micron imaging of deeply embedded young stellar objects p 831 N94-13657
RADIANT HEATING
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788

RADIATION BELTS
Force-free magnetic fields, curl eigenfunctions, and the sphere in transform space, with applications to fluid dynamics and electromagnetic theory
[AD-A265805] p 834 N94-12971
Stormtime transport of ring current and radiation belt ions
[NASA-CR-194416] p 714 N94-13793
Dynamical model for the distribution of geomagnetically trapped anomalous-component ions
[ATR-91(9558)-6] p 784 N94-13936

RADIATION COUNTERS
Search for UHE point-source emission over various time scales
[DE93-012718] p 846 N94-12922
A program of correlated observations using the EGRET instrument on GRO and the IMB neutrino detector
[NASA-CR-194367] p 783 N94-13856
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529

RADIATION DAMAGE
About the influence of inert gas ion implantation on metal corrosion stability
[DE93-620574] p 569 N94-13360
Growth of samarskite crystal under microgravity conditions (M-20) p 590 N94-13752
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529

RADIATION DETECTORS
Crystallographic and metallurgical characterization of radiation detector grade cadmium telluride materials
[DE93-014335] p 806 N94-13150
Absolute detection efficiency of a micro-channel plate detector to x rays in the 1-100 KeV energy range
[DE93-012592] p 789 N94-14460
Results from a water-Cerenkov array
[DE93-012715] p 849 N94-14461
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529

RADIATION DISTRIBUTION
Study of the consequences of the Chernobyl accident and technogenic activity in the Republic Belarus using aerospace methods p 693 N94-14246
Meteorological data, new series A monographs. Volume 6, no. 3: Estimation of influence of high clouds in the radiation field and the climat by analysis of NOAA AVHRR data
[ETN-93-94170] p 723 N94-14707

RADIATION DOSAGE
Temperature dependence of diffusivities, preliminary definition phase
[NASA-CR-192613] p 648 N94-13326
Genetic effects of HZE and cosmic radiation (L-9) p 593 N94-13766
Development and application of the automated Monte Carlo biasing procedure in SAS4
[DE93-015205] p 774 N94-14334

RADIATION EFFECTS
Project proposal for partial computational physics support for Survivability of Coatings program
[DE93-013788] p 576 N94-12939
Annealing study of main electron irradiation-induced defects (H4 and H5) in P-InP using DLTS technique
[DE93-623204] p 806 N94-13213
Comment of parameter excitation of Alfven and Heliicon waves in a magnetoactive compensated semiconductor by microwave radiation
[DE93-623203] p 806 N94-13228
About the influence of inert gas ion implantation on metal corrosion stability
[DE93-620574] p 569 N94-13360
Cellular track model for study of heavy ion beams
[NASA-TP-3351] p 732 N94-13714
Genetic effects of HZE and cosmic radiation (L-9) p 593 N94-13766
Study on the biological effect of cosmic radiation and the development of radiation protection technology (L-11) p 593 N94-13768
Interactions between spacecraft and their environments
[NASA-TM-106115] p 541 N94-13917
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels
[DE93-011602] p 572 N94-14058
Radiation effects on optoelectronic analog link for particle detectors
[DE93-015794] p 793 N94-14529
Structural change of graphite during electron irradiation
[DE93-015961] p 582 N94-14531
JPRS report: Science and technology. Central Eurasia: Materials science
[JPRS-UMS-93-004] p 559 N94-14574
AlGaAs diode laser blue shift resulting from fast neutron irradiation
[AD-A266642] p 659 N94-14681
Investigations of low-temperature neutron embrittlement of ferritic steels
[DE93-015460] p 573 N94-14700
Quantitative luminescence imaging system
[DE93-015691] p 793 N94-14702

RADIATION HARDENING
1/f noise and oxide traps in MOSFETs
[DE93-007581] p 619 N94-12942
Mongoose ASIC microcontroller programming guide
[NASA-RP-1319] p 623 N94-13871
Radiation hardening and radiation-induced chromium depletion effects on intergranular stress corrosion cracking of austenitic stainless steels
[DE93-011602] p 572 N94-14058

RADIATION MEASUREMENT
Measuring surface fluxes in CAPE
[NASA-CR-193664] p 711 N94-12788
Evolution of the lower planetary boundary layer over strongly contrasting surfaces
[DE93-010667] p 717 N94-14424

RADIATION MEASURING INSTRUMENTS
A Fourier transform microscope for x ray and/or gamma ray imaging
[AD-D015742] p 791 N94-13664

RADIATION PRESSURE
Improved treatment of global positioning system force parameters in precise orbit determination applications p 514 N94-14371

RADIATION PROTECTION
A photovoltaic catenary-tent array for the Martian surface
[NASA-TM-106306] p 621 N94-13194
Beta/gamma test problems for ITS
[DE93-013522] p 781 N94-13349
Preliminary nuclear safety assessment of the NEPST (Topaz 2) space reactor program
[DE93-012853] p 551 N94-13514
CRRES to blaze new trails in orbit
[NASA-TM-109314] p 713 N94-13620
Study on the biological effect of cosmic radiation and the development of radiation protection technology (L-11) p 593 N94-13768

RADIATION SHIELDING
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars
[NASA-TP-3312] p 846 N94-12875
Semiempirical fragmentation models on galactic cosmic ray transport calculations with hydrogen target
[NASA-TP-3350] p 847 N94-13263
Development and application of the automated Monte Carlo biasing procedure in SAS4
[DE93-015205] p 774 N94-14334
Measuring parity violation using the neutron capture reaction
[DE93-016629] p 786 N94-14514

RADIATION SOURCES
Two-dimensional simulations of foil implosion experiments on the Los Alamos capacitor bank
[DE93-012676] p 794 N94-12814

RADIATION SPECTRA
Operational test of the airborne data acquisition system: SADA, the Bara Bonita experiment
[INPE-5451-NTC/305] p 685 N94-13610

RADIATION TOLERANCE
The Second Workshop on Deployment and Assembly Experiment of Large Space Structure on Orbit
[NASDA-CON-930003] p 529 N94-13268
Research on radiation resistance properties of structural materials for space use p 529 N94-13271
The 1.00 MeV proton radiation resistance studies of amorphous silicon-based alloy solar cells p 703 N94-13639

RADIATION TRANSPORT
A new method to assess Monte Carlo convergence
[DE93-012667] p 772 N94-12919
Three dimensional time-dependent hydrodynamic and propagation modeling of x ray laser emission
[DE93-012575] p 654 N94-12962
MCNP benchmark analyses of critical experiments for the Space Nuclear Thermal Propulsion program
[DE93-014046] p 548 N94-12981
Semiempirical fragmentation models on galactic cosmic ray transport calculations with hydrogen target
[NASA-TP-3350] p 847 N94-13263
Beta/gamma test problems for ITS
[DE93-013522] p 781 N94-13349
Distributed processor Monte Carlo: MCNP results on a 16-node IBM cluster
[DE93-012639] p 752 N94-14176
Development and application of the automated Monte Carlo biasing procedure in SAS4
[DE93-015205] p 774 N94-14334
The LAHET code system: Introduction, development, and benchmarking
[DE93-012657] p 787 N94-14804

RADIATIVE HEAT TRANSFER
Chemistry and transport in a multi-dimensional model
[NASA-CR-194425] p 716 N94-13969
The accuracy of approximating radiative heat transfer using a temperature dependent thermal conductivity
[DE93-013105] p 638 N94-14318

RADIATIVE TRANSFER
DMSP F11 SSM/T-2 calibration and validation
[AD-A265817] p 719 N94-12978
The continuum emission of active galactic nuclei
[ITN-93-85208] p 847 N94-13232
Basic research in solar physics
[NASA-CR-193632] p 844 N94-13234
Radiative transfer in the dynamic atmospheres of Mira-type variables
[NASA-CR-193324] p 829 N94-13287
ADP study of gamma-ray bursts
[NASA-CR-194311] p 848 N94-13708
Water-vapour, total water and rainrate from passive microwave satellite data over ocean
[DLR-FB-92-37] p 723 N94-14189

RADICALS
Application of synchrotron radiation in chemical dynamics
[DE93-015040] p 563 N94-13411

RADIO ALTIMETERS
Ionospheric calibration for single frequency altimeter measurements
[NASA-CR-194282] p 716 N94-14049
High performance multi-mode radar altimeter for future spaceborne application p 548 N94-14214

RADIO ASTRONOMY
Neptune high-latitude emission: Dependence of angle on frequency
[NASA-CR-193280] p 848 N94-13476
Theoretical molecular studies of astrophysical interest
[NASA-CR-193300] p 838 N94-13781
The next century astrophysics program p 548 N94-14832

RADIO ATTENUATION
Statistical results from the Virginia Tech propagation experiment using the Olympus 12, 20, and 30 GHz satellite beacons p 613 N94-14658
Long duration measurements of fading on a low elevation angle, 11-GHz satellite path p 613 N94-14661
Large-scale rainfall diversity for ACTS p 613 N94-14662
Rain-rate data base development and rain-rate climate analysis p 614 N94-14664
Propagation issues for emerging mobile and portable communications: A systems perspective p 614 N94-14667

RADIO COMMUNICATION
Measurement of wave propagation for VHF/UHF and a comparison between measured and predicted values
[FFI/RAPPORT-92/7024] p 605 N94-13968
The developments of satellite communications of China p 618 N94-14282
The current situation, trends, international cooperation of space communication technological development.in the Republic of Korea p 699 N94-14283
Space communications technology research in CRL p 618 N94-14285
Future outlook on international satellite communications in Asia Pacific region p 618 N94-14287
Technological development for broadcasting satellites in NHK Laboratories p 618 N94-14288
Proceedings of the Seventeenth NASA Propagation Experimenters Meeting (NAPEX 17) and the Advanced Communications Technology Satellite (ACTS) Propagation Studies Miniworkshop
[NASA-CR-194096] p 612 N94-14654
Opening remarks: Current and future activities p 612 N94-14655
New challenges in propagation research in the US p 612 N94-14656
Statistical results from the Virginia Tech propagation experiment using the Olympus 12, 20, and 30 GHz satellite beacons p 613 N94-14658
Long duration measurements of fading on a low elevation angle, 11-GHz satellite path p 613 N94-14661
A database for propagation models p 614 N94-14665
Contribution towards a draft revision of recommendations 681: Propagation data required for the design of Earth-space land mobile telecommunications systems p 614 N94-14666

Propagation considerations in the American Mobile Satellite system design p 614 N94-14668
Coverage aspects of a single frequency network designed for digital audio broadcasting [BBC-RD-1993/3] p 616 N94-14742

RADIO DIRECTION FINDERS
Portable multipath measurement system [DSIS-93-00177] p 603 N94-13843

RADIO ECHOES
A study of meteor scatter communications [DSIS-93-00151] p 603 N94-13841

RADIO EMISSION
Neptune high-latitude emission: Dependence of angle on frequency [NASA-CR-193280] p 848 N94-13476

RADIO EQUIPMENT
Development of UHF spark-switched L-C Oscillators [DE93-015019] p 623 N94-13892

RADIO FREQUENCIES
Dimensionally similar discharges with central RF heating on the D3-D tokamak [DE93-012776] p 795 N94-12953
Design for low beam loss in accelerators for intense neutron source applications [DE93-014557] p 789 N94-13327
Electron beam probe measurements of electric fields in rf discharges p 601 N94-13661
Field emitter array RF amplifier development project. Phase 1: Cathode technology development [AD-A266346] p 622 N94-13776
Plasma-etching science meets technology in the MDL [DE93-012086] p 800 N94-13908
Ionospheric calibration for single frequency altimeter measurements [NASA-CR-194282] p 716 N94-14049

RADIO FREQUENCY HEATING
Ion cyclotron heating experiments and plans for the Advanced Toroidal Facility (ATF) [DE93-012965] p 795 N94-13033
Effect on antenna structure of high power RF during plasma operation [DE93-013278] p 797 N94-13144
Electrical characterization of the JET A(sub 2) antenna: Comparison of model with measurements Wade, T. [DE93-012964] p 607 N94-14291
Microwave sintering of large alumina bodies [DE93-012752] p 581 N94-14340
Design of the ion cyclotron system for TPX [DE93-012961] p 803 N94-14770
Anomalous ion transport and feedback control [DE93-018324] p 803 N94-14874

RADIO GALAXIES
ROSAT observations of clusters with wide-angle tailed radio sources [NASA-CR-193784] p 833 N94-14405

RADIO METEORS
Meteor forward scatter studies [DSIS-93-00382] p 602 N94-13801
A study of meteor scatter communications [DSIS-93-00151] p 603 N94-13841

RADIO NAVIGATION
Environmental projects. Volume 15: Environmental assessment: Proposed 1-megawatt radar transmitter at the Mars site [NASA-CR-194098] p 598 N94-13090

RADIO OBSERVATION
Reduction and analysis of seasons 15 and 16 (1991 - 1992) Pioneer Venus radio occultation data and correlative studies with observations of the near-infrared emission of Venus [NASA-CR-194128] p 841 N94-13083

RADIO OCCULTATION
Reduction and analysis of seasons 15 and 16 (1991 - 1992) Pioneer Venus radio occultation data and correlative studies with observations of the near-infrared emission of Venus [NASA-CR-194128] p 841 N94-13083

RADIO RECEIVERS
Theoretical SIS mixer research [AD-A266323] p 807 N94-13580
Results from a study of scintillation behavior at 12, 20, and 30 GHz using the results from the Virginia Tech Olympus receivers p 613 N94-14659

RADIO SIGNALS
Coverage aspects of a single frequency network designed for digital audio broadcasting [BBC-RD-1993/3] p 616 N94-14742

RADIO SOURCES (ASTRONOMY)
A survey of compact planetary nebulae at radio wavelengths [ISBN-0-315-61950-3] p 829 N94-13371

RADIO TELEMETRY
Characteristics of the amateur radio means of the Arsene satellite [CNES-NT-131] p 605 N94-13950

RADIO TRANSMISSION
Measurement of wave propagation for VHF/UHF and a comparison between measured and predicted values [FFI/RAPPORT-92/7024] p 605 N94-13968

RADIO WAVES
Proceedings of the Seventeenth NASA Propagation Experimenters Meeting (NAPEX 17) and the Advanced Communications Technology Satellite (ACTS) Propagation Studies Miniworkshop [NASA-CR-194096] p 612 N94-14654
Opening remarks: Current and future activities p 612 N94-14655

RADIOACTIVE DECAY
Double semi-leptonic charm decay in HELIOS-I 450 GeV/c p-Be data [DE93-013493] p 781 N94-13348
The beta(+) decay and cosmic-ray half-life of Mn-54 [DE93-013913] p 848 N94-13695
Are there atmospheric neutrino oscillations? [DE93-015550] p 783 N94-13890
Charge-exchange reactions and weak interaction rates for Type 2 supernovae [DE93-015104] p 783 N94-13893
The (mu)(+) yields e(+)gamma [DE93-012750] p 785 N94-14181
Rare muon processes [DE93-012646] p 785 N94-14366
E789 and P865: High-rate fixed-target studies of charm and beauty [DE93-017223] p 788 N94-14898

RADIOACTIVE ISOTOPES
Project AIRSTREAM: Trace gas [DE93-008849] p 706 N94-12904
Research in cosmic and gamma ray astrophysics: Cosmic physics portion [NASA-CR-194127] p 847 N94-13211
Study of the consequences of the Chernobyl accident and technogenic activity in the Republic Belarus using aerospace methods p 693 N94-14246
The LAHET code system: Introduction, development, and benchmarking [DE93-012657] p 787 N94-14804

RADIOACTIVE MATERIALS
Research in cosmic and gamma ray astrophysics: Cosmic physics portion [NASA-CR-194127] p 847 N94-13211

RADIOACTIVE WASTES
Canonical correlation of waste glass compositions and durability, including pH [DE93-012754] p 578 N94-13493
Environmental radioactivity intercomparison 1992 [NPL-RSA(EXT)-37] p 708 N94-13880
Camera calibration in a hazardous environment performed in situ with automated analysis and verification [DE93-010274] p 651 N94-14046
Relationship between borosilicate glass composition, structure, and durability test response (SRS) [DE93-013578] p 581 N94-14343
Modeling surface area to volume effects on borosilicate glass dissolution [DE93-011891] p 581 N94-14432
Dynamic soil pressures on rigid cylindrical vaults [DE93-013930] p 676 N94-14585
A study of hydrogen effects on fracture behavior of radioactive waste storage tanks [DE93-018171] p 574 N94-14873

RADIOBIOLOGY
Effects of radiobiological uncertainty on vehicle and habitat shield design for missions to the moon and Mars [NASA-TP-3312] p 846 N94-12875

RADIOGRAPHY
Real time radiography of Titan 4 booster [DE93-012450] p 548 N94-12911

RADIOMETERS
Nimbus-7 Earth radiation budget calibration history. Part 1: The solar channels [NASA-RP-1316] p 844 N94-13963
Volume 14: The first SeaWiFS intercalibration round-robin experiment, SIRREX-1, July 1992 [NASA-TM-104566] p 725 N94-14090
Earth Observation Center Annual Report on Research and Development, Fiscal Year 1992 [EOC-92-01-0007] p 687 N94-14091
Earth observation experiment data analysis p 687 N94-14093
ADEOS project p 687 N94-14094
A calibration procedure for radiation budget radiometers and its influence on interpretation of measured values [MITT-82] p 651 N94-14149
Clouds and the Earth's Radiant Energy System (CERES) on the Tropical Rainfall Measuring Mission (TRMM) p 690 N94-14223

RADIOMETRIC CORRECTION
Analytical framework for modeling scale-related variabilities in remote sensing p 685 N94-13592
Radio metric errors due to mismatch and offset between a DSN antenna beam and the beam of a troposphere calibration instrument p 607 N94-14370

RADIOSONDES
DMSP F11 SSM/T-2 calibration and validation [AD-A265817] p 719 N94-12978

RAIL TRANSPORTATION
Activities of Bombardier, Inc. [ISBN-2-921393-11-5] p 499 N94-13520

RAIN
Remote identification of rain and hail with a polarization diversity radar [ISBN-0-315-55623-4] p 720 N94-13516
Spatial and temporal variability of precipitation and chemistry: Case studies from the frontal boundary study [DE93-007883] p 708 N94-13910
Water-vapour, total water and rainrate from passive microwave satellite data over ocean [DLR-FB-92-37] p 723 N94-14189
TRMM system overview and status in the United States p 690 N94-14221
TRMM Project in Japan: Overview and status p 690 N94-14222
TRMM precipitation radar algorithm p 690 N94-14224
Estimate of sampling errors of TRMM rainfall observation by using radar-AMeDAS composite data p 690 N94-14225
Multiparameter airborne rain radar development for TRMM validation and TRMM-follow-on study p 690 N94-14226
Future TRMM follow-on mission p 691 N94-14228
Large-scale rainfall diversity for ACTS p 613 N94-14662
Rain rate duration statistics derived from the Mid-Atlantic coast rain gauge network p 614 N94-14663
Rain-rate data base development and rain-rate climate analysis p 614 N94-14664

RAIN FORESTS
Modeling of biosphere-atmosphere interaction for forest and pastureland in the Amazon [INPE-5454-TDI/496] p 707 N94-13330
Spatial variability of throughfall chemistry in a tropical rainforest (Central Amazonia, Brazil) [INPE-5431-PRE/1765] p 720 N94-13429
Estimations of temperature and humidity of the canopy in Amazon Forest using microwave data from SMMR sensor of Nimbus-7 satellite [INPE-5444-TDI/490] p 720 N94-13614

RAIN GAGES
Rain rate duration statistics derived from the Mid-Atlantic coast rain gauge network p 614 N94-14663

RAMAN SPECTRA
Inertial Confinement Fusion [DE93-013303] p 795 N94-13017
Resonant x ray Raman scattering from atoms and molecules [DE93-015158] p 784 N94-13896
Brillouin scattering from fluctuations produced by stimulated Raman scattering [DE93-016531] p 792 N94-14438
Investigation of the feasibility of optical diagnostic measurements at the exit of the SSME [NASA-CR-193832] p 553 N94-14682

RAMAN SPECTROSCOPY
Scanning tunneling microscopy studies of diamond films and optoelectronic materials [NASA-CR-194363] p 578 N94-13246

RANDOM ACCESS MEMORY
Hashing and rehashing in emulated shared memory [CWI-CS-R9240] p 740 N94-13525
Single event effects and laser simulation studies [NASA-CR-194506] p 657 N94-13812
Paradigms for very fast parallel algorithms [ITN-93-85212] p 755 N94-14556

RANDOM PROCESSES
Investigation for improving Global Positioning System (GPS) orbits using a discrete sequential estimator and stochastic models of selected physical processes [NASA-CR-194167] p 512 N94-13082

RANDOM SAMPLING
Rare attributes in finite universe: Hypotheses testing specification and exact randomized upper confidence bounds [DE93-012783] p 775 N94-12955

RANDOM VARIABLES
A new method to assess Monte Carlo convergence [DE93-012667] p 772 N94-12919

RANDOM VIBRATION
Estimation of critical values and vibration characteristics on supersonic delta wings. Part 2: Locally-stationary time series analysis of nonstationary random responses [NAL-TR-1179] p 502 N94-13345

RANGE (EXTREMES)
Robust stability of diamond families of polynomials with complex coefficients
[NASA-CR-194132] p 768 N94-13421
RANGEFINDING
Sequential ranging: How it works
[NASA-CR-194508] p 532 N94-13796
RANK TESTS
Statistical analysis of the m rankings problem: Kendall's prototype and the grouping estimate method based on normal scores
[DSIS-93-00139] p 773 N94-13848
RANKING
Statistical analysis of the m rankings problem: Kendall's prototype and the grouping estimate method based on normal scores
[DSIS-93-00139] p 773 N94-13848
RAPID QUENCHING (METALLURGY)
Measurements of crystal growth kinetics at extreme deviations from equilibrium
[DE93-014526] p 815 N94-14798
RARE EARTH COMPOUNDS
Fine-powder Al2O3 and SiO2 for preparation of multielement standards for rare-earth elements analysis
[DE93-625118] p 567 N94-14884
RARE EARTH ELEMENTS
Fine-powder Al2O3 and SiO2 for preparation of multielement standards for rare-earth elements analysis
[DE93-625118] p 567 N94-14884
RARE GASES
Measurements of scattering processes in negative ion-atom collisions
[DE93-013863] p 779 N94-12940
About the influence of inert gas ion implantation on metal corrosion stability
[DE93-620574] p 569 N94-13360
RAREFIED GAS DYNAMICS
Techniques for estimating Space Station aerodynamic characteristics
[NASA-CR-193394] p 541 N94-13955
RASTER SCANNING
Confocal profilometer with nanometric vertical resolution
[DE93-622698] p 653 N94-12857
RATES (PER TIME)
Adaptive Signal Processing Testbed
[DSIS-93-00258] p 604 N94-13869
RATS
Physiological Anatomical Rodent Experiment (PARE).04 Feasibility Test 1
[NASA-CR-194423] p 728 N94-13473
Improving physical performance by chemical stimulation
[DSIS-92-03763] p 728 N94-13823
RAWINSONDES
Atmospheric soundings during the Washita 1992 campaign
[NASA-CR-194383] p 712 N94-13212
RAY TRACING
The propagation characteristics and instability properties of low-frequency electromagnetic waves in the Io plasma torus p 601 N94-13650
A data distributed parallel algorithm for ray-traced volume rendering
[NASA-CR-191520] p 749 N94-13721
AXAF FITS standard for ray trace interchange
[NASA-CR-194025] p 832 N94-14305
RAYLEIGH WAVES
On the secondary instability of the most dangerous Goertler vortex
[NASA-CR-191504] p 636 N94-13785
RAYLEIGH-RITZ METHOD
A robust multilevel simultaneous eigenvalue solver
[NASA-CR-191491] p 767 N94-13202
REACTING FLOW
